Advices from Springfield, Mo., state that the main body of the Union forces were withdrawing. The destination of the withdrawing troops is not known. It is, however, surmised, that they are bound South. The entire Rebel force, under Price, was going South at a rapid rate, at last accounts.

We learn from Tennessee that the other day five important railroad bridges in that State were burned by the Unionists. These acts of destruction will seriously obstruct the operations of the Rebel forces in that State, as their only means of transportation was by way of railroad.

Mr. Chase, Secretary of the Treasury, has issued a proclamation declaring Beaufort to be be a port of entry. It is believed that the Federal forces have captured large quantities of cotton near that port.

A general order has been issued at Washington, the substance of which is as follows:

The Department announces to the Navy and the country its high gratification at the brilliant success of the combined forces of the Navy and Army, respectively commanded by Flag-officer F. Dupont and Brigadier-General W. H. Sherman, with the capture of Fort Walker and Fort Beauregard, which command the entrance to Port Royal harbor, South Carolina. To commemorate this signal victory, it is ordered that a National salute be fired from each Navy Yard at meridian of the day following the receipt of this order.

In the Port Royal fight the Federal troops captured 55 cannon, 500 muskets, and any quantity of ammunition. The road by which the Rebels escaped is covered with rifled muskets, knapsacks, etc. We have taken 2500 blankets, and tents for 3000 men.

Beaufort had not been burned as was reported. It contained an immense deal of cotton.

The Mercury says: There is no doubt the fleet will succeed in the capture of any quantity of cotton of the best quality.

◆

The New Orleans Picayune reports that Ned McGowan had been arrested as a spy in that city on the 11th of October.

Storm on the Placerville Route.—A dispatch from Sacramento, November 20th, says: The storm was very severe in the mountains last night, completely blocking up the road, and stopping all travel east of Strawberry Valley. No stage has been through from Carson to that place, since 11 A. M., yesterday. The stage company have given notice that no stage will leave Placerville for Carson City before Friday. The telegraph has been repaired, and is now working to Strawberry Valley. The storm broke the line east of that place, last night. It was in working order between Strawberry and Salt Lake up to last night, and will be repaired to-morrow, if it is possible for men to get through. About fifty men are at work, between Strawberry and Lake Valley, breaking the road, the snow in places being fifteen feet deep. A large number of teams are on the road, snowed in at different points, and it cannot remain long closed. This is undoubtedly the most severe storm that has occured in the mountains for many years. The weather is now clear.

Captain Edward Palmer, the pilot who was in charge of the ship Winged Racer when she ran on Shag Rock, has been suspended for four months.

It is said that Senator Gwin holds a commission from Jeff. Davis as Minister to Russia, and that J. Lancester Brent is Gwin's prospective son-in-law.

It snowed heavily in Carson Valley on the 10th and 11th instant, covering all the mountains to a great depth, and making the roads most difficult to travel.

MARDEN & FOLGER,

Successors to Wm. H. Boyce & Co.,

PIONEER

Steam Coffee and Spice Mills,

Nos. 521 and 523 Front street, near Jackson,
SAN FRANCISCO,

LECTURE.

MRS. FANNY GREEN,

Of Providence, R. I., proposes to the citizens of San Francisco to give a series of THIRTEEN LECTURES, in the following spirit and order: First,

A FREE INTRODUCTORY LECTURE,

Entitled

The City of Golden Gates!

With a prophetic view of the Power and Destiny of California, as the Central Magnet of the World, from which are to flow forth new streams of Refinement and Civilization, that will finally encompass and enlighten the whole earth.

This will be followed by a complete Course of TWELVE LECTURES, entitled

Incarnations of Divine Truth;

Embracing not only the Mythology, Philosophy, and Poetry, of the Ancients, but the peculiar Power of the Present, and the Hope and Spirit of the Future. It is, in fact, a synopsis of the Religious History of the World.

The grand object here to be shown is, that the Religious Principle is, everywhere, essentially the same—the natural aspiration of the Human Soul toward something higher, stronger, purer, than itself, from which it instinctively craves protection, and unto which it spontaneously pours forth praise.

Thus are we irresistibly led to the conclusion, that in order to co-operate with Divine Wisdom, in any essential and practical good to Mankind, we must be prepared to Meet and Welcome each other, on the broad ground of Humanity itself.

TERMS:

For the Entire Course - - - - -	$4 00
For Half-Course - - - - - - - -	2 50
Single Ticket - - - - - - - -	50

Each Ticket will admit Two.

The Introductory Lecture will be given on

Thursday Evening, Nov. 7th,

At the SOUTH METHODIST CHURCH, on Pine street. Doors opened at 7 o'clock.

Tickets to be had at the principal Drug and Book Stores in the city. 8

LIZZIE WILEY WARREN, M D.....EDITRESS

LOVE COMES BUT ONCE UNTO THE HEART.

Love comes but once unto the Heart,
But once and never more,
When Youth sits by Life's bounding tide
And softly woos him o'er.
In after years a joy may come
As full of Peace and Truth;
But never more that first, wild Love
Of the palmy days of youth.

The first young flowers of early spring
Sleep folded through the night,
But 'neath the smiles of morning ope
Their red lips to the light.
Thus slept the heart, 'twixt bud and bloom,
Through boyhood's April hours,
Till Love burst in upon its dreams
Like morning o'er the flowers.

There is a vision haunts the breast
That never will depart,
It will not die, it cannot fade,
But just as fades the heart.
How fond we fold the curtains round.
Lest other eyes might gaze
Upon our hearts, while we look on
This dream of other days.

The dove, with death within her breast,
Will rise on trembling wings,
And reach the woodlands where her mate
Upon the green bough sings.
So will the spirit journey back
Across Life's sea of tears,
With Death upon its wake, to find
It's Love of early years.

* * *

THE BRAVE AT HOME.

BY T. BUCHANAN READ.

The maid who binds her warrior's sash,
With smile that well her pain dissembles,
The while, beneath her drooping lash,
One starry tear-drop hangs and trembles,
Though Heaven alone records the tear,
And Fame shall never know her story,
Her heart has shed a drop as dear
As ever dewed the field of glory.

The wife who girds her husband's sword,
'Mid little ones who weep or wonder,
And bravely speaks the cheering word—
What though her heart be rent asunder?
Doomed, nightly, in her dreams, to hear
The bolts of war around him rattle,
Hath shed as sacred blood as e'er
Was poured upon the plain of battle.

The mother who conceals her grief,
While to her breast her son she presses,
Then breathes a few brave words and brief,
Kissing the patriot brow she blesses;
With no one but her secret God
To know the pain that weighs upon her,
Sheds holy blood as e'er the sod
Received on Freedom's field of honor.

[For the California Farmer.]

Literature—No. 7.

Walter Raleigh was born in Devonshire, England, in 1552, during the last year of the reign of Edward VI, and lived during the reigns of Mary (1553–1558), Elizabeth 1558–1603), and James I (1603–1625. He was of a restless, daring disposition in early life; becoming a soldier at the age of seventeen, he fought for the Protestants in the Netherlands. At the age of twenty-seven he accompanied his half-brother, Sir Humphrey Gilbert, to Newfoundland, and subsequently he visited the American Coast on his own account. In 1580, he took part in the suppression of the Earl of Desmond's rebellion in Ireland, and obtained an estate, and was for a time Governor of Cork.

He took pains to ingratiate himself in Elizabeth's favor; perhaps no anecdote is more frequently recorded of him than that telling of his being in the queen's company, when she hesitated in regard to crossing a miry part of the road, and throwing his rich cloak upon the ground to enable her to pass unsoiled. She subsequently advanced him to many positions as a courtier. After returning from an expedition to Portugal, while visiting his estates in Ireland, he formed an intimacy with the poet Spenser, introducing him to the queen, and otherwise patronising him; the poet acknowledges his kindness in the pastoral—"Colin Clout's come home again."

After an expedition to Guiana, he published in 1596, "Discovery of the large, rich, and beautiful empire of Guiana."

After the accession of James, Raleigh was unfortunate; he was no more a royal favorite; through the malignity of an enemy, he was grossly misrepresented to James. He was accused of conspiring against the king in favor of Arabella Stuart, attempting to establish popery by the intervention of foreign powers, etc. Upon being tried for high-treason, he defended himself so well that some even of his enemies were convinced of his innocence. He was reprieved, and instead of being executed, was imprisoned in the Tower; here he wrote his famous History of the World. He commenced with the Creation, and wrote the history of the ages until the downfall of the Macedonian Empire, 168 B. C. The author displays much learning and research; his philosophy is generally excellent, but many regretted his having devoted so much time and space to subjects not understood, if indeed, capable of being understood by man. We may theorize very freely without making mankind the wiser or better, for our theories, especially upon those subjects with regard to which there is and ought to be untold diversity of opinion.

In 1615, Raleigh was allowed to conduct an expedition to Guiana which he had projected during some part of his imprisonment; he failed, however, in his objects, meeting with numerous and weighty obstacles. After his enemies had failed in every attempt to prove him guilty of any crime, they brought up the old charge, and upon it was he executed in 1618; he was calm and intrepid to the last.

He wrote many political essays which have never been collected; also "The Sceptic," "Maxims of State," "The Cabinet Council," and "Advice to his Son," and a few poems.

Raleigh had faults, some of which need to be thought of with more charity, than they would if committed in the 19th century, but he was not guilty of any offense, deserving his sad fate. During the latter part of his life, he seems to have been an exemplary character, and his morality seems far in advance of that which then prevailed. Much of what he wrote, came directly from the heart, and, consequently, speaks to the heart.

Nurses Wanted.—A little girl, hearing it said that all people had once been children, artlessly remarked, "Who took care of the babies?"

Female Physicians.

BY M. AUGUSTE FAIRCHILD, M. D.

Whether females should enter the medical profession or not, is yet, in the minds of many, an unsettled question. Good, pious, well-meaning persons, of both sexes, are found, who seem to look upon a female doctor as we are accustomed to look upon a comet—as a strange appearance, and we hardly know what to make of it; perhaps it means no good. Comets were once looked upon as omens of war. Female doctors may be viewed in very much the same light; for wherever they have made their appearance, a general uprising of the people to welcome them, and a most vigorous attempt of the *regular masculine* dignitaries of the "profession" to "quell the insurrection" have been the result.

"The people" are non-professional, therefore they will sometimes be quieted by the dictates of common sense, and thus they are led to appreciate the offices of woman as physician. Their professional pride, their dignity, their *pocket-book* is not at stake, so they can well afford to open their eyes and "see the light."

It is shining, this great light of *truth*, and those who will see it may do so, and enjoy the advantages which light gives over darkness. Nowhere does the strong light of truth shine more brightly than in the science of medicine. At last it *is* a science; and nowhere do men more perversely shut their eyes against the light than do they of the medical profession. But they can not shut out the light entirely, even from their own eyes. When a strong ray falls upon the closed eyelid, it is a very difficult matter to shut out all its effects—a little light *will* enter. While the learned doctors are stalking about blindfolded, how "the people" are looking out, clearly and rejoicingly, over the beautiful landscape, where amid the pleasant fields of life and hope, flows the bright crystal stream of health, and from along its banks the fragrant blossoms of love and charity send forth their sweet perfume, while the firm, the unmistaken tones of faith are heard calling all to "come," to live and not die, to realize that God is a "God of love"—not one delights in death.

Yes. The people are ready, and can not be quieted with the most *powerful opiate*. They are asking, "What of the morning?" and "the profession" must answer or—*die*, as a "profession." If they answer truly, it must be in condemnation of themselves. Falsely, "the people" will surely know it, for they have been fed on falsehoods till they are "sick at the stomach," and ready to "spue them all out." Nothing but the plain-wholesome truth will be accepted when once the great engine of thought is awakened, when the fires of reason propel the machinery.

What then? Doctors, you may as well "back out." People do not believe what you say, though they pretend to you that they do. And you don't believe it yourself. You *know* that your boasted knowledge of the "science of medicine" is all equal to a cipher. *You* have no science. You can not tell me of the "modus operandi" of a single drug. You have no correct definition of disease. Yet you cry after the manner of a certain biped that paddles in our pools, whenever you find that some one who knows you, and can fathom your shallow "depth of wisdom." You have cried "quack" so long and so loudly, that it is now accepted as a term belonging exclusively to yourselves. We congratulate you upon your happy choice of a title.

But are female physicians acceptable? Do "the people" receive them? Yes, and there is a great demand for them. "Sick sisters" are everywhere. Young girls are sick; they apply to a male physician; he gives drugs, which fasten her name on his books as a life-patient. From year to year she drags through girlhood, and if she is strong enough to live in spite of her "remedies," she enters with a broken-down constitution upon womanhood, becomes the mother of weakly offspring, *endures* life—does not *enjoy* it—dies young, and leaves her sickly children to do as she did, only that they suffer more from an inherited weakly constitution, and die sooner. Now, suppose we have intelligent, well-educated female practitioners. Those young girls will go to them, and, as to a mother or sister, will tell them of their complaints in such a way as they *never can* when talking to a male doctor; they receive such advice and treatment as is indicated, and are taught how to *keep* well; are told familiarly and pleasantly of the *causes* of much of their diseases—in a word, *how to live* healthfully, truly.

I believe that many a young girl has gone down to the grave just for want of such advice as a male physician, be he ever so skillful, could not give her. An old experienced physician once told me that it was impossible for him to treat females as skillfully as he could those of his own sex; "for," said he, "the natural modesty of a young girl—yes, of many an elderly female—forbids her disclosing to me her symptoms in such a way as I can properly understand her case and prescribe such remedies as she needs. In most of those cases I prescribe blindly, not knowing what disease I am treating." What is to be done? Must our sex lay aside the "native modesty" which constitutes much of the charm of womanhood, or must the male practitioner treat our diseases "blindly," thus condemning us to a lifetime of misery, or to an early death?

Neither alternative is called for. We will have physicians who *can* understand what they do—those to whom we may speak freely and without that dread which often compels us to suffer, rather than unvail our symptoms to one of the opposite sex. We will have *women* for our physician. Thoroughly qualified for her noble work, she will go forth as a bright messenger, giving "good tidings"—for wherever woman enters upon the field of medical practice, she rests not in merely "healing the people," but she does *more*, infinitely more—she *teaches* them. Nature has qualified her for this high office. At home, woman is the teacher. And place her where you may, she *will* teach. Then, if she rightly understand the laws which govern our physical being, will she not impart that knowledge to others? If she know how disease may be avoided, how health may become the rule, not the exception, will she selfishly fold her hands and say, "It's no use—I am a doctor; people *pay* me for services when they are sick—they will not thank me if I do tell them how to keep well?" Will she do thus? No. She believes it *is* of use to try to enlighten people upon health-subjects, If she *is* a doctor, that is the very reason why she ought to labor for the best good of her patients, to teach them the laws of life and health, to set them thinking for themselves, that they may act wisely, preserve health, and enjoy life.

She is not discouraged if people do not "even thank" her for her instructions. Her conscience approves, her God approves her course; for in doing this, is she not following the example of the great Physician, who both "taught the people and healed their diseases?"

But it is not true that on the part of "the people" there prevails such an utter dislike for physiological knowledge. They want it, they know they need it, and they will have it, for there is a "little army" of women at work throughout the country, and they mean to take "every field," just as the army-worms did the grain-fields a few weeks ago—make a "clean sweep." The "male regulars" need not take the trouble to "dig ditches"—we'll leap them. They need not try to scare us to death, for we are not easily frightened. They had better sit down and take it easy, for it will be easy times for them before a great while.

We are determined to work, in spite of your "conventions" and learned essays upon "the wonderful unsuitability of woman as a physician." And we will "spoil your practice" most surely, for a woman-doctor is naturally a hygienist. Some are educated at drug-schools, but they do not imbibe the poison—they don't believe in the drug-practice, for they don't follow it in their treatment. They know and see that the hygienic treatment is most successful, is most in accordance with nature, is *true*. So they practice it—they teach it—and wherever hygiene is taught, there druggery receives a death-blow.

I hear some one say, "You talk as though *only* female physicians were of the hygienic practice." No. But among female physicians the *very* few are drugopathists, while of male physicians the *few* are hygienists. And that is one reason why females will do so much good as physicians—why they may and ought to practice medicine.

But we must have male doctors too. And among them we find those who for years have advocated and practiced the true system of medication. Noble men, of the brightest talent, naturally gifted and thoroughly educated, they make terrible destruction of the tumble-down theories and ruinous practice of the drug-schools. They are "the light" of the medical profession, and both "the people" and the profession begin to receive that light with gladness; though as a "prophet is not without honor, save in his own country," so those who throw most light upon medical subjects are the latest received by their medical brethren. We are glad that it will not long be said that the majority of male physicians are on the side of error. Accessions to the cause of hygienic medication are being made constantly, and we may expect more, for in these days people think, and thinking will come to the truth.

And for woman there is a "bright star in the east." She need no longer beg admission into medical colleges, and as many times receive a refusal, merely because she "is a woman."

There is one medical college, "chartered by Legislature," where, side by side with her brother, woman may drink deeply of that "enriching lore," may scale with him into the "dizzy hights," the "shining steps" of knowledge, and, with the inspiration of that confidence with deep culture gives, she may go forth into the world a messenger of light and love.

Woman educated thus, and there, will soon solve, to the undecided, the problem of her fitness to enter the medical profession. Her suffering sisters welcome her with delight, and "will not let her go" till she has repeated to them the story of how the precious boon of health may be restored to them.

Then, as "honor is to whom honor is due," will not the good, the noble, the lover of humanity, honor and labor for the best interests of that institution which has proved, is proving, and will prove such a blessing to our land—to our race? For if we would bless humanity, bless our race, we must bless woman. How can we better do this than by educating her?

> "The woman's cause is man's—they rise or sink
> Together, dwarfed or Godlike—bond or free."

If it be noble in man to devote his life to the practice of the "healing art," why should it not be so for woman to do the same? Then, in the name of woman, I would say, "Bless the college which educates her for this great work of health and reform."

* * *

Usages in Fashionable Society.

MARRIAGE.

When a man marries it is presumed that all his bachelor acquaintanceship ends. He can renew his friendships by sending cards or invitations, but where he neglects to do so, the party neglected may be sure that no further intercourse is desired. There are various reasons for this. In the first place, a bachelor need not be so particular in his choice of companions as a man of family who has a social reputation to achieve. For amusement, while unmarried, he may associate freely with those whose morals and habits would not exactly accord with the proprieties of domestic life.

Ladies, after an engagement to marry, should be cautious of receiving any attention whatever from gentlemen. Lovers are naturally jealous of any such attentions, however innocent or frivolous.

It is the lady's privilege to name the day for marriage, and the lover should leave the arrangements exclusively to her. He ought never to urge her to hasten the event contrary to her wishes, as the lady may have reasons that he cannot appreciate for a more remote day for the nuptials than he desires.

The bridal outfit, which is furnished by the relatives of the bride, usually consists of clothing and necessary family linen. Some opulent fathers will add to these a house and furniture. Jewels are not usually comprised in an outfit. They are presented by the bridegroom. Bridal presents consist of any useful or ornamental articles for the use of the bride, whether to adorn her person, for the toilet, or the housekeeping. Sometimes dress patterns are given, but they are not appropriate, as the colors may not please her.

The bridegroom should wear a black dress coat and trowers, white vest and black cravat. Let us intreat him not to commit the solecism against good taste of wearing a white cravat, which gives an inexpressibly silly look to the most intellectual countenance in the world.

The bride may have one or half a dozen bridesmaids at her choice. No number being fixed, it is often determined by the number of sisters or of intimate friends she may have. The bridesmaids should be dressed in white, all alike, and wear orange flower bouquets.

If there is a bridal breakfast or collation, the the bride should retain her bridal dress until that is over. She can then put on her traveling dress.

After the departure of the newly-married couple, cards are used, and wedding-cake forwarded to their numerous friends, the cards usually contain an appointment of a certain day (or two or three days if necessary) when they will be 'at home" to receive visits of congratulation. Cards and cake are also sent to distant friends—those residing even hundreds of miles away. The cake is often omitted and the cards sent by mail.

When a bride attends the first party after marriage, she usually trims her hair with orange flowers.

A newly-married couple are not expected to give parties at their house for the first year; but after that time they must no longer play the part of exceptional beings, but bland with the herd, and talk as others do.

* * *

A carpenter shingling a house, heard the mistress scold, and said: "If I had that woman I'd appoint a funeral to-morrow, at two o'clock, and by the everlasting, the corpse should be ready."

As people sprinkle the floors before they sweep them, so some ladies sprinkle their husbands with tears, in order to sweep cash out of their pockets.

Woman's mission is to stay at home by the fireside whilst man goes out to collect materials to make the pot boil.

The scriptural penny was worth in the time of Christ about one hundred and fifty of our cents. A penny a day, therefore, for working in the vineyard, was tolerable wages.

Of all kinds of property, moneylent on good security is the most interesting.

MRS. LIZZIE W. WARREN, M.D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases them selves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention.*

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

PRICE REDUCED!

PATENT
HYDRAULIC HOSE
MANUFACTORY.

HOSE
SEWED WITH FOUR SEAMS,
For 15 Cents per Yard,
GUARANTEED TO STAND THE PRESSURE OF ONE HUNDRED FEET FALL AND LAST AS LONG AS THE DUCK, WITHOUT RIPPING.

I am also prepared to sell PATENT-RIGHTS for States, Counties, or Townships, as I hold the documents from the Patent Office at Washington City, with the Seal stamped upon them.

Miners and others interested will please address
BOX No. 353 AT THE MARYSVILLE POST OFFICE,
or through Wells, Fargo & Co.'s Express. All orders thankfully received and promptly executed.

For those having a disposition to invest a small sum in a safe and profitable business, now is the time. I have made sales to Mr. John Carbold, of North San Juan Township, and to Mr. John T. Allment, of Marysville. From these I have the highest recommendations, and numerous other recommendations relative to the value of this Machine.

S. HOWARD,
Pioneer Hose-Maker.

MY NEIGHBOR OVER THE WAY.

I have a neighbor over the way,
  Who sends me flowers so fresh and fair,
I know they will not wither away,
  Because I shall keep them in vases rare,
Inlaid with colors brilliant and fast—
And wrought from a memory, always to last.

Lilies and roses, and delicate green,
  And heliotropes fainting with purple bloom,
Just as the flushing of dawn is seen,
  Fading to white in the skies of June;
And scattered among them, fresh with dews,
Geraniums, red as the sunset's hues.

Oh! beautiful types of all that is pure!
  Ye wither, but only to blossom again;
Just as the aching that we endure
  Grows into peace, *beyond its pain*.
Just as the crown, by the cross may lay,
Though hidden, oh! neighbor over the way.

The roses of Sharon hereafter will grow,
  Close by the side of the lilies fair,
And on the banks of the rivers that flow,
  The angels of Heaven shall gather them there;
Oh! at home, by the silvery streams, one day
I may meet my neighbor over the way.

◆

WHAT MIGHT HAVE BEEN.—Even in the best, we see no more than the rudiments of good qualities which might have been developed into a great deal more; and in very many human beings proper management might have brought out qualities essentially different from those which these beings now possess. It is not merely that they are rough diamonds which might have been polished into blazing ones; not merely that they are thoroughbred colts drawing coal-carts, which with fair training would have been new Eclipses; it is that they are vinegar which might have been wine, poison which might have been food, wild-cats which might have been harmless lambs, soured miserable wretches who might have been happy and useful, almost devils who might have been a little lower than the angels. Oh, the unutterable sadness that is in the thought of what might have been!—[Boyd.

THE TALENT OF SUCCESS.—Every man must patiently abide his time. He must wait; not in listless idleness, not in useless pastime, not in querulous dejection, but in constant, steady, and cheerful endeavor, always willing, fulfilling his task, "that when the occasion comes he may be equal to the occasion." The talent of success is nothing more than doing what you can do, well, without a share of fame. If it comes at all, it will come because it is deserved, not because it is sought after. It is an indiscreet and troublesome ambition which cares so much about fame, about what the world says of us; to be always looking in the face of others for approval; to be always anxious about the effect of what we do or say; to be always shouting, to hear the echoes of our own voices.—[Longfellow.

GOOD NEWS FOR CONSUMPTIVES.—If there is any truth in the following statement, clipped from the New York Evening Post, consumption may be made a less terrible scourge of humanity than it has been in past times: "Recent experiments made by the French physician Dr. Curie, reveal a very powerful new remedy, and a remarkable illustration of the cardinal principle of homeopathy. The plant called "sundew" (*drosera rotundifolia*) will develop tubercles in the lungs of a cat, and cause other phthisical symptoms of lymphatic degeneration in the most marked degree, if administered steadily for a short period. At the same time regular doses of from four to twenty drops of the alcoholic tincture of the same plant will infallibly cure tubercles in a human patient, if begun in the earlier stages of pulmonary consumption. Cut this for your pocket-book."

A LONG STRETCH.—At Edinburgh a wire has been stretched between Edinburgh Castle and the Calton Hill, 4200 feet long, which fires a gun daily at one o'clock. The objection to firing a gun at the observatory at Calton Hill was that it would derange the instruments there. Accordingly a wire was stretched clear across the city without a rest. The electric current passing on it carries a clock at the Castle which, at one o'clock, drops a weight that discharges the gun.

A distinguished divine, on a certain occasion, while preaching with his usual eloquence and power, said, "Brethren, I sometimes illustrate my subject in this manner;" and putting his handkerchief to his nose, blew a blast loud enough to wake "the seven sleepers." That was not the intended illustration, but some of his hearers thought it was.

ENGLISH astronomical eyes, out on a star-hunting expedition, have discovered another comet. Nothing more harmless could by any possibility be discovered.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are n t as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when as in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer.

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp. Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to T. B. MERRY;
21 Farmer Office

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by
JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. SAN FRANCISCO.

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.]
Nov. 21.

Since our last report, in consequence of the continued storm, our Grain Market has been dull, and receipts very light. Shippers have again entered our market for Wheat and Oats, and we have reason to expect an active trade, at remunerative prices. In consequence of the storm, the ships now on the berth have done nothing toward completing their loading for the past eight days. In fact, our grain receipts have been merely nominal. There is now chartered to be loaded the ship Mary Chase, to load with Oats, for Melbourne. The market for Oats continues firm at last quotations. Barley remains the same; holders and buyers both seem not to manifest desire to meet each others views. Hay, in consequence of light receipts, has materially advanced, and our market is now by the cargo from $16 to $25, and we hear of jobbing sale as high as $30 per tun. This rise in Hay is surprising, when we see at what prices Barley and Oats are selling. The ship Kaffir Chief took 1546 bbls Flour, 500 sks Oats, 750 flasks Quicksilver, $65,000 treasure. The Winged Racer, has refitted and commenced to reload with wheat. The steamer Cortes arrived on the 14th, with an assorted cargo: of Wheat 130 sks, Flour 8500 quarter sks, Apples 5088 boxes, Wool 49 bales, and a supply of Bacon, Butter, &c. The David Crockett, for New York, took an assorted cargo consisting of 2861 sks Barley, 461 bbls Beef, 24,947 Hides, 940 sks Mustard Seed, 28 cases Tallow, 1344 packages of Wool, beside an assortment of other goods. The ship Carrington, for Shanghae took 263,000 feet Lumber, and treasure; total value of cargo, $9260. The Gen. Harney took an assorted cargo to Tiger Island, of which Flour, Hams, and Potatoes formed a part.

Our receipts of Grain around the Bay for the past week have been as follows: Wheat, 13,536 sks; Flour, 8128 qr-sks; Barley, 3885 sks; Oats, 1470 sks; Beans, 17 sks; Onions, 350 sks; Buckwheat, 75 sks; Potatoes, 3710 sks; Salt, 900 sks; Bran, 300 sks; Wool, 230 bales; Hay, 175 tuns.

San Francisco Cattle Market.

Nov. 21.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

The market for first quality of Beef Cattle is somewhat better than it has been for some time past, and an extra article would perhaps bring from a cent to a cent and a half a pound above our quotations, the market not being very well supplied with that quality.

Hogs have declined, particularly Stock Hogs. Fat Hogs on foot are in good demand at our quotations, particularly large ones, as they are most sought for by the packers.

AVERAGE SLAUGHTERERS' PRICES.

Beef—American, first quality 3c to 6c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ℘ lb.

Veal—first quality, 3c@6c.

Hogs—Stock Hogs 1½ to 2c; fat Hogs on foot 2½ to 4c; Dressed 7c@8c.

Mutton—dressed, 3c@6c, according to quality.

Milch Cows—1st quality $25@$60; 2d quality $15@$25.

Please Mention the Farmer.

We will be thankful to our friends if they will mention the fact to parties, where they are led to purchase goods, of receiving that information from the Farmer.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Post-Office Laws.

We publish the annexed decision of the Courts relative to the matter of newspapers. It was a righteous decision. Any man who will continue to receive a newspaper for years, and then try to avoid payment, should be made to know that he is liable for the debt, interest, and costs; and also as it is a United States Law that regulates it, the debt cannot, like other debts, become outlawed. There are "lots of people" who willingly take papers year after year if they can avoid payment, and when called upon for payment, say they did not intend to *continue* their paper, and they only subscribed to *patronize* the paper! It is *such patronage* that has destroyed more papers than any other cause.

To receive a paper from the office is *positive proof* they intend to take the paper, and no person should take a paper unless he intends to pay for it, and do it promptly. We are glad the Law is being applied to some hard cases as examples. Some persons think by ordering a paper stopped, or moving away, they can avoid the payment justly due, but the Law says every person must first *pay all arrearages* before they can stop their paper; and if they move away without giving notice, and also paying all dues, the bill for papers sent for years can be collected.

How much better and wiser, and certainly more pleasant, for all, if subscribers would keep their true accounts, and always promptly remit their dues. When such is the case, there is a pleasant intercourse between the publishers and the subscribers, alike beneficial to both:

Judgment for a Newspaper Account.

Among the recent decisions at the General Term of the Supreme Court of the Albany (New York) District, was one in favor of J. Seasbury against Bradford O. Wait, for seven years' subscription to the Catskill Recorder and Democrat. The decision was in favor of the publisher, and the judgment and costs, we understand, amount to between two and three hundred dollars.

One of the exchanges copies the above paragraph, and adds the following comment:

Good enough for him. He had sneaked along seven years, enjoying the fruits of the labor of another, and now he has to pay that bill, with Court costs superadded. If publishers would make a few more such exhibitions, newspaper swindlers would find it a desperate game to play. We hope it will prove a warning to delinquents.

The New York Observer, one of the oldest religious newspapers in the country, says of this decision:

It is surprising that so few subscribers fully understand their responsibilities to publishers of newspapers. The law which governed in this decision is a law of Congress, and therefore applicable in every State of the Union. Many subscribers seem to regard the bill for a newspaper the last to be settled, and especially the last which the law will enforce. Responsible men even, under trifling whims, refuse to take their papers from the office, regardless of the payment of arrears, and when a half dozen more years have been added to the arrears at time of stoppage, think it hard to pay the increased bill, with interest and costs of collection.

◆

Protection to Newspaper Publishers and Their Subscribers,

Office of the Special Mail Agent
for the Pacific Coast.
San Francisco, 1861.

Sir: Complaints have been made to me that Newspapers are improperly taken from the Mails at many of the Post-Offices on this Coast, by parties to whom they do not belong.

Your attention is called to the following extracts from the Postal Laws on that subject:

Section 128. Be it further enacted, That * * * * if any person employed in any department of the Post Office shall improperly detain, delay, embezzle, or destroy any newspaper, or shall permit any other person to do the like, or shall open, or permit any other to open, any Mail or packet of newspapers, not directed to the office where he is employed, such offender shall, on conviction thereof, forfeit a sum not exceeding Fifty Dollars for every such offense. And if any other person shall open any Mail, or packet of newspapers, or shall embezzle or destroy the same, not being directed to such person, or not being authorized to receive or open the same, such offender shall, on conviction thereof, pay a sum not exceeding Twenty Dollars for every such offense. * * * * *

Section 132. And be it further enacted, That if any Postmaster shall unlawfully detain in his office any letter, package, pamphlet, or newspaper, with intent to prevent the arrival and delivery of the same to the person or persons to whom such letter, package, pamphlet, or newspaper, may be addressed or directed in the usual course of the transportation of the Mail along the route; or if any Postmaster shall, with intent as aforesaid, give a preference to any letter, package, pamphlet or newspaper over another which may pass through his office, by forwarding the one and retaining the other, he shall, on conviction thereof, be fined in a sum not exceeding Five Hundred Dollars, and imprisoned for a term not exceeding six months, and shall, moreover, be forever thereafter incapable of holding the office of Postmaster of the United States.—Sec. 32, Act of July 2, 1836.

In accordance with the above, I shall use every exertion in my power to have all Postmasters removed from office who allow a violation of these Laws; and shall prosecute all persons (whether Postmasters or others) on information of their having violated either of them.

We take pleasure in publishing the above, as we have been largely a loser by the practice which has existed of permitting other than subscribers to take papers from the Post-Offices. We shall be glad if our subscribers will advise us of every infringement of this Law, when it interferes with our journal, and we will reward them for their valuable information.

◆

Pamphlets and Catalogues Received.—We have received from the author a pamphlet of about 40 pp., "The War, and How to End It." We shall read it, and then speak of it. It is well to discuss this question and meet all the points bravely, for they must be met. We have received also the extensive Catalogues of the celebrated Nurserymen, Seedsmen, and Florists, of Paris, Messrs. Vilmorin-Andrieux & Co., a valuable series of pamphlets. Also, an excellent Descriptive Catalogue of the Suscol Nurseries of Messrs. Thompson, containing valuable hints on planting and the management of Trees, Vines, etc.

A New Grape in England.—A new grape has been raised by Mr. Ingram, head gardener at the Royal Gardens, Frogmore, a place famous for fruit-growing. This grape is pronounced a hardy grape and very prolific; the best judges of grapes have given it as their opinion that this grape will prove one of the best flavored of all grapes. It has been named Ingram's Hardy Prolific Muscat. Mr. Standish of the Royal Nursery, Bagshot, has the stock of this grape, and will send it out at *three guineas each*, or fifteen dollars. It must be a very valuable grape if it will command such a price.

Grain Storage.—Those who desire to send Grain to this city for storage, should bear in mind that Messrs. Wm. T. Coleman & Co. can offer the very best facilities in point of location and terms, both of storage and loans.

Larrimer's Vineyard, Napa Hills.—We spoke of this Vineyard last week as an excellent one. There were only about 600 bearing Vines planted in 1855, yet they have yielded 25 and 30 pounds to the Vine, the nett yield about $300. Near this Vineyard is an Orchard of 250 trees, some of them yielding 200 pounds Fruit to the tree. Mr. Larrimer has 150 bushels Apples on hand of very superior quality, Belleflowers, Baldwins, Pearmains, etc. Mr. Larrimer had 600 acres Grain, also. We noticed also a splendid filly, Cheatham blood, called Lucy Coombs. Rarely have we noticed a finer animal; splendid limbs, fine neck and head, a bright full eye, and the grace of movement of a Thoroughbred.

The Holidays are Coming.—A few weeks and the Holidays will be upon us. Now we want some valuable Gifts from our friends, and we would only say now, that we would be glad if our friends would give us, as a Thanksgiving, Christmas, and New Year's Present, a goodly list of *new subscribers*. We should gratefully receive such a gift as the best that could come to us. To all such as may give us such a token we will not forget them, nor will we be behind them in generosity. From whence shall come the first token?

Why are Wheeler & Wilson's Sewing Machines something like "perpetual motion?" Because they are *constantly moving* from the Agents' hands to supply orders received by him.

Celestial Suspension.—The dead body of a Chinaman was found hanging to a tree near Folsom, two or three days ago. The Chinese often commit suicide by hanging, but it is thought that this particular John was secretly lynched for sluice-robbing.

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

National Loan.

PURSUANT TO INSTRUCTIONS FROM THE SECretary of the Treasury, a book will be opened on the 14th day of November next, at the Office of the Assistant Treasurer U. S., in this city, at the hour of 9 o'clock, A. M., for subscriptions under my superintendence for Treasury Notes, to be issued under the Act of July 17, 1861. These notes will be issued in sums of fifty dollars, one hundred dollars, five hundred dollars, one thousand dollars, and five thousand dollars each, dated 19th August, 1861, payable three years after date to the order of the subscriber or as directed, and bearing interest at the rate of 7 3-10ths per cent per annum, payable semi-annually; such interest being at the rate of two cents for each day on every hundred dollars. For the convenience of the holder, each note will have coupons attached expressing the several amounts of semi-annual interest, which coupons may be detached and presented for payment separately from the note.

Subscriptions for such Treasury Notes will be received during fifteen days from the day of opening the book as aforesaid. No subscription for less than fifty dollars nor for any fraction of that sum can be received. Subscriptions of fifty dollars or one hundred dollars must be paid in lawful coin of the United States at the time of subscribing. Subscriptions of more than one hundred dollars may be paid at once; or, if preferred, one-tenth at the time of subscribing, and one-third of the whole amount on every twentieth day thereafter until the whole shall be paid. No payment of less than fifty dollars can be accepted, that being the smallest sum for which Treasury Notes can be issued.

Certificates will be granted in duplicate to subscribers for the amounts so paid, the original of which the subscriber will transmit by mail to the Secretary of the Treasury, when Treasury Notes as aforesaid will be issued thereon to such subscriber or his order, carrying interest as expressed in such certificate; but in cases where only a part of the amount subscribed is paid at the time of subscribing, Treasury Notes will be issued only for the payments made subsequently to the first, which will remain until the whole amount subscribed by such person shall be paid, when Treasury Notes will be issued for such first payment also. On payment of each deferred instalment, the subscriber will pay, in addition thereto, a sum equal to the interest accrued thereon from the 19th August to the date of payment, and on final payment like interest on the amount paid on subscription, which payments of interest will be reimbursed to the subscriber in the payment of the first coupon.

The Treasury Notes issued upon such certificates by the Treasury will be sent to the subscribers by mail, or such other mode as may be indicated by them when they transmit their original certificates. The duplicate certificates may be retained by them for their own security.

D. W. CHEESMAN,
Assistant Treasurer U. S., and Subscription Agent.
San Francisco, October 19, 1861. 7

FAMILY MARKETING.

Stall No. 1, Washington Market.

Families that desire the very best kinds of Market

Fruits and Vegetables,

in their various seasons, with all the choice selections, can be supplied with them FRESH every morning, by calling at

BUDDINGTON'S,
No. 1, Washington Market,
Washington street, San Francisco.

☞ Fruit and Produce Receivde and Sold
ON COMMISSION.

☞ Orders left at the stall, and the purchases will be sent to any part of the city promptly, and free of expenes. 1-3m

TO THE WOOL-GROWERS OF CALIFORNIA.

THE UNDERSIGNED, AGENT OF THE CALIFORNIA WOOL GROWERS' ASSOCIATION, is now prepared to receive and forward WOOL to the East on the most favorable terms.

This Agency is wholly an instrument of the *WOOL-GROWERS THEMSELVES*, and designed to protect them from all speculative combinations, by enabling them to realize the **Full Eastern Value** of their Wool.

Satisfactory advances will be made on Wool consigned to us, at the rate of 7 per cent per year.

Any information or reference will be promptly given.

JAMES E. PERKINS,
321 Front street, Room No. 2, up stairs,
9 San Francisco.

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

TRAVELING.

Pacific Mail Steamship Company's

STEAMSHIP
St. Louis,
..............................COMMANDER.
Will leave Folsom street wharf
ON SATURDAY,......................Nov. 30, 1861,
At 9 o'clock, A. M., punctually,
FOR PANAMA.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York by the Atlantic and Pacific Steamship Company.

FORBES & BABCOCK, Agents,
9 Corner of Sacramento and Leidesdorff streets.

California Steam Navigation Company.

ARRANGEMENT FOR
1860.
Departure daily from Broadway wharf, at 4 o'clock, P. M.
CARRYING UNITED STATES MAIL.

Steamer ECLIPSE, Captain E. C. M. Chadwick;
" ANTELOPE, Captain E. A. Poole;
" CORNELIA, Captain E. Conklin;
" HELEN HENSLEY, Captain E. Z. Clark;
" J. BRAGDON, Captain D. B. Moseby.

One of the above steamers will leave Broadway Wharf every day at 4 o'clock, P. M. (Sundays excepted), for

Sacramento and Stockton,

Connecting with the light draft steamers for

Marysville,
Colusa, and
Red Bluffs.

For further particulars inquire at the Office of the Company, corner of Jackson and Front streets.
Jan 1. J. WHITNEY, JR., President.

COLEMAN'S LINE,

SAN FRANCISCO TO NEW YORK.

HAVING ESTABLISHED A LINE
..OF..
CLIPPER SHIPS,

To sail regularly from San Francisco to New York, we are prepared to offer unusual facilities to

Shippers of California Produce.

Freight will at all times be taken on the most Favorable Terms.

Goods from the Interior, and from other Ports, will be received and forwarded, Free of Commission.

ADVANCES made on desirable Merchandise consigned to our New York House.

Insurance provided under our open Policy with the Great Western Insurance Company of New York.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Experience of a Vine-Grower.—No. 2.

St., Helena, Cal. Nov. 26, 1861.

Editor Farmer: My communication of last week gave you a brief account of my first essay at Vine-planting; that was in 1859. My second lesson was in doing the work over again in 1860, and in planting ten acres more in cuttings at a distance of six feet by seven. This distance was adopted as a sort of "compromise" between those who recommended six by six, seven by seven, eight by eight, etc.

The ground was subsoiled but could not be very well done, as stumps and roots were in the way. Holes were dug in part of the ground, but in other portions it was loosened deep enough by the subsoiler to admit of slipping the cuttings down fifteen to eighteen inches deep under the concave surface of long narrow steel-spades made for the purpose. But one cutting was put in a hill, as I expected to have enough strong roots of those planted two in a hill to supply the 4000 vacancies in the previous years' planting, to replant this with in 1861. Ninety per cent grew well, and the remaining ten per cent was accordingly supplied last Spring by the large strong roots obtained by raising one of the two replanted in the old vineyard the previous year. A strip forty rods long and fourteen feet wide was left through the ground planted in February, 1860. This was also planted with the same kind of roots, after being well plowed,—about 100 in the row.

Now mark the result; so far as diameter of main stem, branches and spread of foliage are concerned, it is not easy to distinguish the planting of 1859, from that of 1860. The row of 100 vines above named were rooted from the same lot of cuttings, and planted the same month in the same kind of ground, and had the same cultivation as the rows of vines between which they were planted last February. The only advantage their immediate neighbors can claim over them consists in having been put in vineyards as cuttings and never transplanted. Now, although each has had two seasons of growth, those of the adjoining rows average more than twice the size of the transplanted row. They appear to have a full seasons' growth advantage of the transplants. Is not the conclusion, then, irresistible, that planting cuttings in this sort of ground is preferable to spending a year in rooting them.

Again, from the same lot of cuttings, 50,000 procured by Doctor Rule of Napa city and myself, he planted 30,000 in nursery, and had his land lie in fallow a year. They were drilled some two inches apart, instead of six or ten, and consequently had a bad chance to form roots. They were taken from nursery and put out as standard vines last February, about half-a-mile from mine, at an expense by contract of over twenty dollars per thousand. Over ten per cent on his thirty acres are now dead, and the balance as much smaller than my transplanted ones that grew in the hills, of standard vines, as a scientific horticulturist would expect them to be from their huddled condition in the nursery. Had he put his cuttings in the vineyard at once, as I did, there is not one doubt in my mind but he would have had them in full bearing one year sooner than he now will, and at one-half the expense of planting. He was induced to adopt this course by some European professed vine-dressers, who like very many foreigners who can speak Dutch or French, *claim* to know all that is worth knowing in relation to vine-culture. We may yet learn that California requires a mode of culture as different from that pursued in the Rhinish Provinces, as their snowy winters and rainy summers differ from our seasons.

Our first rain this fall was on the night of the 19th inst., and the weather has been wet with the exception of some two or three bright days ever since. Three and one-fourth inches have fallen in the aggregate.

The first frost sufficient to affect materially the vine leaves occurred about the 20th inst. My foreign vineyard suffered much less from it than my California of the same age on one side and older ones on the other. G. B. C.

We are pleased to receive the above from our correspondent, and will endeavor to comply with his wishes. We hope he, as well as others, will continue to give us the results of their experience, and observations, for mutual benefit.

* * *

New Cider-Mill.—Attention is called to the new Cider-Mill advertised in our columns. This Mill is a good one, and should be seen by those in want of a Mill. It has been tried, and found most excellent.

[For the California Farmer.]

I Guess It will Do.

So I said to myself, a year ago, when hiring a piece of land on which I intended to plant Chinese Sugar-Cane. I knew the land was too heavy, but could not command just such as I wanted, so I came to the philosophical conclusion that it would *do*, upon the presumption that old Mother Nature would not be so *very* particular, and would give me a short, thick stalk, at least, if not a long slim one, which might be expected from lighter soil. It was new land; broke it in January, and re-plowed just before planting. The plants did well for a time, but when the roots got down below the soil loosened with the plow, they branched off at right angles, nearly as perfect as though they had been sitting on a board, and of course the tops did the same, for a pinched, cramped, knurly root cannot draw sustenance from the earth, sufficient to produce a fine, healthy stalk, any more than a tea-kettle could supply steam for a steam-engine; consequently, a very small portion grew large enough to form a stalk, and none of it ever matured. From inquiries made, and from personal observation of several different fields of cane, on as many different qualities of soil, I am satisfied that no system of cultivation will produce this crop on any other than light land. Where the stalks have grown straight, and to the hight of twelve or fourteen feet, I have found the ground completely filled with roots to a depth of three and four feet, and I know not how much deeper; after cutting one of these stalks, in a short time the root yielded sap enough to wet the dry ground it for two or three inches, thus proving conclusively that the plant requires a large amount of nourishment, which can be supplied in no other way than by sending down its myriads of rootlets to collect the needed food; suckering, extra cultivation, and all such coaxings, amounts to nothing in the absence of soil in which the roots can run straight and easy.

Napa City. R. E. W.

Home-Made Tool Handles.

Editor Farmer: I wish to call your attention, and more especially the attention of our importing merchants of San Francisco, to the imposition practiced upon all who use that most useful tool, the Ax. We have been thus far dependent on our Eastern friends for Ax-helves, and for a year or two past it has been impossible to get a helve in these parts worth fastening. Good hickory helves have been sent us until late years, which was quite a treat, and would still be; but now an article is imposed on us but little better than white pine. These helves have a grain somewhat like that of hickory, but when tried prove to be bogus. Frequently two cords of wood cannot be chopped without getting the second helve, and pay the old hickory-price, fifty cents, for it. Now, sir, this wooden-nutmeg business ought to be stopped.

California is a loyal State, and most assuredly will continue to be, but she ought to withdraw her patronage from the soft and brittle helve-makers of the East. If our merchants did not buy them, they would not be made, and the good hickory would still be sent us.

Cannot some of our citizens be induced to engage in the helve-making business in our State? There must be big money in it. Helves are quite an article of trade here, and their importation can be stopped, greatly to the advantage of the home-manufacturer.

There is timber in our State far better suited for helves than that we are getting from the East, which can be found on the hills of Russian River and Bodega, that I know of; and why should we send our money abroad for articles we can produce at home?

Can you not say something, Mr. Editor, that will induce some of our enterprising mechanics to engage in this lucrative business? Bodega.

We are very glad to hear from "Bodega," upon the subject of Home-manufacturing. The article he names is an important one, and deserving attention. There is no reason in the world why we should not manufacture all our ax-helves and pick-helves, and all this kind of ware. We know there is timber enough for all such purposes, and as good as can be found in any part of the world.

* * *

Bluestone.—The Independent says the farmers of San Joaquin county have bought extensively this season of bluestone, as shown by the large quantities sold by the druggists and dealers in the city. The use of bluestone has been ascertained to be the most effectual preventive against smut, and hence its almost universal use among experienced grain-growers. Some employ a mixture of bluestone and salt, others use salt, while the greater number find the surest protection in a solution of bluestone water. If we may judge from the great quantity of the latter sold this season, its use is becoming preferable over all other solutions.

The Foothills for Tobacco.—The Shasta Courier thinks that California "has the largest tobacco growing area of any State in the United States, and any one familiar with the production of this article will bear us out in the statement. It can be grown nearly to the summit of the Sierras, indeed we think the 'foot hill' section of our State, the very best portion for its production."

Low Trees versus High Ones.

By William Bacon, Richmond, Mass.

[The following excellent Essay we give our readers as one of great value. It is the same doctrine we have urged for years. The clear and conclusive evidences of the value of this plan are so well explained, that we take pleasure in presenting the article entire. The season of Tree-planting is near at hand, and now is the time to practice the plan proposed:]

In years gone by, as the remaining Trees in old Orchards show, there was an almost universal practice of throwing the tree-tops high into the air; first, by allowing the trunks to arise some six or seven feet before they throw out branches; and, secondly, by pruning the branches near the trunk, leaving merely a tuft of limbs at the extremities of these naked arms. These outside tree-heads, formed on branches that had the appearance of *artificial* trees thrown out from the trunk, of course receded further from the main body of the tree each year.

The disadvantages of this way of growing Trees are, their greater liability to be shaken and broken by high winds; the longer the lever, the greater the power in raising heavy bodies; the further the heavy tree-top is removed from the earth, the more power the winds will exert to overturn a a tree. Then the branches are more liable to be broken by the weight of top being far removed from the trunk, or, if not directly broken, they are severely twisted, and thus made unhealthy, which, in due time, insures their decay.

The Fruit on such trees is much more liable to be prematurely blown off by high winds; they are gathered with much more difficulty when mature. If the tree is shaken, as is still the custom with many, it is sadly bruised by the fall from these high tree-tops; and if picked off, the danger to life and limb in the operation is increased in a greater ratio than the increasing distance from the ground.

But there is yet another objection to this method of tree-forming? fully equal to, if not greater than, all other. Sap is the life of the tree, and the excess of sap goes to perfect the Fruit. The longer the trunk and branches of the tree, the more of this must go to support the wood; the more the small branches are thrown into tufts at the extremities of large limbs, the fewer will be the leaves to elaborate sap for the nourishment of the tree, and perfection of Fruit; consequently, a feeble tree and small and inferior Fruit will, in the end, be the result of the miserable system.

By the above noted system of tree-growing, they are more exposed to the ravages of insects. The more bare wood, and greater exposure of it to atmospheric changes, the feebler the tree, and more subject to attacks, not only of the hosts of of animal depredators that feast most greedily upon such trees; lichens gather on them more readily, and feed on their very vitals. Any one must know that these evils cannot be so readily contended with on a high, ill-shapen tree as when near the surface; so that, besides the increased amount of danger from the evils alluded to, the difficulty of obviating them is so much increased that, in a sort of indolent discouragement, they are neglected, and old, moss-covered, worm-webbed, insect-bored trees in a few years take the place of what may now be a young, thrifty, and promising Orchard.

When Nature raises trees, she does it on her own economical plan—one best calculated to give health and long life to her subject. In the forest we see trees shoot up their tall mast-like trunks with a few branches at their extremities. Such trees are protected by surrounding trees while the forest remains; but remove the burden of timber, and how the remaining trees are rocked and shaken by the wind! How often their beautiful heads are decapitated by the raging storm! Who ever saw such trees on the border of a wood-lot, or standing in isolated positions about fields? Such trees, if on the border of woodlands, throw out branches near the ground, to shield the body of the tree from storms and sunbeams. And the specimen of unrivaled symmetry in the field—how low its branches, and how beautifully it throws its long arms abroad! Yet these arms are not the naked ones that invite disease, but all along their length they throw out little branches, from each of which a clump of leaves appear to aid in furnishing the tree with healthy life-blood. If these branches become too numerous, or if the weaker interfere with the stronger, nature prunes and casts off what is superfluous.

But to our Fruit-trees. The best specimen of an Apple-tree we ever saw made its head so near the ground that a person can without difficulty step into the lower branches, and these branches spread so low that the Fruit can be gathered without difficulty by a person standing on the ground. They are long branches, and the top of the tree a symmetrical hemisphere. Neither the ax nor the saw has been accessory to forming that tree-head. The hand and the pruning-knife directed the first starting of these branches, and here they stopped, unless two combatant branches so interfered with each other's rights that one of them must be removed. This tree-top is so dense and so wide, that the hot midsummer sun cannot send his fiery rays to scorch the unprotected part of the tree. They fall upon its leafy head, and the warm atmosphere is diffused along the trunk and among the branches. No insects have ever disturbed the tree, unless it were some straggling worm that so far forgot the rules of propriety and honor as to commence its web among its branches. And, what is far better, it has never failed of a crop since it commenced bearing.

Low trees come into leaf, flower, etc., earlier than tall ones. A Pear-tree seven feet high had branches within a foot of the surface of the ground. The lowest branches were in full leaf before the buds on the top of the tree had developed the color of the leaf. And a Plum-tree, with branches near the ground, gave blossoms on the lower branches from a week to ten days earlier than they appeared in the upper part of the tree. Let the difference continue in the same ratio through the season, and many of our Fruits would be raised in much higher perfection than they now are.

We have no doubt but many of our old Orchards have been injured more by injudicious over-pruning than in any other way. Tree-pruning was almost a mania. It must be done every spring. This lower limb must be taken off, and that branch pruned as far out as the operator dared to venture, and could reach with the destructive ax. Such a system of tree-torturing and tree-mutilating could not be otherwise than destructive.—[Horticulturist.

* * *

How to Make Accurate Outlines of Fruits.

By Coososco.

Now that the Pears and Apples of the later and more valuable varieties are ripening, I wish to suggest to all cultivators desiring to preserve of accurate outlines of their Fruit for future reference or comparison, a plan, although by no means new, yet not very generally known or practiced.

In the first place, have prepared a neat book of clean white paper; drawing-paper would be preferable, if you should wish to have them shaded at a future time; but fair writing-paper, not ruled will answer a good purpose. Now take your Pear, and divide it equally through the greatest diameter, taking care, also, to divide the stem with it; then lay it flat upon a loose sheet of glazed paper, and with a black lead-pencil draw its outline by running it around the Pear. You will then have an accurate representation, but the juice of the Fruit has soiled the paper; and although your outline is perfect, yet there is nothing neat about it. To obviate this difficulty, it is necessary to transfer it from the loose sheet of paper to the book. It is done in this manner: remove the juice by soaking it up with blotting-paper before it has had time to strike the glazing, and dampen the body of the paper; then take the original outline, and lay it on the book in the place on which you wish to have it transferred; place between the two a sheet of transfer-paper, and by passing again over the outline with a fine point you will have an exact duplicate, neat and clean, upon your book. The core, seed-vessels, etc., can be transferred in the same manner, by laying a piece of tracing-paper upon the flat side of the cut Fruit, and with a fine brush tracing around them, and then by the former process transferring it to the outline already prepared, the transparent tracing-paper enabling one to fit each outline to the other. When one becomes a little expert at it, the whole tracing may be made from the Fruit, but it would be better to stretch the tracing-paper on a frame, then place it as near the Fruit as possible without touching it, and make the tracing with a fine brush and India ink, this requiring no pressure on the paper, as in using a lead-pencil. We have seen outlines made from the Fruit on common brown paper; this readily absorbs the juice, and in drying, the outline becomes somewhat distorted, and is always more or less discolored. Exterior peculiarities may be added with a lead-pencil, and weight, color, and time of ripening, in fact, the whole history, should be carefully written out beneath. Those who are experimenting in Fruit-culture, should devote several pages to each variety, that they may thus be able to compare the results of different years.

It must be borne in mind that a sectional outline thus made appears less in size than the real Fruit, although in reality it is the exact size. When it is desirable to show the apparent size of the original, a finished drawing should be made from the same outline. Shadow gives the appearance of rotundity, and thus apparently increases the size; this last is, however, artistic, while the other can be done by any one possessing a medium amount of intelligence.

Duplicate outlines can be made on tracing-paper, and transferred to letter-sheets, if one should wish to mail them to friends.

Transfer-paper comes in a package of four sheets, green, blue, black, and red, or four sheets of a single color, for twenty-five cents, and may be had at almost any stationer's. Tracing-paper is sold at six cents a sheet. Fifty cents' worth of the two will last any one almost a lifetime.

Leaves of almost every description can be beautifully transferred, to the most delicate fiber, by laying them on the green transfer-paper, and rubbing them with an ivory paper-folder, so that each part comes in contact with the paper; then place them on clean white paper, and repeat the same process. It is often desirable to preserve fac-similes of the leaves of Fruit-trees, Grape-Vines, etc.

[Will not our Pomologists try and preserve their Fruits in the way proposed? It would be of great value to them in all coming time.]

* * *

The Cotton Question.—From an experiment made by Capt. R. C. Kendall, formerly attached to the United States coast survey, with a perennial cotton tree, indigenous to Peru, he is satisfied it can be cultivated wherever Indian corn will grow, not merely with the success ordinarily attending crops in general, but with a greater profit than any other crop now produced upon our farms. Capt. Kendall says, in his own words, "I have already proved, by personal experiment, that it can be grown in the northern part of Maryland," and predicts that "the period is not very remote when hedges, most efficient as fences, shall yield annual dividends of cotton; ornamental trees, blending the useful with the beautiful, shall repay tenfold their cost and culture; when the rugged hights of the Hudson, the plains of New Jersey, the fertile valleys of the Keystone State, and the undulating prairies of the great West, shall gleam in the sunlight, white as the winter drift, with generous pods of democratic cotton." How we wish this could be realized. It would be a national boon, as it would exert an immense influence in unsectionizing our great country.

Diversity of Crops and Home Products.

We have often urged the necessity of a diversity of crops, both for the interest of the farmers and the State, and are glad to observe with the Marysville Appeal, that the subject is now frequently discussed by the press. The Appeal then properly remarks: Exclusive attention to one crop, such as grain and fruit, puts the farmer at the mercy of the speculators, subjects him to loss by fluctuations in the market, or by unfavorable action of the elements. Had he many crops, one could not so often bankrupt him as now, for the failure or unprofitableness of one would be compensated by the success of another. Besides, there are small crops which yield always a proportionately larger profit than the large ones, and are ever in better demand. Among the new articles of culture suggested by the press are hops, tobacco, and flax. The adaptability of our soil and climate to these products has been demonstrated, especially during the present season, by numerous experiments, which have been from time to time noticed. If the subject is persistently agitated, another year will find the three first of these articles at least very largely cultivated, prominent features in our markets, and contributing considerably to our list of home manufactures. The culture of new articles should meanwhile be encouraged by liberal premiums from the Agricultural Societies, as we have often before, though vainly insisted. A Rhode Island society offers $500 for a bale of the best flax cotton; and in the same way $500 or $1500 should be offered for the best box of California tabacco, for the best bale of California cotton, best keg or barrel of sugar or sirup.

The following portion of the Appeal's article should excite special attention:

But there is one suggestion we want particularly to make in this connection. While it is well for the farmer to diversify the products he raises for market, he should also practice that large economy which consists in producing for his own use whatever can be produced by himself, in preference to buying it from others. He should raise his own fruit of all kinds—his own poultry, eggs, butter, cheese and meat; and the good wife should make her own preserves, sauces, starch, etc. A majority of the farmers in the Sacramento Valley live in mean little shanties, without a garden, without a fruit tree or bush, without a sheep, a hog or a hen, and buy the poor butter they use from importers. We know of farmers who do not even milk a cow, and who dwell with their families in the dust, misery and nakedness of a roadside hut, and are dependent upon the sale of their grain for everything but flour that they consume. No wonder so many valley agriculturists are poor on a hundred, two hundred and three hundred acres, with herds of stock bearing their brand and roving on the plains about them. Such squalor and meanness always cost more than comfort and liberality. The insecurity of land titles is urged as an excuse for this, but it is a poor one. What if the improvements that may be made should have to be surrendered eventually, even in two or three years? The cost of them is more than returned by the comfort they yield, by the physical and moral deterioration they prevent, by the educational aid they are to the man and his family. He and they may lose the snug cottage, the trim orchard and garden, the neat dairy, dovecot and chicken house; but never the refining and happifying influence upon character which these produce—never the delightful memories they inspire, the brave hope that stimulates endeavor after loss or failure, the lesson of economy and the sweet sense of independence they impart.

* * *

Plant Grain.

We would earnestly call the attention of Grain-growers to the importance of now preparing all the land possible for the Wheat-Crop of 1862.

It is an established fact that California can now raise Wheat and compete with the great Wheat-growing sections of the Old States, and that we can place Wheat in the European markets as cheap or cheaper than can be done from Chicago, the great Grain depot of the U. States.

We believe if growers will look back five years, it will be found that the average price has been over 1½ cents, thus showing that with average crops growers have no fear. Europe will always want the "little spoonful" that California may ever have to spare.

In spite of all that has been said by distinguished writers, who tell us "how to make Farming profitable," we assert that Grain (Wheat) can be grown for $10 per acre, averaging 30 bushels per acre, which would be 33⅓ cents a bushel less than half a cent a pound. Many will deny this. But remember, we don't say every Farmer can do this; we say *it can be done*, and we know it, for it was done by real live-Yankee Farmers, who not only work themselves upon the Farm, but whose Farms show a diversified crop that gives them labor all the year to attend to it, and give them a good income for doing so.

As we have said, we believe Europe will *always* take what Grain we can spare, and at a good fair price.

* * *

A Good Crop for One Pear-Tree.—There were grown at Black Point, Marin county, on the ranch of J. DeLong, Esq., upon one Pear-tree of good size, 100 pounds of large Pears. Among them were two Pears weighing, the one, 3⅝ pounds, the other, 3½ pounds. In the same grounds are Quince-trees bearing Quinces that weighed 1½ pounds each.

Nepaul Barley and Tall Oats.—We have a remarkable sample of Nepaul Barley, grown in San Jose in 1857; also Oats, some nine feet high kindly sent us by J. S. Hoyt, Esq. They are at our office.

The Indians of Lower California.

The Jesuit Indians.

The two Jesuit histories of Lower California, that of Venegas published first at Madrid, in 1757, and afterwards translated into French, English and Dutch; and that of Clavijero, first published in Italian at Venice or Sesena, in 1789, and not hitherto translated into English: Both contain careful and detailed observations on the different tribes of Indians civilized by the Jesuits from Cape San Lucas to the Mission of San Francisco Borgia, near to latitude 31°. The following is taken from Part first, section five, of the first volume of Venegas, London edition of 1759, on the different nations and languages of the Jesuits' California. "Among the different opinions formed by the Missions, none are to be preferred before Father Taraval, as none were better acquainted than him about all those countries, being an eye witness of all he affirms. The languages, he says, are three, —the Cochiemis, Pericues, and Monquis. From the latter two dialects have been formed, the Guaycura and Uchiti. The variation indeed is such, that a person unacquainted with the three languages would be apt to conclude that there were not only four but five. The Indians understand one another in words, signifying the same thing in the three languages of Loretto, Guaycurra, and Uchite; but these are very few. Those who are of opinion that three variations have been formed from two languages, conclude that there must have been four.

Country of the Different Tribes.

Clavijero in his chapters,—the 17th to the 25th, —on the indigenous characteristics of the Lower California Indian tribes, says—(edition of Juan R. Navarro, Mexico, 1852, in folio, connected in the same volume with Palon's life of Fray Junipero Serra)—"The Christian Indian nations of California we shall speak of are three: the Pericues, Guaicuras, and Cochimies. The Pericues occupy the southern part of the peninsula from Cape San Lucas to latitude 24°, and the adjacent islands of Ceralvo, Espiritu Santo, and San Jose; the Guaicuras between 23½° and 26°, and the Cochiemies from 25° to 33°, with some of the adjacent Pacific Coast islands. Each one of these nations have their own proper language.] It would seem from Father Consag's Journey to the Colorado in 1746, and those of Padre Winceslao Link in 1764 and 1766, that the Cochiemies language extends over to the Colorado as high up as 33°, and doubtless the tribes of this stretch of country are of very near parentage and affinity. Link traveled only from the frontier missions of San Francisco Borgia to the East on the Gulf shores as far as 33°, but further observations up to 1860 would seem to justify the assertion that the seven Dominican Missions of Santos Fernando, Rosario, Domingo, Vicente, Tomas, Miguel, and Pedro Marter, founded before 1787, and that of Santa Catalina de los Yumas, founded in May, 1797; indeed all the tribes up to San Diego along the coast, and through the mountains to the East to the Colorado, have one general language; which fact would make the Indians (from our Alta California Los Angeles county, to the latitude of 26° in Lower California, and so on over to the Colorado Valley, or a distance in length of about 700 miles), the members of one great nation, long ago divided by wars, pestilence, or convulsions of nature. And let us add, that the traditions of the Indians of all these districts confirm the aspect of contingencies. A. S. T.]

From the following short account it seems that remains of Indian bodies have been found in the caves of Texas as well as in Lower California:

Aboriginal Remains found in Caves in Texas.

H. D. C. Smith, writes that, while himself, his brother Josiah H. Smith, and Jacob R. Stanley, were returning from Mr. Sterrock's mill, within a half mile of the Neches river, their dogs (three in number) started a panther and chased him down the river. The men followed on horseback. After going about two miles, the dogs stopped and bayed very loudly at the foot of a high and rugged bluff of rocks, about two hundred yards from the river. On approaching, the men saw the aperture two or three feet in diameter, leading into a cave. Driving away the dogs, they saw the panther, and Mr. Stanley shot and killed him. They then entered the cave, which they found nearly circular in form, and about twelve feet high, with a small aperture, apparently leading to another. But the light was so imperfect as to deter them from entering it until they had first supplied themselves with a lighted torch. On passing through the aperture they found themselves in a room about ten feet in breadth by eight in hight, and some forty feet long. To their astonishment, they beheld at the further extremity of this room, what appeared to be two human bodies, one stretched at full length on its back on the floor, and the other lying with the head partly elevated on the wall against which it leaned. The party approached with the torch close to them, and awed—almost appalled by the strange spectacle—made a complete examination. They were, indeed, two human forms entire, complete, and perfectly petrified. The feet and hands were bare. A garment, which must have resembled a hunting shirt, seemed to have been worn by each, and partly preserved by petrifaction, was distinctly visible, especially at its seams and folds. On the waist of one was a buckle of pure gold, almost three inches in diameter, securely imbedded in the body. The features were not much shrunken; the eyes were partly closed and even traces of the eyebrows could be plainly seen. The party who discovered these bodies intend, in a few days, to remove them to Jonesborough, where they may be seen by all who wish to examine them. They express no conjecture as to the time these remains may have occupied their present position, how they came there, or even the race to which they belonged. They probably lived before the race of Indians at present found in Texas.—[Galveston Civilian, Sept. 23, 1856.

Their Languages.

Clavijero continues, "at 33° [he is now speaking (in 1770) before the boundary line was fixed by the last settlement made by the Dominicans—to wit, San Miguel about 40 miles south from San Diego], commences another nation who speak a distinct language, and there are others on the margins of the river Colorado, but as they are little known and out of the line of our argument, we shall not here treat of.

The Pericues language exists no longer, the few individuals of this unfortunate nation existing, speaking only Spanish. The Guaicuras have many divergent dialects among the different branches of their nation, as the proper Guaicuras, Aripas, Uchitas, Coras, and Laurentanos, the last named being the one adopted from the Mission of Loretto which was established among them. The Coras and Uchitas are extinguished; the Laurentanos have adopted Spanish; while the others mentioned still use their ancient language. The Cochimies in great numbers learned Spanish, but they also have preserved four dialects of their languages, which are *apparently so divergent as to sound to the unpracticed ear as distinct languages.*

The Cochimies language, which is the most extended, is very difficult, full of aspirates, and has so many modes of pronouncing that they cannot be properly explained. It has no higher numbering than four, to wit: lepeeg, one; gogus, two; combio, three; magacubugua, four; to say five, they say naganna tegueeg ignimel, this is one hand entire. The rudest of them are confounded by counting more, and can go no higher than five; for any thing more they can only say many, or very many: but the ingenious among them to express more, say one hand and one hand, one hand and two hands, etc. To express ten they say, naganna ignienbal demerjueg, that is, all the fingers; for fifteen they say two hands and one foot; for twenty, the two hands and two feet, which is the extent of the Cochimies arithmetic; those who have learnt Spanish understand our mode of counting.

Their Notation of Time.

When they give the time of day, they express it according to the suns name, ibo; the year they call mejibo, which term signifies principally the season most agreeable and fruitful. Their year they divide into six seasons. The first is mejibo, the time of ripe *pitahayas*, a species of cactus fruit; this comprehends part of June, all July, and a portion of August; the second season, amadd-appi, also of fruits, is that of pitahayas sub-dulce, the *tunas* (other cactus) and other fruits and seeds which they esteem; this season includes all September and part of October, at which time the plants are renovated by the rains which then fall, but in general light; the third season is called amada-appigala, and includes part of October, all November, and part of December, the time when the plants of the last season begin to get yellow and dry; the fourth season is called majibel, the coldest, which includes part of December, all January, and part of February; the fifth season, called majiben, includes part of February, all March, and part of April; finally, the sixth season includes part of April, all May, and part of June, and which is called manjiben masji; this is the bad season, for in this portion of their year, like with us in the winter, all provisions are scarce, and they are obliged to live on what they have stored from the other seasons, which is helped out by these miserable people with the mescal and the seed they have stored, and which they toast before eating.

Of the Origin and Character of the Californians.

Concerning the origin of these rude people [see Farmer, 21st December, 1860], no one can decide, nor can they say themselves no more than they always assert to the missionaries, that their ancestors came from the regions further north. This is likewise the assertion of the tribes and nations who populate the vast country of Anahuac (Mexico and southward). This assumption may be credited without being told by the Californians, as their country is nearly surrounded by the sea, and only joins the continent towards the north. When they are asked the occasion of their coming here they reply, because in a war excited between their own and a nation of the north, their ancestors were driven down to the centralia and found refuge in the mountains of the peninsula. This old tradition is strictly preserved by them and fully believed, and they feel no shame in confessing they are descended from these fugitives. The Carthagenians and Romans, those famous nations of antiquity, gloried also in being of the stock of the fugitives vanquished by the Trojans.

Their Physique, Etc.

The Californians are healthy, robust, and of good stature. The infirmities which prevail among them do not strongly affect them, except those which they have contracted from small-pox, or the bad food which they ordinarily use, which cause certain sores and tumors. The venereal disease has not as yet prevailed amongst them. In the countenance, hair, whiskers, and color, they assimilate to the general natives of Mexico. They have, like them, coarse, straight, black hair; the whiskers, etc., are short and scanty; no hair on the arms, muscles or legs; their foreheads are narrow (la pente estrecha), the nose bulging (poco grueso), the teeth white, equal and firmly set; the mouth, eyes and ears regular, except when disfigured by their manner of boring the ears and nose for their ornaments. The color of those inhabiting the interior districts is of a clear chestnut; but those of the littorals or coast lands are of a much darker hue.

Their Mentality.

Among them, unlike the Mexicans, there are very few deformed. As to the soul, they seem to be of the faculties as the other children of Adam. Those who live in the uncivilized state, or were thus raised, have all the vices and imperfections contingent on the savages of all wild countries, they are rude, very limited in their knowledge, for the fault of ideas, slothful and lazy from the want of stimulus, inconstant, precipitate in their resolutions, and greatly inclined to their puerile games and diversions when unsubjugated or unchecked. Certain other vices prevail among others of these barbarians, the same as among those of some more polished people. Drunkenness, the dominant vice of American tribes, does not yet exist among the Californians. They do not pilfer the little of effects which each may possess, nor have they quarrels and disputes among their own relations, or the people of their own tribe; all their enmity, odium, and furor, is exhibited against other nations with whom they are at variance or war. Finally, they are neither obstinate nor intractable, nor very docile, or with facility made to do as they are instructed or desired. Of their simplicity and puerility we have various curious examples. Some Indians having found a number of earthen jars (tinajas) among the sands of the Pacific Coast, left no doubt by sailors of the Philipine galeons, thinking they were like casks they had seen before, drew forth their admiration. These they removed to a cave contiguous, and set them all together, with their mouths out from the entrance to the end of the cave, so that they could easily be seen by all. [The Manila galeons often used the large earthen jars in large numbers, so common in China, and which the writer has seen used in the Asiatic countries for every conceivable purpose: for the purpose of carrying waters for their crews.—A. S. T.] Afterwards they would often gather in crowds in front of the Cave, even holding their dances and feasts before it; sitting down and absorbed in admiring the always open great mouths of the jars as something wonderful, and dancing and screaming before them as if they were something animated, every now and then running up to the jars, noising and resounding them by hollowing in their mouths, and imitating the movements and voices of animals. Among these people some would fall very sick at times, and when he did not recover from his illness, and they could not relieve him, they would meet in council in which after a long deliberation, the one in highest authority would decide that no doubt the man's sickness or the epidemic emanated from these dreadful mouths of jars ever staring, and the remedy to end it was to closely stop up the horrid openings of these awful Finajas. This seemed sound law to those deliberating; but to put this in practice it was necessary for some to go in among the formidable utensils and tap them. Inasmuch as this might be attended with contracting the same epidemic as that of the sick man, or of death, it was not easy to find any one to perform the dangerous ceremony, until it was decided by those high in council, that some of the robust youths present should go backwards towards the cave and stop the opening of these fatal vessels with handfulls of herbs, which in fine was actually effected.

A short time after the Jesuits commenced their missions, one of the fathers sent to another by a neophyte two loaves of bread, a present much appreciated from the scarcity of wheat, with a letter accompanying the present. The Indian finding the bread good, eat the whole of it on the road. When he arrived he presented the letter to the father, who asked where the bread was, mentioned in the paper. The neophyte denied having received the bread; the father told him, however, what the letter said of its being sent: he, however, insisted in denying it, wondering how the father could know from the paper. The father lost his bread, and the Indian returned to his Mission. A short time after the same missionary sent the same individual to the same father with another present, accompanied by a letter of remission. Forasmuch as the Indian found his former letter an informant, he was determined on being extra sly and ahead of the recipient's knowledge, and hid the letter under a stone on his road, after devouring the present by his hands. Having arrived at his destination and the father ascertaining afterwards what had been sent to him, reproached him with the theft, whereon the accused responded with the greatest simplicity, "I confess, padre, that the first letter told the truth, for I eat the bread sent with it, but I know this last paper is a great liar in affirming I eat the present sent, as certainly the paper did not see me eat it at all.

Their Arts, Food and Drink.

All the tribes are pure savages and barbarians, and know nothing at all of agriculture, architecture, or any other of the useful arts. In all the peninsula no house, nor a vestige of one; neither a cabin or even an earthen jar, or any kind of instrument of metal, or any kind of woven thread fabric. [From this must only be excepted the earthen jars or vessels seen by Father Consag in 1746, among the head-of-the-Gulf or Colorado Indians (at the Bay of San Luis Gonzago in 31°), which Clavijero says is the only exception to their want of knowledge of the useful arts, and suspects that they were brought from more northern tribes, or were those left by pearl divers: a fact though still unascertained, as the western Gulf shores of the northern half of Lower California remain a *terra incognita*, except from Consag's account (except casually by the fur hunter Patie 1828–29, near the mouth of the Colorado, and also by Lt. Mechaux, of the Railroad Surveys 1853–57, a short distance below Fort Yuma.) About these earthen jars, however, Father Consag says, "the Indians are very ingenious in making them." The Father in his several voyages from Sonora to the Colorado countries, found there, the nations of the Bagiopas, the Heabenomas, the Iguanas and Cuatganes or Cuegenas The Bagiopas lived near the mouth of the Colorado, and the Heabenomas a little above them, both on the east side of the river, while the Yumas and Quig-Yumas lived on the west side. The Alchedomes were on the west side of the Colorado in the vicinity of the Gila. The Cuculatos lived on the west side of the river, but were little known—probably their territory extended to the head of the Gulf, and were those of the Mission of Santa Catalina, established in a valley near by or not far from a high snowy peak hard by.—A. S. T. 1860.] They simply live on what grows spontaneously without their aid, or the animals of the chase and sea, nor has any vestige of agriculture or of sowing of seed, or raising of animals, been met with among them.

[TO BE CONTINUED]

Valuable New Machinery.

PORTLAND, OREGON, November 8, 1861.

EDITOR FARMER: Inclosed you will please find the report of the Special Committee of the Oregon State Fair.

You will notice the time in which I completed a Wagon Wheel. I am now putting an improvement on this Machine which when completed will do the same work, in at least five minutes less time.

By giving this report a place in your valuable paper you will be doing me a favor, and oblige.

Very respectfully, H. S. JACOBS.

SIR: The undersigned committee appointed by the Board of Managers of the Oregon State Agricultural Society to examine the wheel machinery of H. S. Jacobs, at Portland, Multnomah County, respectfully report as follows:

The machinery exhibited by Mr. Jacobs consists of—One machine for making tenons on spokes; one machine for doweling fellies; one machine for boring fellies for the spokes; one machine for cutting the belt joint of fellies.

These four machines are arranged on one table and driven by pulleys fitted to a driving shaft beneath the table. Nothing is claimed by Mr. Jacobs on the four machines above except the ingenious and convenient arrangement thereof for the various purposes named, which in the opinion of your committee is worthy of special notice.

The fifth machine, "a wheel lathe," as denominated by Mr. Jacobs, for turning the fellies of wheels true and to the shape and dimensions desired; is of his own invention, a patent for which has been applied for; is well suited to the purpose—a wheel being quickly adjusted and easily turned. Your committee recommend a diploma for this machine. And your committee further recommend a diploma be awarded for the best combined machinery for the manufacture of wheels.

At the request of your committee, Mr. Jacobs finished a wheel in their presence, so far as the manipulating with these machines performs. The time occupied is given below, which amply demonstrates the practicability of the machinery.

A wagon wheel three feet eight inches in diameter with the spokes driven in the hub, the fellies sawed and smoothed inside, and the following operations performed by Mr. Jacobs in the time given:

		MIN.	SEC.
1st.	Tenons made on the spokes............	1	2
	Time changing..............................		18
2d.	Sawing joints of fellies..................	1	55
	Time changing..............................		33
3d.	Boring fellies for spokes and dowels	1	34
	Time changing..............................		16
4th.	Driving on fellies and wedging spokes	2	35
	Time changing..............................	1	35
5th.	Turning the wheel in the lathe.........	4	5
	Total time....................................	14	45

A. B. HALLOCK, } *Committee.*

PORTLAND, October 17, 1861.

Potato-Digging Machine.

A machine for digging and sacking Potatoes, invented by Thos. Lake of Sacramento, is thus described: "It is twelve feet in length, and has a seat in front for the driver, within reach of whom is a crank by which he can readily raise or lower a sort of plow attached, at pleasure, according to the nature of the surface or soil. The plow, which is scoop-shaped, introduces the earth and Potatoes to an elevating wheel furnished with a series of perforated buckets, the inner rim of the wheel also perforated for sifting the dirt. From the wheel the residue is conducted to a shaking sieve and thence into the sacking apparatus at the back part of the machine, below which is a platform on which a man can stand and sack. In the sacking apparatus are two valves so adjusted that they can be opened or shut by the sacker at pleasure, and above is a rack for empty sacks within his reach. The machine can fill two sacks at the same time, and enable the sacker to sew them up and throw them off, while the succeeding sacks are filling. It is claimed that this machine will dig and sack from 1500 to 2000 bushels of Potatoes, or from 3000 to 4000 bushels of Onions, daily, without cutting or bruising, but is designed to operate in dry soil only.

PLEASE remember Jebb's Patent Churn on exhibition at our office.

Wealth and Happiness.

BY SCRATCHAWL.

If thou art rich, thou art poor;
For, like an ass whose back with ingots bows,
Thou bear'st thy heavy riches but a journey,
And Death unloads thee.

[We are glad to welcome to our columns a new friend. "Scratchawl" will *all*-ways be welcome to our sanctum, and we know our readers will be happy to extend a welcome also. We hope to hear often from the same source.]

Americans, as a nation, have frequently been charged with an inordinate love of money. With what degree of truth this assertion is made, 'tis not for me to say. If this be true of us as a nation, I think I may safely say it is preëminently so of Californians: although it may not have such a controlling influence over us at the present time, as it may have had in former years; nevertheless, when we look back upon our past lives, we must confess that, in common with the rest of mankind, we have sometimes been "a penny-wise and a pound-foolish" in our eager scramble after riches.

How many of us in the ardent pursuit of wealth stop to consider of the folly of our course? How seldom do we turn aside from the hurry and bustle of life, calmly to consider the great objects for which we were created; but push on in search of gold, as if to obtain wealth was the chief end of man—the *ultima thule* of human glory and happiness!

Instead of securing happiness, however, he who is possessed of an undue desire for wealth, often sacrifices health, happiness, and life itself, on the altar of Mammon. Take, for example, the miner, who leaves his home, and braves the dangers of the sea, to seek his fortune in the gold-fields of California. He goes to the mountains, and deprived of the comforts to which he has always been accustomed, and led on by the prospect of sudden wealth, he neglects the proper care of his person, exposes himself to sudden changes of temperature, and to the cold water of the mountain streams; disease fastens upon him, and after a few weary months of suffering, death lays him low. How many have found their graves in this way in California, who with a proper regard for the laws of health, and more correct ideas of the value of money, and the means of obtaining happiness, might have enjoyed life for many years to come.

We all seek happiness, and naturally desire wealth because we believe we shall find happiness with it. But wealth and happiness are not always found together, and wealth is not indispensible to happiness.

The mind of man, the master-work of the Creator for which our bodies were made, which is capable of enjoying so much pleasure, and suffering so much pain, seems sometimes almost entirely to be lost sight of, in the race for riches.

It's no' in books, it's no' in lear,
To make us truly blest,
If happiness has not her seat
And center in the breast;
We may be wise, or rich, or great,
But never can be blest.

The Mammonist does not sufficiently realize the fact that the mind possesses other avenues through which happiness can be far more effectually secured than by the acquiring instinct. Man was born to be happy, and riches form no part of the conditions of man's happiness. True, every man should strive to lay up enough to place himself and family beyond the reach of want. That man who has a home and the comforts of life, blest with a contented mind, and work enough to make his food taste sweet and his sleep refreshing: the rich man, burdened with his cares and anxieties, or living in idleness and voluptuousness, well might envy. The former has an object to live for; his life affords him happiness, because he lives in accordance with the divine command, "by the sweat of thy brow shalt thou earn thy bread." Providence has so ordained things, that man must labor or be proportionally miserable. Few are more unhappy than the habitual pleasure-seeker.

We hasten to get rich that we may live without labor, when labor, so that it is not beyond our strength, and of the right kind, should constitute one of the chief sources of man's happiness. The testimony of more than a dozen of our millionaires might be brought to prove the doctrine that man is the happiest just when he is the most useful. No man ever achieved fame or honors living in idleness. Work of the hands, or work of the brain, or both, must be put forth by everyone or he cannot fully enjoy life; hence the folly of running after great riches, of neglecting to live in the present, of refusing to enjoy life as we go along; but looking forward to the time when we shall be in better circumstances, and thus virtually missing the substance, and grasping at a shadow.

One will toil like a slave half his life to accumulate wealth, that he may live in idleness the other. He lives on the commonest food, wears the commonest clothes, spends but little in improving his mind, or in adorning and surrounding his home with the beautiful in Art and Nature; fails to find enjoyment in the noblest works of creation, simply because his mind is too much occupied with other things to understand or appreciate these opportunities for pleasure. When he has acquired the desired amount, is he happy then? He is either unwilling to give up the chase which he has so long followed, and which habit has made second nature, or he finds that he has passed the best years of his life following an ignis fatuus; that at the time when he expected to settle down in the full enjoyment of happiness, something else besides riches are essential to true enjoyment. And as old age creeps upon him, with all his faculties for enjoyment impaired, he looks back with shame and disappointment upon the great error of his life.

Another holding these false views, that money makes the man, and whose prospects preclude the idea of his ever becoming rich, fails to enjoy the blessings that are bestowed upon him, and allows the thought that he must always labor, and that he is never to be rich, to overshadow a large share of his happiness.

Those who are reared from infancy in the lap of luxury, so far from being fitted to enjoy life, are frequently the most miserable. At an early age they are plentifully supplied with money. They are not accustomed to labor of any kind, and as they never have to earn money, they never know the value or right use of it. Besides, by not being accustomed to work, they often fail to take that exercise so essential to the development of bone and muscle, and thus grow up with their bodies only half-developed, and long ere they expect it they are broken down in health, without which there can be no real happiness. Very truly health is "the poor man's riches and the rich man's blessing."

Or, another thus indulged in youth, for the want of other employment, easily learns to indulge in gaming. He seeks excitement in bar-rooms, and at horse-races. To rouse his drooping spirits he takes an occasional glass. From this time his course is downward. He goes from bad to worse. The longer he indulges his passions, the stronger he forges his chains. He foolishly imagines his wealth will save him. But, alas! he sooner or later finds himself ruined in purse, in health, in character, and without the means of obtaining a livelihood. He is worthless to himself, a disgrace to his friends, and a curse to the world at large. Or if he is raised in ease and affluence, however good may be his habits, he is poorly prepared to enjoy life, should fickle Fortune withdraw her favors. These are no overdrawn pictures. Great wealth begets idleness, and "idleness is the nurse of sin." How much discord and bitterness has been caused by leaving riches to be quarreled about by contending heirs!

Nearly all our great men have come from the ranks of the poorer laboring classes. Our greatest orators, heroes, poets, and statesmen, are those who were early taught to rely upon their own resources. From a low log-cabin, among the sturdy hills of New Hampshire, came forth the mighty genius of a Webster. From among the same class came a Washington, a Franklin, a Clay, and lastly, a Lincoln.

It must be kept in mind that I write not against laudable exertions for acquiring the comforts of life; for if what I have said be true, and we understand the real objects of life, we shall find happiness in procuring these very comforts. I speak especially of excessive love of great riches, of sacrificing every other means of enjoyment on the altar of Mammon. And it becomes doubly important for us to consider how unwise we are in this matter, when we contemplate the inability of wealth to give us happiness, unless the mind and body are prepared for enjoyment. And since happiness is the great object we seek, and since so much more depends upon a contented spirit, and a right frame of mind, and a proper cultivation of the intellect, than upon riches, shall we fail to enjoy each moment of life as we go along? Let us also make the best use of what money we possess. Let us spend every dollar so as to obtain from it the greatest amount of happiness that a dollar can buy. And the mind, which will scarcely have commenced to live, long after the body has mouldered back to dust; let us spend more upon that. Let us remember that the highest felicity cannot be secured by indulging the appetite, or in gratifying the animal man; but let us learn to enjoy Nature as it is spread out before us, and refuse longer to worship the god of gold.

Wealth cannot compass all the beauties of Nature. The birds shall make music as sweet in the ears of him who labors for his daily bread, as for him who lolls in the lap of luxury. The flowers that adorn the fields, and hillsides, and gardens, may delight his eyes as much, and breathe as sweet fragrance for the one as for the other. The hills, and rocks, and valleys, and trees, as enchanting; the mountains as lofty and majestic; the water as free; the heavens as infinite and glorious; the sunshine as bright; and the tempest as grand and awful. Even the richest gem that sparkles on the bosom of the daughter of wealth, may delight alike the eyes of all beholders. Nature is spread out before us, and offers a thousand prolific sources of enjoyment. We may feast our eyes on her beauties, and contemplate with admiration the marvelousness of her works. From the smallest blade of grass, and the tiniest insect that creeps, to the planets rolling in infinite space, we may find something to amuse and instruct. And having done this, we may "turn from Nature up to Nature's God," and be assured that He is no respecter of persons. That in His eyes gold is but glittering dross. That to secure a heritage in the land of light, we need not riches. Happiness, then, is not to be found in wealth alone. And since so much more depends upon man's individual capacity for enjoyment, than upon the amount of his wealth, let us make the most of such means and opportunities as we have, and love money as a *means*, not as an end.

The Largest Grain-Market in the World.

CHICAGO may well be called the World's Grain Market. We give the receipts for *one day*, Oct. 1, and for the corresponding week; the receipts in one day being 327,176 bushels, and in one week 1,941,786 bushels, or near Two Million Bushels of Grain:

Receipts for One Day.		Receipts for one Week.	
Flour, bbls............	7,545	Flour, bbls............	51,8
Wheat, bush...........	142,705	Wheat, bush....	993,2
Corn, do	171,508	Corn, do	844,0
Oats do	2,364	Oats, do	26,2
Rye do	1,390	Rye, do	11,
Barley do	1,664	Barley, do	8,2

Rules and Regulations in Regard to Inspection of Grain.

THE grades and requisites of the different kinds of Grain, as established by the Board of Trade of the City of Chicago, we give below. Some established rules should make a standard here:

WHEAT.

No. 1 White Winter—The berry to be plump, well cleaned, and free from other grains.

No. 2 White Winter—To be sound, but not clean enough for No. 1.

No. 1 Red Winter—The berry to be plump, well cleaned, and free from other grains.

MANAGEMENT OF FRUIT TREES.—Dr. Kennicott, in a late essay on this subject, makes some very just remarks. He says "a crop of rye, barley, oats, or wheat, in a young orchard, is worse than fire, blight, or caterpillars"—that fruit trees need as much cultivation as corn as potatoes, not only one year or five, but forever, or so long as they bear fruit." Cultivation, he adds should not be continued late in summer, for half hardy trees, as peaches, but the wood allowed to harden and ripen. He says "as *commonly practiced*, orchard trees need pruning as much as cows' horns—and that most of the shaping should be done in the nursery, or during the first three or four years." In the rich West, he could apply no manure to orchards till the trees had been years in bearing. He would spread it broadcast in autumn, not at the foot of the trunk as is sometimes done, and where the roots cannot get it. Plow it under slightly in spring.

CARE OF HENS IN WINTER.—The following plain rules for the winter care of Poultry, should receive attention from all our readers: Keep the hens in a warm clean place, where they can have access to the sun whenever it shines. Feed them regularly with a variety of food, such as corn, which may always be before them, barley, wheat, boiled potatoes, mashed and mixed with cob-meal, that is, corn and cob mixed together; and give them access to plenty of gravel, old plaster, or broken oyster-shells. The barley and wheat may be fed to them occasionally, if convenient. Add to these plenty of clear water, and pork or beef scraps, or bits of fresh meat, two or three times each week, and you will not fail to find your Fowls profitable.

THE PROBLEM.

BY RALPH WALDO EMERSON.

I like a church; I like a cowl—
I love a prophet of the soul;
And on my heart monastic aisles
Fall like sweet strains, or pensive smiles;
Yet not for all his faith can see,
Would I that cowled churchman be.
Why should the vest on him allure
Which I could not on me endure?

Not from a vain or shallow thought
His awful Jove young Phidias brought;
Never from lips of cunning fell
The thrilling Delphic oracle;
Out from the heart of nature rolled
The burdens of the Bible old;
The litanies of nations came,
Like the volcano's tongue of flame,
Up from the burning core below—
The canticles of love and woe;
The hand that rounded Peter's dome,
And grained the aisles of Christian Rome,
Wrought in a sad sincerity;
Himself from God he could not free;
He builded better than he knew—
The conscious stone to beauty grew.

Know'st thou what wove yon woodbird's nest
Of leaves, and feathers from her breast?
Or how the fish outbuilt her shell,
Painting with morn each annual cell?
Or how the sacred pine-tree adds
To her old leaves new myriads?
Such and so grew these holy piles,
Whilst love and terror laid the tiles.
Earth proudly wears the Parthenon,
As the best gem upon her zone;
And Morning opes with haste her lids
To gaze upon the Pyramids;
O'er England's abbeys bends the sky,
As on its friends, with kindred eye:
For out of Thought's interior sphere
These wonders rose to upper air;
And Nature gladly gave them place,
Adopted them into her race,
And granted them an equal date
With Andes and with Ararat.
These temples grew as grows the grass—
Art might obey, but not surpass.
The passive master lent his hand
To the vast soul that o'er him planned;
And the same power that reared the shrine
Bestrode the tribes that knelt within.
Ever the fiery Pentecost
Girds with one flame the countless host,
Trances the heart through chanting choirs,
And through the priest the mind inspires.
The word unto the prophet spoken
Was writ on tables yet unbroken;
The word by seers or sibyls told,
In groves of oak, or fanes of gold,
Still floats upon the morning wind,
Still whispers to the willing mind.
One accent of the Holy Ghost
The heedless world hath never lost.
I know what say the fathers wise—
The book itself before me lies—
Old Chrysostom, best Augustine,
And he who blent both in his line,
The younger golden lips or mines—
Taylor, the Shakespeare of divines;
His words are music in my ear—
I see his cowled portrait dear;
And yet, for all his faith could see,
I would not the good bishop be.

Conflict and Coronation of the Art-Discoverer.

[CONCLUDED.]

Hear his own account of his misery. "I suffered an anguish that I cannot speak, for I was quite exhausted and dried up by the heat of the furnace, it was more than a month since my shirt had been dry upon me. Further to console me, I was the object of mockery; and even those from whom solace was due, ran crying through the town that I was burning my floors. And in this way my credit was taken from me, and I was regarded as a madman. Others said that I was laboring to make false money, which was a scandal under which I pined away, and slipped with bowed head through the streets, like a man put to shame; I was in debt in several places, and had two children at nurse, unable to pay the nurses; no one gave me consolation, but, on the contrary, men jested at me, saying, 'It was right for him to die of hunger, seeing that he had left off following his trade.' All these things assailed my ears when I passed through the streets; but for all that there still remained some hope which encouraged and sustained me, inasmuch as the last trials had turned out tolerably well, and thereafter I thought that I knew enough to get my living."

Some of the chemicals melted over his jars and produced a white enamel—but it was only his own conviction of a triumph that was the result; months must elapse before a batch of actual enameled crockery can produce conviction in others. Although his children cried for bread, his wife gave him no peace, his neighbors thought him mad, and he was plunged in debt, he resolves to engage as an assistant, a potter who understood his art, because it would take him too long to make a batch with his own hands; a magnanimous inkeeper undertaking to feed and lodge the said potter for six months, charging the same to Bernard Palissy's account. For six months, then, Palissy and his man labored together, molding and baking pottery to be enameled, when, for want of funds, the potter must be discharged, Bernard's clothes being given to him for wages.

"Then, because I had not any materials for the erection of my furnace, I began to take down that which I had built after the manner of the glass-workers, in order to use the materials again; then because the said furnace had been so strongly heated for six days and six nights, the mortar and bricks in it were liquefied, and vitrified in such a manner, that in loosing the masonry I had my fingers bruised and cut in so many places that I was obliged to eat my pottage with my fingers wrapped in rags. When I had pulled down the said furnace it was requisite to build the other, which was not to be done without much difficulty, since I had to fetch for myself the water, and the mortar, and the stone, without any aid and without any repose."

The furnace was built, the chemicals purchased, and with infinite labor ground and put upon the pottery, and the pottery put into the furnace. The neighbors gathered round, more earnestly angry, or bitterly sarcastic, or sadly pitiful, than ever. Palissy hopes to draw three or four hundred livres from the produce of the furnace, and the good-hearted inkeeper, with the rest of the creditors, "wish they may get" rather than hope for their money; but—

"When I came to draw out my work, having previously removed the fire, my sorrows and distress were so abundantly augmented that I lost all countenance; for though my enamels were good, and my work was good, two accidents happened to the furnace which had spoilt all. The mortar of which I had built my furnace had been full of flints, which, feeling the vehemence of the fire—at the same time that my enamels had begun to liquefy—burst into several pieces, making a variety of cracks and explosions within the said furnace. Then, because the splinters of these flints struck against my work, the enamel, which was already liquefied into a glutinous matter, retained the said flints, and held them attached on all sides of my vessels and medallions, which, except for that, had been beautiful."

Another failure, and the labor of months lost; yet many would have bought the produce of the furnace "at a mean price." But because this "would have been a decrying and debasing of his honor," the grand old potter, gaunt, and ragged, and furnace-stained—a very Lear in his distress, rushes wildly upon his spoiled batch, and breaks it all to pieces, strewing the fragments at his feet. His neighbors remonstrate—his wife, more than ever convinced of his madness, pours maledictions upon his head. His poor heart is sore. His faith is tried to the utmost. But the enamel is really discovered; another experiment, and a few months may realize all his hopes. He does, therefore, what any sensible man would do—he leaves the gossips jeering, his wife cursing, and, perhaps, his children crying, and goes to bed. O, could she have appreciated the noble heroism of his soul, how precious then would a few words of sympathy have been! He was now forty years old, and had experimented in pottery for eight years, and yet eight years more must elapse before his discovery is perfected. But the sorrows of his travail are past, and we need not follow him further; the grand secret is discovered, and he has now only to learn by experience how to avoid the thousand accidents that mar its application.

"When," says he, "I had remained some time upon the bed, and had considered within myself that if a man should fall into a pit, his duty would be to endeavor to get out again; I, being in like case, set myself to make some paintings, and in various ways I took pains to recover a little money. I said within myself that my losses and hazards were all past, and there was no longer anything to hinder me from making good pieces." And then, after describing his various failures, he adds: "In short, I blundered for fifteen or sixteen years. * * * I was so wasted in my person, that there was no form nor prominence of muscle on my arms or legs; also the said legs were throughout of one size, so that the garters with which I tied my stockings were at once, when I walked, down upon my heels with my stockings, too. I often walked about the fields of Saintes, considering my miseries and weariness, and, above all things, that in my own house I could have no peace, nor do anything that was considered good. * * * Nevertheless, the hope that I had, caused me to proceed with my work so like a man, that often to amuse people who came to see me, I did my best to laugh, although within me all was very sad. * * * I have been for several years—when, without the means of covering my furnaces, I was every night at the mercy of the rains and winds—without receiving any help, aid, or consolation, except from the owls that screeched on the one hand, and the dogs that howled on the other, * * * and having nothing dry upon me because of the rains which had fallen, I would go to bed at midnight, or near dawn, dressed like a man who had been dragged through all the puddles in the town; and turning thus to retire, I would walk, rolling, without a candle, falling to one side and the other, like a man drunk with wine, filled with great sorrows, insomuch as having labored long, I saw my labor wasted; then, retiring in this manner, soiled and drenched, I have found in my chamber a second persecution worse than the first, which caused me to marvel now that I was not consumed with suffering."

Hardly can we find a reproach for poor Madame Palissy; hardly can we marvel that she sought comfort from her neighbors, or even that she ran clamorously through the streets of Saintes, wailing her household wrongs; or that, like "vinegar upon niter," her curtain-lectures fell upon Bernard's sore heart. We have Biblical types of patient men; is there one of a patient woman?

Palissy at length supported his family by his pottery. A great naturalist, as well as a great artist, he consecrated his art to nature, and made imitations of all things, animate and inanimate, whence the peculiar and exquisite productions to which a room in the Louvre is consecrated, known as Palissy's Room. Nature had been his prompter, and nature was his teacher. He proudly designated himself, "Worker in Earth, and Inventor of Rustic Figulines;" and almost every product of his hands, down to the tiniest leaf or fossil, was molded from nature.

He was forty-eight years of age at the close of his sixteen years' struggle. Thenceforward his fame rapidly spread, his discovery was talked of, and specimens of his art were exhibited at Court. Noblemen frequented his cottage; the visionary had proved a seer; his rebellion had been pronounced a glorious revolution. Victorine smiled again; her children were well fed; she purchased a finer "grass-green camlet" than ever she had dared to hope for; she was like Job's wife, when "each man give him a piece of money." His neighbors became respectful; the Constable Montmorenci had "spoken for him to the King." He placed an enameled watch-dog at his door—funny fellow that he was—which the dogs of the town barked at. He was appointed to decorate the Constable's country-seat; and because no other man could do it, he was saved from being burnt for heresy, for which he had been apprehended—whereat Victorine blessed again the white enamel. Then an edict appointed him inventor of rustic figures to the King. He removed to Paris; Madame Palissy went to Court; and for forty-four years he filled the Tuileries with his works, and France with his fame.

Taming a Horse by an Editor.

N. P. Willis, of the Home Journal, having a handsome horse that was much given to biting and kicking, thus describes his cure: The animal's forefoot was hooked up a with a strap, and he was thrown by the regular process. While lying on his side and with his head still up, I saw that the creature's eyes were full of fury, and his expanded nostrils very uncomplying; but with a final drop of the head to the ground there was a sudden change in every line of his excited face. The eyelids were relaxed, and there was the horse-substitute for a smile (the corners of the ears bent forward instead of backwards), which was, to my eye, as agreeable as it was curious. In fact, the beauty of the animal, even as he lay on the ground, was exceedingly improved, as the frequent putting back of his ears had been, hitherto, his one solitary blemish—radically cured at that moment, it appears, for he has ever since worn his ears (the smallest and most daintily formed pair I ever saw) like any other horse. But what a change in the behavior of that powerful animal on getting to his legs again! Thinking that there might possibly be an exception to Nature's wonderful law of subjectiveness, and expecting some momentary lingering of resentment, at least until his blood was cool, I was for keeping the tether upon his foreleg; but Mr. Appleton removed everything—straps, bridle, and surcingle—and left him standing with us in the inclosure, loose, stripped, and without incumbrance. I had never known this horse to look at me except askant, and with a mischievous toss of the head, but now he fixed his tranquil eyes fully and confidingly upon mine, and his first movement was to close and rub his muzzle against my shoulder. I walked in zigzag involutions about the shed, calling him and holding out my hand, and he followed like a shadow, stopping instantly at the word of command; and, if his forward-pressed ears were to be trusted, perfectly content with my society and control! Yet this was the same creature who, with the same liberty half an hour before, would have sprung at me, tooth and hoof!

---

[*] Fecundity of Bees.—A queen bee will lay it has been asserted 200 eggs daily for fifty or sixty days, and the eggs are hatched in three days. A single queen bee is said to produce 100,000 bees in a season.

Horsemanship—From Old Letters.

My mode of breaking even an habitual kicker is as follows: I watch his head and ears, and the moment that he tries to lower his head (and which a horse must do when he wants to kick) I give a jerk to his bit, by means of the reins, which baulks his kicking, because it compels him to throw his head up higher than usual, and just at the moment, too, when he seeks to lower it considerably, in order to enable him to kick; I apply a cut of the whip to his quarters, almost immediately with the jerk; thus, thrown on his haunches, he may begin to caper, but by my urging him forward by alternate, yet each other quickly succeeding, jerks and cuts, and by his being thus compelled to hold his head up and take to the collar, he is so much perplexed, that between attention to bit, whip, and speed, he cannot settle himself to begin kicking again; and to puzzle him still more, I talk to him angrily, and in words and tone familiar to his ear; additionally, and by way of punishment, I drive him a quick and long run, so as to fatigue him. After two or three such applications, I generally find when I drive the same horse again, that he refrains from tricks with me, but if others, although good drivers, handle the reins of such a horse, and (your own observation has been arrested by the fact) although I have subdued him, with a new driver he will try his old tricks again, and almost immediately. This last mode, however, must not be attempted by any one that is not perfectly self-possessed, and able to drive with nicety sufficient to avoid fatal contacts, for, additionally to the hazardous consequences of violent collisions, a horse so ruffled will not fail either to lash everything to pieces, or to run away, if he discovers that the driver is deficient in either nerve or skill. Never quit your seat, whether you are on the box or in a carriage, when run away with, nor call out for help, only to make the horses more wild; sit still, keep them straight and free from contacts, move them to where the road runs heavy, or let your wheels grate against a curb-stone, provided there are no lamp or other posts to upset you; the edge of a causeway may similarly be used to make the draft more severe, but it has this risk with it, the horses may jump on it, if not properly handled, to upset the carriage thereby. Your jumping out of a carriage, is not only pusillanimous, but is almost certain to inflict some serious injury, whilst your staying and doing your best may save the lives of others, as well as your own; and why should you court injury by jumping out, when you can but be injured when you are thrown out? "Stick to your post," whether you are a soldier, a sailor, or coachman! Several inventions have been employed to insure safety in such situations, if not to prevent both kicking and running away, at least to effect the latter. Lieut. Cooke obtained a patent, some years ago, for a clever and effectual mode of reining in four horses, even by their very endeavors, at dashing off, for by treading on a lever, the safety-rein was wound shorter by the very revolving of the wheel to which that action had attached it, a winding that continued as long as the foot remained on the lever, for its removal from the latter gave the safety-rein the slack again. The only objection that I should raise to this mode is, that it may fling the horses down, if resorted to whilst going at a great rate; but this is only my supposition, for it is more than likely that so clever an inventor as Lieut. Cooke has contrived some preventive against such an effect; if not, it ought to be provided against.

The War Horse.—It requires considerable time to mount the guns proper for an advancing army, to supply them with trained horses, and especially the right kind of harness. The horse is a curious, shy, inquisitive, animal; and when first taken from the stable or pasture, for the stragetic purposes of war, demands to be handled with great care and patience. He must be gradually accustomed to the sudden and marked change in his *status*—the gleam of arms, the roll of drums, the flaunting of banners, the flash, the smoke and roar of the cannon. It is remarkable, however, that when the praticed war-horse is thus drilled and disciplined, his proficiency in wheeling with guns and caissons, at the critical moment of limbering and unlimbering light artillery, is wonderful. Without a word, without a touch, without a sign from man, he wheels, advances, and retreats, with almost miraculous rapidity—at times compelling riders and gunners to spring, to keep their saddles or escape the lightning-like evolutions.

To Stop Bleeding.—Asa Kemper, of Ross county, Ohio, writes to the American Agriculturist, that bleeding from a wound on man or beast may be stopped by a mixture of wheat flour and common salt, in parts, bound on with a cloth. If the bleeding be profuse, use a large quantity, say from one to three pints. It may be left for hours or even days, if necessary. In this manner he saved the life of a horse which was bleeding from a wounded artery; the bleeding ceased in five minutes after application. It was left on three days, when it worked loose, was easily removed and the wound soon healed.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.
A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.
The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.
To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

The "Ladies' Department" of this Journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

◆

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

This Number.

☞ We send this number of our Journal to many of our friends, and to persons who have not yet enrolled their names on our list. We hope they will examine the Farmer, and see that it is for their interest to give us their cordial coöperation.

◆

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

Look to your Stock in the Wet Season.

A large amount of Stock is annually lost to our Stock-men by reason of neglect, on the approach of the "wet season." Cattle, Sheep, and even Horses that have been kept thin by reason of short feed are illy able to meet the chilly and cold rains which are now of daily occurrence. Sheep, fat Cattle, or those in good condition, are better able to endure the cold rains of autumn, though they are injured by it, but poor and half-starved Stock are stiffened by it, and soon sicken and die.

Were it possible, all poor and thin Cattle and Sheep should be looked after at this season, and put under shelter, or housed in some way, to bear up against the change, until by the new feed they are made strong and able to bear the exposure.

It is a well-established fact that a good warm shelter for Stock saves a goodly portion of food, for all Stock eat more when exposed than when well-sheltered and warm. The present long cold rain must cause the death of large numbers of Stock.

◆

The National Loan.—The subscription books for the National Loan closed in this city on Saturday, the 30th November. There was quite a rush during the last few days the books were open, and the amount subscribed is about $300,000.

The Loan Still Open.—Secretary Chase has given orders for Mr. Cheeseman to keep the books for subscription to the National Loan open until further notice. So on Monday next the books will be reöpened.

Collegiate Institute, Benicia.—We received a kind invitation to be present at the exhibition of this excellent College, which occurred on the 3d and 4th, and regret we could not be present at the examination.

The Grain Market and Exportation.

The late rise on the price of Grain may be attributed in a measure to the more favorable terms of chartering vessels, thus enabling parties to pay a higher rate for the Grain. This, and a continued existence of favorable news, both from the East and from Europe has induced foreign houses to become purchasers to a considerable extent, as will be seen by the very full report of Messrs. Todd & Co., in our Market column, which we know can always be relied upon as substantially correct.

We flatter ourselves that we have been instrumental in inducing the Farmers to bring forward their Grain, even though slowly and in small lots, thus keeping the market active, and prices steadily advancing. This is the plan we suggested, and Farmers find their account in it.

The present rates will be found nearly or quite the maximum of the season, save extra parcels of *Seed Wheat.*

It is gratifying to notice the fact that Grain Growers are now willing to pay for and plant only the *best and cleanest Wheat,* and that they are learning to *plant early,* and upon the hill-sides and hill tops even; that they have also found their reward in *changing* their Seed Wheat, not planting the same seed upon the same soil year after year. Every Farmer should look to this matter. A change from one county to another often adds ten per cent to the crop.

The now almost universal plan of using bluestone upon the Wheat is shown in the excellence of the Wheat now brought to market. A few years' careful attention to "good seed" and "bluestone," and "smut mills" will not be needed. A goodly portion of the Wheat now brought to our wharves is of the most superior kind, nearly all approximating to Seed Wheat. The Millers of our city have fully realized the value of pure Wheat, in a better Flour, and a higher price for it, some mills in our State having secured a name for their Flour equal to the far-famed brands of Haxall and Gallego. This has been done by buying only the purest Wheat, and in perfecting the machinery of their mills.

◆

Timely and Creditable Premiums.

The San Joaquin Valley Agricultural Society is going to work in the right direction and in good time to produce results for next year (or this season). It has already announced a number of liberal (for it) premiums to be awarded at its next fair, in 1862, on a number of new products, or articles the production of which in our State has not hitherto received much attention, but for which our State is eminently adapted, and which in their growth and manufacture would tend to create a diversity of pursuits so highly necessary to our well being. These premiums offered are: For the best acre each of Chewing and Smoking Tobacco, $10; for sample each of Chewing and Smoking Tobacco, and box of Cigars, $5; for ten pounds of Rice and five of Cotton, $20 each; for five pounds each of Hemp, Flax, and Hops, $5; for one pound of Flax Cotton, $20; for an acre of Chinese Sugar Cane $10, and gallon of Molasses from same, $5; for five pounds Sugar from Sugar-Beets, $10; for an acre of Broom-corn (this cannot be called very "new" here), $10, and sample of same, $3; for one acre each of Hungarian Grass and Alfalfa, $10 each; and, finally, for a Cashmere Goat $25, a Grade of same $10, and a Male or Female Kid $10, each.

Though the above premiums may not embrace everything that is desirable, or be of as large amount, they are certainly very creditable to the Society and its managers, and we say "Good for San Joaquin." The example is worthy emulation of other Societies, and the State Society, if we have one, might profit thereby. But our State Legislature should give attention to the matter, and encourage various new productions by the offer of liberal bounties; this would be legislation of some practical use, for it would result in immense benefit to the State.

◆

Low Price of Stock.

Never, in the memory of that veritable personage, "the oldest inhabitant," has Stock been so low as at the present time. Common Stock all over the State has been sold at ruinous prices, not the value of hide and tallow.

One cause of the low price of Cattle has been the cutting up of large estates, and the difficulty of finding large pastures for Stock. Many of our large Stockmen in the lower part of the State are killing off their Cattle for the hide and tallow. Don Abel Stearns, one of the largest Stockmen in our State, who has now some 25,000 head of Cattle, will slaughter some 1200 head per week.

The great numbers of broad prairies, and thousands of fine grazing hills, that a few years ago were the roving ground of Stock, are now all fenced up and divided into small Ranches, whose owners keep a few select Cattle. Among them will be found the Durham, Devon, Ayreshire, the *quality* fully making up for the quantity, and more real profit to the owner than these immense flocks of common Cattle.

We feel confident that the price of Cattle and Sheep will be advanced in the Spring to quite a liberal figure.

◆

Good Light.—How pleasant in the household is a clear, brilliant light; to the student, to those who labor, and to all it gives a charm to the social circle. By steady progression, from the old "dipped tallow candle" to sperm oil, camphene, kerosene, and gas, our homes are now illuminated principally by the latter *two.* Kerosene for movable, and gas for permanent lamps.

For all family uses, the splendid collection of Lamps now opening by Stanford Brothers, of this city, and the use of their improved Kerosene, a light is secured of the clearest brilliancy, at a very low cost. We would invite our friends from the country when in the city to be sure and visit Stanford Brothers, California street, and make their selections; they will be pleased with the collection.

The steamer St. Louis, on Saturday last, took $984,864 58 in treasure, of which sum $822,058 81 is destined for New York, $175,805 78 for England, and $5000 for Panama.

The Great Sierra Valley.

"Above me are the Alps,
The palaces of Nature, whose vast walls
Have pinnacled in clouds their snowy scalps,
And throned Eternity in icy halls
Of cold sublimity, where forms and falls
The avalanche—the thunderbolt of snow!
All that expands the spirit, yet appals,
Gather around these summits, as to show
How Earth may pierce to Heaven, yet leave man below."

The visitor, the business-man, and the miner, all who wend their way to the Great Sierra Valley, or through this Valley to the vast mineral regions of "Washoe," beyond, make their starting-point from Downieville in the saddle with the regular pack-trains of Langton & Co.'s Express, or some trains for Washoe direct, or preferring a leisure ride, they try it alone. From Downieville, the trail on the mountain-side is a good one, yet often upon wild precipitous mountain-sides, which as you look down from the saddle, makes the inexperienced traveler dizzy; for often the distance down the steep may be thousands of feet, and a trip of the animal would send you headlong to the bottom. Accustomed as we have been to mountain traveling, the wild beauty of the scenery gave us new inspiration, as it was new scenery to us.

A pleasant afternoon in August, with the promise of a bright moon, we left Downieville late in the day, so as to enjoy the moonlight in the wild scenery of this mountain range. Having no fear of grizzlies or robbers, we had nothing to fear, as we intended to make Sierra City, some dozen miles only, that night.

We rode leisurely along the mountain trail, the waving trees, the singing birds, and the gurgling waters of the mountain streams below, making music in beautiful harmony with the hour and the place.

Wild and mountainous as is this route, yet the increased travel has induced settlers to take up the many pleasant little valley-spots which are scattered along the whole route. These settlements it was our purpose to note, as indices to the future.

Three miles from Downieville we stopped at Mr. Wm. McCarty's Ranch. Here we found a neat Garden, an Orchard of Apple-trees, planted in '53, doing well. Found Potatoes growing finely, and other Vegetables doing well. Mr. McCarty will soon have a fine Garden, comprising all the leading Garden-stuff.

One mile further on, we came to "Shady Flat." Here we found the Saw-Mill of Mr. D. L. Whiting. A good substantial Mill, 84-inch saw, and making 1500 feet in 12 hours.

A couple of miles on and we found the "Mobile Ranch," Frank Beaver, proprietor. Here is a good soil and good location for a Vineyard. Mr. B. had five acres of Potatoes here. They grow well, yielding largely, and bring the good price of five cents a pound. Mr. B. raised this year 1000 pounds on two acres.

A little further on is the Ranch of Fred. Junot, a Frenchman. Here were three acres of Potatoes. and a fine crop. Pear, Apple, and Peach-trees all doing well. The Potatoes yield from 7000 to 8000 pounds to the acre.

The next call was at "Charcoal Ranch," by Felix Foumier. Here also were five acres of Potatoes and one acre of Cabbages; each excellent. Here we were told that ice made the week previous, Aug. 5th.

We now come to the wild scenery, beautiful and grand, which surrounds Sierra City. We were once misled from the trail by the track of an old Quartz-Mill, from whose flume the white powder made a light track visible in the night, and brought us down into a wild ravine, from which we at one time felt as if we could hardly escape without a night's lodging in these mountain cañons. But fortunately our sagacious animal took the trail and brought us safely out of our difficulties, and we soon arrived at the City of Two Taverns and One Saloon, "Sierra City."

Undoubtedly in coming years this place will be one of note, as the Wagon Road will pass here as the best and most direct route for the Great Sierra Valley and Washoe.

Sierra City is some 12 miles from Downieville, situated at the foot of the Great Sierra Buttes, whose hoary summits seem resting amid the clouds. This is one of the grandest of all the mountain peaks; its craggy and smoky head seems like the mouth of some terriffic mountain god, there reaching up some ten or twelve thousand feet high. It seems the sentinel watching over the rich treasures that are hidden in the mountains around its base, in one of which is a rich argosy, equal to the Almaden Quicksilver Mines. The Sierra Buttes Quartz Company have their famous Mills half-way up this mountain, where, as we have before reported, $39,000 were taken out in 39 days. The Bigelow Mills and others are below it, all rich and doing well.

At Sierra City there is a good home, a Hotel kept by Mr. and Mrs. Thompson, whose kind attentions bestowed upon the traveler will always make them feel contented and happy in these mountain regions.

The Buttes that stand over this region have been quite celebrated for some daring attempts to mount them by visitors, one of which, from the Sierra Democrat, we append as quite interesting, and showing what has been done in the past to stand upon their lofty peaks:

A Daring Feat.—On Wednesday a party, composed as here named, was piloted by Rhodes from Gold Lake to the Buttes: Mr. and Mrs. C. F. Woods, Mr. and Mrs. W. M. Stewart, two Misses Atchison, W. H. Ladd, and I. E. James. The entire party set out to ascend the rocky pile, but the gentlemen of the party were detained, as the ascent became difficult, assisting ladies to mount the successive layers of rock. After toiling along in this way for some time, the company in general, and three ladies more particularly, were startled, on looking about for Miss Annie Atchison, to see her seated on the highest peak of the Buttes, at the flagstaff, waving a handkerchief to to her friends below. Few men and never a woman had before set foot on that giddy hight, and the sides are so precipitous as to cause a shudder in the bravest. In one part of the ascent the pedestrian looks off to the left into a chasm with perpendicular sides rising two hundred feet. A rock cast over is not heard till the lapse of seven seconds. The other ladies of the party did not venture where Miss Atchison led the way, but contented themselves with stopping some hundreds of feet below, till joined by the gentlemen, who scaled the wall of rocks, and accompanied Miss Annie in the down-trip. The gentlemen took champagne with them, and there on the misty hight drank to the health of their fair *compagnon du voyage,* no doubt impressed with the truth of those lines of Bayard Taylor:

> "The bravest are the tenderest—
> The loving are the daring."

◆

Vancouver Products.

The Agricultural Society of Vancouver lately held its first Industrial Exhibition, which was very creditable. From the Secretary of the Society, J. T. Pidwell, Esq., we have received a very handsome box of Fruits, Pears and Apples, together with a fine collection of samples, such as was on exhibition, highly honorable to the Society for their merit, and for the handsome style in which they were got up. We received also a package of Seeds for the Secretary of the State Society, and for the Santa Clara Society, which we forwarded, and also one for ourselves, which can be seen at our office. The Apples and Pears were fine samples, and we are satisfied that the Exhibition has been a complete success, for which we rejoice. We copy the following from the Secretary's letter:

"I had intended sending you a report of our late Exhibition.

"I now merely say that it was a success the most sanguine among us did not contemplate, and is another evidence of what a little preserving effort may accomplish.

"We do not pretend, however, to say that anything that we can present will at all compare in size with what your favored climate can produce, but we are presumptuous enough to think that what we lack in size is more than compensated in flavor, and after a little painstaking culture we may improve in size.

"I send you a few samples of our Apples and Pears, and a few Cereals, just to show that we are making a beginning, and you know 'all things had a beginning,' even the great and ramified Agricultural existence of California. The results of efforts and advocacy I well remember of yourself and a few others, who dared to think and say that California could and ought to produce her own bread. Oh! '49, '50, and '51! What think you now? Were they madmen, who had foresight to see, and courage enough to declare, that California would never be a country worth living in till she can produce the bread she eats? Gold did not make California what she is, and well you know it. It must afford you much pleasure to reflect on the progress of the past. And it should tempt you to lay down your 'arms'—*pen,* I mean, and cease from your toil of body and mind. But I suppose, like many another old hero, the many battles won strengthens his ardor for further conquests.

"Well, go on; and may your last days be your best and most successful ones.

"Accept my thanks for past favors, and allow me to remain, Yours, respectfully,
"J. T. Pidwell."

For the kind words to us personally, we *feel them* just now, when the years of labor press on us, and we would fain lay down and rest. But work! work! work! is the watchword, though years of past toil have not given us the rest hoped for.

We well remember the years '49, '50, and '51, when early efforts in this cause were ridiculed. Now, they are the theme of triumph.

We wish complete success to the Society, and to the able efforts of our friend, their efficient Secretary.

◆

The Bee and the Vine.—We copy the following from the San José Mercury, to show what is said on the Bee subject, with the observation that it is positively asserted in other quarters that the Bees never disturb the Grapes unless the skin has been previously broken; while, as far as we can judge, there is Honey here produced as fine and agreeable to the sight and taste, as there is anywhere. We need only refer to the beautiful Honey exhibited by Harbison, Bigelow, Hoag, and others, at the State Fair, and by Hamilton and Woodbridge at the Stockton Fair. These refute the wrong assertion of the Mercury that there is no sweet or pure Honey. Any one in our city can see at Rumrill's Stand, Washington Market, as pure Honey as ever was made. But here is what the Mercury says:

The Honey-Bee has almost taken possession of some portions of this country, greatly to the annoyance and disgust of Wine-makers. Perhaps it is not generally known that when the Grapes are allowed to remain on the Vine until thoroughly ripe, the Bees almost ruin the best varieties for Wine purposes. They puncture the skin and feed on the juices, causing the Grapes thus pierced to become sour and wilted. The introduction of the Honey-Bee into this country we regard as the next thing to a failure. The long dry summers, and the absence of suitable food, are peculiarly unfavorable to them, and they take to robbing each other for pastime. Besides, we have seen no Honey here worthy the name—fair to look upon, but offensive to the taste. The wild-mustard, tar-weed, and other obnoxious substances upon which they feed, give much of the Honey produced a disgusting flavor. We have had some considerable experience in Bee-culture in the East, and have never yet found here Honey made to compare with that made from the white-clover of the Northern Atlantic States.

Pioneer Coffee and Spice Mills.—We paid a visit to the Pioneer Coffee and Spice Mills of Messrs. Marden & Folger of this city, and really to spend an hour in these mills and inhale the fragrance of the "Old Java," as it sent forth its perfume while roasting, is almost equal to the enjoyment of a cup of its inspiring beverage, save the sugar and cream. This establishment has been in full operation for over ten years (formerly Bovee's), and is the Pioneer Mills of this kind in our State, and for purity and excellence of all its manufactures, cannot be beaten, as is shown by the success it has won.

California-Cured Figs.—We have eaten some very delicious Figs that were grown at "Hock Farm." These Figs were neatly packed in 25-lb boxes, were fresh and delicious, yet very finely preserved, and highly creditable to "Hock Farm," being the *first* thus prepared in California.

Thanksgiving.

The day was more universally observed in our State than ever before; almost universally, business men regarded the day; Churches were well filled, and the usual family gathering over the Thanksgiving dinner, and the social usages of the day, made it a genuine "Thanksgiving Day," and in no State of our Union was there one that had more reasons for the true observance of such a day more than California, for our harvest has been abundant, and our people are at peace—almost free from the din of war, and the evils and sorrows that hang so heavily over every other State in the Union. To us, personally, it was a dark day, for we were an attendant in the sick-room watching a loved one—a little angel hovering between two worlds. Earthly friends clinging to it here, while Spirits were calling for it to another world, and thus for that and many days since the battle has waged. Hope comes now, and we abide trustingly to Him "who doeth all things well."

We rested from the office labors of that trying week. We did not issue a Farmer, for so was our custom, Thanksgiving week; yet not so sadly has one week been passed before. We trust, however, that all our kind friends elsewhere enjoyed the day, and hope a kind Providence favored them with all the blessings of life, health, and prosperity.

◆

Export of Sewing-Machines.

The trade in Sewing-Machines already ranks among the most important of our national industries. For some time Machine-sewing has, in this country, almost superseded the ordinary use of the needle in the manufacture of garments; but other countries are only just beginning to adopt the economising invention. Certain of our enterprising manufacturers of Machines have recently introduced their productions into the principal cities of Europe, and the result has been quite an important demand for the American Machines. The Machines made here are cheaper, more handsome, and more complete, than those of English makers, and the probability seems to be that the Yankee Machine will defeat the English one, even on English ground. The following statement of the export of Machines from one port for two months shows the importance that this branch of manufacture is assuming:

Export of Sewing-Machines from New York from Aug. 1st to Oct. 1st, 1861.

Destination.	*Quantity.*	*Value.*
Liverpool	546	$20,528
New Grenada	168	8,368
Brazil	114	10,553
Chili	106	5,537
Havre	71	6,888
Hamburg	87	3,772
Cuba	45	2,688
Mexico	27	1,343
Argentine Republic	22	941
Cisplatine Republic	22	802
Porto Rico	18	445
Rotterdam	11	450
London	8	612
Cadiz	3	112
British West Indies	3	201
Venzuela	3	150
Constantinople	9	250
Africa	2	91
China	1	13
Leghorn	1	100
Bremen	1	45
Total	1,268	$64,149

The above is from the U. S. Economist. Of the Machines, Wheeler & Wilson's comprise a large majority.

◆

"The Song of the American Volunteer."—We have received from the composer, E. G. St. Clair, Esq., a song with the above title, the words by T. G. Spear, Esq. The words of the song are inspiring, and do honor to the Poet, who is a typo; the music is also fine, The song should be a family song, to awaken Patriotism and Love of Country. Besides, it is a home-production all through. and published in fine style.

Splendid Collection of Bulbous Roots.—S. W. Moore Seedsmen, on California street, have just opened one of the largest collections of Bulbous Roots yet shown on the Pacific shores. It comprises all the rarest and most beautiful kinds known. Call early; now is the time to plant.

◆

Riding School.—The fine Riding School on Montgomery street, conducted by Orrick Johnson, Esq., the proprietor, is now under successful way, and nobly patronised. Several parties of Ladies are in daily attendance as scholars, and yet there is room for more.

◆

The Tucker's Music Hall Association has organized by the election of the following officers: Trustees—Samuel J. Hensley, S. H. Meeker, Wm. Norris, Wm. R. Garrison, Charles Hosmer; President—John W. Tucker, Secretary and Treasurer—S. C. Simmons; Messrs. Parrott & Co. were elected as bankers of the association.

The San Francisco Pioneer Woolen Factory Company has filed a certificate of incorporation in the County Clerk's office. The capital stock is $100,000, in shares of $1000 each. Frederick P. Salomons, Leopold Cahn and Gustave Ris, are the first Board of Trustees.

The Lone Mountain Association has tendered a lot two hundred feet square as a burial place for Col. Baker, in one of the most eligible spots in the Cemetery for the erection of a monument to his memory.

County Treasury.—By the County Treasurer's Report it appears there was in November in cash in the County Treasury $721,974 65; on the 31st of October there was $541,411 41. On November 31st the balance on hand was $430,980 84.

Ant Riddance.—We have made a very important and cheap discovery in keeping ants from bees. Several years since the little red ants were very numerous in our cupboards, and we put stone-coal against the end of the house opposite the cupboard, and it banished them all. We concluded that it was the copperas in the coal. This spring the black ant began to annoy our bees, and we produced copperas out of the coal-bank and put it around the bench legs, cleaning all the ants off the bench, and there has not been one about the hive or bench since.—[Bee Journal.

STATE SUMMARY.

THE increase in the taxable property of Calaveras for this year is 11½ per cent over the amount exhibited last year.

IN Los Angeles county deer, as well as geese and ducks, in fact all kinds of game are said to be unusually abundant this year.

OIL springs have recently been discovered in Santa Clara county, from which large quantities of crude oil are now being taken. The discovery is considered valuable.

BOYS who are big enough to manage a gun are making a very good thing of it at present, at Stockton, the Republican says, in sallying out into the tules and shooting duck. They shoot sometimes a dozen or twenty a day, and get from fifty to seventy-five cents a pair for them.

WEEK before last a drove of 590 hogs reached Carson from Sacramento. They were owned by Chester & Launce. They were slaughtered and made into bacon and hams. The same parties had another drove of 300 overtaken by the storm at Truckee Lake, and it is supposed they all perished, as the men with them had neither barley to feed them nor salt to pack them.

NAPA must be the banner county we "guess" in the State, as the Reporter says the taxpayers may congratulate themselves on being free from debt. The county is not only out of debt, but has excellent county buildings, permanent bridges, and, on our principal routes of travel, as good roads as the nature of the soil renders possible, without either planking or macadamizing. Pretty well, we think, for a county only ten or eleven years old. Good for Napa.

A Registry Law is apparently demanded in this State, and several of the papers are discussing the propriety of having one enacted. Numerous cases of frauds on the elective franchise for the want of such a law are cited, and appear to be well substantiated. There appears to be no remedy for such outrages on the rights of freemen, except in the enactment of a Registry Law. We believe a large majority of the people would sanction such a law, while none but demagogues, or those who profit by iniquity, would oppose it.

THE ANTI-CHINESE, or Anti-Cooley Association of San Francisco, has issued an address to the people of California in opposition to the immigration of Chinese among us. The Association recommends that the Chinese be driven out of the State and all immigration of that class stopped, by the passage of an Act providing for gradually increasing license tax upon all Mongolians in this State, engaged in mining, mechanical, or other industrial pursuits, holding the employer, as well as the Mongolian, responsible for its payment, and making the process of collection summary, as in the case of poll tax and miners' license. While at first this tax shall not be large, it shall be increased periodically, until it amounts to a complete prohibition. The address is worthy the attention of our people, industrials as well as legislators.

RAIN! Rain! Rain! We appear to have rain enough for one spell. A few days of pleasant weather succeeded the first storm, since when, for ten or twelve days, it has been continual rain or drizzle, up to Wednesday morning, when it cleared off, with a northerly wind and a prospect of fair weather for a time. We hear though it has not been so "rainy" latterly in the interior as in this city. Severe storms have occurred in the mountains and over in Carson Valley, with any quantity of snow. Farmers are fully satisfied with the quantity of rain for the present, as we hear, and if fair weather succeeds, so will busy times, and the plows run actively. The grass is springing up and our hills around the city are already covered with green, a pleasing contrast to their late brown appearance; It is a pleasure to greet these indications of the arrival of our springtime.

THE SWAMP LAND FUND.—The last Legislature borrowed for the use of the General Fund, the sum of $193,666 43 from the Swamp Land Fund, and enacted that it be paid back out of the first moneys received into the Treasury subsequent to the second Monday in November, 1861. Treasurer Findley has now paid back this amount to the Swamp Land Fund, so that to-day there is the sum of $238,057 66 in the Swamp Land Fund. Thus far, says the Bee, there has been paid out of this fund by order of the Board of Swamp Land Commissioners, the sum of $16,350, making the total that was in the fund $254,407 66. There are some $43,000 due this fund from the General Fund, which was paid into this latter fund under the law of 1855, but no legislation has yet been had ordering it paid back. The next or succeeding legislature will doubtless cause the matter to be rectified. Although the Commissioners have paid out but $16,000, they have increased the taxable property of the State—which fact will appear in the next assessment roll—some one million dollars: and of this the taxable property in Sacramento county will be increased about $100,000. They have discovered all the lands sold—their location and the owners thereof—which before was not known save to a limited extent, and thus this property which has been virtually exempt from taxation will now be taxed as other property.

◆

From the East.

But little news had been received by the Overland Telegraph for some time, owing to disarrangement of the wires by storms and other causes, up to Wednesday, when late and interesting news was published by the Alta, which we copy below. The capture of Pensacola is confirmed, though the particulars are meager, as to the victory or its results.

The Times dispatch from Washington on the 28th says: Letters from prisoners of the California Regiment at Richmond, show that most of those supposed to have been killed at Ball's Bluff are prisoners. The officers are confident that fifty includes the whole number of dead.

The Phil. Inquirer's Fort Monroe letter says the rebels report Pensacola evacuated, and the Navy Yard entirely destroyed......Gen. Bragg out for reinforcements. Five vessels of war that were assisting Col. Brown were riddled with shot.

A special dispatch to the Tribune, dated 29th, says that Adjutant General Thomas sent instructions to General Sherman, at Beaufort, to take possession of all the crops on the island, and ship the cotton and the other crops not wanted for the army to New York, to be sold for the Government of the United States; the slaves to be employed to save the crops.

The rebels are falling back from the Potomac before the slow but certain advance of the Union forces, and hardly offered resistance to our vessels for the last few days; (supposed to mean the vessels navigating the Potomac.)

Letters from Port Royal report that the expedition to St. Helena Inlet, without striking a blow, took the enemy's works. The guns have been carried inland. 14,000 rebels are reported at Handeville, ten miles from Hilton, under Gen. Drayton.

A dispatch dated 2d December, says, Congress met to-day at noon. In the House, 114 members answered roll call. Sargant and Phelps of California, Hooper of Massachusetts, Wilson of Iowa, Bernheisel of Utah, and Cradlebaugh of Nevada, were sworn in. Maynard, of Tennessee, after some discussion, was sworn in. A committee was appointed to inform the President that both Houses had a quorum, and were ready to proceed to business. Hickman presented a certified statement of the organization of the Provisional Government of North Carolina, dated Hatteras. He asked that Foster's claim might be considered. Foster's claims to be a member from North Carolina were referred to a committee. Watts, Delegate from New Mexico, and Blair of Virginia, successor to Senator Carlile, were sworn in. Sigur, of Accomac county, Va., claimed a seat. Richardson, of Illinois, moved he be sworn in, as the people in Eastern Virginia, where Sigur was elected, had returned to their allegiance. After some discussion, Sigur's case was referred to the Committee on Elections.

The Vice President called the Senate to order at noon. Forty members were present. Twelve o'clock was fixed on for the daily sessions. Messrs. Trumbull, Hale and Latham, were appointed a committee to wait on the President. Mr. Trumbull gave notice that he would introduce a bill to-morrow, to confiscate the property of rebels and give freedom to persons in the Slave States.

Mr. Wilkinson also gave notice of a bill to abolish the distinction between regular and volunteer forces. An informal recess was then taken.

The St. Louis Democrat has news that the rebels (fifteen thousand strong) were moving under Price, Rains and McBride. Price says he shall make Kansas the future field of operations. McCulloch has had a quarrel with Price, and gone off to Arkansas.

The New York Post has information that a Canadian steamer, with a large cargo of arms and clothing for the rebels, had been captured on the coast of Maine...... General Jim Lane delivered a great Anti-Slavery speech in Boston, on Saturday, to an immense crowd of people......The Tribune's Washington special dispatch, of the 1st, says no fear need be entertained as to the position the President will take concerning the seizure of Mason and Slidell. He will hold that Capt. Wilkes did right, but that he should have seized the steamer also......Mr. Ely, M. C., now prisoner at Richmond, has sent word that he will take his seat in Congress this session......Reports from Richmond say the rebels are terribly excited concerning the Federal operations on the coast The Southern troops declare they will go home and leave Virginia to her fate.

Upon the renewed application of G. D. Prentice, Secretary Seward, on Saturday, ordered the release of Calhoun Benham and Ex-Senator Gwin from confinement in Fort Lafayette.

The Secretary of the Navy, in his report, after mentioning the capture of Mason and Slidell, says that the prompt and decisive action of Capt. Wilkes merits and received the emphatic approval of the Navy Department, and if a too generous forbearance was exhibited by him in not capturing the vessel which had the rebel Commissioners on board, it may, in view of the special circumstances of his patriotic motives be excused; but it must, by no means, be permitted to constitute a precedent hereafter for the treatment of any similar cases.

Jesse D. Bright, of Indiana, is at Washington, and intends to take his seat. Senator Powell, of Kentucky, also arrived, Saturday, and it is said will take his seat. A committee will be chosen to examine into the conduct of such men, and if proof against them is plain, they will be expelled.

A letter in the N. Y. Herald, from Curacoa, Nov. 9th, says the U. S. steamer Iroquois arrived off Port Saguiarica, with the intention to land, but was informed by the Government authorities that the vessel could not enter except in case of distress. The commander would not enter on such conditions, but bore away westward.

Another rich prize was brought to the Brooklyn Navy Yard on Saturday, which was captured by the steamer Penguin on the 25th ult.

The tolls this season on the Erie Canal up to the 22d October amount to $3,055,649 26, being an increase of $624,007 11 over last year, and $4107 more than any year since the construction of the canal.

The following later intelligence was published yesterday:

The President's Message was sent in to Congress on Dec. 3d. The House has voted a gold medal to Capt. Wilkes. H. C. Burnett, of Kentucky, was expelled for treason. Wickliffe, of Kentucky, made a strong Union speech, explaining the course of Burnett, and other Kentucky traitors, and said that by the 25th of December, no rebel government will be found on the soil of Kentucky.

A panic is reported among the rebels at Charleston, and a meeting had been held, at which the Mayor and people were in favor of surrendering to the Union army, but the rebel government said the city must be burned.

Dispatches received from Flag-Officer Dupont, dated Port Royal, Nov. 25th, give the gratifying intelligence that the flag of the United States is flying over the territory of the State of Georgia. Tybee Island is within mortar distance; Fort Pulaski is taken possession of, and the approaches to Savannah are completely cut off.

The great gun-boat expedition under Gen. Halleck is expected to start down the Mississippi in about two weeks.

As the people of several counties of Eastern Virginia have declared themselves loyal, their ports will be opened for trade.

A dispatch to the N. Y. World says that Col. Kerrigan, of the 12th N. Y. Regiment, has been tried for treason by court-martial, convicted, and ordered to be shot. The order is signed by the President. Kerrigan is a Member of Congress.

Beaufort was to be occupied on the 28th ult. by 5000 Federal troops, to prevent secessionists taking possession of it.

The expedition South is for Fernandino; 5000 troops have gone into it.

A conspiracy of Union men had been discovered in New Orleans, causing great excitement there. Many arrests had been made.

McCall is moving towards Leesburg, and Generals Smith and Porter are extending their lines forward, while McDowell and Franklin are watching the enemy's centre, which is growing weaker and weaker every day.

◆

OVERLAND MAIL AFFAIRS.—During November the number of Letters sent by the Overland Mail numbered 33,868; the postage on which amounted to $4,875 31. During the same period 24,507 Letters were received from the East. There were 2,512 circulars and 11,892 newspapers sent hence East during the same month.

MR. JAMES E. CALHOUN, a son of the late Hon. John C. Calhoun, of South Carolina, died in this city on the 29th November, of consumption. Mr. Calhoun was a lawyer of good ability, and formerly practiced in connection with Mr. Blanding and Col. Della Torre.

AN order has been received from Washington countermanding the first order for withdrawal of the regulars from this coast. The whole of the Ninth Regiment will remain here, with the exception of one company which has already started East. They are in camp at the Presidio.

A WARNING ABOUT CARIBOO.—A correspondent of the Alta, who has seen the Cariboo elephant, warns the public not to believe all the big stories from there, and to remember Fraser river. He speaks of his experience in the Cariboo diggings as follows: "I left this city about the middle of April last, bound for Cariboo, and after about two months' hard fatigue and travel I arrived at the new El Dorado. I found a good many doing pretty well, say about one to every eight persons who were there. After prospecting, and running from one place to another, I found nothing that would pay grub, nor anything like it, and hundreds of others were in the same condition. The season is so short that miners have but little time to prospect, and if a person has not money enough to bring him back, he stands a good show of starving before he can get away."

SALT.—The imports of salt into the United States during the year 1860 were more than 14,000,000 bushels. The manufacture for the same period amounted to 13,400,000 bushels, making a total supply of 27,400,000 bushels, from which deduct amount exported, 475,000 bushels, and we have amount taken for consumption, 26,925,000 bushels. The salt-producing States of the Union and their estimated yield of salt for the year 1860, are as follows: Massachusetts, 325,000 bushels; New York, 5,593,447; Pennsylvania, 950,000; Virginia, 3,650,000; Kentucky, 290,000; Ohio, 2,050,000; Illinois, 60,000; Michigan, 40,000; Texas, 50,000; Florida, 70,000; California, 250,000; Utah, 60,000; Total—13,388,447 bushels. The production during the year 1860 was 70,000 bushels less than in 1859.

Something New.

HALSTED'S PORTABLE
CIDER OR WINE MILL.

THIS IS A CALIFORNIA INVENTION, COMBINING both the Grinding and Pressing processes within a space of three by four feet.

With it the smallest amount may be made at a moment's notice, or one person can make from two to three barrels per day. The inventor will make these Mills to order on very short notice, and guarantee them superior to any imported. Price, $75. Larger Mills made to order.

A sample Mill can be seen in operation in the Pacific Fruit Market, Clay street, San Francisco.

The inventor would respectfully refer those interested to Messrs. GRAVES, WILLIAMS & BUCKLEY, Fruit Dealers, for further information. Or address

JOEL HALSTED,
(By Express) San Francisco.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N SWEZY, President, and CHAS. M. GORHAM, Secretary. The Committee was composed of H HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,
For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

THE PASSING CLOUD.

O cloud, so beautiful and fleet,
Passing where fierce suns burn and beat,
O'er hights untrod by human feet!

Chameleon cloud, of iris hue,
As changeful as a drop of dew,
How many shapes in moments few!

A car, a globe, a golden gloom,
How many forms thou dost assume!
A mountain, pyramid or tomb.

So many shapes beneath the sun,
So many dyes that fusing run,
And beauty still in every one.

Tinged with the hue the rainbow cast
On snow peaks, where their image fast
Fades down before the scowling blast.

Such golden light the young moon threw
Upon the still drops of the dew,
What time the night wind fresher blew.

'Twould make a brain-sick painter pine
To win a hue to match with thine
To make his martyr's mantle shine.

In such a cloud the angles seek
To hermit on the granite peak,
So pale, so humble, and so meek.

Such cloud when Jesus, long ere day,
Had sought the mountain-top to pray,
A halo round him seemed to play.

[For the California Farmer.]

Literature—No. 8.

BY MARY MERRILL.

John Milton was born in London in 1608, during the reign of James I, and lived also during the reign of Charles I, the Interregnum, and the reign of Charles II. At fifteen he was a fine scholar, and was sent to College. In his twenty-first year he wrote his celebrated Hymn on the Nativity, which alone would have immortalized him. He devoted himself to classical literature, and wrote successively Arcades and Comus (masques), and Lycidas, an exquisite monody upon the death of a college companion, Mr. Edward King, who was lost in the Irish Sea. About this time, he also wrote L'Allegro and Il Penseroso, highly descriptive poems.

In 1638, he left home to travel for more than a year in France and Italy, where he became acquainted with Galileo and other great spirits.

In 1643, Milton married Mary Powell, daughter of a cavalier; this marriage proved most unhappy; in about a month's time, the bride visited her parents, and with them remained about a year, but subsequently returned to him, when he solicited the hand of another, he holding to the view that the law of Moses tolerated divorcement not alone for adultery, but for uncleanness of mind. It is highly probable that what he chose to call perversity, or uncleanness of mind in his wife, would never had manifested itself to a congenial partner, for she had not those mental qualities that could appreciate his philosophical tastes, nor was her nature such that she could be happy with a husband so fond of seclusion.

In 1649, Milton, a firm republican, was appointed Latin Secretary to the Council of State. He remained faithful to freedom and republicanism after the death of Cromwell. Equally free and independent was he in religious matters. His father had been educated a Catholic, but became a Protestant, and he soon dissented from the Presbyterians, then from the Independents, then for years did not go within a church, and at last was a Unitarian, a fact not generally known until the beginning of the nineteenth century revealed an unpublished treatise, written in the latter part of his life, strong in argument against the Trinity. He begun Paradise Lost in 1658, and with shattered health and in blindness did he finish it in 1665. His fortune was much diminished after the Restoration, but through the intervention of true friends, he did not suffer further. His great work was a success with the public, 3,000 copies having been sold within eleven years after its publication.

Lowell says that Milton was filled with a sublime egotism; that no great poet is so universally self-conscious as he; also that no other is so much indebted to books, so little to personal observation.

He loved music, and in his verse may be called a musician; he had remarkable imaginative power, and his writings are characterized by a vastness that has perhaps never been portrayed by any other writer.

Paradise Regained and Samson Agonistes are great works; his prose writings too are remarkable for accuracy, strength and loftiness of style; they are mostly treatises upon political and religious subjects.

Milton, though long a sufferer from hereditary disease, had a calm serenity of mind to the last; he died in 1674.

Worry.

Don't you know that multitudes of human beings turn away from the many blessings of their lot, and dwell and brood upon its worries? Don't you know that multitudes persistently look away from the numerous pleasant things they might contemplate, and look fixedly, and almost constantly, at painful and disagreeable things? You sit down, my friend, in your snug library, beside the evening fire. The blast without is hardly heard through the drawn curtains. Your wife is there and your two grown-up daughters. You feel thankful that, after the bustle of the day, you have this quiet retreat where you may rest and refit yourself for another day, with its bustle. But the conversation goes on. Nothing is talked of but the failings of the servants, and the idleness and impudence of your boys; unless, indeed, it be the supercilious bow with which Mrs. Snooks that afternoon passed your wife, and the fact that the pleasant dinner-party at which you assisted the evening before at Mr. Smith's, has been ascertained to have been one of a second-hand character, his more honored guests having dined on the previous day. Every petty disagreeable in your lot, in short, is brought out, turned ingeniously in every possible light, and aggravated and exaggerated to the highest degree. The natural and necessary result follows. An hour or less of this discipline brings all parties to a sulky and snappish frame of mind, and instead of the cheerful and thankful mood in which you were disposed to be when you sat down, you find that your whole moral nature is jarred and out of gear. And your wife, your daughters, and yourself, put into moody silence over your books—books which you are not likely for this evening to much appreciate or enjoy. Now, I put it to every sensible reader, whether there be not a great deal too much of this kind of thing. Are there not families that never spend a quiet evening together, without embittering it by raking up every unpleasant subject in their lot and history. There are folks who, both in their own case, and that of others, seem to find a strange satisfaction in sticking the thorn in the hand further in; even in twisting the dagger in the heart. Their lot has its innumerable blessings, but they will not look at these. Let the view around in a hundred directions be ever so charming, they cannot be got to turn their mental view in one of these. They persist in keeping nose and eyes at the moral pigsty.—[Country Parson.

Things we Ought to Know.

"Uncle Ben" writes for the "Young Folks," in the Vermont Chronicle, the following:

My Dear Young Friends: A celebrated ancient writer has truly said, "There are some things which it is no *credit* for us to *know*, but a great *reproach not* to know." Among these we may reckon:

I. Things *necessary*: A boy should know how to tie his handkerchief, drive a horse, build a fire, tie up a bundle neatly, reckon money, tell the points of the compass, wind up a watch, hold his knife and fork at the table, &c., &c. These, and a countless number of other things, which I cannot here mention, you will have occasion to know how to do—some of them daily—others more or less frequently. If you cannot, it will often put you and others to great inconvenience. If you make the attempt and fail, or succeed badly, you will be greatly "mortified," perhaps laughed at and reproached for your ignorance and inefficiency.

A young miss should certainly know how to make a bed, set the table, trim the lamps, dress her hair, and arrange her own apparel and room properly, superscribe a letter neatly, and many other things which your mothers will remind you of, or what is better, you yourselves will perhaps think of and try to do. Now, it is no great *credit* for a boy or girl to know how to do these necessary every-day affairs (though many are sadly deficient in them), but a great *discredit* not to know.

II. Things common: For example—Why does the blaze of the light, by which you write, go up? Why does the moisture collect in drops upon the pitcher filled with water? How is the rainbow formed? How can the fly walk upon the ceiling overhead? Why does water ascend in a sponge? &c.

These and many other facts and processes are daily and hourly going on around you and under your very eyes, and you do and should know something about them. Do you say, "Some of these things I know, and others I do not—I think some of them pretty tough philosophical questions."

Well, suppose I ask you "whether a snake has bones—which way the hind legs of an elephant bend or fold"—or the very simple question, "how many toes a hen has on each foot"—how many of you could answer even the last question? Could you tell me for a certainty whether it has four, or five, or three toes? You might guess at the number, or go out and count them. But you have seen them a hundred times and ought to know, and the question is, do you know to a "dead certainty," as the phrase is, so as to answer correctly and at once? The truth is, my young friends, we know something about a great many things, and but few things for a certainty. The very things we see every day, and think we know all about, we find have escaped our attention. If we go to others for information, we are but little better off. Indeed we shall be surprised to find how few persons are extensively and correctly informed—how few, even of the wise heads around us, can give the information we need, and whose answers we can safely rely upon.

You see, then, the importance of beginning to learn when young, and of being very careful how we learn from others, and observe for ourselves. You will remember the story of Columbus—how he made the egg stand up. We should not only know how to do things, but be able to do them promptly.

III. Things near home—in your own neighborhood, town, state, county. Suppose one were to ask you "how many inhabitants there are in your native town, or how many in your State." Could you tell them? Suppose they ask you to inform them "how many counties there are in the State." Could you tell the number and tell their names? Could you even tell the number and names of the towns in your own county? If they further wished to know "the length of the State, and its breadth at each end," could they learn from you?

Again, if you were asked "what year the battle of Bennington was fought," or "where Washington died," would you not possibly have to turn to your history before you would be quite certain as to the answers you should give?

Now these are only a few of the many things you ought to know, and if you do not, when you come to go out into the world among really intelligent persons, your pride will be wounded at every step, or what is still worse, if you pretend to know them and do not, your answers, if acted upon, may be productive of great mischief to others, and will be sure to bring ridicule and contempt upon yourselves.

You should not, however, confine yourself to common things. You may learn a great many things, so be you learn them well. You may inquire into the most distant and uncommon things, provided you do not overlook those common and near at home.

But do not waste your time in reaching after things beyond your measure, while you fail to see those wonderful things that are constantly going on around you, or trample under foot jewels of thought that lie right in your pathway.

Shingling a House.

James A. was a young man who had commenced in life with very flattering prospects, and a wife and happy children soon blessed him. Unhappily he became by slow degrees attached to strong drink, and soon became, to make a long story short, a drunkard. One evening he left his wife in tears, as was too common, repaired to the house of the man who sold the deadly poison, and drank so much that he sank down in a kind of stupefaction easily mistaken for sleep. All his companions had deserted him. About midnight, the landlord's wife came into the bar-room and said:

"I wish that man would go home if he has got one to go to."

"Hush, hush!" said the landlord, in a whisper, "he will call for something more directly."

"I wish he would make haste about it then, for it is time all honest folks were abed."

"Hush, I say!" he's taking shingles off his house, and putting them on ours," said the landlord.

At this time James began to come to his right senses, and commenced gradually rubbing his eyes and stretching himself, as if he had then awoke, saying "Believe I'll go."

"Don't be in a hurry, James," said the landlord.

"Oh, yes, I must go," said James, and off he started.

After an absence of a long time the landlord met James one day, and familiarly accosted him: "Hallo, Jim, why ain't you been down to see us?"

"Why," James remarked, "I had taken shingles enough my own house, and it began to leak pretty bad, so I thought it was time to stop the leak, and I believe I have done it."

Swearing for a Family.

Rev. R. S. Maclay, for thirteen years a missionary in China, has written a book, in which he relates the following anecdote:

During one of our examinations of candidates for baptism at Naukang, I observed that one woman and some three or four young people had the same surname. This circumstance led to the following conversation between myself and one of the young men:

"I observe you all have the same surname. Are you members of the same family?" I inquired.

"Yes," one replied, "this is mother, and these are my brothers."

"Where is your father?" I continued.

"He is at home attending to business."

"Does he approve of your embracing Christianity."

"Yes, he is entirely willing."

"Why does not your father himself become a Christian?"

"He says it would not answer for all the family to embrace Christianity."

"And why," I asked with some curiosity, "does he think so?"

"He says that if we all become Christians, our heathen neighbors will take advantage of that circumstance to impose upon us."

"How will they do that?" I inquired.

"Christians are not allowed to swear or fight, and father says that when our wicked neighbors ascertain that we have embraced Christianity, they will proceed at once to curse and maltreat us. Hence father says to us: 'You may all become Christians, but I must remain a heathen, so as to retaliate on our bad neighbors. You can go to meeting and worship, but I must stay at home to do the cursing and fighting for the family.'"

Why Don't Boys Grow Up Handsome?—'Cause they were not made handsome, perhaps you will say. Well, we cannot speak very positively on this point, but we *think* a correspondent of the Springfield Republican Republican hits pretty near the mark, at least in some respects, when he says: "The male human race in its common aspects is by no means beautiful. Yet most boys are handsome. Why don't they grow up handsome? It is hard work and poverty, rum and tobacco, and selfishness, and vanity, and all the other foolish propensities and bad habits, which so play the deuce with their good looks." There is no doubt but bad habits and evil passions and propensities, are very instrumental in destroying good looks, as well as good characters. Boys, and girls, too, will do well to bear this in mind.

MRS. LIZZIE W. WARREN, M.D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

Mrs. Warren will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention*.

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower o any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting grounds and trout-fishing within a short dive the Springs.

14 6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G Oakes, are prepared to give the best accommodations to the traveling public. (15-3m

SPERRY'S HOTEL.
Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs Perry, a lady of experience

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort

20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

UNION HOUSE!
Corner of Main and Center streets,
MOKELUMNE HILL.
Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Churns than by gold digging. They only need to be seen to be approved. 19

TO THE HEROES OF AMERICA.

BY J. R. DRAKE.

On, hail to the heroes whose deeds have restored
  Our honor unsullied once more,
And the blaze of their valor triumphantly poured,
  On the field that was darkened before!
For hid from our view was fair Victory's form;
  And the heavens were shrouded in wrath,
Till the sons of the battle, like stars of the storm,
  Arose on the desolate path.

Then plume thy dark pinion, proud bird of the North,
  And sweep from thy home in the skies,
On the wings of the whirlwind exultingly forth;
  To the plain where thine enemy dies;
And joy thee, my country, thy stains are effaced;
  The pride of the boaster is low,
And the deep sullied standard by cowards disgraced,
  Is washed in the gore of the foe.

And thou, starry banner! look proudly again
  On the chiefs who redeemed thee from shame,
Nor darken thy beam, though it fall on the slain,
  Who repose on the death-bed of fame;
For the halo that circles the tomb of the brave,
  Its luster unfading maintains;
The sun of their being may set in the grave—
  The light of their glory remains.

* * *

What is it For?

By A Reader of the Farmer.

"I say, neighbor Prompt, what d'ye s'pose this letter 'a' after my name, here on this Michigan Farmer, means?"

"What is it?—a letter 'a'? Let me see, neighbor Tardy. It cannot be what they call a 'typographical error,' can it? Let us look at mine. No, there's none on mine. Here comes neighbor Goodheart. Perhaps he can tell us. Neighbor Goodheart, good morning to you. Got a puzzle for you to help us solve."

"Good morning, my good friends Prompt and Tardy. Hope I find you in good health this fine morning. A puzzle, you say? What is it?"

"This letter 'a' after my name here," says Tardy, "D'ye s'pose its a mistake, or——"

"Oh, I can tell you all about that. You see, I was down to the city the other day, and stepped into the Farmer office. The editor was just reading over and revising the long list of printed names, over twenty feet long! and seeing those 'a's' after a good many of the names, I asked what they signified; and he said he had put them after the names of all those who were in arrears—you are 'a' stands for *arrears*."

"Ah! well; that is the reason why there is none after my name, then," said Prompt. "I make it a practice to pay up such small bills, instead of letting them run along, bothering folks half to death for the want of their just dues."

"You are about right, neighbor Prompt, though I didn't realize it till I had a talk with our editor, and found out that about four hundred of the Farmer subscribers have not yet paid a cent toward their paper this year. You see, as it is only about two months till the end of the year, and as the editor makes no profit this year, on account of there being so little received for advertising, what has been received for the Farmer up to this time has not paid expenses; so he actually has to hire money at at a big shave to furnish our papers, while we let it run along, when we all might pay a dollar or two apiece and save his hiring money, ever so much easier than he can hire fifteen or twenty dollars every week to make up the deficiency. Tell you, when I came to see the whole truth of the matter, I paid over my dollar and a half in short order, so as to take the blame from my door; and I wondered how he could be so lenient as to still take only the *advance* price, while he has to pay a large interest, in return for his disposition to accommodate his patrons. Why, you would hardly believe it, but it is a fact that, on one occasion, being a stranger in Detroit, our new editor had to pay at the rate of *fifteen dollars a month for the use of a hundred dollars!*"

"Du tell!" exclaimed Tardy. "W-a-l now, I never thought on't. Fact is, if I'd got a dun, I'd a stopped my paper; but now I wonder I hain't had a pretty sharp one long afore this. Guess I'll send down a two-dollar bill to wipe that 'a' away from my name, forthwith."

"That's the right talk, neighbor Tardy, and if all who have an 'a' after their name will do likewise, I'll warrant the editor will be able to give us a better and prompter paper than he has any heart to get up for us now. It stands to reason, I think."

* * *

Coal Oil as a Remedy.—Professor J. B. Turner writes to the Prairie Farmer that through a succession of experiments on himself, his children, his horse, and other cases, he has discovered that coal oil is a certain and speedy remedy for all scrofulous eruptions and all kinds of local diseases, such as rheumatism, pains in the side, shoulder, back, and joints, croup, sore throat, bruises, strains, cuts, and laceration on men and animals. He mentions several cases in his own family where the application of this oil gave instant and permanent relief; and finding its effects so beneficial, he thought proper to make the discovery known to the public.

The Oregon Farmer having published the above, says in a later number: "We are glad to learn that it has been tried in several cases of rheumatism and effected cures. The rheumatism is one of the diseases of this country, and a remedy for it is of very great value. It has come to our knowledge that this remedy has been used in cases of sore throat—sore from colds, perhaps bronchites—with great advantage, even effecting cures. If this be so, its value can scarcely be appreciated. We again recommend to persons afflicted with rheumatism, to try this remedy. Bathe the parts affected morning and evening—bathe well, and dry in by the fire. The flavor of coal oil is not agreeable to many, but it soon passes away. Our own opinion is, that it is worth all the nostrums and patent medicines ever invented for the cure of rheumatism."

An Oil Well.—A paper published at Titusville, Pa., gives the following account of an oil well in that neighborhood: "The oil rushes through a three-inch pipe, with tremendous velocity, and that as it is carried into the large vats prepared to receive it, it drives in with such speed as to keep the whole body of oil in these vats in a perfect foam. Two vats were filled and running over, which the men were putting into barrels, but notwithstanding they barrelled 125 barrels in less than an hour, the oil continued to run over the top of the vats as fast apparently as if they had not drawn out a gallon. Immense quantities of course have run off and been lost, large ponds of the oil have accumulated in the hollows, while thousands of barrels have run into the river covering its surface for at least fifty miles. The flow of oil from this one well cannot be less than from 2500 to 4500 barrels every twenty-four hours.

Thoughts Meditative.—The darkest clouds are often made to appear with golden edges, and sometimes become all brightness; so the human heart, though bowed in gloom and sorrow, may feel the sunlight of Hope, and send forth its gleams that shall appear in smiles upon the countenance, so bright that for a time the heart shall forget its sorrow.

How much greater and more inestimable in value is a truly generous sympathy and kind words at the fitting time to a suffering heart than the bestowal of even a largesse of *money*, that the recipient is made to feel as an additional burden to the present sorrows!

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	363
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860.

P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by
KNAPP, BURRELL & CO.,

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer

Saddle-Horse For Sale.

A FINE SADDLE-HORSE, FOUR YEARS old, got by Imp. Lawyer; is well broken, and can run a mile in 1:55, when in racing order. Is just fifteen hands high, bright bay, with a star and white hind foot; a perfect gentleman's horse. The owner wishes to sell him for want of use for him. Apply to

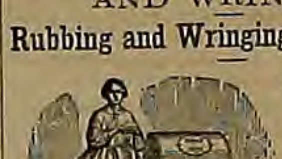
THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!



THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand

Wringing is Done Five Times As Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by
JOHN G. ILS,
170 (old number) Washington street,
16 Next Maguire's Opera House. SAN FRANCISCO.

Colby's Patent Improved
CLOTHES WRINGER

This machine is attached to a tub when in operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary

For sale by
T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.
W. HODGES, Sacramento street,
2-3m San Francisco.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

This machine is adapted to all kinds of Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco,
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.]
Nov. 30.

Since our last report there has been but a limited business in the Grain Market. In consequence of the long storm and unfavorable weather our receipts have been light, notwithstanding the willingness of shippers to pay a fair price for Wheat. Holders are not disposed to sell to that extent it was supposed they would. We now have the following ships loading, viz: the Winged Racer, Zephyr, Nonparell, and Inspector, all for the English market. It is reported that some of our leading shippers have, through agents in the country, secured the bulk of the Wheat they require to load the above named ships, and further that all of the orders here are for early shipment. If this is correct, and we have but the months of December and January only to ship in, it argues that in February, and March, and April (the months that large shipments were made in last year), our export demand will be but trifling, and instead of high prices, low figures will rule, as our local demand and home trade will not require all that we will have on hand with the amount expected from Oregon. In view of this state of things, knowing as we all do that our export demand fixes a price on our Grain, is it not well for heavy holders to consider a moment before they take too great risks?

The receipts from around the Bay for the last week have been as follows: Wheat, 24,001 sacks; Flour, 11,218 qr-sacks; Barley, 9857 sacks; Oats, 5583 sacks; Beans, 208 sacks; Onions, 150 sacks; Buckwheat, 25 sacks; Potatoes, 4775 sacks; salt, 400 sacks; Bran, 957 sacks; Middlings, 118 sacks; Wool, 162 bales; Hay, 349 tons; Corn Meal, 300 sacks.

Effects of Chloroform on Bees.—A person, says an exchange paper, wishing to have the honey taken from a hive without killing the bees, and having before heard of chloroform being used, felt anxious to try the experiment. He first closed the doorway, and then covered the hive with a cloth, to shut out the light as much as possible, after which he commenced to blow chloroform into the hive. When it was discovered that the bees were fallen to sleep, they were easily removed to another hive without harm to any one, and next morning were all awake and in a lively state, humming around their hives, no doubt wondering what had happened. This being a successful and useful experiment in keeping the bees alive, we think it right to make it known for the benefit of others.

To Strain Honey.—Bees make no honey late in the season, therefore take it away early. Select and mash by hand, and strain through a sieve. In warm weather it will nearly all drain through in a few days, and the honey thus passed will be pure and perfect, and will candy in cold weather. If it is desirable to prevent candying, keep it warm. What remains in the comb may be washed out with a small quantity of water, and may be boiled and skimmed, and answers the same purpose in culinary matters as the best. The silly practice of heating and straining through a cloth always spoils the honey.

Tapeworm and Measly Pork.

In Boston there is a very learned German, D. F. Weisland, Ph. D. (Doctor of Philosophy), who is devoting his life to the study of tapeworms. During the last ten years he has dissected more than 5000 animals in search of these singular parasites, and the facts which he and his collaborators in this field of investigation have ascertained, are exceedingly curious.

Tapeworms are found in all classes of vertebrated animals, fishes as well as land animals, different species of animals generally, having different species of tapeworms; that of the horse different from that of the ass; that of the sheep from that of the goat; and that of the rat from that of the mouse.

The common human tapeworm lives and grows in the bowels. Its head is provided with four suckers, with a cluster of little hooks, by means of which it attaches itself to the intestine, the body floating two or three yards down, and absorbing the nourishing juice either through small openings or through the skin. The body consists of several hundred rings or sections, which grow out of the head, so that the nearest the head are the youngest, and the oldest are at the end of the tail. The creature is an hermaphrodite; and as the joints mature, the sexual organs are developed, the male and the female both in the same joints. The joints then break off, and each one is a complete living animal, preserving its existence, frequently, for a considerable time, and laying a number of eggs after it is broken off.

The eggs pass out by the fæces, and *never hatch unless they enter the stomach of a hog.* But if the joints are eaten by some hog, or if their eggs find their way into the water that is drunk by swine, the egg hatches in the hog's stomach, producing animals so small as to be invisible to the naked eye, but which, under a microscope, are seen to have three pairs of spines, by means of which they bore their way through the walls of the blood vessels and enter into the circulation. Here they are carried into the muscles of the hog, where they grow into a curious animal, having the head and neck of a human tapeworm, with a round bladder tail, and producing the disease called measles. It has long been known that measly pork was caused by this bladder-tailed animal, but it is only within a few years that the curious fact has been ascertained that this animal is the larva of the human tapeworm. It is now proved by careful observation, that if one of these animals is taken into the human stomach the bladder-like tail is digested, while the living head and neck pass down into the intestine, where they hook on, and the rings begin to grow out to the well-known tapeworm.

Other species of tapeworms, living in other animals, have a natural history similar to that of the human tapeworm. They all live in intestines of vertebrated animals (animals with backbones), and each species must be hatched in the stomach of some animal different from that in which it is developed. For instance, one of the tapeworms of a dog is hatched in the stomach of a hare, and another in that of an ox; and the tapeworm of a cat is hatched in the stomach of rats and mice.

About 200 species of tapeworms have been described—five of them being found in man. There are only two, however, that are at all common. One of these is a narrow worm with hooks on its head, found particularly in Teutonic nations (Germans, English, and Americans), and the broad tapeworm without hooks, which seems to live almost solely in the Swiss and the Sclavonic nations. The former, and more common of these two species, has a head about the size of a pin's head, and the body gradually winds to about a quarter of an inch, sometimes reaching a length of 24 feet. Tapeworms have been found in sheep 100 feet long.

It is doubted by some physicians whether tapeworms are injurious to the health, though it seems probable that they are. They are certainly generally accompanied either by cerebro spinal effects, or nausea, or indigestion, or colic. The great remedy is pomegranate bark.—[Scientific Amer.

◆

Maryland Agricultural College.—On the 5th of October, 1859, this institution was formally opened, under auspices which indicated that it was destined to become not only an admirable educational establishment, but also an important auxiliary in the cause of agriculture. Thus far, in spite of many drawbacks, the chief of which have had their origin in the disturbed political condition of the country, the College may be fairly said to have justified the expectation of its friends. That it should have suffered to some extent from the same causes which have operated so seriously upon the material interests of the country, was naturally to be expected, and also from the loss of some of the members of its faculty—who have buckled on their armor and gone to the wars—but we are happy to learn that it is already in process of surmounting the various minor difficulties that have in some measure impeded its career of usefulness. The appointment of Henry Onderdonk, Esq., to the Presidency of the College is one of the very best that could have been made. We have known Mr. Onderdonk for many years, and from this long acquaintance with him, we have reason to congratulate the Board of Trustees upon the judgment and sagacity which has been displayed in calling him to the Presidency of the Maryland Agricultural College.—[Balt. Rural Reg.

The Right Spirit.—In a recent private letter, an extensive stock-breeder manifested a spirit, which we trust prevails generally among those who are laboring to promote improvement. After alluding to the times, and the fact that he has devoted many years of his life to a cherished object, he says: "I cannot, because a cloud has passed up before us, consent to throw away all past improvement, and when the cloud passes over, have to begin where we were ten years ago. I do not expect to sell enough stock these times to pay the interest on my outlay, besides keeping expenses—but I have no doubt of our country standing and going ahead. And when the good time comes, I wish to be prepared to reap a reward, and fully compensate all who give me now a helping hand." Were all animated by a like confident and resolute spirit, we should hear very little of the giving up of useful and progressive enterprises, on account of the temporary (as we hoped it to be) depression of the times.—[Baltimore Rural Register.

Bactrian Camels.—Ten of these animals which recently arrived in San Francisco from the Amoor country, are creating some considerable attention among the wonder-seekers at the Bay. They are said to be of an entirely different breed from those of Arabia and the North of Africa, being capable of enduring a more rigorous climate, and adapted to travel in mountainous districts. They are extremely active, and as sure-footed as goats; and there is no reason that we can perceive why they may not be rendered extremely serviceable in California.

Large Pear.—We have read several descriptions of large pears lately, and now wish to speak of one raised in San Juan. The particular pear to which we allude, weighs three pounds, measures nineteen inches longitudinally and fifteen and a quarter latitudinally. It was grown in the garden of Mr. W. H. Sears, one of our Assemblymen elect, on a tree not quite two years old, no more than two inches in diameter at the thickest part of the trunk.—[San Juan Press.

Protection to Newspaper Publishers and Their Subscribers.

Office of the Special Mail Agent
for the Pacific Coast.
San Francisco, 1861.

Sir: Complaints have been made to me that Newspapers are improperly taken from the Mails at many of the Post-Offices on this Coast, by parties to whom they do not belong.

Your attention is called to the following extracts from the Postal Laws on that subject:

Section 128. Be it further enacted, That * * * * if any person employed in any department of the Post-Office shall improperly detain, delay, embezzle, or destroy any newspaper, or shall permit any other person to do the like, or shall open, or permit any other to open, any Mail or packet of newspapers, not directed to the office where he is employed, such offender shall, on conviction thereof, forfeit a sum not exceeding Fifty Dollars for every such offense. And if any other person shall open any Mail, or packet of newspapers, or shall embezzle or destroy the same, not being directed to such person, or not being authorized to receive or open the same, such offender shall, on conviction thereof, pay a sum not exceeding Twenty Dollars for every such offense. * * * *

Section 132. And be it further enacted, That if any Postmaster shall unlawfully detain in his office any letter, package, pamphlet, or newspaper, with intent to prevent the arrival and delivery of the same to the person or persons to whom such letter, package, pamphlet, or newspaper, may be addressed or directed in the usual course of the transportation of the Mail along the route; or if any Postmaster shall, with intent as aforesaid, give a preference to any letter, package, pamphlet or newspaper over another which may pass through his office, by forwarding the one and retaining the other, he shall, on conviction thereof, be fined in a sum not exceeding Five Hundred Dollars, and imprisoned for a term not exceeding six months, and shall, moreover, be forever thereafter incapable of holding the office of Postmaster of the United States.—Sec. 32, Act of July 2, 1836.

In accordance with the above, I shall use every exertion in my power to have all Postmasters removed from office who allow a violation of these Laws; and shall prosecute all persons (whether Postmasters or others) on information of their having violated either of them.

We take pleasure in publishing the above, as we have been largely a loser by the practice which has existed of permitting other than subscribers to take papers from the Post-Offices. We shall be glad if our subscribers will advise us of every infringement of this Law, when it interferes with our journal, and we will reward them for their valuable information.

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Please Mention the Farmer.

We will be thankful to our friends if they will mention the fact to parties, where they are led to purchase goods, of receiving that information from the Farmer.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

THE VINE AND WINE IN EUROPE.

LETTER NUMBER SEVEN.

From Our Regular Correspondent.

Vine Cultivation, Demand for Wine, Etc.

EPERNAY, October 27th, 1861.

EDITOR FARMER: Although the cultivation of the vine has generally been well received in California, and has met the success it deserves, there are still many persons kept from planting vineyards by the idea that they could find no outlet for their wine; that there is more made in Europe than can find a market, etc., etc. Such suppositions are not only vicious and without foundation, but as all persons know, who are in the least acquainted with the wine statistics of France, the demand for wine from day to day becomes greater, from day to day its use becomes more general. To confirm what I advance, I will cite but two proofs; they are great and evident in themselves:

The first is, the great change which has taken place since more than twenty years back in the renowned vineyards of France; there, everywhere the quality of the wine has been neglected for the quantity, and each year the grand wines become more and more rare. Even this neglect cannot satisfy the increasing demands. How is this insufficiency remedied? By falsifications which are as injurious to the health as they are infamous. These falsifications, of which each one has at *least heard*, form the second proof. If there was enough wine there would be no falsifications; the business would not pay.

As for the fear, then, that there is more wine made in Europe than can find a market, it is as you see—totally without foundation. Even had this fear a foundation, it would speak but little in favor of a Californian to acknowledge that his intelligence, enterprise and industry cannot supplant that of Europe, at least in his own country.

No one can deny that the vine flourishes as well, and even better, in California than in Europe. It is less liable to accident, to disease; it comes to maturity sooner, and is by far more productive. As for the quality of the grape, it depends wholly on the choice of the planter. Even the necessary varieties of plants can be had, for Col. Haraszthy will receivé, during the months of January and February, some five or six hundred different varieties of Grape-vines. What more do we then want to make our wines the worthy rivals of the very best of France? What we want more is, *intelligence, obsercation,* and *industry*, none of which, I am pleased to say, are missing to the Californian. His intelligence will give him *understanding*, his observation *knowledge*, and his industry *success*.

We should not only look upon the cultivation of the vine in our State as a productive business, but also as a benefit rendered to mankind.

How many each year, fall victims to the use of those infamous falsifications of which I have already spoken! The old use them in their search for strength; the young in their search for pleasure; and both old and young fall victims to their credulity.

This evil will only cease when it is no longer lucrative, and that will only be when the quantity of wine made will equal the demand.

Let us, then, citizens of California, make this step towards the general good of mankind, while in the meantime we are putting into utility one of the richest resources of our beautiful State.

Respectfully, yours,
ARPAD HARASZTHY.

We ask the particular attention of our Vine growers to the valuable letter of our correspondent, from the wine districts of Europe. The *Facts* therein stated, relating to *spurious wines*, are of great moment to the wine interest of California.

As these letters, and extracts from them, of our correspondent, have been more or less copied by the press, and as criticisms have been made relative to the matter of irrigation of the vines, and these alluding to *Col.* Haraszthy as the author, it is right and proper that we should say that our correspondent is a *son* of Col. H., and not Col. H.

Our correspondent has resided in France some years, and traveled among the vineyards, visiting the wine-vaults, and become familiar with the works, and was, at last date, traveling with his father (who has since recently returned and will enrich our State with new and valuable varieties of the vine, as alluded to by the son.)

The remarks of our correspondent relative to the ability of our State to produce the grape and make wine successfuly will be fully proved in a brief time—his remarks are very pertinent to the subject.

Letter from Stanislaus.

Plowing Deep or Shallow?—Triumph of Bluestone—The Borer—Best kinds of Wheat, Etc.

MORLEY'S RANCH, December 8, 1861.

EDITOR FARMER: I now after a long pause send you a few broken thoughts and scattered notions of my own in regard to farming. I see in Volume XVI. Number 5, a letter written by Mr. Abraham Clark, on the subject of Wheat-growing. Mr. Editor, I am not disposed to be very quarrelsome with any of my neighbor farmers as to style of plowing and growing Wheat, or any other kinds of produce; on this head I am a strong union man.

I conclude from Mr. Clark's letter that he is an advocate of shallow plowing; here is the rock on which we split. It is an old adage and a true one, if a thing is worth doing at all it is worth well doing; it is quite evident to me that a better crop can be obtained on any piece of land well cultivated, than on the same lands half plowed, provided the season is the same; for instance, will Mr. Clark take five acres of ground, plow *cut and cover*, and that 1½, 2 to 2½ inches deep, and on the same kind of land plow five acres 4 to 8 inches deep, and sow same time with same kind seed, and then if the result is the same I will acknowledge that for the last 40 years I have entertained erroneous notions, and labored under great mistakes. Here let me say to all the advocates of shallow plowing, that if deep plowing is available in New York State, Michigan, Indiana, and Ohio, these being States that I am most familiar with, the same principles hold good in California, and the greater necessity for deep plowing in California, from the fact that this is a country of great drought.

It is a fact that as deep as you pulverize the soil the water will find its way down; the finer the soil is pulverized the longer it will retain moisture; for instance, after the first shower of rain falls in the Fall of the year, please go and examine a piece of land that has never been plowed, and see how deep the water has penetrated, and then take a walk to the piece that has been thoroughly plowed, and it is my opinion you will find the water three times as deep down, as in the first named piece; then please examine the same lands in the months of April and May, and publish your result at what the difference is. Here, let me say to your readers, Mr. Editor, that I have often made the examination, and found that lands deep plowed and finely pulverized retain moisture much the longest. Up in this part of the State we have a great variety of soils. On my farm have some quite sandy, and no subsoil until 3 to 8 feet deep; this produces the best wheat when deep plowed. I have some lands sandy loam, the result is best when deep plowed. A portion of my farm is stiff clay; this is the same result. I am a strong advocate for fallow-plowing, and then in the Fall to plow in seed with a small plow or cultivator; prefer the plow if the work can be done early. I am opposed to plowing in seed too deep when the ground is too wet and cold, and more particularly on stiff clay lands.

I think the first letter ever published in the CALIFORNIA FARMER was from my pen, and you, Mr. Editor, know that I have long been a strong advocate of the use of Bluestone. Here let me say, that most every farmer in this part of the State uses Bluestone on wheat when they sow. Five years ago I was hooted at for contending for the use of it. Farmers that two years ago hooted at the idea of using Bluestone now use it themselves. Its utility is now no longer questioned.

Mr. Editor, will you or some of your readers, through the FARMER, let me know how I can prevent the borer from committing such serious havoc on my fruit trees. They caused me great injury last season; the most of my trees were planted last season, and had no irrigation.

Perhaps you or your readers will not be offended if I should give my opinion as to the best varieties of wheat to grow for quality and flour. My first choice is White Chile, because it makes good flour and will yield the most to the acre, and stands frost good. The Australia is my second choice; this is said by millers to make the best flour, but no great difference; the price is the same at mill. The Sonora wheat in my opinion is not worth sowing; if any man would give me 100 bushels and with it $100 in cash, I should reject the offer. It will not yield more than half as much an acre, is badly affected by the frost, makes poor hay because it has no leaves on the stalks, and is less sweet, and lastly, it makes little and poor flour.

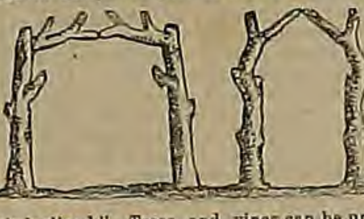
I. D. MORLEY, Stanislaus County.

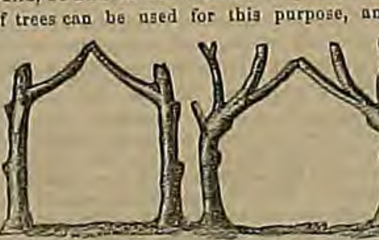
AN EXPERIENCED MAN, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the FARMER Office.

Natural Arches.]

We present below designs for beautifying our gardens and homesteads. Nowhere in the world can be found a climate more congenial, where art can join with nature and make her subservient to man's comfort and happiness; and nowhere on earth is it more easy to labor to beautify home than in our glorious State.

Almost every tree, shrub, and vine is under the control of man, and "just as the twig is bent, the tree's inclined." Trees and vines can be united, as here described, by *inarching*, so as to make a far better arch than any skillful carpenter could build, be he ever so tasteful. A greater number of trees can be used for this purpose, and the arches can be made heavy or light, according to the wants or taste of the builder. The Lime, Maple, Elm, Beech, Acacia, Willow, and the Rose can all be used for this purpose. The vine, fruit trees, and almost every species can be used in this country. By bringing the tops together, and halving and binding, in a brief time they will unite and become as one tree, and thence can be pruned to suit the space used, and the taste.





Bulbous Roots.

Now is the time to plant all kinds of Bulbous and Tuberous roots.

The Hyacinth, Narcissus, Tulip, Gladiolus, Anemone, Crown Imperial, and the delicate Snow-Drop—these all should be planted now—especially if they are designed for the ground; they will do later, if for the parlor or conservatory. But, then, the bulbs are now ready, strong and healthy, and if prepared now, they will bloom stronger and give forth a more fragrant breath.

We have been surprised at the few parcels of the Bulbous roots grown in our State. Every garden spot in our city should have more or less of this class of flowers—the earliest, most fragrant, and the most beautiful. The Bulbous tribe are in the *Flora* of our life, what the strawberry is in the *Pomona*, the earliest, the quickest gone, yet the most delicious to the eye and taste.

We have many wealthy citizens, and fine private gardens; these should have their Tulip Shows, and their beds of Hyacinths; their Crocus beds; groups of Lilies, Jonquills, Anemones, and all this delightful class. We are glad they can now be obtained abundantly, and at moderate rates, as will be seen by the card of S. W. Moore, Seedsman, in our columns.

Bluestone the Wheat.

THE value of Bluestone to Wheat has been so well established, that we are surprised to hear of any Grain-grower sowing an acre of Wheat without the application of Bluestone.

The character, quality and value of Wheat, has been much improved within the last two years, by attention to the quality of the Seed sown, and the protection from Smut by means of the Bluestone. Bluestone (Blue-Vitriol) is now made here in quantities, and offered at low rates, as will be seen by reference to the Card of Messrs. Redington & Co., to whom we refer purchasers.

THE FARM AND PLANTATION MILL.—Every Farmer, every Stock-raiser, who uses his own grain for stock, or who is at all distant from a grist mill, should have one of the famous mills. A large farmer will save the cost of it in one year, aside from the convenience of grinding his own grist and saving the toll. These mills are for sale at the warehouse of Messrs. Greene, Heath & Allen, on Front street, near Jackson. They are the best mills known.

The Examination and Exhibition of the Collegiate Institute.

ED. FARMER: You requested me to attend the closing exercises of the Term, of this educational establishment, and I will, as briefly as I can, jot down my observations.

Benicia has long been celebrated for its schools. It is situated upon the great artery of travel; is, nevertheless, quiet, and celebrated for the salubrity and healthfulness of its climate.

The Collegiate Institute is situated upon the hills back of the town—the buildings are large, well ventilated, and are surrounded by handsome play grounds.

The Faculty of this Institute is headed by Mr. C. J. Flatt, who superintends the department of Mathematics, and Natural Sciences. Mr. Abbott is Professor of Ancient and Modern Languages, and one of your contributors, Mr. Sarles, is Professor of Music and Elocution.

I attended the examination of the classes in Physical Geography, Geology, Physiology, Geometry, and Higher Algebra. These were examined by the Principal, but different persons throughout the audience were frequently called upon to propose questions to the classes.

In Physical Geography the causes of the open Polar Sea, of oceanic currents, of the constant and periodical winds, and of earthquakes and volcanic phenomena, were well explained.

In Geology, I was glad to see that the class was acquainted, not only with the glittering generalities, but with the technology of the subject. The pupils in Physiology illustrated in different ways the great necessity of the more general introduction of this subject into our system of Education. They pointed out the calamitous results of bad ventilation, want of cleanliness, tight dressing, continual dosing with medicines, etc. They also explained how they would stay the bleeding of an artery until the arrival of a physician, and the antidotes and best methods of treating the vegetable and mineral poisons. To me this was a most interesting class. The examination in Geometry was certainly "on the square," as the pupils were required to ennunciate all the propositions, and the audience was called upon to name any particular number, which they were required to demonstrate. Your correspondent never considered himself *au fait* in the abstrusities of Higher Algebra; he must therefore confess that his mind not quite find its way through the tangle of the binomial theorem, indeterminate co-efficients, logarithmic series, etc., but the young gentlemen of the class certainly did untangle the skeins and show us how the logarithmic tables are formed, and when required by the Rev. Dr. Woodbridge to find the logarithms of 5 and 13, did it at short notice, and verified their work by the table.

I also attended the examination of classes in Arithmetic, Algebra, Universal History, and the various classes in Latin, under the charge of Mr. Abbott.

The classes in Arithmetic showed not only a readiness in working examples, but also in explaining them, and the principles involved in their solution. The audience selected the examples, and proposed others not found in the text book. I noticed the same thoroughness and indifference as to which of the principles were selected for explanation, in the class in Algebra. The department of Universal History studied during the session was the middle ages. The class rapidly sketched an outline of the principal events, and then treated each in its turn more fully, giving with great readiness, dates, the names, and characters of the actors in the different epochs, their causes, and effect on civilization.

The method of examination brought to mind Carlyle's definition of history, "philosophy teaching by example." In the different classes in Latin the selections for reading were made by the Rev. Dr. Woodbridge. The readiness of one little fellow, in particular, James McCabe, both in reading and writing the exercises, induced me to inquire his name. In the examination of the first class, which had finished the orations of Cicero against Cataline, I noticed not only an accurate rendering of the text and familiarity with the grammar, but also a good acquaintance with Roman History. The examination in the Classics convinced me that the people of California need only to be persuaded to allow their children sufficient time, to give them an education equal to that of any of the boasted colleges of the East; but while the age of the graduates there is from twenty-two to twenty-five, pupils are expected in California to finish their studies before they arrive at the age of twenty.

The part-singing by the school charmingly concluded the exercises on Tuesday. The four parts were well sustained, and the lights and shadows of the music were beautifully managed. No accompaniment was used, so that the singing was severely tested.

On Wednesday afternoon, a large number of ladies and gentlemen assembled in the main hall, to hear the reading of the papers, etc. The essay on Astronomy was the fine composition of Wm. M. Goodyear, and was eloquently read. The essay on Architecture, by C. C. Rueger, was an admirably written paper, and was gracefully delivered. A debate between R. G. Parks and James Lamont was very spirited and interesting. The dialogue between some thirty little boys pleasingly enlivened the exercises. The characters represented by George Stone, Willie Van Pelt, and B. Horr, deserve particular mention. The reading of the "School Boys' Journal," by J. Hull and F. Weinmann, and the "Young America," by James Stevens and Samuel Allkire, finished the programme for the afternoon.

PROGRAMME OF EXERCISES, WEDNESDAY EVENING.

1. Debate—"Resolved, That a nation is justified in rising against its rulers," { Affim, Geo. Lamont / Neg. Robert Moore
2. Dialogue—The Soft Answer..Hook, Coombs, and Saxton
3. Piano Solo—L'Hirondelle et la Prisonnier..F. Weinman
4. Essay on Law..........................JOHN Q. ADAMS
5. We'll Never Give Up Dixie..........................
6. Declamation—The Poet's Trouble............H. Williams
7. Declamation—Mary O'Connor..............M. Stevenson
8. Piano Solo—1 Ernani—2 Golden Bells........C. C. Ruger
9. Dialogue—From Norval...Stevenson, Parks and Lamont
10. Essay—Liberty..........................W. B. Haskell
11. Song—The Star Spangled Banner..........................
12. Declamation—The Veteran and General Scott..M. Osborn
13. Dialogue—The Deacon's Philsophy..........................
    W. Allkire, F. Canisales, and Wm. Cameron
14. Piano Solos—Study for the left hand, by Strakosch—....
    The Last Rose of Summer..........Wm. Goodyear
15. Presentation of Diploma.........By Hon. B. C. Whitman
16. Hurrah for Our Union..........................

The debate attracted much attention, and the arguments were well written, and read with an energy that won considerable applause. The essay on law, by John Q. Adams, was a fine production. I am sure that this young man will make his mark in the world.

The essay on Liberty, by Wm. B. Haskell, deserves more than the passing comment I am obliged to give. The principles he so eloquently enlarged upon should be felt by every educated American. I observed throughout the examination that this young gentleman appeared to unusual advantage. I trust he will adhere as enthusiastically to the practice of the principles of his essay as to his theory. The acting was excellent. In the "Soft Answer," the character of the lawyer and his angry client were very amusing. The scene from "Norval" received the heartiest applause of the audience, who appreciated likewise the comicality of Samuel Allkire's representation of a Yankee Deacon. The declamation of "Mary O'Connor" brought tears to many an eye. The "Veteran and General Scott," and the "Poet's Trouble" were both well done. The music I enjoyed very much—the touch, expression, and time of the young gentlemen were almost perfect. It is rare to find boys able to play so well. The national songs, touching, as they did, the popular feeling, aroused the greatest enthusiasm.

The quiet, scholarly, and well-timed address of the Hon. B. C. Whitman, to the graduate Wm. B. Haskell, closed the very successful exhibition. I take this occasion to thank the Principal for his hospitality, and to wish him the success that his patient and persevering efforts in the cause of Education deserve.

H. S.

Increased Value of Coarse Wool.

The demand for common grades of Wool, the last few months, in the Eastern States, has caused a great advance in the price; so much so as to have given large profits to those who shipped their wool on their own account.

We have all along urged this measure upon the wool-growers of our State, and have referred them to those prominent houses, which, for moderate commissions and advances, at New York interest, would have saved them large sums, and we are glad to know that those who availed themselves of such opportunities have done well.

We have a letter from Boston, of recent date, which shows the true condition and profitable results of the shipments of California wool and the quick demand and sale of all parcels sent there, at prices ranging from one hundred to one and fifty per cent profit over the value of such wools here at time of shipment. Common wools, long wools, Lustrous wools, if free from bur, must always be a source of profit to the growers, for they will always be in demand here, at our own manufactories, and the demand will always be on the increase, both here and abroad; the article of wool must always pay:

BOSTON, Oct., 28th, 1861.

DEAR SIR: My father, in Philadelphia, requests me to write you relative to our wool market. California wool is usually classified into six grades, No. 1 to No. 6, but recently the demand has been so active as to warrant the saving of time and expense of grading, and invoices have been sold, "as they are"—indeed, in many cases the wool has been sold to arrive. When graded, the burry wool is kept separate. The latest sales I have to report was made in New York—650 bales—regular marks at prices varying at 16 @ 35c, mostly cash; 116 bales, 36c.—cash and 6 months; 437 bales, to arrive, as it was, with all faults except sea damage, at 27c. I shall be very glad to receive a consignment from you, and will use every effort to report satisfactory sales.

* * * * *

PACIFIC METHODIST COLLEGE.—We have received the pamphlet of this Insitution, which contains the Officers of the College (the Faculty and Board of Trustees,) with the rules and regulations, course of study, rates of tuition, and the addresses on Education by Rev. O. P. Fitzgerald. This College is professedly a religious institution, and the aim of the Faculty is to make it prominently Religious. The Institute have a fine large college and extensive grounds, and intend to beautify the college and make it one of the best in the State.

The Crops.

We find an article under the above caption in the N. Y. Tribune of the last of October, which we copy, as follows: Last year, in the face of an unexampled harvest, prices of breadstuffs in this country remained high, and such quantities as were within tolerably easy reach of the seaboard found a ready market all throughout the season. True, there remained at the opening of this Spring, in spite of the enormous exports, a large surplus from the old crop, in many districts of country amountingsto one-half of the yield; but in ordinary times the superfluous stores would have been fabulously great. England had in 1860, perhaps, the most deplorably bad harvest ever known, certainly the worst of the past fifty years. Her usual importation of foreign grain for actual home consumption, beyond what she can possibly raise with all the aids of modern agricultural science, is about 40,000,000 of bushels; but from September 1, 1860, to August 31, 1861, they amounted to the enormous sum of 84,000,000 bushels, or about three bushels for every inhabitant of Great Britain. For this supply of the staff of life she has exported gold, or its equivalent, to the amount of $60,000,000 or $80,000,000 of which nearly or quite $50,000,000 have come to this country. Since the first of January our exports of breadstuffs have been at about the rate of $2,000,000 worth a week; they sometimes reaching as high as $3,000,000, and sometimes falling a trifle short. Meanwhile we are importing not more than one-third of our usual quantity of foreign wares and merchandise, and the to us anomalous state of things has arrived, of an uninterrupted accumulation of wealth in the midst of an extensive internecine war. We are now upon the threshold of 1862, and what are the prospects of our farmers? Our Wheat crop, taking the whole country through, is good; perhaps quite up to the average; the Oat harvest has been fine; and the Indian-Corn crop wonderfully so. Supposing that our usual aggregate crop of Indian Corn is 900,000,000 bushels, we could not have harvested less than 1,100,000,000 bushels in 1860, and must have at least 1,000,000,000 in 1861. That a considerable portion of this is in the rebellious States and hence cut off from the great markets of Europe, is true; but the South was never an exporter to a tithe of the extent of the North, and all that she has raised will be wanted to feed the vast armies she has levied for her traitorous war upon the General Government. To the loyal farmers of the North, then, the profit of foreign orders will accrue, and it is well worth our while to estimate how large they are likely to be. The latest accounts from abroad, through The Mark Lane Express, show a probable deficiency in Great Britain of at least 64,000,000 bushels of grain; and English grain-buyers are exhorted to put their orders into the markets of the world at the earliest opportunity, else it will be too late, and the British working classes will be subjected to the terrible possibilities of a famine. In France, now that concealment is rendered impossible from the receipt of immense orders for breadstuffs in this market, the most deplorable condition of things is manifested. The crops have been so very short that there are grave apprehensions of famine, and the peasants and *ouvriers*, always half-starved, are now in far worse than their usual plight. With a prescience and good sense that the English Government would have done well to imitate, the French authorities have taken the matter into their own hands, and, through special agents and the usual official channels, ordered immense quantities of food at such prices as to shut English buyers out of the European grain markets, at least for the present. France, it is said, will require an importation of 80,000,000 bushels; a quantity which, as The Mark Lane Express truly observes, "is enormous for a country which has, for the last two or three years, been an exporter of wheat and flour." This, with the prospective requirements of the English market, will amount to *nine thousand cargoes* of 16,000 bushels each, "an unheard-of and impossible quantity, if we are to judge of the present exporting power of the neighboring nations by the past. Such, however, is the present state of the two countries, without taking into account Spain, Belgium, and Holland; which will all be buyers, as well as France and England."

Under this wonderful state of circumstances, why should not the farmers of the loyal North be of good cheer, and use every exertion to save their crops in good condition, and get them to market? With all this foreign demand, however, there is no chance, it seems to us, for wheat to rise to a very unusual and exorbitant price; but on the other hand, there is no likelihood of its abating any from its present value.

◆

Respect the Earth-Worm.

Farmers are generally aware that the earth-worm luxuriates in rich soil, but they are not disposed to give him any credit for contributing to its fertility. But the Creator is wiser than they, and He gives the farmer efficient helpers under ground, who do him good service without pay in money or even in thanks. One of the foreign quarterlies gives an account of the labor done by this busy engineer:

The ground is almost alive with the common earth-worm. Wherever mold is turned up, there these sappers and miners are turned up with it. They are, indeed, nature's plowmen. They bore the stubborn soil in every direction, and render it pervious to air, rain, and the fibers of plants. Without these auxiliaries, "the farmer," says Gilbert White, "would find that his land would become cold, hard-bound and sterile." The green mantle of vegetation which covers the earth is dependent upon the worms which burrow in the bowels of it. What conveys a more definite idea of the magnitude of their operations, they are perpetually replenishing the upper soil, and covering, with soft and fine material, a crust which before was close and ungenial. They swallow a quantity of earth with their food, and having extracted the nutriment, they eject the remainder at the outlet of their holes. This refuse forms the worm-casts, which are the annoyance of the gardener, who might be reconciled to them if he was aware that the depositors save him a hundred times more labor than they cause. Mr. Charles Darwin has shown that in thirteen years, a field of pasture was covered to a depth of three inches and a half, with the mold discharged from their intestines, and in another case, the layer that they had accumulated in eighty years, was from twelve to fourteen inches thick. They therefore play a most important part in the economy of vegetation, and we see why they teem throughout the surface of the globe.

◆

Harness Blacking.—Take isinglass ¼ ounce, indigo in fine powder ¼ ounce, soft soap 4 ounces, glue 5 ounces, logwood 4 ounces, vinegar 2 pints, ground black ½ ounce, bees-wax 1 ounce. Infuse the logwood in vinegar for some time with gentle heat, and when the color is well extracted strain the liquid and add the other ingredients to it; boil until the glue is dissolved, then put it into stoneware or glass jars. This blacking will be found very convenient for the harness of artillery and other army horses.

Treatment of Ship Timber—Ventilation.

The density of timber is a very good index of its strength and durability. Timber varies in its specific gravity according to the nature of the soil upon which it grows and the climate in which it is reared. The most dense timber grows in dry tropical climates. Teak, *lignum vitæ*, ebony and mahogany—the very hardest woods used in the arts—are the products of the tropical regions. Many persons entertain the erroneous notion, that the strongest timber grows in the coldest climates. In selecting oak trees for shipbuilding great practical skill is requisite to judge of their age. Those which have attained to their full growth have their heartwood of the same density and strength throughout; those which are overgrown and those which have not come to maturity, are not of uniform density. The age at which an oak attains to maturity is supposed to be from eighty to one hundred years. This depends in a great measure, however, upon the nature of the soil upon which it grows. If it is moist and porous it matures faster, and the timber is inferior in proportion. "Soon ripe, soon rotten," is an old and true adage applied to the vegetable world generally.

One great defect of timber is its liability to rot. The principal expense connected with shipbuilding is not for the purchase of raw materials, but for the shaping, arranging and fitting them together. It is not only very provoking, therefore, but very expensive to witness a noble ship, constructed upon the most approved model, and at great cost, rendered almost useless in a few months by the growth of a fungus in the timbers termed *dry rot.* This has occurred to a great many war ships—the very class which costs most to build. Great attention, therefore, should be directed to the preservation of such vessels from dry rot.

In the late edition of the "Encyclopedia Britannica" Mr. Robert Murray treats this subject in a very instructive manner. He states that the various processes for preserving timber by the absorption of metallic salts, have more or less failed in practice, and are now very generally abandoned. Timber prepared with creosote, he states, resists the attack of marine worms and insects, but the strong odor which it imparts to timber, makes it objectionable for ship building. Salt, with which some timber is treated, attracts much moisture, and is destructive to bolts and other iron fastenings. Empyreumatic oils render timber impervious to moisture, and they tend to prevent iron fastenings from rusting, but they are very inflammable and therefore dangerous. In some government dock yards oak timber is submerged in shallow salt water among the mud from ten to twenty years. This treatment preserves it very perfectly from subsequent rot, but it is very expensive.

There are thus serious objections to mostly all the chemical processes which have been proposed and tried for treating ship timber, and Mr. Murray sums up the most practical and best systems in two words, "seasoning" and "ventilation."

The timber must be thoroughly seasoned and dried on shore, and after being made into a ship it must be properly ventilated. The closely packed timbers and the double planking of war vessels render it almost impossible to ventilate their timbers. This is the reason why so many frigates require frequent repairs and renewal of their timbers.

Mr. Murray states that merchant ships built of inferior timber and in a hurried manner by what are called "slop builders" are known to resist the ravages of dry rot much better than the expensively and elaborately constructed ships of her Majesty's dockyards; nay, more, these same ships, even when constructed entirely of green timber will last longer than a government ship built with the best seasoned oak."

This is exceedingly important information. The greater durability of the timber of merchant ships is attributed to the spaces left between the timbers and the planking by which ventilation is promoted. To secure the greater durability of war vessels, it is suggested that spaces be left between the timbers, and that currents of dry air be maintained through these spaces and between the planking. On all wooden steam ships perfect ventilation among the timbers can easily be maintained by a small blower worked by the engine, producing currents. Of course the hull will require to be constructed with united channels between the timbers to secure this object.

The new gunboats which have lately been built for our navy have spaces left between the ribs, thus securing a proper arrangement for the ventilation of their timbers. We have heard complaints made against these vessels to the effect that their hulls were not of sufficient strength, the timbers and planking not being a packed mass. The fact is, the British gunboats that were built hurriedly in the old way for the Crimean war—and which soon became useless from rot—afforded a useful lesson to our naval architects, and they have wisely profited by it.

◆

A Substitute for Lead Pipe.—It is a well substantiated fact that lead pipe, when used for conducting water for drinking and culinary purposes, is highly deleterious to health. It has therefore been for many years a desideratum with scientific men to procure an article which should obviate this difficulty. One of the best, and a successful invention for this purpose, is an article patented by Charles McBurney, Esq., and manufactured by the Boston Belting Company. A specimen of this pipe, that has been in constant use and buried under ground for three years, shows no symptom of decay. Extreme degrees of heat and cold do not affect it; water may remain frozen in it for any length of time without injury to it, and it can only be destroyed by the direct application of fire. There is nothing injurious in any of the materials of which it is composed; indeed, it could be eaten without in the least affecting the system. It is made of any size, and furnished at a remarkably low rate, and possessing so many desirable qualities, is certainly a pipe that commends itself, and must come into very general use.—[Scientific American.

The West Highland Cattle.—A visitor at the New Brunswick Agricultural Exhibition writes as follows in regard to a specimen of the West Highland cattle which he saw there: At the recent provincial Exhibition at Sussex Vale, we got our first view of a living specimen of a breed of cattle just the antipodes of the Short Horns, in many of their leading characteristics. We recognized it instantly as a West Highlander, from its resemblance to the illustrations given in the books. Rather small, long horns, turning upwards at the points, short, muscular limbs, a *very shaggy* coat, with a ridge of coarse hair on the neck, almost a mane. Hardy, beyond all other British breeds; thrifty, subsisting on the coarsest fare, and yielding beef which commands a higher price than all others, we have often wondered why some of our enterprising farmers have not before now introduced the breed into Maine.

It is stated in L'Invention that an establishment has recently been erected in the plain of Gennevilliers at which a windmill is employed to compress air into large iron reservoirs similar to steam boilers, and then this air is used to work engines for driving machinery. The power of the wind is thus stored up to be used as wanted, and is brought under the most perfect control.

The Size of Farms.

Our old correspondent Agricola writes the following on this subject to the Petaluma Journal, being in reply to articles published in that paper. He says:

I perceive that "Agriculture's" No. 10 is devoted to the advocacy of large farms over small ones. It would have been proper, preparatory to this discussion, to settle this question, namely: How many acres of tillable land, for the most profitable cultivation, come within the power and capacity, mainly, of one man or family? I maintain that under our peculiar circumstances, fewer acres can be profitably tilled here than in alternating climates. In the clay soils which may be said to prevail here, the only time for plowing is in November before the ground becomes too wet, and after it dries off in the spring. Sometimes, as was the case last year, the early or fall rains remit, the December or winter rains making it too wet, thus requiring all the plowing to be done at the drying up. The high price of timber in the valleys for building and inclosures, is another draw-back. To make a farm here requires cash or credit for the following purposes, namely, land and timber to inclose, dwelling and other indispensable houses, team, tools and seed. But few who came here to live by farming, have had enough, after paying expenses of the passage by water or overland, to buy what land is necessary for immediate productive farming. A few have had money enough to do this, bringing it with them from the East, or making it in the mines. Some of these have invested their money in too much land, making hard labor indispensable, and they have failed. But those who have invested according to their personal ability to improve have not thus failed. Those who had not cash to invest, necessarily contracted debt for land and appliances at a high rate, though with good prospect from the high price of produce, soon to pay off their debts, but the price of produce suddenly coming down far below correspondence with the prices of investment, we need not wonder that mortgages and failure should be the result. The Government, by the pre-emption laws, assumes that one hundred and sixty acres is the amount adapted to the purposes of the family homestead. But this amount of tillable land here or in the prairies of Illinois is more than can be tilled or managed profitably without a good deal of hired help, and it is questionable if much of the failure here has not resulted from the attempt to inclose and care for too much. Fifty acres will allow ten for orchard, twenty-five for grain, beets, etc., and leave fifteen for pasture. But when good arable land under tillage will yield from five to ten times more food for cattle than by pasturage, the demand by an increasing population will thus enhance its productiveness and confine pastoral pursuits to the hills and mountains. Farms of this size (fifty acres), cultivated by an intelligent, reading yeomanry, would be promotive of the interests of society, of government and of true democracy, beyond any system of large farming pursued in England, the Southern States or here. And although the Dixie aristocracy might depreciatingly denominate us "small-fisted," yet our position will be approved by all who are influenced by "good will to men," or who reject the right of any to oppress *jure divino* or otherwise.

◆

Wines Should be Made without Sugar.

Dr. Flagg, of Cincinnati, well known for his connection with Nicholas Longworth in the extensive production of native wines, makes the following protest against recipes for sugared wines: It is not by mashing up sour, wild, unripe grapes with water, sugar and whisky, that our farmers are to become wine-growers, however well the mixture may please the palates of unsophisticated women and children, and hard werking men, whose olfactories never knew any other wine than Madeira of American manufacture. Tell them that good wine is never made of sugar in any part of the world, and that to weaken with water, or strengthen with spirits is downright wickedness! The grapes must be fully ripe, dropping off ripe, and to render them so the vines must grow on stakes or very low trellises. The expressed juice must then be put into clean "wine green" casks, and cared for very much in the same way good cider is managed. This done faithfully, and the product will be wine that will not ferment over again in the stomach, deranging the livers and muddling the brains.

All tricks of adulteration and debasement our people will take to naturally enough by mere virtue of their nationality, and without being told. After they shall have learned how to make good, pure wine, then they may, for home use, make a cheap beverage in the following way. Into a large cask fling the cheese from the winepress, after all the juice is extracted, or else well mashed wild grapes of good flavor till the cask is half or two-thirds full; then fill up with water and add one pound of sugar to the gallon of water; let the fermentation begin and complete its work in the cask, and then draw off the clear wine and put away in as cold a cellar as you have, and keep it well filled and closed up. Drink it within the year.

◆

Sacking Grain Repudiated.—The farmers of Santa Clara county held a meeting Nov. 22d, at San Jose, to consider the propriety of sacking up their grain for the wheat market in future. They desire to unite all the farmers of the State with them in a purpose to hereafter deliver all grain *in bulk.* The meeting resolved, "That the present system of marketing the grain produce of this State by the use of sacks, is a grievous and oppressive task on the labor of the farmer, with only a partial corresponding benefit to others, and that benefit falling into the lap of those whose legitimate profits should arise from the sale or manufacture of the produce alone, and not from that which contains it; and for these, and other reasons, such system ought immediately to be abolished." An adjourned meeting of the farmers on the 12th inst, to further consider the subject, the Mercury says proved a failure. The were but few present, and no action was taken. The farmers are anxious to rid themselves of this tax, but lack confidence in themselves to accomplish anything in that direction; hence their failure to come out. They should not give it up so, but persevere.

Coffee.—The Polynesian of November 16th says the coffee crop of the Sandwich Islands promises to pay well this year. Over 30,000 pounds have already been shipped to Honolulu, and the picking season is but just begun. The coffee comes mostly from young trees, whose first yield it is, and which have not yet been affected by the blight. As there is plenty of land to vary the plantations, the natives feel encouraged to plant, and by having a succession of young crops, in a measure stave off the evil of the blight, which fastens principally on the older plantations.

An Illinois Farm.—The largest farm in Illinois is that of Isaac Funk, who resides near Bloomington, M'Lean county. The total number of acres occupied and owned by him is 39,000—one farm of 27,000 acres, said to be worth $30 per acre, and three pasture fields containing, respectively, 8000, 3000 and 1000 acres. His great crop is corn, all of which he consumes at home, and is thus able to market about $70,000 worth of cattle per year at New York. His stock on hand of horses, mules, hogs, and fat cattle is said to be worth $1,000,000.

How a Poor Boy Got Rich.

Mr. Jacob Strawn, of Illinois, has earned the reputation of being the "largest farmer of the West." Twenty-seven years ago he settled in Illinois, a poor man. His possessions were small at first, but continued to increase each year, until he had reduced over 30,000 acres of land to a state of cultivation. He has one farm of 7,800 acres, and another of 10,000. He has usually employed some 200 to 300 men, and a large number of horses. Every year, until quite recently, he stalled from 5,000 to 6,000 head of cattle, and kept other live stock in proportionate numbers. In this twenty-seven years he has made a fortune of over a million of dollars, and is still hale and hearty to enjoy it. He has one corn-field, in Morgan county, some six miles long. Lately he has not been farming so much, having converted some of his real estate into cash. He writes the following items of advice to farmers, in the Chicago *Press:*

When you wake up, do not roll over, but roll out. It will give you time to ditch all your sloughs, break them up, harrow them, and sow them with timothy and red clover. One bushel of clover to ten bushels of timothy is sufficient.

Make your fence high, tight, and strong, so that it will keep cattle and pigs out. If you have brush, make your lots secure, and keep your hogs from the cattle; for if the corn is clean, they will eat it better than if it is not.

Be sure to get your hands to bed by seven o'clock. They will rise early by the force of circumstances.

Pay a hand—if he is a poor hand—all you promise him. If he is a good hand, pay him a little more; it will encourage him to do still better.

Always feed your hands as well as yourself; for the laboring men are the bone and sinew of the world, and ought to be well treated.

I am satisfied that getting up early, industry, and regular habits, are the best medicines ever prescribed for health.

When it comes rainy, bad weather, so that you cannot work out of doors, cut and split your wood. Make your tracks, when it rains hard, cleaning your stables, or fixing something which you would have to stop the plow for and fix in good weather. Make your time count, fixing your fences or a gate that is off the hinges, or weather-boarding your barn where the wind has blown off the siding, or patching the roof of your house or barn.

Study your interests closely, and don't spend any time in electing Presidents, Senators, or other small officers; or talk of hard times while spending your time in town, whittling away on store boxes, etc. Take your time and make your calculations. Don't do things in a hurry, but do them at the right time; and keep your mind as well as your body employed.

◆

Substitutes for Indigo.—Owing to the scarcity and high prices of indigo and the great demand for dying fast blue woolen cloth and flannel, a cotemporary states that the woolen dyers in Hampden county, Mass., are buying up carrot tops from the farmers, paying at the rate of twelve or fifteen dollars per acre, and using them for dying blue. Carrot tops yield a species of indigo, the same as wood, and they are used in what is called the "pastel-vat." The color obtained from them is as durable, we think, as that of indigo, but it requires a great quantity of them to yield a small amount of coloring matter. It appears to us that chemists will find what are called "the refuse products of petroleum oils," good subjects for experiments to obtain a rich coloring substitute for indigo. Scarlet, red, crimson, drab, green and blue colors have been obtained from compounds of the aniline, but these are not fast colors. What is wanted is some discovery to render aniline-blue a permanent color, and when it is well known that, according to Dumas, a radical salt of indigo is *anyle,* which is composed of $C_{16}\ H_5\ N$, the manufacture of indigo from coal tar is not a hypothetical proposition.—[Scientific American.

Affairs in Arizona.—Since the disgraceful surrender of Major Lynde in Arizona, to an inferior force of volunteer troops, another disgrace has happened to the United States troops in that country. Captain J. W. Moore, of the United States dragoons, with a force of infantry and cavalry numbering 300, and with two pieces of cannon, after burning Forts Buchanan and Breckinridge and a fine mill at Tucson, and hearing of Lynde's shameful surrender, abandoned his artillery and the people under his charge, mounted his infantry on mules and ran away from Baylor's force, taking refuge in the town of Sante Fe. Since then Baylor has issued a proclamation declaring Arizona under martial law and himself Governor of the same in the name of the rebel Confederacy.

The Prices of Wool.—The market for the coarser kinds of this article is exceedingly active owing to the large consumption for the manufacture of army clothing. Its price at present is at least three-fifths higher than at the same period last year. Wool being dull in England, large orders have recently been sent there for shipments, and we shall not, perhaps, long see the present prices sustained. Woolen mills in Philadelphia and environs are working almost entirely upon Government account. Indigo is another article that has much risen lately in prices, owing to the heavy demand for dyeing blue army clothing.—[Philadelphia paper.

Killed, Wounded, and Prisoners.—The New York Herald, of Nov. 12th, has a carefully compiled exhibit of the killed, wounded, and prisoners on both sides during the war. From this it appears that the Union men have gained 47 battles; the rebels 32. The Union armies had 1,327 killed, 2,962 wounded, and 4,691 taken prisoners. The rebels had 2,474 killed, 6,786 wounded, and 2,899 taken prisoners. Total of killed, wounded and prisoners on the Union side—8,980. Total of killed, wounded and prisoners on the rebel side—12,159.

Camels.—The camels are now in use over in Washoe, packing salt from Walker's Lake to Virginia City. They carry six hundred pounds each, and it is worth seven dollars per hundred. The salt is used in the chemical process of separating metals, and as it costs nothing at Walker's Lake, the owners of the camel train are making a very nice speculation in the packing business.

M. Leroux, a Frenchman, has invented a feed-bag for horses, which is ventilated in front so as to allow the dust of the grain to escape, and the horse to breathe freely. The bag is hung by an elastic band, so that it rises as the weight of the grain diminishes, and constantly presents the feed to the lips of the horse.

Flax Cotton Calico.—The Providence Journal says: We have latterly seen a specimen of prints made from a mixture of 25 per cent cotton, and 75 per cent flax. It shows to decided advantage in texture, color, and general appearance by the side of the cloth made wholly of cotton. The raw material can be afforded at seven cents a pound.

The Eastport (Maine) Sentinel makes joyful mention of the fact that the old spectacle of cart loads of sound potatoes in the market has again appeared in that town, and the potato disease has disappeared.

Prolificness of the Rabbit.—It is said the wild rabbit will breed eleven times in a year, and bring generally eight young ones each time; at this rate in four years a couple of rabbits would produce 1,800,000.

How Sacramento was Flooded.

A Sacramento paper makes the following record of the particular causes of the Flooding of that city on the 9th inst.

About a mile or so below Brighton, and some three or more from the city, is the mouth of the slough, which formerly discharged large quantities of water, when the river was full, past the Fort, thence into the Sacramento through the sloughs below Sutterville. When the city levees were built, the mouth of this slough was closed. The water opened it in 1851; it was again closed in 1853, and from that date withstood all the floods since until last Monday. But the water rose so high as to run over the top of the levee at that point, and eventually cut most of it away, again opening the mouth of the old slough. The only water from the American, which is now running past the eastern limits of the city, comes through this slough. The bank of the river, from that point to the eastern boundary of the city, at Thirty-first street, is high, and rarely overflows, except at a few depressions. Through the garden and ranch of Smith, the levee was probably never over two feet high, and as no work has been done on it, since 1853, except by individuals, it is now considerably lower than when first built. Over this levee the high tide on Monday flowed, for probably a mile and a half. There is another slough near the Tivoli House, which opened in 1852, was closed in the winter of 1853, which, we understand, stood the high freshet.

All the points of which we have been speaking, it should be borne in mind, are outside of the city limits, and really beyond its municipal control. We have before stated that the water which rushed out at Brighton with such force, did not flow towards the city; it passed down east and south of Poverty ridge. But that which came in at the mouth of the Fort slough, and that which ran over the levee at and this side of Smith's, flowed directly towards the city until it reached the levee at Thirty-first street; it followed down the levee southward until the railroad embankment was met. As that had been, contrary to law and prudence, made solid, and as it was fully as high as the levee, the water was forced over the top of the latter and into the city, where it was dammed in by the R street levee. Sacramento was thus converted into an immense reservoir, and so remained with her inhabitants afloat in it until breeches were effected through that levee. We have expressed the opinion that the filling up by a solid embankment the space required by ordinance to be left open under the railroad, and was so left when the railroad was first built, was the cause of the inundation.

A prominent citizen, who resides near the point where the water first struck the railroad, and who saw it when it first began to tumble over the levee into the city, declares that, in his judgment, if the trestle work, first built by the Railroad Company, as the law directed, had been permitted to stand, the flood would have passed the city, and left it not only unharmed, but a large majority of her citizens would not have been aware that such a body of water was passing in the rear of the corporate limits. A little water might have made its way into the city where the levee had been cut down for road purposes, but not enough to attract attention. The responsibility of this distressing and destructive overflow is, therefore, fairly chargeable to the selfishness of the railroad managers, and the neglect of the city authorities to force them to comply with the law The fact that the trestle work had been taken away, and earth substituted, because cheaper and more durable than wood, was presented to the Court some two years since; the authorities have notified the agents of the company to restore the trestle work, but neglected to enforce their instructions by legal proceedings. People often spoke of the danger, but as Sacramento has so long escaped, the subject was permitted to rest until the supreme folly and wickedness of the act of closing the opening has been demonstrated at a cost of more than a million of dollars, and an amount of suffering which no one can estimate.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the
First Premium for my Patent Machine
FOR SEWING HYDRAULIC HOSE, WAGON COVERS, Grain and Feed Bags, Garden Hose, &c;
And I have the Society's DIPLOMA, signed by G. N. Swezy, President, and Chas. M. Gorham, Secretary.
The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge
Only 15 Cents per Yard,
For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 64 of whole Series; continued from Farmer of Dec. 6, 1861

XII.—L.

The Indians of Lower California.

FOOD.

THEY eat food of various kinds, and many of them which to us are not considered food, such as roots and fruits (bitter or insipid), worms, spiders, grasshoppers, and other insects; snakes, wild-cats, and lions, and even to their dry hides and skins. A dog is as highly esteemed by them to eat as a kid with us. They never eat human flesh, and even abstain from eating the *tejon* (badger), from its fancied resemblance to man.

For their food they use things truly strange. In the time of the pitahayas fruits, they eat till they can eat no more; the seeds of which being indigestible, pass through them, when, with incredible patience, these miserable creatures pick out the seeds, which are very small, and toast, pound and finally reduce them to powder and put away as food for the winter or scarce season. Some Spaniards have called this operation, "burlesco (burlesque) of the second crops."

The savages who inhabit some of the more northern parts of the peninsula, have preserved a secret which till now remained unknown to common mortals. They attach a piece of the hardest sun-dried flesh they can procure, to the end of a strong cord, and swallow the meat after chewing it some, leaving the ends of the cord out of the mouth. After two or three minutes, they will draw the meat up and re-chew it, and repeat this operation until the meat is entirely masticated and swallowed, when the cord is drawn out. And, very strangely, no one, to my knowledge, has ever heard of any of them being suffocated in this process. Often when they are going to perform this operation, many get together, when eight or ten persons forming a circle, one of them will take the cord and meat and chew it, then hand it from one to the other, each repeating the mastication with great gusto until it is finally consumed. Many of the Jesuits and other Spaniards would not credit the truth of this ceremony and practice until they had seen it with their own eyes. The civilized Indians have, however, abandoned this practice, but only after being closely watched and prohibited by the Jesuits.

In their food they use no kind of condiments. They eat fresh meat often entirely raw, or dried in the sun, or half roasted, or often more properly when burnt. The insects and seeds they use are generally toasted and ground before eating; for drink, they use nothing else but common water.

[Honey-dew (or what the Jesuits call manna) also falls on the leaves and twigs of trees, in April, May, and June, and is greatly sought after by the Indians south of Loretto. It is also a favorite food of all the Alta California State tribes where it occurs.—A. S. T.]

OF THEIR HABITATIONS, DRESS, ORNAMENTS, AND MOVEABLES.

Each tribe, composed of various families of the same kindred, inhabit, ordinarily, some place near a spring. And there all live without any other covering but the sky, nor any other bed than the ground. When the sun is very hot, they get under the trees, and when the weather is cold, they retire into caves of their vicinity. Some of them make a cabin or bower (of leaves of plants, etc.), others dig out excavations in the earth of two or three feet deep, while a generality of them make a circle of stones, five feet in diameter and two feet high, within which each family will live without any covering from the sky. The Missionaries had the greatest difficulty to make them live in covered houses, as they said they would either sicken or be suffocated by the confined air. But after they became accustomed to covered buildings, they liked them much better than their old way. At their own habitations they always get near the fire; every time they awake, they run to the fire to warm themselves. The men have no other dress than their natural skin; and so little sense of shame have they on this point, that they always ridiculed the Spaniards for being clothed, and which feeling occasioned the Missionaries much mortification and difficulty to know how to overcome. The first neophytes they induced to put on clothes excited the greatest ridicule among their tribes, which caused them to throw them away in great disgust. A boy a Missionary had clothed, became so ashamed of the ridicule of his tribe, when in his dress, that he always took them off when among them; and ashamed of being seen naked by the Father, always put them on again, before he presented himself again before the Missionary. But by repeated attempts and at much cost, the Jesuits finally succeeded in inducing all their neophytes to clothe themselves and cover their nakedness.

The Women are far more decent, as in no part of the peninsula have they been yet seen without some covering to preserve their honesty and shame. The best dressed of all are those of the Pericues, who have different fabrics of vestments and styles. These are composed of leaves of reeds or bulrushes, palms, canes, etc., threaded together by connecting strings, with a binding at the top-edge. One of these will cover from the shoulders to the waist. Another of these dresses is composed of two pieces each of about two feet square, which is tied round the waist; the back part falls down, like in pieces of ribbon, to the middle of the calves, and covers the posteriors also: the front part hangs from the middle to the knees. A certain kind of palms, which grow plentifully in many parts of the peninsula, makes a thread of great whiteness and strength, and which is much used by the Indians and their women for various purposes.

The Guaicuras, and also the tribes living up as high as 30°, use dresses made of like materials, but the styles often different. They also use the skins of beavers, otters, foxes, coyotes, hares, rabbits, and other animals (among men), sometimes without the aprons, and other times in connection with them. All of the women of these last tribes, like the Pericues, always cover themselves and female children with the greatest care to guard their modesty, and always manifest great shame if ever any of them (of the softer sex) are seen by the Spaniards without aprons. [This description of the clothing of the Lower California Indians, will answer according to all the accounts noted in this Indianology for that of the Indians of all parts of the present State of California, before they were influenced by the Spanish civilization, or the Americans since 1848. It may also be assumed as a general thing, that the Indians from Cape San Lucas to Shasta, and from the Klamath Lakes to the Colorado, are one and the same closely affiliated characteristic nations, tribes, or races.—A. S. T.]

SHOES.

When the Californians travel, they use a kind of sandals made of some animals as deer-skins, etc., similar to those of the Mexican Indians. They now often use them made of bullocks' hide, being stronger and thicker.

ORNAMENTS.

The different tribes may be known by their different styles, etc., of dress and ornaments. The Pericues use their hair very long, adorned with pearls mixed with plumes and feathers of birds, so as to look, at a distance, like wigs. The Guaicuras use a beautiful band round their waist, and for their head, cover it with a curious net, in the fashion of a fillet, accompanied with a collar or string of pieces of mother-of-pearl, mingled with certain berries (bayas), and with bracelets of similar materials. The Pericues use also cintures or bands made of strings of certain shells (caracollitos), small, white and round, looking at first like pearls. The women of this tribe use their hair long and falling down over the shoulders, and adorn their necks and waists with many strings and bands of pearls, little shells (caracollitos), little figures made of mother-of-pearl, and pieces of small cane (canutitos), dispersed and mingled together. The Cochiemies do not use their hair long, nor dress their heads like the others mentioned, except with a species of crown made of equal-sized pieces of mother-of-pearl inserted in a kind of cord and bound round the forehead.

MOVEABLES.

Their moveables are very few, making up no more than could easily be carried by a boy. These are a flattish bowl or basin-shaped basket (bateas), a porringer, a small stick to make fire, a sharpened bone for an awl, two nets, one used by the women to carry their infants, and the other used by the men to gather mescal, pitahayas, and other fruits. The batea and porringer are ingeniously and beautifully and strongly made like basket-work, of well prepared threads and shreds of palm-leaves, mescal, and other plants, and are made so compact (yet flexible and light) that they can easily hold water. They are ornamented with many different figures, and serve to eat and drink out of, to carry things, and to store in, for covering their heads from the sun, and, finally, for a great variety of purposes in their rude life. Some of the Colorado Indians make their baskets, utensils, etc. similar to the Cochiemies, and of such a large size that they often carry over their effects in them from one side to the other of the river, and which they call *coritas*. In the different tribes they vary in size and shape, but the mode of fabric or material all assimilate as well as the method of making them.

[The art of making these basket-utensils was practiced, as far as has been observed, by all the State of California tribes, the shapes and materials differing according to materials, etc.—A. S. T.]

THEIR EMPLOYMENTS, HUNTING, FISHING, ETC.

Their employments, among the men, are fishing, hunting and war, and making arms, instruments of fishing, etc. [The description of their bows, arrows, fishing utensils, and such things, agrees precisely with those of our State Indians, as also their method of hunting, fishing and fowling with nets, spears, clubs, etc.—A. S. T.] One of their methods of hunting hare and rabbits is very expert and ingenious, and consists of a curved stick a foot and a half long, which they throw with such dexterity, that they kill or wound without fail the object aimed at, as straight as an arrow. With these sticks they can kill numbers without going off their road. Another mode of hunting (deer) is to take the head of a deer, antelope, etc. with the horns on and fixing it on the shoulders of a hunter creeping along the ground to where the animals are grazing. The deceived beasts being curious and permitting the disguised hunter to draw them on, are easily shot by hunters concealed near by, as well often as by the false deer. It is truly admirable, the quickness with which they will infallibly determine the signs, tracks or vicinity of animals of any kind, as well of Indians of their own tribes, or of friendly or unfriendly tribes, or what their intent, occupation, etc. They can distinguish the utensils of war, fishing, etc., of each of their own tribe, as infallibly as we could do by a written description.

FISHING CANOES.

They fish with nets and hooks. To fish with hooks, they often go out at high tide in one of their canoes or balsas made of three, five or seven sticks firmly bound together with cords and of an equal length, except the one in the middle which is made longer and answers for a prow. Those made of a light, corky wood are used for the swiftest purposes, and they will often go four or five miles from land with these frail vessels, and fearlessly braving the tops of the great rollers of the Pacific Coast, which seem sometimes to pitch them up to the skies, and the next minute let them fall down again as it were into the profound depths of the sea. The fisheries are very abundant, particularly those of the Bay of Magdalena.

WAR IMPLEMENTS.

The different tribes also use clubs and lances of wood of various sizes and styles; some of them are made with sharp edges, or pointed and nicked: these arms are always hardened in the fire. Those towards 31° have arms made of clubs, two pieces, in shape similar to a chopping ax; also, single clubs, some made with a head similar in form to a weather-cock, while others are shaped like a small cimeter. In these arms they show more ingenuity than in any kind of their employments for procuring food, etc., etc.

[In their wars, as described by Clavijero, they differ in nothing from those described frequently in this Indianology.—A. S. T.]

The women do all the work, except such as is mentioned the men assume. They make the nets, baskets, dresses, and such other conveniences as prevail in their rude life.

FEASTS AND AMUSEMENTS.

Their feasts, dances, Councils, and authority of the chiefs—what Clavijero says of these matters affirms nearly precisely to those related of our tribes in this Indianology—the divergence is insignificant. Venegas varies very little from Clavijero. The government of their clans, tribes, and of each family, is not at all different as many times related in our notes.

One of the highest of their Festivals, Venegas relates from Father Piccoli, as follows, who is speaking of the Cochiemies: was the day they distributed the annual supplies of animal skins to the women: "All the neighboring rancherias met at an appointed place, and there with branches of trees erected a spacious arbor, from which they cleared a broad and level way for racers. Hither they brought the skins all the beasts which they had killed that year, and laid them as a carpet along the course. None but the Casiques and chiefs were admitted into the arbor, and when the banquet, which consisted of game, fishes and fruit, was over, they inebriated themselves with wild tobacco. At the entrance of the arbor, one of the Sorcerers used to take his place, dressed in the habit of ceremony, and with wild vociferations proclaimed the praises of the hunters. In the meantime, the other Indians run to and fro in a frantic manner on the skins; while the women, who assisted at this ceremony, sang and danced with equal transport. This continued till the orator was quite spent, when the harangue concluded, and together with it the races. The chiefs then came out of the arbor, and distributed to the women the skins, for their clothing that year; and this distribution was celebrated with fresh rejoicings. The foundation of all this festivity was that these poor women were acquainted with no greater ornament than the skin of a deer, though it scarcely covered their nakedness with any tolerable degree of modesty."

The time of gathering the pitahayas was their vintage, and they celebrated it with particular mirth and rejoicings. The three pitahaya months, says Father Salva Fierro, resemble the carnival in some parts of Europe, when the men are in a great measure stupefied or mad. The natives here also throw aside what little reason they have, giving themselves up to feastings, entertainments of the neighboring rancherias, buffooneries and comedies, such as they are; and in these, whole nights are spent to the high diversion of the audience, They have a great variety of them, some thirty of the dances representing, severally, war, fishing, traveling, burying, hunting, love, marrying, etc. A child of three or four years will show as much joy at his having performed his part well, as young men of warm emulation and judgment, a thing which caused great wonder and admiration among the Spaniards. The Fathers at Christmas and certain feast days promoted these festivities among the neophytes, but within the bounds of proper restraints. They dance at weddings; for successful hunts, or war, or any other other particular occasions. The neighboring clans are often invited to these festivities, and challenges are often sent from a clan to another, to wrestle, leap, run, shooting with their boys, and various trials of strength and agility. [Their manner of conducting war, as stated by Venegas, was precisely that of the Alta California tribes, as detailed frequently in these notes.—A. S. T.]

THEIR MARRIAGES, WOMEN AND FAMILIES.

Among the Edues or Southern Pericues, they admitted a pleurality of wives, says Venegas, who were very diligent in supplying their husbands with fruits, to keep them in good temper. The more wives, the better provided they were with food, so as to keep their lords in good temper. The wives, once discarded for any fault, met with great difficulty in finding other protectors. The Loretto tribes were more moderate in wives, the highest chiefs never having more than two, while the commonality were contented with one. Adultery was a great crime except on two occasions: at their feasts of wrestling matches amongst the rancherias, or at certain other feasts and routs, when its practice was the scandalous privilege of the victors. The Cochiemies, in respect to their amours and marriage relations, were entirely different from the other, and as noted by the Fathers, extremely honest in these respects. The manner of negotiating marriage, among those of the Loretto, was to present the bride, by way of earnest, with a basket-work bowl or jug, called by them *olo*. Her acceptance denoted consent; on her part, she was to present a net for the head: this confirmed the marriage. In other nations, the agreement was concluded with festivities to which were invited the whole rancheria; but these marriages were easily dissolved on the part of the husband. In some of the tribes, the husbands, at time of their wives' confinement, would affect to be sick, lay in his hut or cave, or stretched out at full length under a tree, and pretend to be extremely ill and weak; and this farce would continue for three or four days, during all this while watching their wives at their maternal duties. Immediately after delivery, the women would go to a spring near by, and wash themselves and their infant, and in other labors and offices observing no more caution than ordinary. They frequently destroyed their children in seasons of scarcity, and even in some tribes, infanticide was common, but this practice was stopped by the Fathers. [Clavijero denies the custom among Californians, spoken of by Venegas, as to the men making a farce of their wives' delivery; but it is likely true, as the same comedy takes place among several of the Alta California tribes.—A. S. T.]

The women carry their children in nets made fast to a piece of wood, and held by the shoulders, or passing across the forehead; the infant hangs down behind, the inside being lined with furs or herbs. Among the Pericues, the child was carried in a basket-work of oval form, in which it can be laid down, or be carried in traveling, suspended from the shoulders or head. The women, to protect their infants from the weather, would cover them with a covering of ground charcoal mixed with urine, and sometimes use the latter liquid even for washing their own faces. In the tribes northwards towards 31°, to defend their children from the cold, the women make a hole in the sand, and warm it with fire, and then put the child in it up to the neck. In other parts, they are accustomed to fasten their nets to a pole suspended across the shoulders; and when they want to suckle the infant, they fasten the stick in the ground and give it the breast. When the child is very small, they carry it in the arms; but when larger, they often carry it hung to the neck or head. It is not unfrequent to see their women with one child in the arms, another in a net, and another on the shoulders. When the children arrive at a certain age, their ears and noses are bored, which is the occasion of a greet feast, assisted by all their relatives, at the end of which, great noises are made to drown the cries of the child.

OF THE INDIGENOUS RELIGION OF THE CALIFORNIA TRIBES.

Venegas says: "All relations agree that hitherto no idolatry has been found among the Californians." [From this must be excepted, what herein seemingly prevails in the island of Santa Catalina of Alta California, on the ocean coast of Los Angeles county, as related in Vizcainos' Voyage of 1602, detailed in these Notes, and which appears up to 1860, to have been the only semblance of image worship resembling the Aztec or Foltecan found within the boundaries of the ante 1848 Upper California of the Spaniards, an immense space of territory extending from the Gila to the Oregon line, and from the Salt Lake the Ocean. The Spanish edition of Venegas says, this figure, or demon, or God of Santa Catalina, had figures of the sun and moon *on each side of it*, and not holding these symbols *in its hands*, as stated in the English edition.—See FARMER of 8 Feb. 1861, for notes on this matter.—A. S. T. Dec. 1860.]

They neither worshiped any creature, nor had any representations or images of false deities, to whom they paid any kind of adoration. Nor had they among them any temples, oratories, altars, or any other place set apart for religious excercises. Indeed, no such thing was known there, no outward profession of religion in festivals, prayers, vows, expiations, or any public or private marks of addresses being made to God, or even of any knowledge of Him; so that they did not distinguish themselves in the least from the savage, and deplorable blindness of their neighbors in the opposite coast of Sinaloa, of whom Father Ribas, in his Triumph of the Faith, says, that scarce any trace of religion was to be found among them; nor did their external performances show the least knowledge of God.

[TO BE CONTINUED.]

Something New.

HALSTED'S PORTABLE

CIDER OR WINE MILL.

THIS IS A CALIFORNIA INVENTION, COMBINING both the Grinding and Pressing processes within a space of three by four feet.

With it the smallest amount may be made at a moment's notice, or one person can make from two to three barrels per day. The inventor will make these Mills to order on very short notice, and guarantee them superior to any imported. Price, $75. Larger Mills made to order.

A sample Mill can be seen in operation in the Pacific Fruit Market, Clay street, San Francisco.

The inventor would respectfully refer those interested to Messrs. GRAVES, WILLIAMS & BUCKLEY, Fruit Dealers, for further information. Or address

JOEL HALSTED,
(By Express) San Francisco.

10

FOR SALE.

A VALUABLE HOMESTEAD, WITH excellent Out-buildings, a fine Garden, Vineyard of four acres, with a field of sixty acres more, for pasturage or cultivation. The whole will be sold a great bargain if applied for immediately.

For particulars apply at California Farmer Office. 10

TO THE FARMING INTEREST!

E. F. JONES,
51 Wall street, New York.

HENRY H. HEWLETT,
Stockton.

JONES & HEWLETT,

IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN

GROCERIES,
LIQUORS,
Provisions,
AND
HARDWARE, MINING, AND
AGRICULTURAL
IMPLEMENTS.

Plows,
Harrows,
Reapers,
Mowers,
Thrashers,

Grain and Flour Sacks, Powder, Shot, Fuse, Cordage, Marline, Blocks, Baling-Rope, Oakum, Tar, Pitch, Rosin, Oars.

The undersigned would respectfully call your attention to their large and well assorted stock of Merchandise, just received per recent arrivals from New York, Boston, and San Francisco, part of which are enumerated above, and which they are prepared to sell at the lowest San Francisco prices. Articles of our own importation are made expressly for our trade, and are of the best material and manufacture, under direct supervision of Mr. Jones.

All kinds of Country Produce taken in exchange for Goods at regular rates.

4-3m JONES & HEWLETT.

Attention, Hay-Balers!

BALING-ROPE.

JUST RECEIVED, EX SHIP "FEARLESS," and other late arrivals,

500 COILS SUPERIOR EASTERN BALE-ROPE,

Which we offer in lots to suit, at San Francisco prices.

Plant Early!

Seed! Seed! Seed! Seed!

A LARGE AND NEW ASSORTMENT soon to arrive, consisting of

FIELD, GRASS, HERB, AND VEGETABLE SEEDS

All carefully packed in tin cases. For sale very low by
2-3m JONES & HEWLETT.

Well Cleaned Grain!

FAN MILLS! FAN MILLS!

J. T. GRANT'S PATENT, IMPROVED BY JONES & HEWLETT, for taking out Barley and Oats; 25 just received.
2-3m JONES & HEWLETT.

Sportsmen!

Powder AND SHOT.

Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.

Parties purchasing will please give us a call. Our stock consists, in part, of

500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1 lb cans.
25 cases in ½ lb cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by
2-3m JONES & HEWLETT.

Manila Cordage.

250 COILS, OF ALL SIZES, OF EASTERN MANUFACTURE. For sale in lots to suit.
2-3m JONES & HEWLETT.

CALIFORNIA WINE!

CARD.

LAKE VINEYARD, Los Angeles Co., Cal., March 21, 1861.

BEING OFTEN APPLIED TO BY ACQUAINTANCES throughout the State for my WINE in small quantities, I hereby notify them, as well as the public generally, that I have appointed

Messrs. HOBBS, GILMORE & Co.,

SAN FRANCISCO,

My Sole and Exclusive Agents

With the Improved Instruments of
For the State of California, for the sale of all the different classes of WINE manufactured by me at LAKE VINEYARD (and that they cannot be obtained of any other parties), giving the assurance that they will obtain from them the same article in every respect as I have in my cellars. B. D. WILSON.

NOTICE.

IN CONFORMITY WITH THE ABOVE CARD, the public are informed that we, the subscribers, have for sale at our

Wine Cellars,

Southeast Corner of Market and Beale streets

Nearly opposite the Railroad Depot,

PURE WINES!

CONSISTING OF

Port, Angelica, and White Wines

ALL WARRANTED TO BE THE PURE JUICE OF THE GRAPE,

Which we will sell in quantities to suit purchasers, put up in shipping packages or otherwise.

HOBBS, GILMORE & CO.,
17 Market street, opposite the Railroad Depot.

The Plaza Stable,

DOWNIEVILLE.

RETICKER & MORRISON.

The proprietors of this Stable ask the attention of the public to their establishment. It needs for us only to say that we are at all times prepared to furnish HORSES and MULES, for the single day or longer period, and Horses and Mules for Exploring Expeditions for all the Interior. Our Stock is all trained for mountain travel, sure-footed, and well-broken to the trail. Charges always reasonable.

We have a Stage and Passenger-train running from Downieville to Virginia City, leaving Downieville Mondays and Thursdays, and leaving Virginia City same days, making the trip in two days. Price $15. 24-3m

GARDEN-ENGINE FOR SALE.

A FINE GARDEN-ENGINE, OF CAPACITY TO throw a good stream of water 50 or 60 feet, can be had at a bargain on application at the Farmer Office. 5

FRUITS, GRAIN, AND PRODUCE.

Notice.

THE COPARTNERSHIP HERETOFORE EXISTING between A. H. TODD and JAS. R. RICHARDS, under the firm of TODD & RICHARDS, is hereby dissolved by mutual consent. Either partner will sign in liquidation of the business of the late firm.

A. H. TODD,
JAS. R. RICHARDS.

October 3d, 1861.

THE UNDERSIGNED WILL CONTINUE THE BUSINESS of PRODUCE AND GRAIN BROKERS AND COMMISSION MERCHANTS, at the old stand, No. 42 Clay street, near East, under the firm-name of A. H. TODD & CO.

A. H. TODD & CO.

San Francisco, Oct. 3d, 1861. 4

A. H. TODD & CO.,
Produce Grain Brokers,
AND
COMMISSION MERCHANTS,
No. 42 Clay street, near East.

Have for years been engaged in selling Grain and Produce in this market and in Oregon, have extensive acquaintance, and possess advantages unsurpassed for buying or selling.

We have permission to refer to many of our most substantial Merchants and Business Houses in this city and Oregon. Also, to a large number of Farmers in every part of the State.

Our terms for buying or Selling Grain and Produce: For amounts under $5000, 2½ per cent.; for $5000 and over, 2 per cent. Highest market-rates and prompt returns guaranteed.

Cash advances made on Grain in warehouse. 14

PACIFIC
FRUIT MARKET.

OUR ARRANGEMENTS ARE NOW COMPLETED to supply our customers with the choicest Fruit of California production. We receive consignments daily from

OAK KNOLL, NAPA.
SUSCOL, NAPA.
FERNSIDE, ALAMEDA.
WASHINGTON NURSERY, SACRAMENTO.
SANTA CLARA NURSERY, SANTA CLARA.

And many other Orchards, embracing Fruits of every variety and flavor.

OUR JOBBING DEPARTMENT
Will meet the wants of families.
OUR WHOLESALE DEPARTMENT
The requisitions of buyers throught the State.

The superior manner in which most of our Fruit is packed renders it very desirable for shipping purposes.

WINE!

OUR CELLAR IS ADMITTED to be the best in our State for the Storage of Wine, and is capable of holding 200,000 gallons.

We are now ready to

RECEIVE WINE ON STORAGE,
OR FOR SALE,

And offer facilities to all Wine-Makers with whom we may make business arrangements.

24 GRAVES, WILLIAMS & BUCKLEY.

FRUIT
Commission Dealers.

THE UNDERSIGNED HAVING BEEN ENgaged in the

SALE OF FRUITS

For the past Four Years, respectfully solicit Consignments from any and all

Fruit-Growers,

Who wish to dispose of their products in this market.

SEED, PLANTS, ETC.

To the Seed Trade!

J. M. THORBURN & CO.,
15 John street,
NEW YORK,
GROWERS AND IMPORTERS OF
VEGETABLE,
Flower, Field, Fruit,
AND
TREE SEEDS,

Offer of the growth of the present year, and of the purest Stock, their usual very extensive assortment, comprising every tested desirable variety known in the several departments.

By reason of the abundant crops, generally, this season, we are prepared to offer unusual inducements to WHOLESALE PURCHASERS OF

First-Class Seeds.

For further particulars and Trade-Catalogues, address as above, or to

THOS. DAY,
2 No. 732 Montgomery street, San Francisco.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861. 8

TUCKER!

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................DEC. 20, 1861.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

The Close of the Year.

In two weeks more, the Year 1861 will leave us, and a "New Year" will dawn upon us. May we not consistently ask those who have been indebted to us, for some time, and who have received bills from us, to remit those dues at once?

By the new arrangement we have made, we wish to close those old debts, and we know those who are indebted to us, can pay us with but little effort.

It is a season of the year when we can use our means to good advantage, and when we need all such dues. It is a season, too, when every person wishes to feel a little rich, so as to enjoy the "Holidays," and reciprocate the favors of the season.

It is so much more pleasant to receive a voluntary remittance than to be obliged to go or send for it; and we must, in justice, "ask" our dues.

Perhaps newspaper readers may think it is but a small sum; but the aggregate due us, will count in Thousands; and now we ask it, and must do so in earnest. We hope this call will be enough.

◆

The Loss of Stock by the Flood.

We desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

◆

A Merry Christmas.

Before another issue of our Journal the merry Christmas will have come, and old "Santa Klaus" will have popped down a thousand chimneys and stove pipes into the sleeping rooms of "little children," and in some cases "big ones," and have filled lots of "stockings," and under the pillows of many a dreamer a host of beautiful things that were not thought of the night before will be found with the waking to gladden the eyes and thrill the heart.

Oh, "Santa Klaus!" what a blessed creature thou art, although rough in the exterior and strange looking, thy heart must be generous, for you make so many hearts glad. But there is another, a more glorious association with this day,—the Birth-day of our Savior, the dawn of the new life in Christ; heralded by angels came the news, "a Savior is born,"—darkness left the earth, and the light and blessing of a Redeemer came with the joyful tidings.

Let the day be hallowed and kept as a joyous day forever; let parents and children hail it as a beacon-light that shows us the path from earth to Heaven.

We desire to tender to all our readers and friends everywhere the customary greetings of this glad day, and hope it may indeed be a joyous one to them all; may the smiles of a beneficent Providence be upon them, giving health and prosperity; may they be abundantly blessed in basket and store, and thus be enabled to scatter blessings to many around them in those treasured tokens of love, and affection, and kind neighborly remembrances that are so happily linked with the "merry Christmas Day."

◆

Loss of the Honey-Bee by Flood.

Alas, poor Honey-Bee, how hard has been thy fate; thy genius and industry, and all thy care, and thy "sweet stores" for thy winter supply has been swept away, thy home gone, and thy thousands perished by the flood of waters that has buried thee. We learn that many of our apiarians have suffered greatly, and hives of bees by scores, and by hundreds, have been swept away by the flood. We would ask of all who have thus suffered, to forward us an account of the number lost, so that we can make a record of this loss, as well as of other kinds of stock.

◆

Steam to China.—We have received the memorial from the Chamber of Commerce of this city to Congress, urging the establishment of a line of steamers to China. Also a printed letter from J. W. Osborn, setting forth the advantages of the measure. May the project succeed.

New Business Arrangement of the Farmer.

For eight years past we have given our entire time, day and night, summer and winter, rain or shine, to the duties of our profession, until we have found that the accumulation of business and duties were of such an amount that if longer continued human strength would not endure it. We have borne the entire care of the Editorial department, with the selection of all other matter; we have been our own bookkeeper, collector, traveling agent, and have answered all our own correspondence; beside these duties we have canvassed for the journal, and given time to examinations of farms, gardens, and vineyards, and all the many matters connected with our enterprise as far as it was possible, and often beyond our strength. Such, however, has been the accumulation of duties and cares, and now so constantly increasing, that we found it would be ruinous to our health and life if longer continued. We have found, also, that the increase of duties was such that we were often delayed and hindered in our plans, as it was by far too much labor for any one mind.

In order, therefore, to relieve ourself from some of these heavy duties, and regain our exhausted strength, and give ourself full command of time whereby we could go over the entire State and look more extensively after the all-important interests of this great science of Agriculture, we have called to our aid an assistant in our labors.

We have therefore, from this issue, associated with us in the California Farmer, J. K. Phillips, Esq., who has been in our employ as the Foreman of this Journal from its very commencement, and whose competency, ability, and faithfulness for this business is best established, when we say that for the period of *eight years* Mr. Phillips has been present as Foreman and superintended the issue of *every number of the paper,* and his ability is made manifest, as we can say with pride that for typographical style and accuracy our paper will compare with any Journal of the kind in this or any other State.

Mr. Phillips will from this date take charge of the publishing and principal business department of the Farmer, and thus relieve us of great care and laborious duties, so that we can be at more leisure to visit all our friends far and near. Our duties, however, will still demand of us that we shall in these visits solicit the aid and coöperation of all our friends and the friends of the cause, and having more time, and being enabled to be away more from the office we hope to do it more effectually.

In our absence from the Editorial room Mr. P. will attend to all matters of business; he will also receive subscriptions, advertisements, attend to business generally, and in our united interest we kindly commend him as one who has most faithfully served us in that important position for the period of eight years.

We hope we can also call upon our many friends to give to us now a renewal of their subscriptions for the year close at hand, and to give us also their kind influence among their friends.

We give to all our most sincere thanks for the many favors of this long period, and hope by this new plan to increase the interest and value of our journal, and to have its appearance, as we intend it shall be, greatly improved with every issue, and with more promptness than ever before, as with this new aid we shall be enabled so to do.

◆

The Storm—Its Benefits.

"Good out of Evil!"

"Look on the bright side," Brother Farmers! Though your Farms may be flooded, and you may have lost some of your Stock—your Horses, Cattle, Sheep, or Swine—your Hay and Grain: yet, "Look on the bright side." Your lands that have been flooded, will be *enriched* by rich Alluvial Deposits, and the next year's crops will be greatly increased. Another good: the Gophers that have done you so much harm, are all destroyed, old and young; you will now be freed of the Gophers. Again, the next year was to be the "Great Grasshopper Year:" these Floods, these heavy Rains, will effectually destroy the Grasshopper; hence another "Blessing in Disguise." The loss of Cattle and Stock will serve to increase the value of those that remain, so that you are as well off as if you had your entire number: for there is no doubt but that Beef Cattle, Dairy Stock, Sheep and Swine, will soon advance in price. Beef Cattle have already risen in value, and Sheep and Swine will follow suit. So, Brother Farmers, "Look on the bright side," and murmur not at the Storm: for it was *beyond* your control.

No Farmer should murmur or complain, or bewail his lot, unless he has *neglected* to prepare himself against such events. Having done his duty, he must look at this event with the firmness of a philosopher, and go to work to repair damages. In nine cases out of ten, the time some men spend in murmuring against fate and the decrees of Providence, would have made the Loss good. But in this calamity there may be cases where the Loss has come too sadly, and loved ones may have suffered by sickness or death: here is a call for the deepest sympathy of every feeling heart; and the only refuge and relief, is a calm submission to Him, "Whose ways are past finding out."

Come now, Brother Farmer; if the cloud has cast a shadow upon your prospects; or if the Storm has spent a part of its favors upon you: meet the event like a Man—bear it like a Hero. Away with desponding; be not cast down: but lift up your head, and let your brow be cheerful, your heart brave—and you will find with these a strength will come to your *arm,* and your "will-power" will be very mighty: even sufficient to overcome all trials. "Look on the bright side" always.

◆

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

Progressive Labor.

From the time that vessels were principally propelled on the water by paddles, to the present moment, human ingenuity has been at work to develop a power or powers that would relieve Man from severe physical effort.

The same efforts that have been put forth to carry the wealth of nations and the inhabitants of Earth, upon the waters, have been continued on the land, and from the ordinary lumber-wagon and the unwieldy hack, to the train of cars upon our railways, with their gay saloons for day or night passengers, for land travel, or the conveyance of merchandise by the thousands of tuns at a time; to the "floating palaces" on the deep, richer, more costly and more comfortable than could be conceived in former years: is now the result of Progressive Labor of man's mind, by the new Inventions, that show "Progressive Labor," that not only relieves Man from physical effort, but directs it into a channel greater and mightier, its results elevating and ennobling to Man himself.

The links of iron that track our county and bind it, one section to another; the Lightning Telegraph that has usurped a good part of Uncle Sam's Post Office revenues: these are also evidences of the progression, all verging to the grand result which marks Progressive Labor, as the evidence of Progressive intelligence.

As in the modes of conveyance of the wealth of our nation and its people, so in all the Machinery and Implements of Man's labor, the same progressive spirit has made its mark; and while new Inventions are continually being developed, even though it at first appears to destroy the plans and interests of all our former works: a brief time only and the evidence leaps forth that the great public weal is nobly subserved by their invention.

The great inventions of Arkwright and Whitney; all the new improvements in the Plow, Harrow, Seed-Sower, Mower, Reaper, and a thousand other noble inventions, that at first involved heavy losses in old materials on hand, and the factories and interested parties who were to be laid on the shelf: these are as drops only, to the ocean of good that has flowed in on the world of humanity by these bright gleamings of Progressive Labor.

Among other great inventions of the age, the *Sewing Machine* assumes a high rank; probably more so than any invention which would seem at first to affect only woman's immediate home, and her limited (?) influence; for it has now been found to be of such mighty importance, that all the nations of the earth are awaking to its value. And as we said in our last issue, *two thousand* Sewing Machines per month were being shipped from the port of New York alone; and the demand still increasing.

The Sewing Machine is now the Right-hand element in many of our largest manufactories of woolen, cotton, linen, silk, and even leather; and had it not been for the *Sewing Machine,* the soldiers of our armies could not have been thus readily clothed, and prepared to defend the Liberties of the nation.

The Sewing Machine is estimated to have saved to our country the enormous sum of seventy-five millions of dollars, in manual labor, during the year 1861. To strengthen, if needed, these remarks upon the value of progressive labor, we give the following facts as relating to the Pacific Coast alone:

The last year, it is estimated that more than Five million of Grain and Flour Bags have been made upon Sewing Machines of the various patterns introduced here; added to these, a large amount of the clothing now made here, both for man's wear, and all the principal garments of mothers and children, with a vast amount of the domestic bedding-material, and many other articles now in use, that were formerly the result of "stitch! stitch! stitch!" are now thrown off with the lightning rapidity of the Sewing Machine, with ease and pleasure instead of the old ways of hand drudgery. To these can be added, as alluded to, the garments of several regiments of brave soldiers, that otherwise would now be almost without clothes.

We have gathered as near as an estimate can be formed of the facts, that there have been sold, in California, about *two thousand five hundred* Sewing Machines, of all kinds, during the year 1861; and of these, the Wheeler & Wilson Pattern has been equal in number to more than half of the whole amount. This fact tests the great capacity of these Machines, for all purposes, as is seen by their use in the manufacture of woolen, cotton, linen, silk, and even leather, to which they have been successfully applied in large numbers.

◆

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

Grain to Europe.—To show the immensity of the grain trade with Europe, it is only necessary to show that, by last accounts from New York, the shipments of one week were equal to 2,000,000 bushels of wheat, and over 60,000 barrels of flour. Who can say that "Cotton is King," when our breadstuffs are greater in value. It is to be regretted that our farmers had not fully completed sales, as it will be seen that orders for the purchase of grain for Europe have been countermanded to a large extent, so that if there is any serious trouble with Europe, grain must must fall in price. Then, farmers will see their error, and regrets will will be too late.

◆

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

What will Sacramento Do?

Sacramento will never be disgraced by the stain of Repudiation. Even though interested parties recommend it, the real citizens will never permit that stain to rest upon her. Whatever calamities may have befallen other cities, whether by fire or flood, Sacramento has been more sorely tried than any other city, and to her eternal credit and honor, she has always shown herself in the hour of trial true to herself; the very bravest of the brave.

We have been surprised that such a thought could have originated in Sacramento as *Repudiation of her public faith,* and we rejoice to see with what fidelity the real permanent citizens cling to their public credit and honor, and rally to its defense; and how promptly the means have been raised to guard that devoted city against further calamities. Sacramento has by this noble act to sustain her own credit and honor, and also that of every other city, and the honor and credit of the State itself, proved herself worthy of being the Capital.

The State Capitol may now be considered beyond all cavil as located *forever* at Sacramento, and whatever means may be tried to remove it, every generous mind will feel that Sacramento has saved the honor of California by spurning repudiation, and forever establishing her own and the State's credit and honor.

Who ever saw a city suffer as Sacramento has suffered, and thus rally to sustain herself. This has always been the case with this devoted city; in the flood of '49, at the desolating fire of '52, and the flood that immediately followed, submerging the city for six months; again, in after years, fires and floods; yet though often "cast down, she is not destroyed," and never can be so long as her citizens remain true to themselves.

While that devoted city thus braves the storm she will find warm hearts, strong arms, and willing hands to labor for her, as is seen by the generous outpouring of the sympathies of the good and generous of this city, and all other cities of our State. Even Marysville, herself "under a cloud," sends forth her generous sympathy and offers of aid. This is the right spirit, and this noble interest of the one city with another will redound to the glory of all, for every act of liberality under such circumstances, will always be returned with ten fold interest.

"The liberal deviseth liberal things and by liberal things they shall stand." The noble example Sacramento has shown to save the honor of the State will stand out in bold relief, and the names of those citizens who have come forward in this hour of her greatest calamity should be written in gold and placed on record and preserved for posterity; while those who could aid, but would not, should be remembered only with sorrow and regret.

◆

Aid to Sacramento.—Nobly have the cities rallied for the calamities of our Sister Cities. Sacramento, Stockton, Marysville, and San Francisco, have each and all promptly responded. The Ladies of San Francisco have, like a host of "Dorcases," worked like Heroines, to clothe the destitute. For such labor, Heaven will reward them; we rejoice to see such God-like efforts: they will blessed of Heaven. Platt's Hall has been occupied by them, with sewing machines, and large amount of clothing made, which with more collected and also cash, has been forwarded by the General Committee (appointed at a meeting of citizens) to the Howard Benevolent Society of Sacramento. Previous to the meeting of citizens to relieve the sufferers, over $14,000 was subscribed by bankers and merchants, besides large amounts of clothing, provisions, etc. The river boats carry all articles free. The Union of Monday states that the amount received in Sacramento up to that time, for the relief of sufferers by the flood, from San Francisco, was $27,710 40, of which amount $22,710 40 was in cash, and about $5000 in well selected merchandise. It adds, "such instances of prompt and profuse generosity on the part of the community are of very rare occurrence."

Seeds Received.—We have been kindly favored with a package of various Seeds gathered at different points by J. Hoyt, Esq., to whom we return thanks. The samples sent us were as follows: A very handsome sample of Cotton raised in Sonora, Tuolumne county; the open boll presents the cotton of a fine staple, the seed being full and ripe. Samples of red and white Wheat, and Peas from Vancouver. Bald Barley, extraordinarily large kernels, also, heads with grain. Sydney Oats, Ailanthus Seed, Havana Tobacco Seed, Indian Bread Fruit, etc. These samples are at our office.

◆

Hand-Book Almanac.—H. H. Bancroft & Co., have sent us their hand-book Almanac for 1862, containing a large amount of valuable matter touching all the interests of society, everything relating to the celestial phenomena and tides, times and seasons, historical, topographical and geographical, matter of interests to all, beside the usual calender of an almanac, brief statistics of every county, officers of the national and State Government, and of all the counties; these and other valuable matters, making the book one of worth to every citizen, who should purchase a copy.

Improved Grain Separator.—We have before referred to the Grain Separator invented by Mr. A. Hunter, of Vallejo, as an excellent machine. But Mr. Hunter has since made an improvement upon that, of which he has shown us the model, and it seems to be near perfection as can be. It appears to clean grain completely, no matter how foul; and as the machine is not expensive, farmers will have no excuse for foul grain, while it is for their interest, everyway, to clean their grain. Mr. Hunter intends to send a machine to the World's Fair.

Lectures to Women.—Mrs. S. H. Young, M. D., Graduate of Penn. Medical College, Philadelphia, will deliver Two Lectures to Women, at Platt's Music Hall, on Friday and Saturday afternoons, Dec. 10th and 21st, at 2 o'clock. Mrs. Young has the highest testimonials of ability, and we should judge is fully competent for the work she has undertaken. Our ladies would find it for their interest to attend.

Patrick Henry rejoiced in his patriotism, that sectional distinctions were broken down. "I am no Virginian," said he, "but an American."

Produce of the Sandwich Islands.

From a private letter, dated Nov. 8, lately received from H. M. Whitney, Esq., publisher of the Commercial Advertiser, Honolulu, we extract the following in relation to the production of Rice, Cotton, and Sugar, in the Islands, and their capabilities for the same:

Ed. Farmer: * * * Dr. S. P. Ford, a practicing physician in Honolulu, is just now warmly interested in starting the cultivation of Rice, to which you may see frequent references in our papers. We are bound to succeed in Rice and Sugar, perhaps in Cotton, too, but the latter I am not so sanguine about. It will *grow* here, but whether it can be made a remunerative crop, is the question.

I have no doubt but that you would be much interested with a visit to our group and a tour over the different Islands, examining some or all of our sugar plantations, which are every year increasing in number as well as in capacity. Our manufacture of this great staple is only in its beginning. You will probably see the day when we shall export ten millions of pounds annually, instead of two and a half millions, as at present. The handsome price which California and Victoria pay for this staple, is sufficient to enable our planters to enlarge their estates, as well as sufficient to induce new capitalists to enter the field as fast as new lands can be obtained suitable for the business. Foreign capital is needed, and native labor is abundant to make that capital productive.

◆

Tucker's Opening.—A great crowd of our citizens have thronged the magnificent jewelry palace of J. W. Tucker & Co., every day and evening since the doors were opened. It is worth a long travel to visit this store. All that the most refined taste could devise, or the genius and skill of the mechanic could perfect, has been done to present a most chaste and finished design throughout all the arrangements of the place. It is one of the finest specimens of art and taste in our city: The deep rich color of the whole interior, finished as it is with dark mahogany, and embellished with large and costly mirrors, these with extensive counter cases full of the most costly wares, and gleaming with gems. Here will thousands soon resort with heavy purses to select for kindred and friends their Christmas and New Year's presents. We saw several beautiful articles which costing from $100 to $1000 will make many a recipient happy on the coming holidays. This establishment may with truth be called the finest finished store on the Pacific Coast. The present stock of goods is extensive and costly; though it costs nothing to walk through the store, we would advise those who try it to have "long and deep purses" to meet the temptations so lavishly displayed.

"Oh, the Washing Day."—The washing day is one of the "storming days" in the "domestic life." "John, hang out the clothes line"; "Mary, bring me the clothes pins"; "Susan, help me with this tub"; "Tom, where's the clothes poles?" "Is that boiler right?" "Is the water hot?" "Help me with this basket." These, and a similar bevy of sounds come to the ear. "All on a washing day." But there are some good things now; this scrub, scrub, scrub; this wring, wring, wring, is almost all done away by progressive labor; the hard times of washing day is past. It is almost a pleasure now, that is, if you have a Bailey's Patent Combined Washer and Wringer; the work does itself almost. By referring to the advertisement of Bailey's Patent, the reader will learn of a kind of Washing Machine, such as we have in our family, and we know it does admirably, and does the work in half the time; and we can personally and domestically recommend it as a good Christmas or New Year present for every wooking man to give to his family.

New Hat Store in San Francisco.—A handsome "beaver" is the very *crowning* article of a gentleman's dress. A bad hat spoils all; a genteel glossy beaver will make even a shabby dress look decent. C. J. Collins, the original "Eagle Hat Store" of San Francisco, in 1852, has now opened the new and elegant store in Tucker's buildings, and with his brother, J. C. Collins, they are prepared to "head" off every gentleman in our State, and give them the very "tip top" of a fashionable dress. C. J. Collins was originally on Commercial street; burned out in '56; afterwards on Washington street, and more recently of Lamott & Collins of Sacramento—now Collins Brothers, under the firm of Collins & Co. The talent and skill of this firm, as manufacturers, is beyond question, and their style of hats the very *ne plus ultra.* Their many friends will now be glad to crowd them with a business which they are honorably entitled to.

Very Rich Furniture.—Messrs. Selling, Mars, & Co., are now receiving the largest assortment of Rich Furniture ever opened on this Coast, consisting of about *two thousand* cases. We looked into the Warehouse, the present week, and examined the rich Parlor and Chamber Sets. We noticed one Chamber Set, of carved black-walnut (most superb), valued at $600; others, $400, $350, $300, and $250, each; also, Parlor Sets, $500, and down to $150. A new style of Ladies' Work-table; and also the Cuba Washstand, very chaste. These with other Goods, will well repay purchasers for calling particularly on this House, before they make their purchasers.

Raspberry Wine.—This Beverage is becoming very plenty and growing in public favor. Messrs. Graves, Williams & Buckley are sending out from their Wine Cellar some of the Best that has yet been made. It is a very superior article, of great body and strength, and as fine as can be made; it is from the Vineyard of Mr. Woolsey of Oakland. The Wine Cellar of Messrs. G. W. & B. is under the charge of Mr. Comins, who will show all attention to visitors that feel an interest in the Home-made Wines of our State, of which samples of many kinds will be found in this large Establishment.

Samples of Grain.

Some of the finest Samples of Grain grown in the State can be seen at the Office of the Farmer.

The Flood of 1861.

THE recent storm and Flood, from all accounts, have been the most disastrous and extensive since the occupation of California by Americans, and the deluge the most sudden. There seems to have been a continual storm in the mountains, since the advent of the rainy season on the 10th November, up to the 9th inst, first in snow in the higher regions, then a heavy and warm rain, which melted the snow and sent a "deluge" upon the valleys. As no very large amount of rain had fallen here, the announcement by telegraph on the 9th, that Sacramento was flooded, caused much surprise; then came the news that part of Marysville was submerged, and subsequently that near the whole of the Sacramento Valley and its tributaries had been swept over by water, causing great loss of life, as well as immense destruction of property, by the suddenness of the rise of water. The Valleys of Napa and Sonoma were also more or less overflowed, but the loss was comparatively small. The San Joaquin and Southern counties seem to have been exempt from the flood. But to give a full account of the flood, and the loss, where it did occur, would be impossible for us, as the "papers are full of it." We give esewhere a particular statement of how the water came into Sacramento. Though the American rose higher than ever before known, and even overflowed at Brighton, it is highly probable the city would have escaped serious damage, but for the stoppage of the slough by the Railroad Company. As it is, the loss in the city is estimated at a million dollars or more, which seems not extravagant, when it is considered that every street was flooded, the water being from one to three or four feet deep on J and K streets. While below those streets, it was sufficient to float off and destroy a large proportion of the wooden buildings. In fact, the city was a vast reservoir until the R street levee was broken through, when the rush of water out was so great as to take along twenty or thirty buildings and even two-story houses, which were dashed to pieces below, while every description of furniture, including pianos, bureaus, etc. was distributed over the county all the way to Sutterville. Large quantities of goods in the stores were damaged, and some brick buildings injured by the pressure of the water. Several lives were lost, and from the suddenness of the rise. it seems fortunate that the loss was not greater, large numbers of women and children having been rescued with great difficulty.

At Marysville, many of the brick buildings were injured in the flooded portion, causing the floors to fall, and destroying the contents. The most remarkable was the falling of the Merchant's Hotel, with all its occupants, but fortunately they escaped with their lives. We subjoin some further reports, and shall endeavor to make a more particular record in future.

Fortunately, no rain has fallen since the outbreak of the flood on the 9th, though the weather has been damp and "threatening" rain occasionally. The water has subsided nearly as rapidly as it rose in the upper country and in the American river at Sacramento. But the Sacramento river continued to rise for several days, until it attained about the highest mark of last year, and a serious break occurred in the Sacramento levee near Sutterville, which threatened extensive damage. Should the fair weather continue, however, the water will soon subside so as to allow repairs to be made, and future danger averted. Large numbers of men are now repairing the levees at Sacramento.

A writer says: The storm which has caused such an immense destruction of life and property, commenced in the mountains nearly four weeks ago, and was the first of the season. It continued almost without interruption, constantly increasing in violence up to Monday morning. Between Friday night and Monday morning, a period of 56 hours, not less than fifteen inches of rain fell, by actual measurement, in Nevada. And Sunday and Monday night, the storm was incessant, the streams rose rapidly, and all communication was cut off. All the bridges on Deer and Wolf creeks were swept away.

At Long Bar we found everything swept clean. The island in the stream opposite the village, inhabited principally by Chinamen, was flooded during Sunday night, and some 20 of these people drowned. About as many more, including one white man and three white women, were rescued the next morning from the trees in which they had taken refuge. A family named Brown, of three persons, were drowned a little lower down. All the ranches from Long Bar down to the mouth of the river have been swept of their stock. On Brophy's Ranch, 2,000 head of sheep perished. Another ranch lost 60 head of horses, while the number of cattle and hogs which perished is almost innumerable. Many ranches have been entirely ruined, and many narrow escapes had, the details of which would fill a volume. On Monday evening a Chinaman passed Long Bar on a log. Every effort was made to rescue him, which was prevented by the intervening darkness.

The destruction on Bear river has been equally extensive. There is no estimating the amount of damage which has been sustained throughout this section.

The waters of the Yuba and Feather rivers rose more rapidly and higher than was ever before known, and their subsidence has been equally as sudden.

The San Juan Messenger says: Never had Americans witnessed anything to compare to the storm in this region, before. The damage done to ditches, flumes, mining claims, sluices, etc., is immense, and nearly every bride on the three Yubas known to people of this part of the country, has been swept away.

At Ousley's Bar it is reported that nearly one hundred Chinamen were drowned in a narrow gorge, where the water rose suddenly, leaving only one poor Mongolian to tell the tale. We suggest to the Anti-Coolie Association that the saved Celestial receive a certificate of exemption from their proposed measures.

◆

From the East.

The telegraph after being "laid up" or down for several days by storms and floods, has lately furnished rather stirring news. The city of Charleston, S. C., is reported to have been more than half destroyed by fire, caused by an insurrection among the slaves. The arrest of Mason and Slidell seems to have produced a commotion in England, and some war-talk. Below we give the substance of late dispatches:

The English papers are exceedingly belligerent in their remarks in reference to the arrest of Mason and Slidell. They say the sentiment of the British Cabinet, in relation to the matter, is denunciatory of the act of arrest. In relation to the same matter, and the attitude of the English press thereon, the people, and Cabinet at Washington, are defiant to the last degree.

Mr. Bright has made an eloquent speech on the American question. In it, he strongly condemned the warlike feeling, and scouted the idea that the U. S. Cabinet had resolved to pick a quarrel with England. Sir Charles Cobden has written letters of a pacific tenor urging a suspension of judgment. General Scott has also written a letter in favor of maintaining friendly relations between England and America, which attracts much attention.

The transport Melbourne would leave Woolwich for Halifax on the 5th, with 30,000 stand of arms and a battery, and six Armstrong guns.

The steamer Illinois, which arrived at Old Point on Saturday night, says that it passed within six miles of Charleston, on Thursday night. A tremendous conflagration was going on, and Charleston was evidently burning up. The Norfolk Day Book, of the 13th, gives an account of a negro insurrection in South Carolina, at Charleston. The plot of the negroes was discovered and checked.

Dispatches from St. Joseph, Mo., state that a battle was expected soon between the rebel forces at Lexington, Ky., and the troops under Gen. Prentiss. It was Prentiss' intention to cross the river on Saturday, at a point above Lexington, and attack the rebels. The rebels are 2500 strong; the Federals have 4000.

In Congress, in the Senate, Hall offered a resolution, to the effect that the Committee on Military Affairs inquire into the expediency of providing a uniform plan for dealing with the slaves of rebels, which was agreed to. Lane, of Indiana, offered a resolution that the Committee on Judiciary be requested to prepare a law to prevent aiders of treason from bringing suits for commercial debts, in U. S. Courts. Agreed to. Wilkinson offered a resolution to expel Jesse D. Bright. Referred. In the House. The bill to raise 20,000 more soldiers for Kentucky, was opposed by Lovejoy and Stevens, but was afterwards passed.

At Musselburg, Kentucky, a conflict took place. The Federal troops, under Col. Jackson, killed and wounded forty-five rebels, with loss of only seven......The rebel troops are leaving the Upper Potomac, as fast as possible......Gen. Wool, at Fortress Monroe, is extremely anxious to make a demonstration on Richmond, with his forces......The Federal have evacuated Tybee Island, Georgia, below Savannah, as the rebels had burned the light-house, and rendered the situation worthless.

Great preparations are being made at Columbus, Ky. by the rebels, to resist the attack of the Federal Fleet, from Cairo, which is expected to make a demonstration on the former place daily. The New Orleans Dry Docks have been brought and placed across the river at Columbus, to obstruct the Federal fleet. Hollins' celebrated "Turtle" is also at Columbus, to "run down" the Federal boats.

Deserters from the rebel forces, on the Potomac, state that the Confederate strength, at Centreville, is one hundred and fifty thousand, and that the commanders are daily expecting an attack from the Federal troops, under McClellan.

A "STRONG ARM" WANTED.—The Union demonstrations on the North Carolina coast alarm the traitors of the old North State, and in their fear they betray themselves. The Raleigh Standard declares, with, we imagine, a good deal of truth, that "unless the movement is stopped at once by the strong arm of the Confederate States, more than half the counties of this State will be attached to the Black Republican Government, before the Union Congress meets." And the same paper says, "it is very evident that the State authorities will never make a move in this direction, owing to the reasons that they are in the same boat with the Unionists."

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

MR. PERKINS will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

Ladies' Department.

LIZZIE WILEY WARREN, M D.....EDITRESS.

BE GENTLE WITH THY WIFE.

Be gentle! for you little know
How many trials rise;
Although to thee they may be small,
To her of giant size.

Be gentle; though perchance that lip
May speak a murmuring tone,
The heart may beat with kindness yet,
And joy to be thine own.

Be gentle; weary hours of pain
'Tis woman's lot to bear;
Then yield her what support thou canst,
And all her sorrows share.

Be gentle; for the noblest hearts
At times may have some grief,
And even in a pettish word
May seek to find relief.

Be gentle; for unkindness now
May rouse an angry storm,
That all the after years of life
In vain may strive to calm.

Be gentle; none are perfect—
Thou'rt dearer far than life;
Then, husband, bear and still forbear—
Be gentle to thy wife.

BABY'S COMPLAINT OF HER NURSE.

Oh, mother, dear mother, no wonder I cry,
More wonder by far that your baby don't die;
No matter what ails me—no matter who's here—
No matter how hungry the poor little dear,
No matter if full or all out of breath,
She trots me, and trots me, and trots me to death.

I love my dear nurse, but I dread that great knee;
I like all her talk; but wo unto me,
She can't be contented with talking so pretty,
And washing, and dressing, and doing her duty;
And that's very well—I can bear soap and water:
But, mother, she is an unmerciful trotter.

Oh, dear, is that she? Is she coming so soon?
She's bringing my dinner with teacup and spoon;
She'll hold with one hand, in t'other the cup,
And so fast as it's down, she'll just shake it up;
And thumpity-thump, with the greatest delight,
Her heel is going from morning till night;
All over the house you may hear it, I'm sure,
Trot, trotting! Just think what I'm doomed to endure.

Precocious Children.

BY A REFORMER.

I have not said all I wish to say on this subject. In fact, it is a very extensive as well as important one, and it grows upon me. A great deal might be written upon it, and, in my opinion, two or three columns more ought to be. I pitch in, accordingly.

Children, like other natural productions, are subject to natural laws. One of these laws is, that precocity of development betokens early decay. The tree of slow growth is the one that lasts for centuries. As a rule, vegetables which grow rapidly and come early to maturity, are of a soft fiber, and soon decay. Fast-growing animals are not the longest lived.

A stimulated precocity, physical or mental, must be worse in its effects than one which is spontaneous. Every gardener knows that forcing plants makes a strong draft upon their vitality. Believe me, it is much worse to force the intellects of children.

A forced precocity, or stimulated growth and activity of the intellectual organs, extends to the senses and physical system. So we have our little girls, not only up in their ologies, but heart-broken with violent passions, when they ought to be playing with dolls or driving hoops. I am very sure that the best thing that could be done for the present and future rising generations, would be to resolutely put all our children on a short allowance of intellectual food and exercise, with a corresponding increase of the natural and physical.

Sound bodies and sound minds are of slow growth. To have a sound mind we must have a sound body to put it in. A good body is slowly built up of pure food, pure air, exercise, and plenty of rest and sleep. With these you may have good blood: and with good blood you may have good brains.

Don't be troubled, fond parents, if your children are dull and backward in their intellectual developments. The greatest men have been considered very slow and stupid in childhood. Many of the most successful men in science and literature have been slow boys, who have grown up with strong and vigorous constitutions, and have made no successful literary efforts until they were after forty. Smart Young America may not approve of this doctrine—but our precocious youths generally burn themselves out at thirty, or so, just when healthier intellects are ready to begin.

Our educators are beginning to see it. They go for shorter hours of study, fewer lessons, and a more solid and reasonable process of education. They favor ventilation, gymnastic exercises, base-ball, foot-ball, cricket, and rowing, with corresponding amusements for young ladies.

Education, my dear friends, is not a stuffing of the memory with facts, rammed into it by a patent sausage-machine. A mind so crammed is really in a very bad condition. You might as well cram the stomach with all kinds and the greatest possible quantity of food, and expect a good digestion. The memory so crammed is sure to break down afterward, and lose its power. We have plenty of mental dyspepsia. If you want a healthy intellect, don't overwork it. Keep on the safe and prudent side. A few facts, well digested—that is, thoroughly understood and applied—are worth more than whole encyclopedias half understood.

A good, strong, healthy boy or girl of fifteen, is a wonderful treasure. I would like such a one to be able to read and spell well, to write a good hand, to have a tolerable knowledge of figures, to know something of geography and history. The natural sciences may be easily acquired, if there is a taste for them; if not, there is no use in forcing the inclinations. In the five years, from fifteen to twenty, there is time for acquiring languages, mathematics, etc. From twenty to twenty-five may be given to professional or general studies.

Here are ten years, from fifteen to twenty-five, which are ample time for a pretty thorough education, leaving our beautiful childhood to its never-returning pleasures, and the healthy growth which Nature requires.

And so my advice to all fathers and mothers is, give your children plenty of sleep, air light, and play, until they have passed the age of childhood. Let them be children. Don't make men and women of them before they get into their teens. Don't cram them with Latin and Greek, at the expense of pale cheeks, crooked spines, rotten teeth, and the hectic of consumption. Your son or daughter may be very happy without Greek or Algebra. Can he or she be happy without health.

Even if a child is born with great gifts, and displays an eager desire for knowledge, and that precocity of intellect which is so gratifying to a parent's vanity, my most earnest advice would be, to hold back rather than urge forward.

Treat the mind as you would the stomach. You must put a too vigorous appetite upon a proper allowance. You must check the free horse, who would wear himself out with his exertions. The best way to insure the future welfare of such a child is, to make its health and physical development the first consideration, and to discourage and repress all intellectual effort inconsistent with that end.

THE GLORY OF A LAUGH.—After all, what a capital, kindly, honest, jolly, glorious thing a laugh is! what a febrifuge, what an exorciser of evil spirits! Better than walk before breakfast, or nap after dinner. How it shuts the mouth of malice, and opens the brows of kindness! Whether it discovers the gums of infancy or age, the grinders of folly or the pearls of beauty; whether it racks the sides or disfigures the countenance of vulgarity, or dimples the visage or moistens the eyes of refinement, in all its phases, and in all faces, contorting, relaxing, overwhelming, convulsing, throwing the human countenance into something approximate to Billy Button's transformation; under every circumstance, and everywhere, a laugh is a good thing. "A thing of beauty" is a "joy forever." There is no remorse in it. It leaves no sting—except in the sides, and that goes off—even a single unparticipated laugh. If there is one laugher and one witness, there are forthwith two laughers, and so on. The convulsion is propagated like sound. What a thing it is when it becomes epidemic!

THE YOUNG WIFE.—It takes a heroine to be economical, says Miss Muloch. "For will she not rather run in debt for a bonnet than wear her old one a year behind the mode? give a ball, and stint the family dinner for a month after? take a large house, and furnish handsome reception-rooms, while her household huddle together anyhow in untidy attic bedchambers, and her servants swelter on shake-downs beside the kitchen-fire? She prefers this a hundred times to stating plainly, by word or manner: 'My income is so much a year—I don't care who knows it—it will not allow me to live beyond a certain rate, it will not keep comfortably both my family and acquaintance; and society, if you choose to look in upon us, you must just take us as we are, without any pretenses of any kind, or you may shut the door, and—good by!'"

NO HOOPS.—The Petaluma Journal speaking of the late visit of Lady Franklin to that town says: Her style of dress, in its simplicity and absence from the usual rotundity of our American ladies, reflects severely upon those whose aim in life is to follow the fashions and habits of those of titled birth. Our fine ladies of American soil would meet with considerable disappointment in calling upon Lady Franklin expecting as they would, to find clothing a matter of show more than of comfort. Plain and comfortable is her attire, and when we say this we say all. Her face wears the expression of the true high-toned woman, pleasant and kind, with word polite for all, no matter what their station, with a sort of subdued sadness.

IN the town of Hillsdale, New York, reside Mr. Conrad Decker and wife—the former in his 100th year, and the latter in her 99th. They have been married 77 years, and are both in comparative good health. They keep house by themselves, and have no neighbors within a quarter of a mile. Mr. Decker cultivates his own garden, and saws his own wood; Mrs. D. does her own housework, without thinking of "hired help," although she complains occasionally that she "can't go about the house as spry as she used to." We have read many accounts of remarkable couples, but this instance has few parallels.

A GENTLEMAN had in his service a cook who could just manage to read and write. One day he perceived her taking in some monthly numbers of a work, and curious to know what could possibly be the subject of the cook's erudition, he asked her to let him look at the publication. Mary, blushing, said that she wished to improve in her cooking, and she had been taking for some months, in parts, "Cook's Voyages.

GET VACCINATED.—In view of the fact that the small pox is now becoming prevalent nearly all over this State, we advise all persons who have not been vaccinated to attend to that precautionary measure as soon as possible. It costs but little and is not a painful operation, while it may save many from taking that frightful disease.

A REMARKABLE FACT.—The New Bedford Mercury states that Mrs. Samuel A Frazer, of Duxbury, is now engaged in knitting stockings for the soldiers in our army. She was employed eighty-five years ago in knitting stockings for the soldiers of the Revolution. She is now 92 years of age.

THE triumph of woman lies not in the admiration of her lover, but in the respect of her husband; and that can only be gained by a constant cultivation of those qualities which she knows he most values.

NEVER look at the girls. They can't bear it; they regard it as an insult. They wear their feathers, furbelows, and frills merely to please their mammas—that's all.

IN this world of disguises, we sometimes walk among angels, and know them not until some chance word or sign throws open the spiritual freemasonry of our souls.

"You must take the responsibility," as the man said to his wife when the child cried.

WASHING CALICOES.—Calico clothes, before they are put in water, should have the grease spots rubbed out, as they cannot be seen when the whole garment is wet. They should never be washed in very hot soap-suds: that which is mildly warm, will cleanse them quite as well, and will not extract the colors so much. Soft soap should never be used for calicoes, excepting for the various shades of yellow, which looks the best washed in soft soap, and not rinsed in fair water. Other clothes should be rinsed in fair water, and dried in the shade.

SETTING THE COLORS.—When calicoes incline to fade, the color can be set by washing them in lukewarm water with beef's gall, in proportion of a teacupful to four or five gallons of water. Rinse them in fair water; no soap is necessary, without the clothes are very dirty. If so, wash them in lukewarm suds, after they have been first rubbed in beef's gall water. The beef's gall can be kept for six months, by squeezing out the skin in which it is inclosed, add salt to it, and cork tight. A little vinegar in the rinsing water, of pink, red and green calicoes, is good to brighten the colors, and keep them from mixing.

IF young ladies would like to know what will take off tan and sunburn, let them take a handful of bran, pour a quart of boiling water on it, let it stand an hour, then strain. When cold, put it to a pint of bay rum. Bottle and use it when needed.

COLORED SPECTACLES.—Many persons who have weak eyes wear colored spectacles when they are positively injurious. On no account should colored glasses be worn on a dull day, in the dusk of the evening or, as a general rule, in mild artificial light. The reasons for such caution in the use of glasses are, that the power of the eyes becomes impaired to endure strong light by accustoming them to the impressions of feeble illuminations. Some persons who have delicate organs may occasionally employ spectacles of lightly tinted glass for reading and writing, but they should be avoided if possible. Colored glasses are useful to protect the eye from the brilliant reflection of snow and the bright rays of the oxyhydrogen and electric light, and for this purpose they should be a deep green. Persons recovering from inflammation of the eyes should also use such glasses, but they ought to be laid aside as soon as possible. The eye should be accustomed to endure strong sunlight when not reflected from dazzling surfaces, such as bodies of water, white sand and snow.

MRS. LIZZIE W. WARREN, M. D.,
ELECTRICIAN AND HYDROPATHIST,
Corner Mason and Pacific streets.....San Francisco,

MRS. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick.* Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are *reasonable* and *wise*, and may be relied upon whenever a cure or improvement is possible.

MRS. WARREN will be pleased to make arrangements by the year, with families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Having devoted many years in study and preparation for this profession, and having received ample testimonials from the College where she graduated, feels confident she will be able to prove her ability to attend to the claims of WOMEN and CHILDREN. To this practice she will give her *Exclusive Attention.*

As an ACCOUCHEUSE she claims to be eminently successful, and can produce ample testimonials of success in many difficult cases.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

☞ Arrangements have been made by which a few Patienst can be accommodated with Rooms and Board

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

HOTELS.

Warm Springs Hotel!

Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebrated throughout California, that it is unnecessary here to recapitulate their various qualities. To invalids, they offer the greatest advantages; their medicinal virtues being unsurpassed even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting-grounds and trout-fishing within a short dis the Springs.

14 6m LEWIS BRADY, Proprietor.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL.

Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

PRESTON'S PLACE

Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean-Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

UNION HOUSE!

Corner of Main and Center streets,
MOKELUMNE HILL,

Henry Atwood, Proprietor.

THIS SPLENDID THREE-STORY STONE Building, long acknowledged equal, if not superior, to the best Hotels in the Mountains, has been thoroughly renovated and greatly improved and a

SPLENDID BILLIARD TABLE ADDED.

The Dining-room has been divided into a Family Dining-room and Restaurant, both hard-finished, and newly and elegantly furnished. The former will be for regular boarders who may prefer it; the Restaurant will be open at all hours, and be supplied with the best products of the market.

The parlors and chambers have all been thoroughly renovated and elegantly furnished, and will accommodate seventy-five persons.

The Stages all arrive and depart from the "UNION," and for the accommodation of travelers the House is kept open all night.

The proprietor avails himself of this occasion to say to travelers *en route* to the various places of recreation in the Eastern portions of Calaveras county, that no pains will be spared to make their sojourn at the Union pleasant and agreeable.

Jebb's Patent Churn.

THIS NEW PATENT CHURN IS NOW READY TO be seen and tried. It is beyond question one of the best and simplest constructed Churns ever invented, and Dairymen should call and examine it.

By the action of the crank, three distinct currents are made which moves the cream with such rapidity that Butter is made in from three to five minutes with ease.

This Churn can be seen at the Farmer Office.

Patent-Rights can be had for all the counties in the State, and any experienced carpenter can make a fortune easier by these Chuns than by gold digging. They only need to be seen to be approved. 12

Literary Shrubbery.

TRUE POETRY.

[For elegance and beauty of simile, the following lines from the pen of Charles Mackey challenge the whole world of poesy.]

How many thoughts I give thee!
Come hither on the grass,
And if thou'lt count unfailing
The green blades as we pass;
Or the leaves that sigh and tremble
To the sweet wind of the west,
Or the rippling of the river,
Or the sunbeams on its breast,
I'll count the thoughts I give thee,
My beautiful, my best!

How many joys I owe thee!
Come sit where seas run high,
And count the heaving billows,
That break on the shore and die—
Or the grains of sand they fondle,
When the storms are overblown,
Or the pearls in the deep-sea caverns,
Or the stars in the milky zone,
And I'll count the joys I owe thee,
My beautiful, my own!

And how much love I proffer!
Come, scoop the ocean dry,
Or weigh in thy tiny balance
The star ships of the sky;
Or twine around thy fingers
The sunlight streaming wide,
Or fold it in thy bosom,
While the world is dark beside;
And I'll tell how much I love thee,
My beautiful, my bride!

Couldn't Dead-Head.—The principal avenue leading to Detroit has a toll-gate near the Elmwood Cemetery road. As the cemetery was laid out some time previous to the construction of the planked road, it was made one of the conditions of the company's charter, that all funeral processions should go back and forth free. One day, as Doctor Price, a celebrated physician, stopped to pay his toll, he remarked to the gate-keeper:

"Considering the benevolent character of our profession, I think you ought to let us pass free of charge."

"No, no, doctor," the keeper readily replied, "we couldn't afford that. You send too many *dead heads* through here as it is."

The doctor paid his toll, and never asked any favor after that.

The Grease of the Earth's Axis.—A reflecting gentleman of leisure, lately spent some days in the region of the oil wells of Pennsylvania, and after mature deliberation, gives it as his opinion that the Government should interfere at once and put a stop to further boring and pumping for oil; as he is certain that the grease is being drawn through these wells from the bearings of the earth's axis, and that the earth will cease to revolve when the lubrication ceases!

John Wilkes, at a public meeting, sat next to a person who, being displeased with the course matters were taking, kept exclaiming, "I cannot allow this to go on! I must take the sense of the meeting on this point." Whereupon Wilkes whispered to him, "Do so, if you will; I'll take the nonsense of the meeting against you, and can beat you."

An Old Claim.—It is said that the heirs of Robinson Crusoe have instituted a suit to recover the Island of Juan Fernandez, founding their claim upon the ground that he was "monarch of all he surveyed."

Expressive.—In a recent address, Bishop Purcell, of Cincinnati, expressed the hope that "the rattlesnake of disunion might never sting the hand that waved the flag of the Union, or the heart that loved it."

A householder in filling up his census schedule under the column headed, "Where born," described one of his children as "born in the parlor," and the other "up stairs."

"Pa," said a lad to his father, "I often read of people poor *but* honest; why don't they sometimes say rich *but* honest?" "Tut, my son," said the father, "nobody would believe them."

Sunday Drinking.—There exists in some parts of Germany a law to prevent drinking during divine service. It runs thus: "Any person drinking in an alehouse, during divine service on Sunday or other holiday, may legally depart without paying."

[Suppose we pass such a law here: would not this be the best Sunday Law?]

Baked Tomatoes.—Tomatoes peeled and baked on a hot dish, or even baked without peeling, and when done seasoned with salt, butter and pepper, is a luscious way of preparing this excellent vegetable.

Various Meanings of "Corn."—In Scotland, when the word corn is used it is universally understood to signify oats; in England it means wheat; and in the United States, maize.

Purchasers of California Wine should always select from those who are known to sell only *pure Wines*. With confidence and pleasure we can refer to the firm of Hobbs, Gilmore & Co., as persons who can furnish pure Wines.

Protection to Newspaper Publishers and Their Subscribers.

Office of the Special Mail Agent
for the Pacific Coast.
San Francisco, 1861.

Sir: Complaints have been made to me that Newspapers are improperly taken from the Mails at many of the Post-Offices on this Coast, by parties to whom they do not belong. Your attention is called to the following extracts from the Postal Laws on that subject:

Section 125. Be it further enacted, That * * * * if any person employed in any department of the Post-Office shall improperly detain, delay, embezzle, or destroy any newspaper, or shall permit any other person to do the like, or shall open, or permit any other to open, any Mail or packet of newspapers, not directed to the office where he is employed, such offender shall, on conviction thereof, forfeit a sum not exceeding Fifty Dollars for every such offense. And if any other person shall open ady Mail, or packet of newspapers, or shall embezzle or destroy the same, not being directed to such person, or not being authorized to receive or open the same, such offender shall, on conviction thereof, pay a sum not exceeding Twenty Dollars for every such offense. * * * * *

Section 132. And be it further enacted, That if any Postmaster shall unlawfully detain in his office any letter, package, pamphlet, or newspaper, with intent to prevent the arrival and delivery of the same to the person or persons to whom such letter, package, pamphlet, or newspaper, may be addressed or directed in the usual course of the transportation of the Mail along the route; or if any Postmaster shall, with intent as aforesaid, give a preference to any letter, package, pamphlet or newspaper over another which may pass through his office, by forwarding the one and retaining the other, he shall, on conviction thereof, be fined in a sum not exceeding Five Hundred Dollars, and imprisoned for a term not exceeding six months, and shall, moreover, be forever thereafter incapable of holding the office of Postmaster of the United States.—Sec. 32, Act of July 2, 1836.

In accordance with the above, I shall use every exertion in my power to have all Postmasters removed from office who allow a violation of these Laws; and shall prosecute all persons (whether Postmasters or others) on information of their having violated either of them.

We take pleasure in publishing the above, as we have been largely a loser by the practice which has existed of permitting other than subscribers to take papers from the Post-Offices. We shall be glad if our subscribers will advise us of every infringement of this Law, when it interferes with our journal, and we will reward them for their valuable information.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.
It now makes its first appearance on the Pacific Coast. For sale by
KNAPP, BURRELL & CO.,

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.
I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.
1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.
It will be seen by the above that no family can afford to be without such a Machine.
I can give many excellent recommendations, if necessary
For sale by T. M. CHAPMAN, Petaluma.
TREADWELL & CO., Sacramento.
W. HODGES, Sacramento street,
2-3m San Francisco.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.
This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.
To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.
CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.
A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.
Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.
A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.
Wringing is Done Five Times As Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.
☞ The Machines can be seen in operation at our store. Always for sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.]
Dec. 13.

Since our last report, the few days of fair weather have been fully improved by our Shippers, and large quantities of Wheat, Flour, etc., have gone on board ships. We omitted in our last report, the charters of the Carrier Dove, Golden Fleece, and Punjaub, for Liverpool, all to load principally with Flour and Wheat. The quantity of Wheat bought for future delivery, is large, and the principal amount or bulk of that now coming to market, is for shipment. Our market rates of Wheat are a shade lower than they were last week. Barley and Oats remain without change; market, dull. Receipts of Grain, for the past week, have been heavy; also we have to report the arrival of one load of assorted Produce, from Oregon, ex Jane A. Falkenburg, consisting of Lumber, 4650 boxes Apples, 2795 sacks Wheat, 1600 sks Flour, 747 sks Oats, 54 sks Onions, and 20 casks Cider. This is but the beginning of large shipments from Oregon; and our receipts from Coastwise have been on a liberal scale, of Wheat and Flour, Oats, Barley, Potatoes, etc. At this particular time, we ask to offer a little advice to our friends, the Farmers, about their Seed. It is a well established fact, that our Shippers, and the Export demand for our Grain, fix the market price. Is it not policy, in this view of the matter, to plant such Wheat as Shippers like and show a preference for? Sonora Seed is one of our Shipper's favorites. It ripens earliest, and is ready for market before any other Wheat. Australia and Chile Seed are always the most desirable for Milling and our local trade; these two we have a double chance of finding a market for. Farmers know, without our averring it, the necessity of sending clean Wheat to market; and injury foul matter causes to the sale of Wheat. Buy clean Seed, and the difference of a few cents per 100lbs is too small an item to be even looked at or thought of. Should you change your Seed often, you will be the gainers. We have every variety of Seed and climate in our State, and we may well say, every variety of Wheat and other Grain. It is, therefore, only necessary for the Farmer in the interior Valleys to buy Coast Seed, and Coast or Bay Farmers to buy Valley or Mountain Seed, to effect all the change necessary. Our opinion is that the low price of Barley, the past season; will deter many from planting to any extent; but a varied Crop is, in our minds, the course for Planters: Wheat, Barley, Rye, Buckwheat, Oats, Corn, and Potatoes, should all be the products of one Farmer.

The Receipts of Produce from around Bay, for the past week, have been as follows: Wheat 23,586 sks, Flour 5058 qr sks, Barley 6122 sks, Oats 600 sks, Corn 138 sks; Beans 309 sks, Onions 350 sks, Potatoes 1999 sks; Salt 220 sks; Wool 147 bales; Hay 205 tuns.

Dec. 19.

The past week has been characterized by a lively trade in the Grain market, notwithstanding a disposition on the part of buyers to depress prices. The report of Shippers withdrawing is, in our opinion, all talk. Some one or two orders, we learn, have been cancelled. These parties want no more at present; but we are of the opinion that there are already here sufficient orders, and ships enough chartered to take all of the surplus Wheat and Flour, we shall have to spare, and it argues that Shippers do not find sufficient offering to supply their wants, from their willingness and anxiety to buy all they can get. Thus far, every sack of Oregon Wheat that has come to our market has been taken by Shippers at nearly the prices paid for California Wheat. There has arrived from Oregon, since our last report, the schooner Mary Cleveland, with about 1000 sks Wheat and 400 qr sks Flour; also the brig Sunny South, with 2655 sks Wheat, 3264 qr sks Flour, 1365 bxs Apples, besides Eggs, Cider, Hides, etc. The Wheat and Flour from these two vessels have been taken for exportation. Our Receipts of Produce, Coastwise, have been unusually heavy. One new feature, we have to add, aside from our English shipping orders, is a demand for Wheat and Flour, from Sandwich Islands. The Asa A. Eldridge is taking a liberal supply of Wheat and Flour, for Honolulu. Every new point of shipment that consumes our Grain and Produce is so much to our advantage. There has also been a parcel of Wheat and Barley shipped to Puget Sound. The Clearances for the past week have been as follows: the French ship St. Anne, for Swansea, England, carried a cargo of Copper-ore, including 800 sks Barley valued at upwards $45,000; the Sarah Chase, for Melbourne, 1385 sks Barley, 14,797 sks Oats, 200 flks Quicksilver, 10 bbls Salmon, valued $21,170 44. There has been no new Charters effected, the past week, that we hear of. But the ships on the berths are rapidly filling up; also the ships for New York are taking a liberal supply of Barley, Hides, Wool, Tallow, etc.

The Receipts of Produce from around the Bay, for the past week, have been as follows: Wheat 40,629 sks, Flour 3750 qr sks, Barley 6011 sks, Oats 2986 sks; Beans 122 sks; Onions 250 sks; Potatoes 2740 sks; Salt 1350 sks; Bran 879 sks; Wool 80 bales; Hay 443 tuns.

San Francisco Cattle Market.

Dec. 19.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

We have to note a small advance in first quality Beef; also a better feeling in first class Pork and Mutton (though without any material advance in price), which is propably owing to the near approach of the holidays, and the fact that the market is not very well supplied with the first quality of the above named, particularly Beef.

AVERAGE SLAUGHTERERS' PRICES.

Beef—American, first quality 4c to 7c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ₱ lb.

Veal—first quality, 3c@6c.

Hogs—Stock Hogs 1½ to 2c; fat Hogs on foot 2½ to 4c; Dressed 7c@8c.

Mutton—dressed, 3c@6c, according to quality.

Milch Cows—1st quality $25@$60; 2d quality $15@$25.

European Wool Market.

We give below the Wool Circular of our correspondent which shows to the California Woolgrower many features of interest at the present time. It will be seen that common coarse Wools, such as have been selling here at 6, 8, and 10 cents, have sold when classed as "rubbish" quality for 14 to 17½ cents. From the quotations given of sales it will be seen that coarse wools are in demand, and bring a greater average price than fine wools. It will also be seen that the *United States* was a *purchaser in Europe of more Wool* in the months of September and October than the *entire crops* of California. We have always urged upon our Wool-growers the importance of their shipping their own clip; such as have done so will realize more than double the prices here.

Liverpool, October 26, 1861.

Some branches of the Wool trade have shown great activity during the last few weeks in consequence of the demand for Wool and Woolens suitable for Blankets and Army Clothing adapted for export to the United States, the result is that our market has been cleared of medium and low kinds adapted for the above purposes, and prices of them are ½d to 1d ₱ lb dearer for white, and particular kinds of grey and brown have advanced 2d to 4d ₱ lb. The bulk of the trade does not show an equal degree of improvement, and some departments are still depressed, but on the whole there is a fair consumption, and the total supply being light, prices are firm. Six million pounds weight of Wool will have left England and Northern Europe for the United States between the 1st September and 31st October.

Public sales commenced here on the 8th inst. and concluded on the 23d inst. There has been a full attendance of buyers, and for most Wools strong competition, particularly for the United States, for which quarter large quantities of washed and greasy Mogadore, Cordova, Buenos Ayres, Donskoi, Noils, and English Skin Wools have been taken by public and private contract. The withdrawal of so large a quantity acting on moderate stocks has enhanced prices, and home consumers have more recently increased their purchases. Continental buyers have operated sparingly.

Below is a statement of various quantities offered and prices paid:

18,533 bales East India offered and 16,804 sold. Nearly 3000 bales were taken for export to the United States. Compared with the prices paid at the July sales the rates current at the close of the present series show an average advance of 1d ₱ lb on white and yellow, which form the chief portion, and 2d to 4d ₱ lb on grey, brown, and black.

230 bales Syrian offered, 106 sold. 9¼ bid for good white fleece, good brown fleece sold at 8¼d, inferior white fleece sold at 8¾d, second class white skin sold at 7½d to 8¾d. 833 bales Egyptian offered, 408 sold. In only moderate demand, at former prices. 324 bales Donskoi offered, 185 sold. Chiefly inferior; ordinary grey fleece sold at 7½d to 7¾d. Inferior greasy Crimea sold at 4d to 4¾d. 396 bales Turkey offered, 219 sold. Choice Smyrna white fleece at 11¾d to 13½d, grey do. 7¾d to 9d. Clean Bosnia and Prevesa 8½d to 9½d.

154 bags unwashed California offered, 74 sold. Chiefly of rubbishy quality and very burry, average sold at 7d to 8½d, and a few bags locks at 5½d.

The London sales of 70,000 bales Australian and Cape will commence 7th November. Average descriptions not expected to vary much in price from the August sales. Second-class unwashed, which has been excessively depressed, shows a tendency to higher value.

The Liverpool Sales of 12,000 bales East India, and 6000 bales Sundries, will commence early in January.

JOHN L. BOWES & BRO.

◆

Foreign Postage.—Postmaster Parker notifies us that hereafter all printed matter (whether from a publication office or not) deposited in the Post Office and intended for foreign countries, must have the postage prepaid by stamps, otherwise it cannot be forwarded. He also states that "great care should be taken to have the address properly written, as much matter remains in this office, in consequence of illegibility of direction." Postage on newspapers is: To Great Britain, France, or Sandwich Islands, two cents each; to Germany and other countries on the Continent, three cents; to Prussia, West Indies, South Pacific, or Central America, etc, six cents; to Canada, one cent.

A seedling apple, raised by Mr. Lowe, of San Jose, is pronounced by some who have tested it, a choice variety; in size, color, and form similar to the Baldwin, but superior in quality. It is called "Lowe's Seedling."

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

THE VINE AND WINE IN EUROPE.

LETTER NUMBER EIGHT.

From Our Regular Correspondent.

The Castle of Johannisberg, and the Famed Johannisberg Wine.

[WE hope the readers of the following very interesting letter will not fail to notice the remarks of our attentive correspondent relative to the *impositions practiced* by those who manufacture and sell "spurious Wines." This is invariably the case everywhere. We remember well our own opinions upon the Wines of France when we visited the Halle d'Vin, in Paris, in 1848. Wines represented in New York as of certain brands and pure, were sold at one half the price they were selling at in Paris. Such was our experience fourteen years since, when we visited France, and such are the facts proved ever since by all conversant with wine making. We would like a dozen of the Golden Johannisberg; we would fain do lip service to it on Christmas and New Year. Thanks to our correspondent for his excellent letter.]

EPERNAY, Nov. 4th, 1861.

EDITOR FARMER: In a letter that I had the pleasure of addressing to you from Heidleberg, and in which I tried to give a feeble idea of the beautiful scenery between Biebrich and Lalinstein, I promised a description of my visit to Johannisberg. The rapidity with which I traveled and the numerous duties as Secretary of the Commissioner of the State of California, have, against my will, postponed my letter until this moment. I will now redeem my promise, although I think my letter, if it ever reaches your columns, will come at a bad moment to those of your readers who have already read the Report of Col. Haraszthy, my father, and its vivid description of the Castle of Johannisberg. The letter describing our visit to Steinberg he has already sent to the Alta. We visited these two celebrated vineyards on the same day; I will then take up where my father left off.

Leaving Steinberg, where we had met with such a cordial reception, and where our admiration had been so justly called forth, we gained the Rhine, and then proceeded down its course.

On our left lay the Rhine, while on our right was a continued chain of hills, covered by plantations of vineyards, many of which produce renowned Wines.

The plant the most generally cultivated is the *Riesling*; the *Burgunder* and *Silvaner* are, however, also considerably cultivated.

About an hour's ride on the banks of the Rhine brought us to the foot of the hill producing the world renowned Johannisberg Wine.

The ascent was soon made, and a short time after we alighted in the yard of the *Schloss*. The Controlor of the Domaine received us, and after we had shown our colors, he, with the greatest willingness accorded us the permission of visiting the cellars, where we were conducted by him in person. Before proceeding to the cellars our gracious guide showed us the cattle stables, where there was to be seen some very fine head of cattle. Amongst these I noticed some really beautiful Swiss cows and a young bull of 2 years who had taken a first prize. These stables were real models for arrangement and cleanliness. They were in every manner superior to those of Steinberg. The cattle were also finer.

Along the outside of the stable walls are planted several species of vine, whose long branches support themselves on the sides of the building. The Catawba was the most conspicuous amongst these. It is a plant that has been tried in Europe on a small scale, and is but very little esteemed.

From the platform of the Castle we had one of the most beautiful of views. In front of us lay the silver Rhine, whose deep flowing waters were plowed by numerous graceful steamers; on our right we perceived, on the sides of the mountains, romantic ruins of old castles, whose grim aspect was rendered still more interesting by the vail of mystery with which the popular legends had surrounded them. To our left lay low hills covered with innumerable villages.

The scenery was so soft, so sweet, that I might have spent hours in its contemplation. In leaving the terrace we went to the cellars, which, being under the Castle, are reached by some fifty or more steps. Their course is parallel to the foundation of the Schloss, and thus forms a rectangular parallelogram, parallel to another and *interior* parallelogram, composed of solid matter, and supporting the Castle.

There are four rows of casks, one row against each wall, and two in the middle. The two rows of casks in the middle touched each other at one end, and were each separated from the rows of the wall by a spacious alley.

The cellars were about 36 feet wide and from 20 to 25 feet high.

The casks, which were most all of oval form, had each of them on their end a lighted sperm candle.

It would be hard to describe the magic effect and the different sensations that I experienced when these hundreds of lights burst upon my view so suddenly. The surprise was the more striking as it was the more unattended. I was seized with astonishment and admiration, which soon gave place to a kind of awe. In spite of the hundreds of lights the eye can hardly discern the walls and ceiling. When it meets the dark shadows in the corners and when the ear meets the solemn echos of the voice which fall upon it like a mysterious whisper, the soul is seized with almost a fear.

If the visitor has read Hoffman, he shudders instinctively as his eye penetrates the darkness which envelopes the corners, in a fear of recognizing in each of them, "a figure draped in white!" A messenger from the world of the unknown!

After having peeped in each, and recognized that my fear was without foundation, I rendered myself to the invitation to taste the wine.

We were made to taste the wines of this renowned vineyard, made from 1821 to 1860. Such wine I had not even dreamed of. Its color is richer than gold! Its aroma finer than the rose! And its taste more divine than the nectar of the gods!

Poor fellow-citizens, who have flattered yourselves with having drank Johannisberg Wine in California, drive away your illusions, and come to the reality. You will easily understand that when "Johannisberg Cabinet Wine" is sold on the spot for $5 60, that it cannot be had in San Francisco for $1 50. Unfortunately this is not the only wine that is imitated. Almost every renowned wine has the same honor and mark of attention.

After having *tried* each wine, we drank a full tumbler of the wine we preferred. I chose that of 1846.

One more glance at the beautiful lights as they glimmered in the distance, and I left the cellars. I intended to visit the interior of the Castle, to see the relics there conserved of the old Prince Metternich, father of the present possessor, but I had no time, for night was fast coming on.

As we left I bore off a remembrance of the hospitality of the Controlor of the Domaine, whose name escapes me, but whose courtesy will ever be engraved in my memory.

Believe me, Sir, Yours, truly,
ARPAD HARASZTHY.

Vineyard Planting.

Now is the moment to prepare the hillsides and all lands intended for vineyard. We hope the facts have been abundant enough to prove that hillside and good high ground is the best for vineyards; and the late tremendous rains have so fully saturated the earth that all the upland can be now early cultivated.

We hope, too, that those who intend to plant vineyards will consider well the *kind of Grapes they plant*, the *soil on which they plant*, and the *preparation of that soil*. These are important pre-requisites to success.

There is also the matter of cuttings, or rooted Vines, worthy of careful consideration. Good rooted Vines can now be had at a very moderate rate, and the advantage derived from thus establishing the Vine is far greater than to save the expense in difference of value between cuttings and rooted Vines. Land well prepared, deeply and finely cultivated, the Vines should be planted 8 by 8 feet, or 8 by 7 feet at least, thus giving ample room for the plow for years to cultivate the Vine.

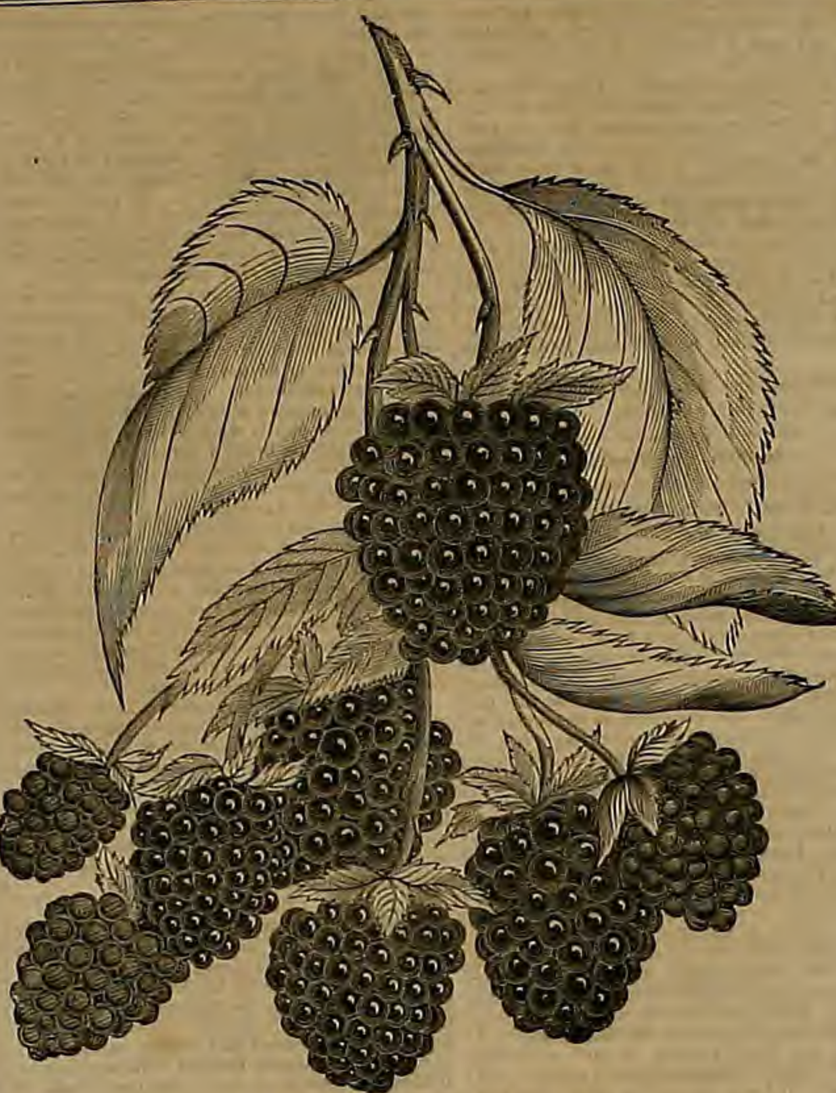
The foreign Vine is so far superior for *Wine Grape*, that we hope vineyard planters will reflect before planting any more of the California Grape, as this Grape will not give that *body* to the Wine that is so much desired, to make it like the Madeira and Sherry of old countries.

Alfalfa.

THIS valuable Clover should be better understood and more properly appreciated, as it is one of the sweetest and most nutritious of all Grasses. Alfalfa should only be planted on light, deep, rich, sandy loam, or alluvial deposits, like the banks of rivers, and never planted on adobe soil, or any land that is not loose and porous, so that when properly plowed, 16 to 20 inches deep, the roots can penetrate and find moisture.

Alfalfa should never be allowed to grow rank and tall, but planted thick, and when twelve or fifteen inches high it should be cut and dried in the shade, or put in stacks early, so as not to dry up. *Wilted* only and stacked, will secure a fragrant and very delicious food for stock. Alfalfa grown on alluvial bottoms has been mowed as many as four times in a season, and yielded a crop of more than ten tons per acre for the season.

Sixteen pounds per acre is the quantum of seed. As the roots of the Alfalfa penetrate very deep, it should remind the grower that Alfalfa once established in the land is difficult to eradicate.



THE LAWTON BLACKBERRY.

The Lawton Blackberry.

WE present this week an illustration of the famous Lawton Blackberry. It has been introduced and fruited in California quite extensively, and the past season has proved beyond any question that it thrives in our soil, producing enormously of beautiful fruit, fully equal in size and flavor to the best specimens ever exhibited in the Atlantic States. We are informed by Messrs. Abbott and Rumford of Fruit Vale, who are the most extensive growers, that the bearing season of this splendid fruit continues for about four months, commencing the middle of June. As a table fruit it is first rate; for pies, preserves or jelly nothing equals it, and for wine some persons have pronounced it not excelled by even the grape. The Blackberry grown at Fruit Vale we know to be the genuine Lawton, as we imported the stock and sold to these gentlemen, from which their large plantations originated.

The Stallion David Hill.

"A NOBLE HORSE, INDEED."

WE had the pleasure of a ride behind that magnificent Horse David Hill, of which we spoke in the Spring, when he arrived. He was imported by J. G. McCracken, Esq., and taken to Oroville, where he remained awhile; thence to Marysville; and now to Stockton, where we saw him last week, at the stable of Messrs. Ryan & Cutler, on Weber avenue.

The "Judge of Horseflesh" would be gratified to see this fine animal. Rarely do we find his equal. David Hill is a "trotting stallion," a very dark bay, fine head and neck, flowing mane, deep chest, well ribbed up, strong and finely formed limbs, with powerful muscular development. His gait is smooth, but powerful. He seems to cast the earth from him, and leap onward like the rush of a whirlwind. With a full consciousness of his own power, and ready at the word to sweep over the course, he yet is perfectly trained, and obeys the word. David Hill received the award of the State Fair, and at Marysville, as one of the best stallions shown. He was bred by Chester Pratt, Esq., of Bridgeport, Vermont; was purchased by J. H. Hall, Esq., of Wisconsin, from whom he was purchased by Mr. McCracken, and brought to this State. He has taken numerous premiums in other States, and will most undoubtedly take the highest rank in this State, and his "get" lead off as the "fast ones." Upon trial, before he came here, the poorest trial he made was in the 40's.

We herewith append his true pedigree. Owners of fine mares will do well to bear in mind this fine stallion, if they want the "fast trotters:"

David Hill was sired by Black Lion; he by David Hill's celebrated trotting stallion Black Hawk; he by Sherman Morgan; he by Justin Morgan, and he by True Briton, who was imported from England, and was used by Gen. De Lancy as a charger, while commanding the British on Long Island, in 1777. True Briton was a thorough-bred horse, of great speed and beauty. Black Hawk's dam was bred in New Brunswick, was three-quarter thorough-bred, and distinguished for fast trotting.

David Hill's dam was got by Hambletonian; he by Abdallah; he by old Membrino, and he by imported Messenger. Hambletonian's dam was the Charles Kent mare, by imported Bellfounder; grand dam by old One Eye, by old Hambletonian; he by imported Messenger, and the dam of old One Eye by imported Messenger. The dam of Abdallah was sired by imported Roebuck; his grand dam by Sir Henry, the horse that run four mile heats with old Eclipse, on Long Island, for $20,000, being the closest contested race on record.

Black Lion's dam was got by Liberty, and he by Duroc; grand dam by Sir Charles; Sir Charles was got by imported Diomede. [See Stud Book.] Sir Charles' dam was got by Plato, and he by imported Messenger; his grand dam by Brutus, out of imported Brutus.

Two more Noble Stallions.

CALIFORNIA will soon be noted for the finest horses in the world. Every characteristic of this noble animal will be sought for and improved upon from the swift-footed Arab Courser to the all-powerful Scotch Draught Horse and the Enduring Roadster.

There can be no question but that with our climate to develop, and the taste and skill of our breeders and the pride of our "turf men," this State will in ten years be able to show Horses that will vie with the world.

We have had the pleasure of examining *two splendid animals* recently imported into this State by Morris Dooley, Esq., of Stockton (of the Stage Co.)—Horses that can not be surpassed for their style and beauty. They are

HAMILTON CHIEF,

Arrived within a few days. This remarkable Horse will create surprise when seen. For muscular powers we have never seen a superior, rarely his equal. This Horse is soon destined to make a mark that will tell. We give below the pedigree of Hamilton Chief:

Is a dark bay Horse, 16½ hands high, black legs and heavy mane and tail. Was sired by the celebrated fast trotting stallion "Old Royal George," by Black Warrior, by Imported Merryfield, by Old Black Warrior. *Dam*, by American Eclipse, out of a Messenger Mare; she by imported Messenger, imported by the late George Cooper, Esq., of Toronto, Canada West. Hamilton Chief is half-brother to Toronto Chief (now owned by Mr. Brown of Long Island), Young Royal George, and a host of other fast trotting stallions. He was raised by Leonard Salmon, Esq., of Brinbooth, county of Wentworth, Canada West, and was foaled on the 19th of May, 1855. The weight of Hamilton Chief was 1400 lbs. in June last in Canada. He was reduced for the voyage, and weighed when he left Canada 1336 lbs., and has made the passage remarkably well, coming in improved health and flesh and increased in fine appearance.

To show the value of such stock, Mr. Brown refused, last summer, for Toronto Chief $12,000. This Horse, Hamilton Chief, took the first and second premiums at all the Provincial Fairs last year. His yearling and two-year-old colts have taken first premiums at the above Fairs, and one of the latter was sold for $800 in that country. Toronto Chief beat all stallions at the National Horse Fair two years ago. There is no stallion that can beat Toronto Chief two-mile heats to 300lb wagon. Both Toronto Chief and Hamilton Chief were raised at same place, and last season Hamilton Chief trotted faster than Toronto Chief did at same age.

Nana Sahib.

THIS animal is one of the most beautiful creatures we have seen move, with an eye like an eagle's, a faultless head, a neck perfect in the curve as that of a swan, with a quick, graceful, elastic movement, and every limb like a perfect ideal cast in a mould to suit. Nana stands before you with his eye of Mars flashing fire, with nostrils distended snuffing up the breeze, and every muscle trembling ready for action, he brings to mind the "Arab steeds" we read of as the favorites of the Knights Templar.

From the antecedents of this splendid animal, we may look for a bright career, and Cheatham, Langford and Belmont may all find a dangerous rival in this "bonnie Irish laddie," that has come all the way from Dublin to win the honors of the Turf.

Nana Sahib was purchased by John Butterly (who was sent to Ireland by Mr. Dooly to secure this fine creature), of Lawrence McCourt, Esq., of 60 Bolton street, Dublin. Nana was brought out by a clipper ship to the United States (the steamer having refused to take him at one hundred sovereigns). He was thirteen weeks to the United States, and six weeks having only bread and water, other feed being exhausted. Although he arrived in thin flesh, he is now in extraordinary fine condition. He never flagged in spirits during all the days of his pennance upon bread and water. We here give the full pedigree of Nana Sahib:

Nana was got by Horn of Chase, out of Independence's dam (the favorite mare of the Marquis of Waterford), by Birdcatcher; out of Cuckoo, by Drone; out of Stork, by Oiseau. There is no better breeding in Ireland or England. By this it will be seen that Birdcatcher was the sire of Nana's dam; Nana is therefore grandson of Birdcatcher. We extract the following from Bell's Life of January 29, 1860, which shows the unprecedented high character of this stock.

Birdcatcher's fame in England and Ireland, as a sire, is imperishable, having covered at the high figure of fifty guineas each mare, being sire of Knight of St. George and Warlock, both St. Leger winners; of Daniel O'Rourke, who won the Derby, and Songstress, who won the Oaks; of Saunterer; of Chanticleer, who beat Van Tromp, winner of the St. Leger, who beat Fisherman for the Goodwood cup, and a host of other first-class winners; his own brother, Faugh a Ballagh (now imported to France at a price of $1,500), won the St. Leger and Czarewitch stakes, is also an emigrant sire, having got Goldfinder, who won the Chester cup, and Leamington, who twice won the same great event, once of £2,595, and the other of £2,605, and the Goodwood stakes of 905 sovereigns.

Altogether, as near as we can calculate, from 1841 to the end of 1849, Birdcatcher produced 335 winners of 718 races, of the value of $117,603, including one Derby, one Oaks and three St. Legers, and any quantity of Cups and other large races—the total of these winnings being nearly £600,000, a record without a parallel in the world. And California can now boast of having a beautiful animal that can boast of Birdcather as his grandsire, for such is Nana Sahib.

Good Stock in San Joaquin County.

THIS county will soon have some fine Dairy Stock, bred from choice sires and full blood Durhams. R. S. Bates, Esq., is owner of the splendid Durham Bull "Duke of Northumberland 4th," purchased of J. D. Patterson, Esq., for $5000.

J. Sarles, Esq., has three very fine Durham Bulls, different ages, by name "San Mateo," "Tommy" and "Sport." Mr. Sarles was the first to introdmce Durham stock into the county.

Dr. Holden has that excellent Bull "Washington," widely known as the "Blacow Bull," a cross of high grade and a Bull that has been uncommonly successful in getting fine stock in Alameda county. Dr. H. has also some fine young stock of Durham blood. With these fine sires we regret to say there is not yet *one* pure Durham Cow in this entire county. We hope this will not long be so.

NURSERYMEN'S CATALOGUES.—Those nurserymen who desire to make their business widely known, should send us their priced catalogues for distribution from our office.

As many purchasers send to us a request to send them a catalogue of the Best Nurseries, we ask all who claim to stand No. 1, to send us their catalogues and we will scatter them into good hands. As we only advertise those of the best character, we hope those who claim to be No. 1, will send us their business cards.

Cultivation of the Cranberry.

We received the following note from a correspondent, and give in reply a chapter from a valuable work, "Eastwood on the Cranberry," as the most appropriate now:

GEORGETOWN, Dec. 6th, 1861.

ED. FARMER: I write to you for information in regard to the culture of the Cranberry. If you will inform me through the FARMER, or by letter, as to the soil and climate best adapted, the time and manner of sowing or planting, you will confer a favor on Yours, &c., * * * *

LOCATION.

In selecting a place for a patch, it is well to consider its aspect. Though we have seen the vine doing well, and to all appearances very thrifty, when the yard has faced the north, yet experience is in favor of a southerly direction. If possible, in forming your patch, let it be sheltered from the cold raw winds; give it the advantage of the warm breezes; by doing this you will be more likely to succeed than if you neglected it.

A swamp may be chosen. If you find the vine growing round the edges of a bog, you may safely conclude that the plant can there be advantageously cultivated. In the preparation of these locations, there is often much labor and some expense. But this depends upon its surface, what you have to do in removing and "filling in." It is customary with some growers to redeem a certain proportion of their swamps yearly; by thus proceeding, they ultimately overcome the natural obstacles before them, and accomplish what they intended to realize. The sight of each year's progress encourages them to persevering effort. Then it must be so that you can drain off the water at your own pleasure. If you make a cranberry patch in a swamp, and it is liable to have water standing in pools over the vines in the summer season, this will operate as a hindrance to the ripening of the berry. This precaution must be observed in making choice of such a situation, that you can expel or draw off the water, when it is necessary.

Meadow land, which is low and moist, affords an excellent location for the cranberry. In fact, these damp situations are very suitable, providing the dampness or moisture is not too cold and icy. If the moisture beneath the surface in which the vine is planted is of too cold a temperature, it will prove fatal to the young vines. Care must be had, in selecting for a yard, to ascertain if the water is too cold; if it is not, it may be converted into a useful and profitable cranberry patch. There *must* be water in the land in which they are planted. As a general rule, it is best to have it within twelve inches of the surface. The object of this is to give moisture. The grower must have it, or his plants will fail.

SOILS AND THE MODE OF PREPARING THEM.

It is of importance that the nature of those soils in which the cranberry will most easily grow, should be considered, and known to those who intend turning their attention to its culture. Many failures have resulted, not so much from the unsuitableness of the location chosen, as from the badness of the soil. It is generally the case, that the best and richest soils are selected, as those in which experiments ought to be tried. Failures sometimes occur, not because the climate or season are unsuitable, but because the soil is too rich. If the vine is planted in good alluvial soil, it will do well, apparently, but it will not bear fruit. Such soil will cause the plant to abound with healthy foliage, and a vast quantity of runners, but no fruit. Manuring is wholly out of the question. If it is attempted, it will kill the plants, or in some cases, make them grow rank, and they will be worse than they are found to be in their native swamp.

Clay and marl are totally unfit for cranberry cultivation. Either of this class are liable to cake and become hard; and whatever soil cakes and sogs around the root of the plant, is to be avoided.

If intending cultivators would exercise some caution in the choice of soil, it would prevent both trouble and expense. Failure is often caused by inattention at this stage of the undertaking.

Rocky Loam is not very favorable to the development of the cranberry. The objection which lies against it is, that wiry grass and rushes abound therein. These grasses and rushes are to be guarded against in a cranberry yard, or they will choke the vine. Loam of the kind above named *may be made to do*, but it will require excessive cultivation in order to effect anything of importance.

Heavy soils, taken as a class, are not of much service; the grower will do well to avoid them to as great an extent as possible. And, indeed, it is questionable whether the vine can be cultivated at all to any purpose on soils of the above description. The vine may grow on such lands and seem to flourish, but they will not bear; they are unfruitful, and if so, therefore unprofitable.

The following soils are those which are preferred by the Cape Cod cranberry cultivators. There is one fact which ought to be stated here, as introductory to the subsequent suggestions and statements, and it will not be amiss for the experienced cultivator to remember it. If he bears it mind, he will avoid many difficulties which have discouraged others. It is this: *Dead sand, water and air*, are the elements upon which the cranberry feeds the best, and attains its highest degree of perfection; therefore, that soil and location which has these advantages is the best adapted for the growth of the berry.

Beach Sand stands the first. All other kinds must be rejected if this can be got. Experience teaches us this. Those yards which are wholly bottomed by *beach sand* flourish and yield abundantly, far better than those that have a different soil. During the past fifteen years every variety of soil and situation have been experimented with, and the results are entirely in favor of *beach sand*. On Cape Cod, the greatest cranberry field in America, situations are sought for where the cultivator can be near the shore, that he may be able to put on this sand, if it is not on his chosen location.

We will in this connection, call attention to a small yard with which we were acquainted, which is situated near to the sea-shore. It was originally a pond; water stood in the basin, but it was not deep. On the banks and edges of this pond was sand in abundance, which the owner spaded down to the water, and continued to fill in. He planted; some said it would not do much, but now it is one of the handsomest yards in the country. Everything seems to be favorable—soil, situation, and water—and the result is, heavy yields of the berry. In this, as many as three bushels have been picked off a square rod. And so well is it now known that situations where beach sand abounds are the best, that the most practical men are buying up such locations with the view of converting them into cranberry yards.

We are acquainted with one cultivator, whose yards produce from two to three hundred bushels of cranberries annually, who has the greatest proportion of his vines planted in beach sand, and some few in loam. The difference between the two is marked. Those in sand are fruitful, those in loam are but small producers. He therefore carts off the loam, or carts upon it *beach sand*.

We could produce a vast body of evidence to demonstrate that beach sand is better adapted to develop the cranberry than any other soil; but the cases adduced are sufficient.

There is another reason, though, which should not be lost sight of, why this sand is so much better than any other soil. It is light, porous, and is almost incapable of supporting weeds. It admits the atmosphere freely to the roots of the vine, and is found to be the only soil in which the rank weeds can be effectually kept down. It will thus be clear to the reader, that in such a situation, the plant can throw out its runners in every direction, and having no weed to contend against, will therefore spread rapidly, and soon become matted, a condition of the yard towards which the practical man looks with anxiety. If you are about to make the attempt to cultivate the cranberry, if possible, obtain *beach sand* in which to set out your vines; or coarse sand when the former cannot be obtained, but the white is preferred.

Peat is found to be excellent, in fact, next in value and importance to the beach sand, for the growth of cranberries. But peat wants management and care in its preparation, in order to be made useful to the vine. In selecting a peat swamp to be converted into a cranberry patch, it is necessary to take off the top turf, or grass, and if possible give the yard a little incline. When this is done, it is unsafe to plant at once. If you do so, you will find that the peat will in the following summer cake and crack. It will be hard on the surface, and some few inches below stiff and dry. The veriest tyro in cranberry cultivation knows that such a condition is very bad for the vine.

How is this difficulty obviated? Prepare the surface as we have stated above, and leave the yard exposed to the frost and weather for one year. When the frost is thawed out of it, it will crumble and be powdery. It will never cake afterward. It will be light and porous. You may then with safety plant your vines, and with moderate attention they will do well.

We have lately visited a famous cranberry producer, who is filling up a pond with loam, composed of *sand, clay*, and a small portion of *marl*. The pond is about four feet deep. When this is filled up and leveled, he will plant it in the spring, believing that the soil will meet the wants of the vine.

We shall continue the subject as to manner of planting, etc., in future numbers.

◆

Insects on Fowls.

THERE are several kinds that infest the hen. By attending to the following remedy, they will be entirely kept clear. First of all, if in confinement, in the dust corner of the poultry-house, mix about a half a pound of black sulphur among the sand and lime that they dust in. This will both keep them free from parasites, and give the feathers a glossy appearance. If infested with the insects, damp the skin under the feathers, with a little water, then sprinkle a little black sulphur on the skin. Let a bird be covered with the insects, and they will disappear in the course of twelve hours. Also, previous to sitting a hen, if the nest be slightly sprinkled with the sulphur, there is no fear of the hen being annoyed during incubation, neither will the chickens be annoyed by them. Many a fine hatched brood pines away and dies through nothing else, and no one knows the cause. Having had an ostrich under my care that was pining, I looked into his feathers, and observed thousands of parasites. I employed tobacco-water, also lime-water, under my then master's orders, to no effect. In his absence, I well damped him, and sprinkled him under the feathers with black sulphur, when next day they were examined with the microscope, and every one was dead. Having had some macaws, also parrots that were addicted to biting off their feathers, I employed the black sulphur by well syringing them with water, then sprinkling the sulphur over their skins. If tame, sponge the skins, then rub gently, with the points of the fingers, with the sulphur, every other day for about a fortnight, when the parrot or macaw will cease to destroy his plumage. It is not a remedy which has not been proved, for I have used it these two years with success.—[John Douglas, in the Field.

◆

Remedy for Bee-Stings.

THREE years ago, one of my little ones poked his spade into a bee-hive. You may suppose he was severely stung. I immediately mixed with water some ipecacuanha powder, and applied it to the places stung (of course, extracting the stings where visible), and in ten minutes he was playing about, and all irritation was gone. The nurse was stung, too, in several places, and the same remedy was applied with equal success. The Indians use this remedy for the stings of scorpions, and a friend has (since my publication of the cure in the West Sussex Gazette, at the period), called my attention to the fact, that Dr. Livingstone states in his journal that the African tribes use ipecacuanha for snake bites. I have not the book to refer to, but I think they mix the powder with oil. I have used also for gnat-bites.—[Charles Hardy, (Hayling Vicarage, Havant), in London Field.

◆

BEES AND HONEY.—The county of San Joaquin is thought to be the most favorable of any locality in the State for the increase of the honey-bee, and for the production of honey. This county also has the reputation of furnishing the best honey in the market. The Rev. Hiram Hamilton, of Stockton, who is one of the largest and most successful bee raisers in the State, thinks there is no better field for bees in the world. He has about 400 hives, and they have, the Alta states, this year made 40,000 pounds of honey. The bees work nine months in the year, and there is no trouble in wintering them. They closed their labors for this year on the 10th of November, the day before the beginning of the rainy season, and they will lie snug and feed upon their stores until the beginning of February.

DISEASE IN STOCK.—The Monterey Union is informed by Mr. David Spence, of Monterey City, that some of his stock are attacked again with a peculiar disease, by which he lost 142 head last year. The first symptoms of this fatal disease are observed in the animal throwing out his head, hanging down, the body much drawn up with the hind legs drawn forward, and in this position they stagger about from one to three weeks, refusing to eat or drink, until they fall over, and are sometimes three days dying, apparently in great pain. Last year the horses were attacked at the latter end of the dry season. These horses were grazing on bottom land. Although *post-mortem* examinations have been held no satisfactory cause has been discovered for the disease.

A RIVAL TO GUTTA PERCHA.—At a late meeting of the French Academy of Sciences, M. Serres gave an account of the *balata*, a shrub, which he asserted was superior, for many purposes, to gutta percha, but especially as an insulating material for enveloping telegraphic wires. The milk or juice is drinkable, and used by the natives with coffee; it coagulates quickly when exposed to the air, and almost instantaneously when precipitated by alcohol, which also dissolves the resin of the *balata*, and it has no disagreeable smell. When worked up, it becomes as supple as cloth, and more flexible than gutta percha. M. Serres exhibited a number of articles manufactured of this vegetable milk. Up to the present time, it seems, from M. Serres' account, not to have become an article of commercial export.

Record of the Flood.

WE copy below some of the reports from various localities, relative to the great flood which burst upon the country on the 9th inst.

DISASTROUS EFFECT OF THE FLOOD TO FARMERS NEAR SACRAMENTO.

The Union remarks: For some eight or nine years, the farmers on the Sacramento have not been very seriously injured by high water, and many of them had probably concluded that the days of floods had passed. They have, therefore, gone forward in improving their farms—building houses and fences, intended as permanent improvements. Hundred of thousands have been expended in this manner, and for improved stock, by men who have applied to the improvement of their farms any surplus dollars realized since 1853. In a single day all this has been swept from them by the remorseless torrent, and they are left to begin again in the world, if they have the courage to undertake a second improvement on land so much exposed to the devastating floods.

A single case will serve to illustrate the general condition of farmers in this valley: Below this city, and on the Sacramento, there is a fine farming section, in ordinary times, extending from 30 to 40 miles in length, by a width varying from 2 to eight miles. This whole section, with the exception of the tule portion, is settled by industrious and thriving farmers, who have not been overflowed since 1853. The last season, by a close and vigorous watch, they succeeded in keeping the Sacramento from overflowing the land for some 10 miles below the city. By private enterprise the river has been leveed in a slight way, from the city to near the Georgiana slough. But after getting some 10 miles below last year, we believe the levees proved insufficient.

This year the section we are describing was mostly flooded from the overflow of the American river east of the city. The water which rushed into, through and past the city spread over the country south of Sutterville and inside the levee of the Sacramento river. As a consequence, the farms for miles below are submerged, the fences of the owners are mostly washed away, and, unless the slough above Smith's garden can be closed, farmers below Sutterville cannot risk putting in crops, because they are liable to be overflowed at every rise of the American during the spring and winter. No event so disheartening to the farmers on the Sacramento, Feather, Yuba and American rivers has occurred since this valley has been in possession of the Americans as the recent flood. It has destroyed the labor of years, deprived men of the means for continuing their farming operations, and, even if they had the means, the insecurity of their position is so great that few will have the heart to attempt to raise a crop.

Samuel Norris, the proprietor of Norris Ranch, states that he has suffered immense damage by the flood, and that probably $40,000 would not cover the loss. Thirty miles of fence, made of redwood posts and boards, was lifted out of the ground, and with the lumber provided for building a new house, floated the owner knows not where. Hundreds of cords of wood, timber, and uprooted trees, have been deposited on the ranch, as well as incalculable quantities of sand.

UP THE RIVER.

The Bee of the 18th says: "A trip up the Sacramento made a few days since, presented some grand as well as some dismal sights. 'Water on the right of us, water on the left of us, water in front of us, water on the right of us;' the snowy Sierras on the east (when one can see them), and the blue line of the Coast Range on the west; islands, houses, woods large as Birnam going to Dunsinane, clumps of trees, lone trees, boats of every shape with all manner of freight; the poultry yard on the roofs and in the branches, and cattle huddled together in scores and hundreds on every spot that peeped above the flood—went gliding by like a panorama, as the steamer puffed and labored against the stream, or swept majestically along with its flowing tide, and presented, to say the least, a picturesque scene of land-and waterscape beautifully blended. In many places on the banks, houses were girdled with ropes and hog chains, and fastened to the oaks and sycamores; while a few chickens and turkeys on the house tops or adjacent branches, were the only living things in sight of that which was once a human habitation. On the Indian mounds along the bank, the neighboring families and such portions of their stock as they could collect, were concentrated in wild profusion. The pumpkins were all washed away or under water, hay scarce, and in most places fodder had to be boated from the city or elsewhere to keep the stock alive. Further out on the plains where a roll of earth showed its shaven crown, cattle stood lowing and mourning. They had nothing to eat, and the lean ones failing beneath the hunger and cold, began to lie down, never to rise again; while the fatter ones kept their feet but to follow in a few days the fate of the poorer kind. Some owners daily carry food to their stock thus located; but it is as battling with the elements to beat off the hungry hordes that rush forward to snatch a mouthful, and dodge round to devour it in safety from the reach of clubs. On one spot a few miles above the city, where there are some five or six hundred head of cattle, over two hundred had lain down (Sunday), and commenced to die. Not one of them can ever rise again without assistance, and as they will not pay for the trouble, it will not be afforded them; but the claimants or somebody else will skin them and market the hides.

DAMAGE AT MARYSVILLE OVERRATED.

After patient waiting for parties who have been damaged by the late flood, to ascertain their loss, and ascertaining from the parties *themselves*, so far as has been practicable, the amount of their damage, we have arrived at what may be considered as a correct sum total of the loss of property within the city from the effects of the late flood, and have fixed it at $39,150. This embraces all loss of goods, merchandise, and damage thereupon, at the owners' own figures, and the damage done to the Merchants' Hotel building and the property therewith connected, on E and First streets. The latter item is the most difficult to get at, and has been fixed, by the judgment of persons most competent in the matter, at $20,000. The real loss to this section of the country has been on ranches, where large amount of stock, grain, and hay, have been swept away, single owners counting their losses by thousands of dollars; but their ranches yet remain, and a few prosperous seasons will restore them to competency.

A resident of Marysville makes the following statement to the Bulletin: I send the inclosed sketch to give you, if possible, a correct idea of the extent of, and damage done by, the late inundation at Marysville. It is of some importance that exaggerated accounts of damages sustained by commercial cities, either by fire or flood, do not gain general credence. We are willing the whole truth should be known, believing this would be to our advantage, as really Marysville has suffered but little serious loss, the high colored and pathetic representations notwithstanding. The block made by the junction of E and Second, F and First streets, is the only one that sustained serious damage. The Merchants' Hotel and Messrs Eaton and Babb's stores were in this block, the destruction of which is the sum of the losses in merchandise. The business of the city is mostly down on E, D, C, and B streets, between First and Seventh streets, no portion of which was disturbed by water, except the block mentioned, and a portion of two blocks between Fourth and Sixth and B and C streets. The western part of the city was entirely covered from the slough to Feather river, except a high point of ground occupied by the residences of John C. Fall, and others. In this portion of the city, perhaps thirty-five families were compelled to leave their houses, the water rising in some instances five or six feet above the first floors. But these families now, with very few exceptions, have returned to their homes, and have even more comforts than could be expected under the damp and cheerless circumstances. Two small dwelling houses only were entirely removed from their foundations, and most of the cows and pigs reported lost, have returned since the subsidence of the flood. Business was suspended but for one day; pack-trains and wagons are every day loading and departing for the upper country. But three deaths have occurred in the vicinity, by drowning—one a milkman, another a hired hand of Mr. Covillaud, and a Chinaman. The money sent to this place for charitable purposes, by the kind people of San Francisco, was by a meeting of citizens returned with their thanks, the poor having been already provided for. While Marysville has comparatively suffered but little, the valleys, particularly the low ground on the south side of the Yuba, have suffered immensely. The farmers are stripped of everything but their lands, and these I am told, in many cases, are covered to the depth of five or six feet with soft clay and quicksand.

From Chico, north of Marysville, it is reported that the amount of cattle drowned in the vicinity of Missouri Bend, near the mouth of Pine Creek, will reach 3000, and that ranches and houses without number were submerged by the flood. At Bidwell's Bar the rise was said to be four feet higher than at any previous flood, and a great deal of damage was done to property swept off or ruined by the deposit of sand and sediment swept down by the flood. At Yuba City, the flood covered the entire plain, except the spots of land upon which are situated the houses of G. M. Hanson and Mr. Kennard. The neat and well built courthouse at Yuba City was so undermined by water, that it is said to be completely ruined, the walls having bulged out for over a foot, and the inner partitions so settled that the doors cannot be opened or closed.

SUTTER AND COLUSA COUNTIES.

That portion of Sutter county, directly opposite Knight's Landing, the News states, is literally inundated. Excepting a small strip of a few rods wide on the immediate bank of the river, there is one vast lake of water from the Sacramento to the Feather river, and how much beyond that we are unable to tell. The large herds of cattle which graze on these low lands during the summer and fall seasons, have been almost wholly caught out and surrounded in the floods. The suddenness of the rise prevented their owners from getting them on high land in time, and the poor animals can be seen standing around—some on small knolls with nothing to eat, others midsides in water—while the owners are wading around endeavoring to get them to a place of safety. During Thursday, over a thousand head were taken out and ferried across the river at this place. But we are informed this is but a small portion of the number which were between the two rivers prior to the freshet. The destruction of stock must be very great indeed.

Nicolaus was entirely under water during Monday and Tuesday. The destruction of property must have been very great in Sutter county, as there are many stock ranches from whence there is but a small chance for escape from a sudden flood. The California Stage Company did not lose a single animal from their ranch, and the loss at Brannan's ranch was very trifling, Patterson losing a few sheep.

At Colusa, the entire town-site was covered with water. The tule was an immense lake, of a depth greater than ever before known. All the farmers in that vicinity were drowned out, and fled with their stock toward the higher lands at the foot of the Buttes.

AN elderly man, named Tarlton, was drowned on Sunday, the 8th December, on the ranch of R. J. Walsh, in Colusa county. The river was rising rapidly, and it became necessary for all hands to turn out in order to save the cattle on the ranch, by driving them back from the river. About a thousand head were collected, and with considerable difficulty were driven through the water to dry land. While assisting in driving them, Tarlton's horse got into a hole and the rider got out of the saddle, but subsequently regained his feet, standing in several feet of water. In this position several of his companions started to his relief, but he again lost his foothold and disappeared from sight.

SIERRA COUNTY.

The Rabbit Creek Fluming Company had their works badly injured. A few hundred dollars may repair them, but two thousand dollars will not make the company good for their loss. Below this company, Greeley & Reed lost a dam which cost $1000; Monard, a Frenchman, a similar amount of mining operations, and all the company below lost their works. Not a dam was left in the stream below the main bridge by our office. This bridge is sufficiently undermined to render it unsafe. The one on the Secret Diggings trail was carried away.

NAPA COUNTY.

The waters of Napa river and creek rose to a hight never witnessed since 1852. A further rise of fifteen inches would have overflowed all the business part of the town. The Reporter says, the residents of Cornwell's Addition received the first assault of the swollen river, and were driven out of their beds late on Sunday night, to find themselves surrounded on all sides by an extempore lake. On Monday morning, the rapid current of the river from a fourth to a half mile wide, was thickly strewn with the wrecks of fences and buildings. Many cattle, hogs, and fowls, were swept away; and it is certain that every ranch upon the river, for its entire length, suffered considerable loss. The heaviest loss yet heard of is that of Messrs. Lynch, Brother. Their large two-story wooden building, occupied as a saloon and dwelling, was carried off bodily with all its contents; loss estimated at $5000. The Boarding House and Saloon of Mr. Andrew Lynch was removed some twenty feet, and so far injured as to be scarcely worth repairing. Several other buildings were more or less injured, together with their contents. The water went down about as quickly as it rose, and left our citizens in the submerged district, at liberty to re-collect their scattered household goods.

SONOMA COUNTY.

In Sonoma county, the roads in every portion, were impassable for several hours, owing to the fact that the streams were all out of the banks; the smaller bridges were all carried away, and some of the larger ones were seriously damaged. Santa Rosa creek overflowed its bottoms from the source of the stream to the mouth, destroying a considerable amount of property, and drowning some stock. The town of Santa Rosa was inundated, and the bridge was seriously damaged. The Democrat says the water stood three and four feet in the streets, covering the first floor of a great many houses to the depth of eight and ten inches. The bridge at the southern entrance of the town was damaged to the extent of $300. Mark West creek was unusually high. Russian river, unlike the smaller streams, did not commence rising materially until after the storm, since when it has become alarmingly swollen, and done much damage in the destruction of property. The Sonoma valley was entirely overflowed, and the town of Sonoma was submerged.

OUR COUNTRY'S CALL.

BY WILLIAM CULLEN BRYANT.

LAY down the ax; fling by the spade;
  Leave in its track the toiling plow;
The rifle and the bayonet's blade
  For arms like yours are fitter now;
And let the hands that ply the pen
  Quit the light task, and learn to wield
The horseman's crooked brand, and rein
  The charger on the battle-field.

Our country calls—away! away!
  To where the blood-stream blots the green.
Strike to defend the gentlest sway
  That time in all his course has seen.
See, from a thousand coverts—see
  Spring the armed foes that haunt her track;
They rush to smite her down, and we
  Must beat the banded traitors back.

Ho! sturdy as the oaks ye cleave,
  And moved as soon to fear and flight,
Men of the glade and forest! leave
  Your woodcraft for the field of fight.
The arms that wield the ax must pour
  An iron tempest on the foe;
His serried ranks shall reel before
  The arm that lays the panther low.

And ye who breast the mountain storm
  By grassy steep or highland lake,
Come, for the land ye love, to form
  A bulwark that no foe can break.
Stand like your own gray cliffs, that mock
  The whirlwind, stand in her defense:
The blast as soon shall move the rock
  As rushing squadrons bear ye thence.

And ye whose homes are by the grand
  Swift rivers, rising far away,
Come from the depth of her green land
  As mighty in your march as they;
As terrible as when the rains
  Have swelled them over bank and bourne,
With sudden floods to drown the plains
  And sweep along the woods uptorn.

And ye who throng, beside her deep,
  Her ports and hamlets of the strand,
In number like the waves that leap
  On his long murmuring marge of sand,
Come like that deep, when o'er his brim
  He rises, all his floods to pour,
And fling the proudest barks that swim
  A helpless wreck against his shore.

Few, few were they whose swords of old
  Won the fair land in which we dwell;
But we are many, we who hold
  The grim resolve to guard it well.
Strike for that broad and goodly land,
  Blow after blow, till men shall see
That Might and Right move hand in hand,
  And glorious must their triumph be.

◆

THE REPUBLIC OF ANDORRE.—Very few people are aware that, in spite of all the changes which have taken place in France during the last eighty years, there actually exists, in one corner of the Empire, a diminutive republic, founded one thousand years ago! The statement is proved by the French Budget recently published, in which figures a tribute paid to the Treasury by the Republic of Andorre, in vi tue of a treaty concluded under Louis (Louis le Debonnaire), about the year 820, by which the inhabitants of Andorre, recognizing the sovereignty of France, agreed to pay 960 livres (francs) per annum for the privilege of exporting some of their products. The tribute was suppressed at the commencement of the revolution of 1789, but was reëstablished in 1806, at the request of the Andorrians themselves. The Republic of Andorre is composed of two valleys of the Pyrenees, between Foix and Urgel. It is still governed by a constitution and laws, which have never been changed since the days of Charlemagne. The Government is composed of a Sovereign Council of twenty-four members, elected by the parishes. This Council hold five annual sessions. It chooses a syndic, or presiding officer, who retains office for life or during good behavior. The capital of this peaceful little State, by whose example greater Republics might profit, is called Andorre, and has a population of 2,000 souls. The total population of the Republic is 15,000.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the
First Premium for my Patent Machine
FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;
And I have the Society's DIPLOMA, signed by G N. SWEZY, President, and CHAS. M. GORHAM, Secretary.
The Committee was composed of H. HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge
Only 15 Cents per Yard,
For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 65 of whole Series; continued from Farmer of Dec. 20, 1861.

XII.—L.

The Indians of Lower California.

Religion, etc., Continued.

The accounts, however, mention that there was among them a series of speculative tenets which must surprise the reader. For they not only had an idea of the unity and nature of God as a pure spirit, and likewise of other spiritual beings, but some faint glimmering of the Trinity, the eternal generations of the Logos, and other articles of the Christian faith, though mixed with a thousand absurdities. And this light was so clear in them, that some missionaries have been induced to think that they were descended from a people which had formerly been Christians. In these tenets, however, there was some difference among the principal nations, and that the reader may have the better idea of them, I shall faithfully copy some fragments of narratives which I have in my hands.

A missionary, speaking of the Southern Edues, or Pericues, gives the following account of their religious principles. There is, say they, in heaven a lord of great power called Niparaya who made the earth and the sea; gives food to all creatures, created the trees and every thing we see, and can do whatever he pleases. We don't see him, because he has no body as we have. This Niparaya has a wife, called Anayicoyondi, and though he makes no use of her as having no body, he has had three sons: of these, one is Quaayap, *i. e.* man; and Anayicoyondi was delivered of him in the mountains of Acaragui; though others say it was among some red mountains in the road from San Jago de los Coras, and which they call Cunimicci; Quaayap has been with them (the Southern Indians) and taught them. He was very powerful, and had a great number of men, for he went into the earth and brought people from thence. At length the Indians through hatred killed him; and at the same time put a wreath of horns on his head. He is dead to this day, but remains very beautiful and without any corruption. Blood is continually running from him. He does not speak, as being dead; but he has a tocolote (horned owl) which speaks to him. They further say, that in heaven there are many more inhabitants than on earth, and that formerly there were great wars in that place. A person of eminent power, whom some learned men called Wae, and others Tupuan, rose up against the supreme lord Niparaya, and being joined by numerous adherents dared to stand a battle with him, but was totally defeated by Niparaya, who deprived Wae Tuparan of all his power, his fine pitahayas and his other provisions; turned him out of heaven, and confined him and his followers in a vast cave under the earth, and created the whales in the sea to be as guards, that they should not leave their place of confinement. They add, that the supreme lord, Niparaya, does not love that people should fight, and that those who die by an arrow or spear do not go to heaven. But, on the contrary, Wae Tuparan wishes that all the people were continually fighting, because all who who are killed in battle go to this cave. There are two parties among the Indians, one siding with Niparaya, and are a serious, discreet people, open to conviction, and readily listen to the Christian truths, which are enforced upon them from their own tenets. The other party is that devoted to Wae Tuparan, and are of very perverse dispositions, sorcerers, and are unfortunately very numerous. These partisans of Wae Tuparan have several opinions peculiar to themselves, and entirely monstrous; as that the stars are shining pieces of metal, the stars by Purutabui and the like. Hitherto, from the narratives of the dogmas of the Edues or Pericues, the tenets of the Loretto nation, which is an assemblage of Laymones, Monquees, Vehites and Guadacuros, living, as we have already observed, in the middle part of California (of south Lower California, below 31°—A. S. T.), are sufficiently explained in the following fragment. They have no word in their language signifying heaven, but they express it by the general word notu, which signifies high, or above. They also say that in the north part of heaven lives the spirit of spirits, which they call Gumango. He was no sooner come, than he began to sow the land with pitahayas, the most common fruit in California, and likewise made the creeks along the coasts of the Gulf; till he came to a vast stone in a very spacious creek near Loretto, called by the Spaniards Puerto Escondido, where he resided for some time. [The Spanish work of Venegas, now before us, always uses the word estero for creek, meaning the flat lands overflowed by the sea-shore, and doubtless being the recipients of fresh water likewise, from the interior lands.—A. S. T.] Here the other inferior spirits, his attendants, used to bring him pitahayas to eat, and fish which they caught in the creek. Guyiaqui's occupation was to make vestments for his priests, who, in their language, dicuinochos of the hide, which were offered to him. After some time Guyaiguai continued his visitation, sowing pitahayas, and making creeks (esteros) along all the coast of the Loretto nation, and as a memorial *left a painted table*, which the Dicuinochos or priests make use of at their entertainments. They add that the sun, moon, and the morning and evening stars were men and women; that every night they fell into the western sea, whence they are under a necessity of swimming out by the way of the East; that the other stars were lights made in heaven by that visiting spirit and his attendants, and that though they became quenched by the sea water, he went towards the East to light them again. It would be very tedious to enter into a further detail of the many absurdities of the same kind, which were imposed on this unhappy people by their stupid or designing priests.

The nation of *the Cochiemies* is not only the most numerous and extended, but they have likewise the best genius and less extaravagant opinions and brutality in their customs. Their behaviour is remarkably courteous, and they never break word. They believe, says a missionary, that there is in heaven a Lord, whose name in their language signifies he who lives; that, without a mother, he had a son, to whom they gave two names, one of which imports perfection or end of clay, the other signifies the swift. Besides him, they say there is another, whose name is He who makes Lords, though they give the name of Lord to all three; yet, when asked how many Lords there are, they answer one, who made the heaven, the earth, the animals, the trees and fruits, also man and woman. They likewise have some notions of devils, saying that the great Lord, called He who Lives, created certain beings who are not seen, who revolted against him, and are enemies both of him and mankind. To these they give the name of liars, ensnarers or seducers. They add that when men die, these deceivers come and bury them, that they may not see the Lord who Lives. [These Cochiemies Indians, or their natural affilees, as intimated before, seem to extend up through the peninsula, from latitude 26° to the latitude of Los Angeles county, and over to the Colorado, and probably even to the Gila countries. The solution of this weighty subject in American homology and Archeology must be left to the future students of Ethnology, as education and civilization extend in the Spanish North American countries.—A.S.T.]

Venegas continues: "These and some others of the same kind were tenets of the Cochiemies, which I could wish to relate at length, being confident that the converted Indians had no design of imposing on the missionaries in telling them that before their conversion they held opinions in some respects the same with these I have just related. I could likewise wish that I was able to wite them in the very words of their languages, with their true and accurate meaning, as from thence we might judge whether it is not reasonable to conclude that some storm or other accident carried to the coasts of California some Europeans or inhabitants of the Philipines, of whom no memory now exists among the Indians; and these, finding themselves among barbarians, endeavored to instill into them the mysteries of the Christian religion, and that such instructions have become in time disfigured more and more." [And here Venegas states the case of crews or sailors left by the galleons, the Russians and Sir F. Drake on the west coasts of America, or of Japan and China, in other parts of his book, noted in another part of the second series Indianology.]

"*Their Edues, or priests*, were called by the name of their two sects Tuparan and Niparaya. The Lauretanos called their priests Dicuinochos, the Cochiemies called them Vamas or Guasmas. In the narratives they are frequently called Hechiseros (Spanish for sorcerers), and in conformity to them we shall also make use of the same name. These pretended to be oracles and diviners. The most sagacious missionaries after the most convincing proofs affirmed them all to have been cheats and swindlers, pretending to hold intercourse with devils and unseen spirits, the existence of which was believed by the Indians, and the assumption of which procured the sorcerers great authority and power among these rude people; all of which was strengthened by certain ceremonies and gestures, and the whole intent and purpose of which was, of course, power and self-interest, so that the people must not perform or do anything without consulting the priests. This was most carefully inculcated on the simple creatures, or they were threatened with the most awful penalties from the unseen spirits; and, on the other hand, the friendship of the priests, spirits or gods was sure to lead to the most desirable enjoyments and of affluence.

As Physicians.

What strengthened this authority, was their being the only physicians from whom they could hope for relief in their pains and distempers, and whatever was the medicine, it was always administered with great ostentation and solemnity. One of their remedies was the application of a hollow tube, called chacunco, made out of a very hard black stone, applied to the suffering parts of the body; and through this they sometimes sucked and at other times blew as hard as possible, supposing that thus the disease was exhaled or dispersed. Sometimes the tube was filled with wild tobacco lighted, and they either sucked in or blew down the smoke, according to the physician's direction, and this powerful caustic sometimes, without any other remedy, has been known to entirely remove the disorder. [This is similar to the Moxa of the Chinese and Japanese, as well as several other half-civilized or barbarous tribes of Asia and America. Similar stone pipes to those described by Venegas have been taken out of the gold workings in the river beds of Alta California since 1850, as noted in the Sacramento Indians, second series.—A. S. T.]

Their Professors and Schools.

The Indians of the Loretto nation had schools, whereby these Professors instructed their youths in the above opinions, and some other needless puerilities, but recommended to them as truths of great importance, and which instruction was carried on in certain caves or solitary places, but at a distance from the woods. Here they were taught to form certain figures or tablets, and when perfect in these, they were taught others as children in our schools are taught to write. This remained a secret for some years, till Father Salia Tierra observed that when the times of gathering the pitahayas arrived, all the boys about the garrison of Loretto suddenly disappeared, from one of whom he extracted the secret, but not without many artifices, as silence is one of their professed acquirements.

Their Sorcerers or Enchanters at the Grand Feasts, Dances, etc.

Here these priests appeared in all the splendor of their paraphernalia, and their presence conferred solemnity on all public assemblages, whether of a whole nation, tribe or family. But their grand paraphernalia is reserved for extraordinary occasions. This consists of a large cloak, covering them from their head to their feet, but only on the back parts, and entirely composed of human hair. The head is adorned with a very high plumage (forming a circlet) of the feathers of hawks and other large birds. In one hand they hold a monstrous fan, formed of the largest feathers; in the handle of one of these fans is hung a square tablet, or a woven rush work, ornamented with feathers, shells, etc. The Edues in the South, in default of feathers, adorn their heads with the tails of deer. The Cochiemies add two strings of the hoofs of deer, one around the neck and one around the waist as a girdle, their bodies being painted with earths of different colors, which makes them look still more ridiculous. These bicheceros open the entertainment with smoking tobacco through the Chacuaco pipe till they are become frantic and almost drunk with the smoke. They then begin an oration on their tenets in the wildest gestures and loudest vociferations. They pretend to be inspired by their familiar spirits, and in their name denounce or dogmatize whatever their phrenzy or interest suggests. Sometimes they would pretend to be the very spirits themselves; at other times they were, or had been, conversing with them in heaven, and to prove it produced the flesh of a deer, or a piece of skin, and an herb, with which they said it was in their power to kill whom they pleased. But their most usual device was to hold up some little tablets made of mesquite wood or the catsclaw wood, covered with grotesque figures worked in it with infinite trouble, for want of iron tools, spoken of before about the Loretto professors, and which they affirmed contained the commands of the visiting spirit. Whilst these frantic preachers were haranguing, others were engaged in feasting, gluttony and dancing in the wildest way, the whole concluding in the most abominable excesses and gratification of indiscriminate appetites, so as to violate every principle of shame, reason and modesty.

The feasts or assemblies for celebrating the gathering of the pitahayas, the distribution of the capture of fish, of deer-skins, and boring the ears and nostrils of children (and more particularly the last mentioned) were the most solemn and important of all. At these feasts, made amid vociferous howlings and shoutings, the priests did not omit exercising their authority over the simple people, declaiming at some as brave and generous, others as cowards, traitors, factious and wicked, and even enjoining penances, such as fasting or abstinence from certain fruits, fish or beasts. Sometimes a whole rancheria came under the ban of these penances, according to the individual demerits of each person thereof. Other penances were that roads or ways should be cleaned along the highest mountains, for the more easy descent of the visiting spirits, and at certain distances to lay a heap of stones, where they might stop and rest themselves. Some were ordered to fling themselves down precipices; and such was the blindness of these poor creatures that they willingly, or by force, carried out the sentence. Besides this, the bicheros raised contributions on all by means of two tributes, which were always paid with a punctual willingness. The first was the best of their fruits and captures at hunting and fishing; the second the tribute of hair, of which were made the cloaks of grand ceremony of the sorcerers. These were committed to the care of a particular person, who was to keep them in a remote and private place. This tribute the children paid for their instruction, the sick if they recovered, and if not, for their care after death.

Russell Ahead.—The Cincinnati Gazette, in an article on General Hunter, says:

He commanded a leading division at the battle of Bull Run, but was wounded so early in the day, that he reached Wahington, traveling in an ambulance, almost as soon as Mr. Russell.

TO THE FARMING INTEREST!

E. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.

JONES & HEWLETT,
IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN
GROCERIES,

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his
NEW GRAIN SEPARATOR,
Patented April 9th, 1861,
As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the
INCREASED VALUE
OF
Well-Cleaned Wheat
Will be more than sufficient to every Grain-Grower of any amount
TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................DEC. 27, 1861.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

The Close of the Year.

In two weeks more, the Year 1861 will leave us, and a "New Year" will dawn upon us. May we not consistently ask those who have been indebted to us, for some time, and who have received bills from us, to remit those dues at once?

By the new arrangement we have made, we wish to close those old debts, and we know those who are indebted to us, can pay us with but little effort.

It is a season of the year when we can use our means to good advantage, and when we need all such dues. It is a season, too, when every person wishes to feel a little rich, so as to enjoy the "Holidays," and reciprocate the favors of the season.

It is so much more pleasant to receive a voluntary remittance than to be obliged to go or send for it; and we must, in justice, "ask" our dues.

Perhaps newspaper readers may think it is but a small sum; but the aggregate due us, will count in Thousands; and now we ask it, and must do so in earnest. We hope this call will be enough.

The Loss of Stock by the Flood.

We desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

Our Ladies' Department.

It is with extreme regret that we are called upon to announce the withdrawal of the present Editress from the columns of the Ladies' Department. But a duty she owes to herself and to her profession demand it as an imperative duty, and while we acquiesce in this and most earnestly commend her to those who may demand her skill in another science, and one equally and vitally important to the welfare of the community, we trust those who have heretofore been so kind as to make our columns the channel of communication for the "Good, True and Beautiful," will come with the same spirit to our aid, so that we can make that department still one of the greatest interest for the Home and the Literature of the Fireside.

See Mrs. Warren's card in another column.

A Grain Exchange.—California needs a Corn Exchange, as it is called in England, where all who are buyers and sellers could congregate, show samples, and learn the true condition and value of every kind of Grain. Such a "resort" would remove many of the present difficulties which exist among the producers and buyers. Such a market would establish confidence.

Correction.—We last week copied an article which appeared in a cotemporary under the familiar signature of "Agricola," and which we supposed was written by our old correspondent. We have since learned that "our" Agricola was not the author, though by what right another assumes his well known signature, we are not informed.

The New Year of 1862.

This will be the last number we can issue in the old year of 1861—a few brief days and another year dawns upon us.

Eight years have passed and gone with us in our labors with this Journal, and the records are made. How faithfully and well we have performed our duty, as a journalist, to the cause we have espoused, we leave for our readers and patrons to decide. We know this: we have given eight years of life—our strongest and best years—with all our best energies and deepest devotion. We have labored with all the zeal and fidelity which we were capable of, to present to those whose interests we plead the best information and the greatest truths relating to those interests.

We have not spared our health or strength, or our means. They have each and all been given without stint or measure. Our health and strength have often yielded to the pressure of duties, and our means have been devoted to the last dollar often, to accomplish a desirable end.

Eight years of such fidelity we think deserves some reward, and we look for it only in the just appreciation of our Journal and the generous support which it has and shall receive from those interested. To all such we look for kind words and generous acts, and for their ready coöperation in our work. We hope we may look for many an evidence of such kindness, and many a subscriber from the influence of friends as our New Year's Token.

By a reference to our columns it will be seen that we have made some changes in the business arrangements—some that will relieve us of *some hard work*, and other changes which necessity demanded, but which we hope will only call new aid and sympathy to that Department.

In all these changes we hope always for good, and our efforts and the efforts of all connected with this Journal, will be to maintain its high character and increase its usefulness. We feel that we have said all that is demanded of us in these few words. We now tender our most grateful thanks for the many favors extended to this Journal from its many friends. To them and to all we tender our most cordial greetings for the New Year and hope it will be to them one of great joy and gladness, one of greater prosperity and happiness than any that have preceded it.

With such feeling to all we greet them, one and all, with a glad and Happy New Year.

The Flood—Our Appeal—Hear Us!

No calamity of so extensive a sweep as the late flood, but what its losses will strike hardly upon many persons not directly within the flooded district. Perhaps the reader may think that, as we are situated in the city of San Francisco, we may be sitting in our sanctum where no calamity from the flood could reach us. But it is not so. The present flood touches us most severely, and our readers can at once see that *our interests* are directly where the floods cause greatest ruin.

Could we know that the farmers and stock-raisers have met with a severe calamity, and we not feel it, we would be wanting in those sympathies which at times like these should be ever active. Wherever a farmer has suffered, we feel it; wherever a stock-raiser has met with a loss, we feel it. And to all such we tender our kindest sympathies, and stand ready, according to our humble ability, to make their sorrows less.

For ourselves we are a heavy sufferer by the floods at Sacramento, having much at stake there, and in addition to this, we have a large lot of subscribers in the flooded district on whom this blow falls with more or less severity, and while their interests are jeopardized, our own interests must suffer more or less, although in not large amounts, for we are in duty bound to do to others as we would have them do to us in a like case.

We therefore feel called upon to announce to our readers—to all who are subscribers, those who have suffered by this calamity by flood—if they will be so kind as to frankly make known to us that they are among the heavy sufferers, we will cheerfully *remit to them* what may be due us, and will also donate the Farmer to them for the year 1862. This may be a small amount to each, but we also are sufferers largely, and the total will be large to us; but we hope each sufferer will take the will for the deed; we may do more for them in some other way.

While we are thus ready to do a little for others, we ask those of our subscribers who have escaped unscathed to remember our wants and our needs, and now help us, both for this cause and for our own needs. The year closes, and we really need our dues. What more shall we say? And to those kind and generous friends who are among our new subscribers, we ask of each that they will speak a kind word to those around them, and thus aid us so we can do more and more for those who are suffering, and also for the cause in which we are engaged.

Stockton Rapidly Improving.—Stockton is steadily and surely going ahead. Business is not *overdone*, nor is it driving; yet there is a wholesome trade. The business part of the city has been constantly on the improve. A handsome large block has been erected on the corner opposite Weber House, by B. W. Owen & Co., and occupied by them as a Grocery, they doing a large business on the Square. A fine, large building erected and occupied by R. B. Parker, Esq., groceries and general goods. Another by the Messrs. J. H. Selby & Co., for hardware. Quite a number of stores in every part of the city, over all the suburbs and for one or two miles the prairie is dotted by new buildings, some fine and spacious and some neat cottages. These are the evidences of a real abiding prosperity which we are pleased to record.

Tule and Overflowed Lands Yield Well.—We know of the complete success which attends the cultivation of the tule and overflowed lands. We know of a nice little spot some seven miles from Stockton, which has been leveed and well cultivated, where the crops of potatoes and all kinds of vegetables have been very abundant and of extra size and quality. The clover produced upon such land has yielded wonderfully.

What Should the State do for Sacramento?

Many propositions have been offered that the State should protect Sacramento against the danger of future floods, that the Levee should be rebuilt at the cost of the State, etc. It is time that the State felt an interest in Sacramento, by reason of the Capitol. This and the other public business of the Supreme Court create a public interest, and should receive a corresponding public aid and protection.

Sacramento has received the last year a liberal sum from the public treasury for the cause of agriculture, and the citizens have contributed liberally to this and to every other work; and we can see no reason why the State should not extend its aid and protection to that city in this hour of her deepest trial.

We hope, therefore, that at an early day after the coming together of the Legislature a bill will be offered, tendering that city the *Loan of One Hundred Thousand Dollars*, without interest, for a given period, the city to give her Bonds for the same, and should prosperity come to Sacramento she can then *voluntarily* pay the interest, but should misfortune again lower upon her, the State could extend the Bonds, or remit them altogether.

The State is as much bound in honor and duty to extend aid in such cases—not only to one city, but to all—as she is bound to give aid to scientific institutions or to benevolent causes. The State and its treasury are made by the people, and the resources of the State should be used for the protection and relief of the people. The cities, towns, colleges, schools, and all our institutions are branches of the State and its interests, while the State acts as the Parent, Guardian and Protector to all, over whom she should throw a shield like that of a parent, and no feeling of sectional jealousy should ever arise when such protection and aid is needed, for none may know how soon they may be in need of the same aid. One city may be devastated by a flood, another by fire, a third by an earthquake, a fourth by a whirlwind; one by famine, another by pestilence. All are subject to calamities, and all should be willing that the State should use its influence, its sympathies and its treasures when necessity requires them.

We hope, therefore, that if Sacramento needs the aid of the State by Loan, it will be given readily, cheerfully, generously, to show its just appreciation for the noble stand that city has taken against Repudiation and its evils.

Sympathy among Farmers.

The great calamity which has fallen upon the Agricultural Interest, over a vast extent of our State, demands some public notice and attention from the Farmers themselves.

There are localities where are Farmers who have been bereft of their all and are left in sickness and destitution. Such cases demand the heart sympathies of every brother Farmer, and every county and section of county where such cases are known, there should be committees to attend to these cases of suffering. We hope every Farmer who has been spared from the calamities that the flood has cast upon others will feel it his duty to look to this matter—give a portion of his time in looking up cases of suffering, and see that they are provided for. This would be a noble work and bring a noble reward. There are cases of suffering—many, most undoubtedly—and they should be sought out and relieved. The earth has brought forth bounteously the past year, and from its great abundance the hungry should be fed and the destitute should be supplied. Farmers have now an opportunity to testify their gratitude to Heaven for their own prosperity, by doing unto others as they would that others should do unto them. Let all remember that "It is more blessed to give than to receive," and what is done should be done promptly and cheerfully, for "The Lord loveth the cheerful giver."

Farmers should not forget that what they do now to relieve the sufferings of others—every dollar thus bestowed is only money put out to great usury—a greater interest than California paid even in its palmiest days. For every dollar thus given, there is a promise that seven dollars for one will be returned, and God Almighty indorses the note.

A Fine Stockton Farm.

One of the finest and best arranged Farms in San Joaquin county is that of Morris Dooley, Esq., one of the large proprietors of the Stage Lines of Stockton.

The Farm of Mr. Dooley is situated on the lower Sacramento road, and contains *one thousand acres*, all under a finished fence, of four boards, and capped, measuring over five miles of fence finished, at a cost of over $6,000. Upon this Ranch is one of the best Barns in the State, also costing the full sum of $5,000. Upon the Ranch are forty choice American Mares, six fine animals for the Dairy, of Devon and Durham blood, and also, we can add, all the horses of the Stage Line, when not employed, as well as the extras—the number of the regular horses of the Line being one hundred and forty.

We feel pleased to know that the success of Mr. Dooley, as a stage proprietor, has thus been the means of establishing so fine a farm—one that does him great credit, both for the character of the stock, the buildings and fence.

Broom Factory in Stockton.—We are glad always to note the steady progress of our own Industrial Works. When at Stockton we called in at the new Broom Factory of Mr. D. J. Smiley (recently from San Francisco, from the factory of Mr. J. W. Ward, the premium factory) and found Mr. S. very busy in his work, turning out about five dozen very handsome Brooms per day, as the *work of his own single pair of hands*. Mr. Smiley has his Factory on the corner of Centre and Washington streets (rather out of the way of trade), yet we hope that the *traders* and families will feel it a duty to call and purchase and leave their orders, for Mr. S. can make them the neatest and best broom as well as the cheapest in the State. Citizens of Stockton, patronize your own Home Industry.

Grain and Hay Suisun.

When in Suisun City about the first of last month we gathered the following statistics to show the large amount of business done in that steadily growing city. As there is always a disposition by some speculators to turn good information to their own account only, we did not publish the facts for good and sufficient reasons.

We learned, however, enough to satisfy ourselves that no good would come to the *producer*, and therefore those other parties knew how to best manage for themselves.

Suisun City is steadily progressing—improvements we note in many places. The amount of Hay, Grain and other produce shipped from this place annually is enormous. We gathered the following facts:

The Suisun City mill owned and carried on by Messrs. Marston & Stockman, is one of the best mills in this section of country. It has a powerful engine, the mill runs night and day, and turns out 120 barrels superb flour in twenty-four hours, with three run of stone. It cleans wheat superbly in the cleaner. A railroad from the wharf to the warehouse and the mill brings the wheat and returns the flour for shipment. The flour ranks high. Price of flour at that date $7. The mill uses five cords of wood per day for the fires. The refuse of the mill is fed to hogs, of which there were 200 being fed. Wheat on hand November 1, 300 tuns: Jackson Warehouse contained 800 tuns wheat, 100 tuns barley, and 200 tuns hay. Ruling price then, 1¾ to 2c. for wheat; $16 to $20 for barley; hay, $8 to $10. Freight to San Francisco for grain, $2 per tun, including all expenses.

Ballad and Hillburn's warehouse contained 15,300 sacks wheat, 3,000 sacks barley, 500 tuns hay upon wharf. Their warehouse is of stone, 120 by 50 feet, with an addition of wood 32 feet more. Capacity of warehouse, 1,700 tuns. Hay was valued at that date (Nov. 1) at $7 to $14 per tun.

Leman's warehouse has a shipping wharf with 200 feet frontage. Preparations were made for another year to build of brick 60 by 120 feet; 1,400 tuns of wheat had been sent away from there this year. The steamers that run regularly, with schooners, find a very profitable business in freighting, as there is a very large business done from this point in grain and hay annually.

There is a valuable tract of tule land at Suisun, which will ere long prove of great value. Some patches of this have been partly reclaimed, and roads have been begun and are in progress. Much of these valuable improvements originated by the energy of A. P. Jackson, Esq., who has done much to advance the best interests of this place, and to whom the city of Suisun is indebted for his great exertions

A valuable quarry of dark-veined Marble was found, some years since, a few miles from Suisun, in the hills, and was partially worked by C. T. Fay, Esq., of our city, the owner of the quarry. It was found to be so hard that it was temporarily abandoned. The Marble was very beautifully veined. A large piece of it, highly polished, is now at our office, where it can be seen. We hope the quarry will again be worked.

Will Growing Wheat Pay at 15 Bushels per Acre?

The great cry that Grain-growers are losing money at present rates, or when it sells for $1 50 ℔ 100 lbs, the constant cry that "it don't pay," that Farmers are ruined, etc., etc.—is surely proved to be false, from the very fact that nearly every one of this class of *croakers* that have been thus *Ruined* have preferred to plant a very much larger area this year, some nearly double the number of acres, so that all such persons that were ruined this year, will be *doubly* ruined next year—and then we suppose they will go to Washoe, or to the Wars.

As an evidence that wheat does pay, and pay well, we have the following facts. We met the owner of a ranch in San Joaquin county, who had planted 360 acres of wheat—the work all done by hired help—planted quite late—the yield only *thirteen* bushels per acre—yet, after all expenses paid, the net profit was $1,800—equal to $5 per acre—the land has been only purchased this year, for $10 per acre—and this profit paid half its cost; the next year's crop will, being now all in, produce more abundantly, and with that the land will be paid for. Who says "Wheat growing don't pay"—if with such a yield it pays thus? What reason of complaint is there when a yield of 25 to 40 bushels per acre is had.?

Come, croakers, look these facts in the face, and give your opinion of these examples of Grain growing; when it costs $20 an acre to grow wheat—such farming will never pay—such farmers are sure to be ruined, for they surely do not know how to farm.

Farming in San Joaquin.

There is no county in the State where there are better farms, or farms better managed, than in the county of San Joaquin, and although there have been some cases of misfortune, there are splendid examples of success—we have spoken of the fine ranch of Morris Dooley, Esq. Pres. Holden has also a large and well-stocked farm; he has done great good to the entire county by his energy and enthusiasm in the Cause of Agriculture—and there are many large and prosperous farms that tell well upon the industry of this wealthy county.

The farm of Austin Spring, Esq., contains 1,328 acres. Some little distance from the City, all under fence—some 10 miles good fence. Of this, 350 acres cultivated—balance stock—175 head of good horned stock—many colts, etc. This land is some of the best in the county, and will soon be placed in the highest state of cultivation.

A Promising Horse.—We saw a very promising young stallion at the stable of A. N. Fisher, Esq., at Stockton, Mazeppa, stands 17 hands high, is only three years old and weighs 1300 pounds; sired by Bertrand—dam, a Morgan mare. Mazeppa is a dark bay, of good action, full deep chest, fine head and neck with a powerful muscle, and all other points that make a good horse. Mazeppa will prove a good roadster.

[For the California Farmer.]

THE NEW YEAR AND THE NEW LIFE.

The year of Eighteen Sixty-One
Draws to a close—'twill soon be gone:
That old year going, brings the new,
We hail as Eighteen Sixty-Two.

How many who review the past
Recall a life not overcast
With trials, disappointment, care,
That ever seem too hard to bear?
Yet months roll on, these clouds depart,
And sunshine comes to the brave in heart.

There's not one human creature found
That treads upon a thornless ground;
There's not one human brow but Care
Hath set its wrinkled signet there;
There's not one eye, however bright,
But tears have often dimmed the sight;
There's not one tender feeling heart,
But that has felt the keenest smart;
There's not one living human soul,
But oft hath drank from sorrow's bowl.
These are the doom of man; they're given
To win our love from earth to heaven.

But let us now the past review,
See how the Beautiful, Good and True
Will far out-weigh—however rife—
The evils of our mortal life.
When disappointment casts a shade
O'er plans by human reason laid;
When Fires consume the toil of years,
And wring the heart with bitter tears;
When Floods, with desolating power,
Sweep off our homes within an hour;
When sickness, sorrow and distress
Seem blotting out all happiness,
Until the weary soul doth crave
Its "funeral marches to the grave;"
'Tis then immortal hopes resume
Their power and triumph o'er the tomb;
That *disappointment* quickly flies—
'Twas but a "blessing in disguise."
No human reason could foresee
The *good* designed by Deity;
And had not Fires our wealth have burned,
Our energies to sloth had turned:
It was the Fire that tried the *ore*,
Revealing worth not known before.
The Flood that sweeps our home away
Like trumpet tones it seems to say:
To mortal man no home is given
That's permanent, save the Home in Heaven.
Then sickness, sorrow and distress,
These, too, were only meant to bless;
To teach that "tenement of clay"
It could not long on this earth stay;
That soon these trappings would unroll,
Revealing man a living soul.
Like the Old Year, cast off the coil
Of human cares and human toil,
Then, in bright worlds of heavenly blue,
Like the New Year, the life renew.

Elliot.

The Weber House, Stockton.

This old Pioneer Hotel, so long and favorably known as the general head quarters of the traveler, has recently changed proprietors, and has been refitted and furnished and is now well patronized by an appreciative public. The Weber House is now under the proprietorship of Messrs. A. & C. Sperry, who, with an efficient clerk, are well skilled in the way of giving pleasure and satisfaction to all that make their home with them. The name of Sperry in the art of hotel keeping in San Joaquin or in Calaveras county, is ever sufficient to insure a good home. Travelers to the "Big Trees" and at Murphy's remember the Sperrys and Perrys, and now with a good Hotel at Stockton, with more Sperrys, we can guarantee another good house, and travelers will always be well cared for.

We are glad the "Sperrys" are so numerous a family, and feel proud we have so goodly a number of that name on our list. There are the "Sperrys" at the Big Trees, "Sperrys" at Murphy's, "Sperry's Mills" and "Sperry's Ranches"—everybody knows Austin Sperry, the pioneer of the Sperrys—and Sperrys at the Weber. We are glad of it. The "Sperrys" among humans are what the Durhams and Devons are to our dairy stock, or the Langfords, Belmonts, Ashlands and David Hills are to our racing stock. "Blood will tell," and muscle, sinew and energy in men tell too, and will give the *cream* of life and *win the race* against the world.

Riches of the Mines.—While at Stockton the last few days we had the pleasure to meet our subscriber, W. B. Whitesides, Esq., and Mr. J. Slater, just in from the gold and silver country from a long prospecting tour. We examined about a half bushel of samples, gold, silver and lead. The gleamings of wealth were enough to satisfy of their richness.

The samples we saw were from the Russ district, from the Coso and Argus mines and from the Panaminit Mountains, near Death Mountains—some 60 miles east of Walker's Pass. Many of the specimens were rich—trials were to be made by assay to test their real value. This district of mines is some 180 miles from Visalia, and a tract of country parallel with the Sierra Nevadas. We surely wish success to our friends, only hoping they will remember us when they strike it *rich*.

New Mill in Stockton.—A large mill has recently been enlarged (formerly Fairbanks' Mills), and will soon be in full operation as a sawing and slitting mill, planing, tonguing, grooving, etc.; also, all kinds of turning. We saw in the turners' department handsome "Butter Stamps" made from the "Buckeye," of new and handsome style. Dairymen should take note of this. The mill is owned by John Pettee, Esq., who also has a large tract of tule land, 4000 acres, on which there are 1500 head of beeve cattle, 60 horses, 200 swine and small stock. On this tule land, all leveed, great success has been had in growing barley, corn, potatoes and all kinds of vegetable.

The Savings and Loan Society of this city is one of the most meritorious institutions that we know of. Its originators and managers have been real philanthropists, and it has been of almost incalculable benefit to the community. Some persons, with what motive we can only surmise, have apparently endeavored to bring the Society into disrepute, and have thereby created something of a panic among some of the small depositors, causing them to withdraw their money and forfeit nearly three months' interest which would have been due them. As the Society is entirely under the control of the depositors, and its affairs very prudently managed, there is hardly no possibility of loss to its patrons, and we must consider the originators of the panic as guilty of no less than downright robbery of the poor. To remove all possible cause of suspicion, a committee of reliable men was appointed to examine into its affairs, and the report has been such as we expected, perfectly convincing that the Institution is sound in every respect. We hope to hear no more of such wanton speculations on the fears of the poor.

BY OVERLAND TELEGRAPH.

BATTLES AND TRIUMPH OF UNION TROOPS!

COTTON ARRIVING AT NEW YORK.

NO TROUBLE WITH ENGLAND!

Dispatches received at St. Louis from Gen. Pope state that, after a forced march, on the 18th, he got between the enemy, General Johnson being encamped near Chicapoo, with a force 2,200 strong, but, as soon as they heard of his approach, the rebels beat a rapid retreat towards Rose Hill, leaving all their baggage, arms, munitions, etc., in Gen. Pope's possession. Gen. Pope then threw forward ten companies of cavaly, with a section of artillery, in pursuit, following with the main body of his army to Johnson, Bates County. The rebels were so closely pursued that they scattered in all directions.

Gen. Pope forced a body of cavalry through to within 15 miles of Osceola, where Price has, it is said, 8,000 troops, and captured 150 of the rebels, with their baggage horses. Other rebels were also taken in squads of from 10 to 15, making an aggregate of 300 prisoners.

QUINCY, ILL., Dec. 21.

Dispatches from Washington give cheering news. Private letters received from distinguished English Statesmen and other prominent individuals give every assurance that it is foreign to the interests of the English Government to make any demand for the release of Mason and Slidell, but that it is probable that they will ask such explanation as the United States Government can honorably grant. The dispatches of the British Minister, received at Washington, are reported to be more sensible and moderate than the representations of the British press would lead to the belief. Nothing peremptory or imperative is addressed to our Government, and no difficulty presented to their view, but which can and will be settled by diplomacy.

The Federal troops now occupy Beaufort, S. C., and are fortifying themselves. The steamship Atlantic has arrived at New York from Port Royal, with 12,000 pounds of Sea Island cotton. Over 100,000 pounds of Sea Island cotton had been secured previous to the departure of the Atlantic. Col. Jeff. Davis and Major Marshall's commands surprised the rebel camp at Warrensburg, Mo., on the 20th, and captured thirteen hundred prisoners, inlcuding three Colonels, seventeen Captains, 1,000 stand of arms, 1,000 horses, and full camp equipage. Our loss was but two killed and eight wounded. This is regarded as the most brilliant exploit of the war. Major Hubbard, of the 1st Missouri Cavalry, captured over 60 rebels a day or two since, together with a large amount of baggage. Gen. Pope and his assistants are determined to rid Missouri of rebels. A battle between Pope's army and Price's is expected every day.

George S. Fisher, of San Francisco has been appointed U. S. Vice-Consul at Kanagawa, Japan, *vice* Dorr. Salary, $3,000 per annum. Capt. Robert Haley, of San Francisco, has been appointed U. S. Consul at Manzanillo, Mexico, *vice* A. Garrill. Secretary Cameron has submitted to Congress a report in favor of appropriating $4,710,000 for putting the coast defences in order from the Lakes around to San Francisco.

In Congress, on the 20th, the House passed the bill authorizing the immediate construction of twenty iron-clad steam gunboats. In the House, on the 21st, Julian, of Indiana, offered a resolution that the Fugitive Slave Law be so amended as to forbid the recapture or return of any fugitive from labor, without proof that the claimant is loyal. After much discussion the resolution passed.

A Washington dispatch says Gen. Ord started on a foraging expedition with one regiment, followed by two brigades, under Gen. McCall. Meeting the enemy near Darnville, a brisk engagement ensued, lasting an hour, when the enemy retreated, leaving the dead and wounded on the field, with a large amount of arms, clothing, etc. Their loss is estimated at 150 killed and wounded. Our loss was six killed and eight wounded.

Some twenty-five vessels, mostly old whaleships, have been purchased by Government, loaded with stone, with the probable intention of blockading Charleston, Savannah, and other ports, by sinking the vessels at the entrances of the harbors. It will doubtless prove effectual.

The Philadelphia *Inquirer* has dispatches from Baltimore saying that Fort Pickens had opened fire on Fort McRae three times since the 22d of November, with what effect is not known.

Gen. Halleck has issued orders making death the penalty for cutting down telegraph wires or injuring railroad bridges. Secessionists and their slaves will be required to repair all damages done to railroads, etc, where they live. Forty bridge burners have been arrested and have probably been shot.

Garnett Davis, Senator from Kentucky, elected to fill the vacancy occasioned by the expulsion of Breckinridge, took his seat Dec. 23d.

In the House 23d, Wilson's resolution was passed, prohibiting United States officers from using any of their force for the purpose of returning fugitive slaves.

Fenton introduced a bill granting lands for a railroad from the Missouri river to San Francisco.

The French transport ship *Resource*, bound to Callao, was wrecked 40 miles south of Valparaiso. She had 600 souls on board, five or six only of whom were saved.

QUINCY, Dec. 23d.—Later news has been received from Europe. The question of the arrest of Slidell and Mason on board the Trent continued to excite the public press. A great Irish mass meeting was held in Dublin, to consider affairs between Great Britain and America. Feeling ran high in favor of sustaining the cause of the United States.

FLOODS IN OREGON.—The steamer from Portland Dec. 12, brought news that Oregon and Washington Territory have been visited by the most excessive rainstorm and flood ever witnessed since the settlement of the country. The rainy season set in during the latter part of October, and from that time, an almost incessant storm has prevailed, with an occasional flurry of snow in the valleys, while upon the mountains immense quantities accumulated, on the Cascade range in particular. The Willamette river continued to rise until the 3d instant, when it reached some five feet higher than the great flood of 1844. Millions of dollars worth of property has been destroyed or washed away, and doubtless many lives are lost. At Portland the river rose over twenty feet, dashing wharves and houses away. The loss at Oregon City and Linn City is estimated at $200,000. Nearly all the bridges and mills in the country have been swept away. The breakwater at Linn City was carried off; loss, $50,000. There was great destruction of flour mills throughout the country, The Island mills, the Linn City mills, McDaughlin mills at Oregon City, all are gone. The Standard mills at Milwaukie are safe. The destruction of grain, flour, fruit, &c., is immense. The greatest stores of wheat and flour were at and near Albany, and it is estimated that 100,000 bushels of wheat were lost at that place alone. The *Pacific*, in coming out of the Columbia river, had much difficulty to keep clear of the driftwood, huge trees standing erect, the heavy roots keeping deep under water. Logs, timbers, lumber, fragments of buildings, fence-rails and broken boxes strewed the ocean for many miles.

THE TEN MILE TROT.—The new Racetrack of Mr. Williamson, near the Willows, was inaugurated on Saturday last by the ten mile Trot between *General Taylor* and *Wm. H. Seward*. The track was in fair order, and the attendance good. *Seward* kept the lead steadily, and won the race, being a quarter of a mile ahead on the last mile. Time—*Seward*, 30:16½; *Taylor*, 30:40.

Flooded Again.

SACRAMENTO has again suffered from inundation. The Levee on the American was being rapidly repaired and strengthened, and Burns' slough, beyond Smith's, filled; but the late heavy rains in the interior caused the American to rise rapidly on Monday, and, as the filling of the slough was not completed, the water again broke through and flooded the city, though not to the same extent previously, the water only coming up to L street. Up to Monday, the Sacramento river had fallen seven feet from its greatest bight (22 feet), being then 15 feet above zero, and no water was running through the crevasse near Sutterville. It had risen but a few inches from the late rain, at last accounts.

WE have been again visited with a heavy rain, which in the drowned-out portions of the country must have been anything but agreeable. No rain had fallen here since the 9th, up to Sunday, when it commenced lightly, and poured down heavy Monday and Tuesday; but cleared off for Christmas, and Wednesday was a fine day—over head.

A foot-race between Selaya and Rix for $1000 a side, came off at Mission San Jose on Saturday. The distance run was eighty yards, Selaya giving his opponent fifteen feet start. The race resulted in a victory for Selaya, who won by one yard.

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

MR. PERKINS will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

LIZZIE WILEY WARREN, M D.....EDITRESS.

OLD CHRISTMAS.

BY MARY HOWITT.

Now he who knows old Christmas,
He knows a carle of worth;
For he is as good a fellow
As any upon earth.

He comes warm cloaked and coated,
And buttoned up to the chin,
And as soon as he comes a-nigh the door,
We open and let him in.

With sprigs of holly and ivy
We make the house look gay,
Just out of an old regard to him,
For it was his ancient way.

We broach the strong ale barrel,
And bring out wine and meat;
And thus have all things ready,
Our dear old friend to greet.

He comes with a cordial voice
That does one good to hear;
He shakes one heartily by the hand,
As he hath done many a year.

What a fine old fellow he is,
With his faculties all as clear,
And his heart as warm and light,
As a man in his fortieth year!

And he tells witty old stories,
And singeth with might and main;
And we talk of the old man's visit
Till the day that he comes again.

Good luck unto old Christmas,
And long life, let us sing,
For he doth more good unto the poor
Than many a crowned king.

◆

Valedictory.

With this number we resign the Editorial charge of the Ladies' Department of the Farmer. For two years we have vainly tried to perform the duties of that post; but it was not in our power to do it as we desired—with satisfaction to ourself or with that benefit which we had hoped to our readers.

Our "forte" is our Profession. Our mind is more intent on healing the sick and preserving health than in writing editorials, and we regret that we have done so little for that department of a Journal capable of so much good. Our profession demands all our time, and increasing business claims our best ability. We hope, however, to give occasionally some thoughts to the columns of this department, and hope those who have formerly written will again give their happy communications, and thus make the Ladies' Department of the Farmer more valuable and interesting than it has been under our charge.

With many and grateful thanks for the kind favors shown us, and with best wishes for all our friends, we wish them all a Merry Christmas as our parting address. L. W. Warren, M. D.

◆

[For the California Farmer.]

The Battles of Life.

There is a striking analogy between the laws of physical and moral progress, but they are often impeded in their operations by the arbitrary rules and regulations of man. The right cultivation of the soil does not impoverish, but enriches it, while careless and improper culture unfits it for yielding but weeds and worthless plants. In like manner the human mind, by wrong education, may be despoiled of its natural goodness, and implanted with so much that is false and useless that it becomes enfeebled and unfit to contend in the great battles of life.

The birthright for which mankind have been contending is civil, religious, and social freedom. The first cost the lives of innumerable millions of human beings, deluging the earth with seas of blood, and filling the air with a universal groan, whose cry has gone up from every land throughout all ages of the world's history.

Not until after a thousand convulsions and revolutions of nations was the man-child of Freedom born, and then thrown like an outcast upon the desolate wilds of the Western Hemisphere, where he was baptized in the blood of the Revolution, and afterwards grew in wisdom and stature by resisting aggression, subduing the soil, and filling the land with peace and plenty.

Religious freedom was bought with a price no less dear, and with still keener pangs of suffering. The living streams of life and thought were dried up at their fountains by fire and sword and fears of cruel torture.

But the immutable laws of nature and truth can only be perverted for a time; like a mighty river, swelling from the innumerable springs of its source, it bursts the barriers which obstruct its onward course, and rushes on with redoubled energy to the great fulfillment of human destiny.

The battle for social freedom is scarcely yet begun; but it will be fought upon the more elevated "plane" of reason, where no carnal weapons are needed, but where every lover of truth will be armed with the mighty lever of thought, based upon the fulcrum of universal liberty and justice. They shall overturn error and false doctrines, and liberate the enslaved and unthinking minds of the masses. In this warfare, moral courage is more needed than physical, and a glorious day will it be for humanity, when people shall be found combatting for the supremacy of good over evil with as much zeal and courage as are now displayed for mere animal prowess.

Those who fall or are wounded in this severest of life's battles, are seldom cared for, and are left to die of their wounds; or, if they survive their misfortunes, their scars are pointed out as marks of dishonor; and their moral courage, called weakness, of those that dare to fight like the rustic soldier, who trusted more to his own aim and rifle than to military tactics, knowing that killing opposing enemies was the business he was placed there to do.

The natural powers of the human mind are often so dwarfed by prejudices and warped by erroneous doctrines, that what they have spent half a lifetime in learning must be unlearned—a still harder task—before they can be prepared to wage an intelligent and successful warfare against the external and internal foes of human happiness.

Aurora, Dec. 1861. LILIA DE MONTANA.

THE BIRD THAT SUNG IN MAY.

A bird last Spring came to my window-shutter
One lovely morning at the break of day;
And from his little throat did sweetly utter
A most melodious lay.

He had no language for his joyous passion,
No solemn measure, no artistic rhyme;
Yet no devoted minstrel e'er did fashion
Such perfect tune and time.

It seemed a thousand joys, a thousand stories,
All gushing forth in one tumultuous tide;
A hallelujah for the morning glories
That bloomed on every side.

And with each canticle's voluptuous ending
He sipped a dew drop from the dripping pane;
Then, heavenward his little bill extending,
Broke forth in song again.

I thought to emulate his wild emotion,
And learn thanksgiving from his tuneful tongue;
But human heart ne'er uttered such devotion,
Nor human lips such song.

At length he flew, and left me in my sorrow
Lest I should hear those tender notes no more;
And, though I early waked for him each morrow,
He came not nigh my door.

But once again, one silent summer even,
I met him hopping in the new-mown hay;
But he was mute, and looked not up to heaven—
The bird that sung in May.

Though now I hear, from dawn to twilight hour,
The hoarse woodpecker and the noisy jay,
In vain I seek, through leafless grove and bower,
The bird that sung in May.

And such, methinks, are childhood's dawning pleasures,
They charm a moment and then fly away;
Through life we sigh and seek those missing treasures,
The birds that sung in May.

This little lesson then, my friend, remember,
To seize each bright-winged blessing in its day;
And never hope to catch in cold December
The bird that sung in May!

◆

Baby Culture.

A mother who has evidently acquired experience in this most important science, writes as follows from New Haven to the American Agriculturist: "How are the most of babies treated? Are they not smothered in blankets, kept in warm rooms, and cool fresh air avoided as if it were a pestilence? Do they not worry and cry for this very want? and then doesn't nurse come to helpless mamma and insist that the little creature is hungry, though nursed but a short time before? Then, hungry or not, its cries are stifled with food it does not need, bona fide pain comes, diseases often follow in dire succession, and mother and nurse are well worn out before many days with such a worrying child. Who would not worry under such treatment? Babies appreciate oxygen thoroughly, and there would not be so many 'terrible infants,' were there more of it in sleeping and living appartments.

"Well, to be practical, and 'give my experience,' which consists at the present time of as healthy specimens of boys and girls as ever made parents' hearts brim full of thankfulness, I have pursued from their birth undeviating regularity in sleep, food and out-door life—nothing but downright rain preventing the latter. Mothers tell me: 'Oh, it's a very good way, if you can only carry it out; but I can't.' Well, if children are not worth self-denial; if they are not better than calls, or company, or visiting, then they must go to the servants. But to those warm mother hearts which make light of all fatigue and care for the sake of the baby, who accept the sweet task committed to their hands by a heavenly Father, how much better to have the key of sunny faces and joyous tripping laughter, than wry faces and shrieks 'that make night hideous.' If a child is born healthy, all it needs to thrive is the carrying out of simple natural laws. For the first few weeks, every two hours is often enough for nursing; after that, once in three. It will then be regularly hungry, and regularly satisfied; if it cries, you will know it is not hungry, and its stomach will never be overloaded.

Let it sleep in a crib by your side—never with you; then sleep is longer, sweeter, more refreshing. Never wake a child—no, not to show it to the Queen of England. Wrap it well, all but the face, and take it daily into the purest air you can find. Let its baths be not decidedly cold water, and before nursing, and then another nice nap will follow. As it grows a few months older, keep it out of doors half the time, and in summer its best naps will be under the broad roof of heaven; and in winter don't stop for cold, but wrapped up like a perfect mummy, out with baby, and if you want to see the little one's cheeks take on the rose, let it feel the splendid tonic in a sharp nor'-wester; and it will smile at the snow-flakes as they softly melt on its velvet cheeks, and grow daily so strong and fat and happy, that the little life will be one continual hymn of praises to God for existence.

The observance of regular hours for the morning and afternoon nap, and laying the child in its crib wide awake when the time comes, is of the greatest importance. It all turns on commencing right, and then there's no trouble. How infinitely better to lay a laughing, playing creature, with a good-night kiss, to sleep its healthful sleep, than the common rocking and hushing so often repeated, and in vain—or the watching by the bed-side, or the leaving of a light to go to sleep by. Never reward a child for crying by giving the article desired; wait till it stops. Teach it to amuse itself often, and not require some one to be constantly shaking a rattle, or tapping a window, but lay it on a bed or floor with a plaything; a slipper is an unfailing amusement when all other objects fail. Lastly, always endeavor to have a serene, pleasant face when you nurse your child. Chameleon-like, it is taking hues to its soul that color and shape it for life and eternity."

◆

How It is Done.—We lately visited a Chinese tea-dealer's establishment, says the Call, where they were engaged in finishing up green teas for the market, and drying and re-dressing black tea which had been wet by the flood at Sacramento. The black teas were simply dried rapidly over a charcoal fire upon broad circular trays with bottoms of finely split and braided cane. While drying, it was re-curled by hand, and was then ready for re-packing. The green teas were dried in the same way, and then finished up with a preparation of Prussian Blue and Glenfield starch, giving it a beautiful pearly-green color. A substance was also added, the name of which we could not learn, to give it the fine "boquet" or aroma so valued by tea fanciers. We took up some of the fine compound, and said to John, who stood at our elbow:

"Do you know that this is poison?"

"Oh, Yes!" was his reply, "me know him poison, but Melican man want him zis color."

And such is the fact. There is poison enough in a single ounce of this green tea to kill a man, if taken at once. "Tea tasters" employed in the Custom House soon sink into the grave from the effects of this slow poison.

Times being hard and a cold winter at hand, many really clever persons are at their wit's end for some means of keeping the wolf from the door. Desperation has driven one of them to the dire extremity he so forcibly portrays in the following advertisement:

WANTED—A Situation as SON-IN-LAW, in some respectable family. No objections to going a short distance into the country. For reference and particulars, address FRANK STEUART, Post-Office, Williamsburg, N. Y.

BUSINESS NOTICES.

Tucker's Opening.—A great crowd of our citizens have thronged the magnificent jewelry palace of J. W. Tucker & Co., every day and evening since the doors were opened. It is worth a long travel to visit this store. All that the most refined taste could devise, or the genius and skill of the mechanic could perfect, has been done to present a most chaste and finished design throughout all the arrangements of the place. It is one of the finest specimens of art and taste in our city: The deep rich color of the whole interior, finished as it is with dark mahogany, and embellished with large and costly mirrors, these with extensive counter cases full of the most costly wares, and gleaming with gems. Here will thousands soon resort with heavy purses to select for kindred and friends their Christmas and New Year's presents. We saw several beautiful articles which costing from $100 to $1000 will make many a recipient happy on the coming holidays. This establishment may with truth be called the finest finished store on the Pacific Coast. The present stock of goods is extensive and costly; though it costs nothing to walk through the store, we would advise those who try it to have "long and deep purses" to meet the temptations so lavishly displayed.

"Oh, the Washing Day."—The washing day is one of the "storming days" in the "domestic life." "John, hang out the clothes line"; "Mary, bring me the clothes pins"; "Susan, help me with this tub"; "Tom, where's the clothes poles?" "Is that boiler right?" "Is the water hot?" "Help me with this basket." These, and a similar bevy of sounds come to the ear. "All on a washing day." But there are some good things now; this scrub, scrub, scrub; this wring, wring, wring, is almost all done away by progressive labor; the hard times of washing day is past. It is almost a pleasure now, that is, if you have a Bailey's Patent Combined Washer and Wringer; the work does itself almost. By referring to the advertisement of Bailey's Patent, the reader will learn of a kind of Washing Machine, such as we have in our family, and we know it does admirably, and does the work in half the time; and we can personally and domestically recommend it as a good Christmas or New Year present for every woeking man to give to his family.

New Hat Store in San Francisco.—A handsome "beaver" is the very *crowning* article of a gentleman's dress. A bad hat spoils all; a genteel glossy beaver will make even a shabby dress look decent. C. J. Collins, the original "Eagle Hat Store" of San Francisco, in 1852, has now opened the new and elegant store in Tucker's buildings, and with his brother, J. C. Collins, they are prepared to "head" off every gentleman in our State, and give them the very "tip top" of a fashionable dress. C. J. Collins was originally on Commercial street; burned out in '56; afterwards on Washington street, and more recently of Lamott & Collins of Sacramento—now Collins Brothers, under the firm of Collins & Co. The talent and skill of this firm, as manufacturers, is beyond question, and their style of hats the very *ne plus ultra*. Their many friends will now be glad to crowd them with a business which they are honorably entitled to.

Very Rich Furniture.—Messrs. Selling, Marx, & Co., are now receiving the largest assortment of Rich Furniture ever opened on this Coast, consist- of about *two thousand* cases. We looked into the Warehouse, the present week, and examined the rich Parlor and Chamber Sets. We noticed one Chamber Set, of carved black-walnut (most superb), valued at $600; others, $400, $350, $300, and $250, each; also, Parlor Sets, $500, and down to $150. A new style of Ladies' Work-table; and also the Cuba Washstand, very chaste. These with other Goods, will well repay purchasers for calling particularly on this House, before they make their purchasers.

Raspberry Wine.—This Beverage is becoming very plenty and growing in public favor. Messrs. Graves, Williams & Buckley are sending out from their Wine Cellar some of the Best that has yet been made. It is a very superior article, of great body and strength, and as fine as can be made; it is from the Vineyard of Mr. Woolsey of Oakland. The Wine Cellar of Messrs. G. W. & B. is under the charge of Mr. Comins, who will show all attention to visitors that feel an interest in the Home-made Wines of our State, of which samples of many kinds will be found in this large Establishment.

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

MRS. D. NORCROSS,
No. 144 Sacramento street,
Above Montgomery street......... SAN FRANCISCO.

LADIES' DRESS TRIMMINGS.

This being the only regular Ladies' Dress Trimmings Store in San Francisco, ladies can always rely upon finding the largest assortment and best style goods in the city.

Having just visited the East, and completed all our arrangements with the best manufacturers of Europe for the importation of Fine Goods, as also with the largest and heaviest factors of our own country, thereby having all our goods come through first hands, we flatter ourselves our facilities are such as to make it an inducement for ladies to give us their trade exclusively for

UNDER LINEN,
HOSIERY
UNDER CLOTHING,

And all Goods in our line.

3 MRS. D. NORCROSS,
No. 144 Sacramento street.

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As BEST FOR BEDS, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

TUNED AND REPAIRED.

Music copied and arranged for all Instruments; New Music published; Music arranged and bound; Genuine Silver Strings manufactured to order. 1-1y

HOTELS.

Union Hotel, Sonoma.

EBENHARDT & GLASSEN, HAVING purchased the UNION HOTEL, of the late proprietor, Mr. A. G. Oakes, are prepared to give the best accommodations to the traveling public. 15-3m

SPERRY'S HOTEL.
Murphy's Camp.

THE COMMODIOUS FIRE-PROOF BUILDING, lately erected by the subscribers, at Murphy's, has been elegantly furnished throughout, after the most approved style, and is now ready for the reception of guests. Parlors and suites of rooms for the use of ladies exclusively, and parties visiting the "BIG TREES," or other natural curiosities in the vicinity.

The management of the Domestic Department is confided to Mrs. Perry, a lady of experience.

The Bar is stocked with fine WINES, and the larder daily supplied with seasonable delicacies.

Stages arrive and depart daily for Mokelumne Hill, Sacramento, Stockton, Sonora, and Columbia.

Parties of pleasure and transient guests will find every accommodation for their comfort.

20-3m SPERRY & PERRY.

PRESTON'S PLACE
Tomales Bay, Marin Co.

I WISH TO INFORM MY FRIENDS AND the public, that the demand for a house of entertainment at this place has been such as to induce me to fit up my house for that purpose. To parties wishing to pass a few days pleasantly in the country, this locality has few equals. Boat-Sailing, Fishing, Hunting, and gathering Shells on the Bay and Ocean Beach, are among the pastimes; and then all have "a claim" in the Clam-Beds free of charge. The place is situated 18 miles westward from Petaluma, and is a nice drive, over a good road, through a fine farming country. It will be a pleasure to endeavor to make your visits agreeable.

21 R. J. PRESTON.

DOWNIE HOTEL,
South End of Durgan Bridge,
Nevada street, Downieville.
W. M. DOWNEY, Proprietor.

WITH INCREASED BUSINESS, I HAVE enlarged facilities for accommodating my guests.

The Hotel has just been painted, papered, and carpeted, from top to bottom; and a large number of sleeping apartments, well furnished and ventilated, added to the usual number.

REDUCTION OF PRICES:

Board, per week	$7 0
Single meals	5
Board and Lodging, per week	$8 50 and 10 0
Lodging, per night	25 and 50 cents

Warm Springs Hotel!
Near the Mission San Jose,
28 MILES FROM OAKLAND.

THIS BEAUTIFUL PLACE OF RESORT is now open for the season for the reception of private families, tourists, invalids, and general visitors.

The Warm Springs are so widely and generally celebra throughout California, that it is unnecessary here to recapi late their various qualities. To invalids, they offer the gre est advantages; their medicinal virtues being unsurpas even by those of the Rhine, so extensively patronized from all parts of Europe and America.

The buildings are new and extensive, affording accommodation for a great number of guests, and containing every requisite usually appertaining to a fashionable Watering-place.

The assistants are the best that can be procured in the State, and being under the immediate supervision of the proprietor, visitors may rely that every attention will be paid to their comforts.

The Table is supplied with every delicacy which can be procured in the State.

Fine hunting-grounds and trout-fishing within a short distance of the Springs.

14 6m LEWIS BRADY, Proprietor.

The Plaza Stable,
DOWNIEVILLE.
RETICKER & MORRISON.

The proprietors of this Stable ask the attention of the public to their establishment. It needs but us only to say that we are at all times prepared to furnish HORSES and MULES, for the single day or longer period, and Horses and Mules for Exploring Expeditions for all the Interior. Our Stock is all trained for mountain travel, sure-footed, and well-broken to the trail. Charges always reasonable.

We have a Stage and Passenger-train running from Downieville to Virginia City, leaving Downieville Mondays and Thursdays, and leaving Virginia City same days, making the trip in two days. Price $15. 24-3m

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 900 acres of Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $ All these implements will go to the purchaser with cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861.

FOR SALE.

A VALUABLE HOMESTEAD, WITH excellent Out-buildings, a fine Garden, Vineyard of four acres, with a field of sixty acres more, for pasturage or cultivation. The whole will be sold a great bargain if applied for immediately.

For particulars apply at California Farmer Office. 9

GARDEN-ENGINE FOR SALE!

A FINE GARDEN-ENGINE, OF CAPACITY TO throw a good stream of water 50 or 60 feet, can be had at a bargain on application at the Farmer Office.

Literary Shrubbery.

SWORD AND PLOW.

The Sword came down to the red-brown field,
Where the Plow to the furrow heaved and keeled;
And it looked so proud in its jingling gear,
Said the Plow to the Sword, "What brings you here?"

"Long years ago, ere I was born,
They doubled my grandsire up one morn,
To forge a share for you, and now
They want him back," said the Sword to the Plow.

The red-brown field glowed a deeper red,
As the gleam of war o'er the landscape sped;
The sabers flashed, the cannon roared,
And side by side fought the Plow and the sword.

◆

Ike Partington's "Composition."

Ike Partington is well advanced in his class. He is something beyond the teacher's art, and could in fact, give that functionary some lessons in arts wherein he is perfect. Ike dislikes "composition," where a theme is given out to be written upon by the scholars, and his credits are not very great for his efforts in that direction generally, but the other day he astonished the master and every one by an elaborate article on the horse. He was called upon to read it aloud to the scholars, and getting upon the platform, he made a bow and began:

The Horse.—The horse is a quadruped, with four legs—two behind and two before. He has a tail that grows to the hind part of his body, that nature has furnished him, with which to drive the flies away. His head is situated on the other end opposite his tail, and is used principally to fasten a bridle to to drive him by, and to put into a basket to eat his oats with. Horses is very useful animals, and people couldn't get along very well without them—especially truckmen and omnibus drivers, who don't seem to be half grateful enough because they've got 'em. They are very convenient animals in the country, in vacation time, and go very fast over the country roads, when the boys stick pins into them, a species of cruelty that I would not encourage. Horses are generally covered with red hair, though some are white and others are gray and black. Nobody ever saw a blue horse, which is considered very strange by eminent naturalists. The horse is quite an intelligent animal, and can sleep standing up, which is a very convenient gift, especially when there is a crowd, and it is difficult to get a chance to lay.

There is a great variety of horses—fast horses and slow horses—clothes-horses, horse-mackerel, saw-horses, and horse-flies, horse-chesnut, and horse-radish. The clothes horse is a very quiet animal to have around a house, and is never known to kick, though very apt to make a row when it gets capsized. The same may be said of the saw-horse, which will stand without tying. Horse-flies is a very vicious beast, and very annoying in the summer when a fellow is in swimming. Horse-mackerel I don't know anything about, only that they swim in water, and are a species of fish. Horse-chesnuts is prime to pelt Mickies, and horse-radish is a mighty smart horse, but bad to have standing around where there's children.

The horse is found in all countries, principally in livery stables, where they may be hired by the mile, and are considered by them as can get money, a great luxury, especially in the sleighing season. In South America they grow wild, and the Indians catch them with nooses that they throw over the horses' heads, which must be thought by the horses a great noosance.

Ike stepped down from the platform with a great consciousness on his face that he had done a great work; and he felt consciousness, soon after, somewhere else, of a different sort.

◆

Cuttings from Vanity Fair.

More "Forward to Richmond" Bosh.—We have all heard of the advice given to the perplexed playwright by a sagacious friend. "My dear boy," said the counselor, "just cram your second act full of brilliant witticisms and your play will be a success!"

Three or four Senators at Washington—who ought to be in a better business—are just now tendering equally sapient advice to the Administration. These quid nuncs represent that

The popular demand of their constituents is that General McClellan or somebody else shall right off whip the rebels on the south side of the Potomac in a pitched battle, and as near Bull Run as possible, and from thence roll the tide of war steadily southward till it meets the waters of the Gulf.

What could be finer than that?

All that General McClellan or "somebody else" has got to do, is to take an early breakfast some morning, mount his gaily caparisoned steed, call his trusty men about him, and after they have lighted their pipes, order them to advance at once against Manassas. Putting Beauregard to flight and cutting his army into smithereens, the bold followers of McClellan or "somebody else" will fill up their pipes again and resume their march towards Richmond. Arriving there they will reduce the city to ashes, hang Jeff. Davis and all his cabinet and take tea. After a refreshing night's rest they will take another turn at the "tide of war" and "roll" it considerable. Say through North Carolina. Thus gaily prancing towards the "waters of the Gulf," they will subjugate the South, destroy her armies, and conquer a peace and enjoy themselves generally. No pains will be spared to surround each one of our brave defenders with the comforts of a home. In the mild tropical evenings, the Federal camp will invariably be "lapped in soft Lydian airs;" the mellow moonbeams will punctually rest upon the white tents of our soldiers, and the soft breathings of the oaten flute and the mellifluous notes of the hand organ will undoubtedly be heard.

We agree with you, Messrs. Senators. This is, indeed, a very pretty programme. We do not imagine, exactly, that General McClellan will undertake to carry it through, right away, but then, as you justly observe, "somebody" else may.

And now, that you think of it, let us suggest that these constituents of yours who "demand" this course, should throw up their positions in the Home Guard, shoulder real muskets, and go to Washington to help "somebody" along.

A General of Division.—The Charleston Mercury of November 10th, says that "General Drayton retired in two steamers by Pipe's Ferry," on his hasty retreat from Port Royal. This extraordinary distribution of the rebel General can only be accounted for by the supposition that he was very much cut up about the loss of his forts.

A Con. for the Camp.—Q.—Why is a lover who composes a pretty sonnet to the features of his "object" like a soldier?

Ans.—Because he knows how to Write about face.

One Thousand Miles in One Thousand Hours.—Whatever may be said of the failure of Gen. Price's rebel command, as a fighting body, it certainly succeeds well in the Long Run.

To Horse.—Without plenty of cavalry, we need never expect to have a Stable Government.

The Principal "Game" Found in the Fastnesses of Washington.—The Tiger.

A Maxim Picked out of "Pi."—The sword is Smitter than the pen.

Always in the Wash.—Lawn dresses.

A Shell Road.—The way Dupont took to reach the Port Royal forts.

Having every accommodation for the purpose, MR. JOHNSON will Train, Break, Bit, and Gait, Horses; or give instructions in the same.

Ladies and Gentlemen whose duties will not allow them to attend during the day, can receive instructions at night. 12

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the disease. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of
Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. A very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new Inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859; and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by
JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO*

Colby's Patent Improved
CLOTHES WRINGER

THIS MACHINE IS ATTACHED TO A TUB WHEN IN operation. It consists of a pair of India Rubber Rollers, hung in a framework of galvanized malleable iron of peculiar form, held together by a single rod, or tie, which forms a joint in the frame, by means of which the rollers are held in their proper place, and the Machine clamps itself firmly to the tub or box.

I give seven good reasons why every family should have a Machine of some kind for this purpose; and if we allow each reason given to make a saving or be worth but two cents per week, you will have the price of the Machine in one year, and it will last a lifetime.

1st—It will save time, which is money.
2d—It will save strength, which cannot be bought.
3d—It will save the clothes, which cost money.
4th—Any man, boy, or girl, can use it, who could not wring clothes by hand.
5th—It helps to wash the clothes, and by running them a few times through the Machine, out of hot suds, it will clean them as well as half the Washing-Machines in use.
6th—It leaves the clothes in a better condition to dry.
7th—It helps to make Washing-Day more pleasant.

It will be seen by the above that no family can afford to be without such a Machine.

I can give many excellent recommendations, if necessary

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Dec. 25.

The severe storm that we have suffered from has had an unfavorable and disastrous effect on grain in many portions of our State and Oregon—flooding the country, damaging and destroying large quantities. In Oregon the loss in grain has been immense; so much so as to cause a temporary suspension of shipments. We hear of one vessel at Portland, that had completed loading for this port, having discharged that portion of her cargo consisting of wheat and flour, they, fearing it would be needed there. That Oregon has a surplus of wheat and flour we feel confident, and which will at some future day find a market here. It only remains now a point of time for them to replace bridges and arrange to bring it in from the country. In the mean time the bulk of our wheat and flour will find a market at full rates, having no competition. Since our last report we hear of no new charters, but the following ships have completed their loading: the Nonpareil, for Falmouth, took for cargo 29,122 sks. wheat, valued at $61,475; the Inspector, for Liverpool, took 299 silver and lead bars, 42 casks tallow and 40,746 sks. wheat, valued $100,515. The steamers Pacific and Cortes have both arrived from Oregon; their cargos are as follows: 11,899 boxes fruit, 301 sks. onions, 233 bales wool, 13 bbls. butter, 172 hides and $232,615 in treasure. But little trade can be expected for the next eight or ten days. The uneasiness that was felt and which we alluded to in our last, about shipments of grain stopping, has about subsided, and we find that many agree with us that there is or will be a demand for all of our surplus, and the alarm was in a measure sounded by those who wished to buy at a decline in price. From every agricultural section of our State we hear of extensive preparations being made to plant heavy of wheat the coming season, and in some cases wheat to the exclusion of all other kinds of grain. Should the season prove favorable, our crops of wheat will be immense, and farmers as a general thing are using great care in the selection of their seed; all of which argues favorably. Our receipts of grain for the past week have been heavy, both coastwise and from around about the Bay. Large quantities of damaged barley have been received from Sacramento City, which soon will have to be supplied again in good barley. The consumption of this grain being very heavy in that section of the State, an advance is confidently expected. The unfavorable and stormy weather has proved disastrous to large quantities of hay in transit, and damaged hay has been offered freely on our market, causing a decline in price of all qualities. The receipt from around the Bay for the past week has been as follows: wheat, 23,113 sks.; flour, ½ sks., 2,500; barley 4,742 sks.; oats, 1,607 sks.; corn, 40 sks,; beans, 100 sks.; onions, 100 sks.; potatoes, 2,453 sks.; salt, 2,300 sks., bran, 1,229 sks.; wool, 87 bales; hay, 213 tons.

Samples of Grain.

Some of the finest Samples of Grain grown in the State can be seen at the Office of the Farmer.

[From the Farmer of Dec. 20, 1861.]

New Business Arrangement of the Farmer.

For eight years past we have given our entire time, day and night, summer and winter, rain or shine, to the duties of our profession, until we have found that the accumulation of business and duties were of such an amount that if longer continued human strength would not endure it. We have borne the entire care of the Editorial department, with the selection of all other matter; we have been our own bookkeeper, collector, traveling agent, and have answered all our own correspondence; beside these duties we have canvassed for the journal, and given time to examinations of farms, gardens, and vineyards, and all the many matters connected with our enterprise as far as it was possible, and often beyond our strength. Such, however, has been the accumulation of duties and cares, and now so constantly increasing, that we found it would be ruinous to our health and life if longer continued. We have found, also, that the increase of duties was such that we were often delayed and hindered in our plans, as it was by far too much labor for any one mind.

In order, therefore, to relieve ourself from some of these heavy duties, and regain our exhausted strength, and give ourself full command of time whereby we could go over the entire State and look more extensively after the all-important interests of this great science of Agriculture, we have called to our aid an assistant in our labors.

We have therefore, from this issue, associated with us in the California Farmer, J. K. Phillips, Esq., who has been in our employ as the Foreman of this Journal from its very commencement, and whose competency, ability, and faithfulness for this business is best established, when we say that for the period of *eight years* Mr. Phillips has been present as Foreman and superintended the issue of *every number of the paper*, and his ability is made manifest, as we can say with pride that for typographical style and accuracy our paper will compare with any Journal of the kind in this or any other State.

Mr. Phillips will from this date take charge of the publishing and principal business department of the Farmer, and thus relieve us of great care and laborious duties, so that we can be at more leisure to visit all our friends far and near. Our duties, however, will still demand of us that we shall in these visits solicit the aid and coöperation of all our friends and the friends of the cause, and having more time, and being enabled to be away more from the office we hope to do it more effectually.

In our absence from the Editorial room Mr. P. will attend to all matters of business; he will also receive subscriptions, advertisements, attend to business generally, and in our united interest we kindly commend him as one who has most faithfully served us in that important position for the period of eight years.

We hope we can also call upon our many friends to give to us now a renewal of their subscriptions for the year close at hand, and to give us also their kind influence among their friends.

We give to all our most sincere thanks for the many favors of this long period, and hope by this new plan to increase the interest and value of our journal, and to have its appearance, as we intend it shall be, greatly improved with every issue, and with more promptness than ever before, as with this new aid we shall be enabled so to do.

◆

How Many Grain Bags?—We called into the Bag Factory of A. Skogh, Esq., of Stockton, to ascertain the number of grain bags made monthly, and was really surprised at what we learned. Mr. S. informed us that the sum total of the year 1861, of bags for Grain and Flour, which were made by him in his store, would be between 250,000 and 300,000, or between *twenty and twenty-five thousand bags per month*, and this in only one of *three* factories in Stockton. Verily, San Joaquin may carry off the palm for grain bags! Who can beat it?

Stockton Grain Warehouse and Sales Rooms. In a call at the Warehouse of Messrs. Peters & Jackson, forwarding merchants and purchasers of grain, we ascertained that they had on hand about 200 tuns wheat, their sale the present year had been about $250,000 in value—two-thirds in wheat for export and one-third to Sacramento. We believe they have sold more largely than any house in Stockton. They are always ready to purchase of the Farmer and pay ready money.

Excellent Barley Forks.—It may not be known to the farmers or barley growers of our State that we have California made Barley Forks; yet such is the fact. We called on the maker when in Stockton, Mr. W. Beardsley, and found him a true working man—coat off, sleeves stuffed up, and hard at work. Beardsley's Barley Forks are now esteemed superior to all other. Farmers must always patronize home manufactures in preference.

Wool Business.—Messrs. Christy & Wise have opened an office at 610 Front street, for the sale and shipment of wool on commission, with favorable arrangements, to which they call the attention of the wool-growers of the State.

Left Out.—Our crowded columns compel us to leave out much intended for this week. It will appear next issue.

General McClellan's Personal History.—Gen. McClellan, a few years since, offered his hand in marriage to Miss Ellen Marcy, a beautiful and accomplished lady, a daughter of Col. Marcy, of the U. S. Army. Col. Marcy objected to the union, on the sole ground that he could not consent to the marriage of his daughter to any gentleman belonging to the army. McClellan at once resigned his commission, and accepted the place of Chief Engineer upon the Illinois Central Railroad, at a salary of $8,000 a year; and three years since he was married to Miss Marcy; and now, having reëntered the army, is now Commander-in-Chief.

Significant.—The published statement of the first quarter of our postal receipts, since secession, shows a decrease of only about fifty thousand dollars from the receipts of the previous quarter, while the expenses have been eleven hundred thousand dollars less—a saving of over a million dollars in eleven weeks. This shows where the leak in the Post office department has been. That the Southern States have not paid the expenses of their postal service.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

Sugar-beet Seed.

An invoice of French sugar-beet seed, Apply at Office of Farmer.

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and crous of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

Machine for Making Wine.

☞ Several Valuable MACHINES for WINE-MAKING, including a Machine for stripping the Grapes from the bunches, with presses, etc., capable of making Wine in the best and most rapid manner, can be had on application to this office.

The Old and the New.

The distant clock strikes twelve—the Old Year's dead!
Its sweet and bitter things have with it fled;
The joys that cheered us, and the griefs that chilled,
Are buried now with day-dreams unfulfilled.

Within the deep recesses of the soul
Lie urn'd and mouldering, damp with many tears,
Bright hopes, despairings, griefs beyond control,
And early loves—the harvest of the years!

The harvest, said I? They are garnered, then,
For future use—to guide us by their light,
To show us how we stumbled, where and when
We meanly did a wrong, or acted bravely right.

The harvest? Surely, then, 't was all for good:
The anger-blast that like a fire did burn,
The sorrow that swept o'er us like a flood—
The God who rules to some good end will turn.

* * * * *

But thousands now are bowed beneath a woe
That cannot reason—will not comfort know;
To many a household desolation spreads,
Sweeping the sheltering roof from o'er their heads.

Flood calleth unto flood in cañons deep;
Stream answereth to stream with mighty sweep;
Through mountain gorge and glade they madly pour
Their turbid waters, with a wildering roar.

Brave forest lords, that lined the torrent's banks,
Are torn resistless from their serried ranks;
Seas surging spread o'er fertile valleys broad,
And rivers roll where rippling brooklets flowed.

The smiling farm, with fairest fields well tilled,
Alive with lowing herds, with barns well filled,
To-day lies desert, waste, of life bereft—
Nor lowing herds nor bursting barns are left.

The prosperous cities of the lowlands, too,
Are desolated by the overflow;
And thousands see their hardly gathered store
Drift from their feeble grasp 'mid wreck and roar.

The garden, rich in promise for the Spring—
Of flowers and fruits, and birds upon the wing—
Is torn and rifled by the treacherous flood,
And left a desert, drowned in stagnant mud.

But forth flows sympathy from heart to heart,
From quiet hamlet to the busy mart;
To suffering neighbors stretching liberal hands,
Fulfilling love's and Heaven's high commands.

And Winter, with its stormy skies, will pass away;
The present darkness yield to sun-bright day:
Hopes blasted now by sorrow, care and pain,
Will spring anew, with blessings in their train.

And Spring will come, wide scattering the flowers;
And birds again will woo in leafy bowers;
The rich alluvium spread o'er all the land
Will teem with harvests 'neath the farmer's hand.

The lowing herds will fatten on the plain,
And hardy Thrift will store the barns again.
So will the Old give place unto the New,
And clouded skies to pure cerulean blue!

* * * * *

But hark! the herald, crowing Chanticleer:
Auspicious dawns the Morning of the Year!
The Past is fled—the Future only ours;
Then let us strive to plant each other's path with flowers.

J. L. W,

SAN FRANCISCO, January 1, 1861.

Delay in Farming Operations.

THE recent and continued heavy rains, and the wide extended calamity caused by the almost universal flooding of immense tracts of agricultural lands will cause a great delay in the putting in of seeds the present year. A very large amount of wheat land that was already planted, has been more or less under water, and some considerable quantity has been badly washed, while other portions of land have been injured by heavy desposits of sand, gravel and slum upon the soil, which will more or less injure the crop.

A very large portion of our gardening ground also has been covered by water, in various parts of the State, so that a considerable delay must occur in the season of planting the present year. It will also materially change the plans of many cultivators in the crops they will put in, and there are cases now where the calamities of the flood are so serious as to entirely prevent the use of the land the present year. We hope, however, where valley land is thus lost to use, our upland and hill-sides and mountain land will be brought into active requisition, for so great has been the quantity of water fallen that land will be so much saturated as to become very fertile, and the quicker the high land is brought into use the better. To the hill-sides, even to the hill-tops, let the plow be set to work, and every acre of good land be cultivated, for the coming year will reveal wants for our Wheat crop that we little dream of now.

"SOME TATERS."—At our Garden Spot we think we can boast of a good yield of potatoes. We had several volunteer vines spring up. Their promise induced us to let them grow even among roses; the result was from one vine we dug more than a large peck, weighing 23 pounds.

What Seeds are the Most Reliable?

LETTER FROM A SAN FRANCISCO SEEDSMAN.

SAN FRANCISCO, Jan 1, 1862

To the Editor of the California Farmer:

DEAR SIR: This day being the first of the New Year, and it being the near approach of the Planting Season, it is a very appropriate time to call to your attention the discussion that was had last winter as to the relative value of Imported and Home-grown seeds, and I would ask of you if it would not be a good plan to hold a kind of Conference with the Planters—through the medium of your valuable paper—upon a matter of such great importance to them, in order to ascertain their opinions upon the relative value of Seeds, both of the Imported article and those that are Home-grown, as the result of their own experience.

And relying upon your knowledge, acquired by travel and personal acquaintance with the Seedsmen of Europe and their business, whose names are herein quoted, I wish to gain the experience of those who have tried both foreign and domestic Seeds, and thus secure all the reliable information in my power.

As you say, in your editorial of Jan. 11th:

"It is not simply enough to know how to plow the ground, deposit the seed, and harvest it, to become a seed-raiser; it requires for such a business a thorough knowledge of the nature and character of the article which is to be *re-created* by seed, so that whatever may be the species, it should be so carefully nurtured and grown as to possess not only a perfect physical structure, an uninterrupted health, but the power so to perfect its seed. The mere general appearance of the plant, so as to show that it is the variety, is not enough; it must be strong, healthy and pure in its variety, so as to perform all its functions and mature its seed perfectly; to this end great care and experience are required; and thus far in California, the time and care required for this have been too great to enable seed-growers here to bring the business into a reliable reputation.

"The great mass of seeds raised in California have been grown by individuals where all the many varieties of the same species were raised contiguous to one another, and thus became hybridized, and the seed, when planted, produced new and mixed kinds or worthless monstrosities; large portions, too, of seed offered, are of mixtures of many years' growth, and therefore almost worthless."

My business is the selling of seeds, and my interest can best be promoted by only selling the best, whether they be the Home-grown or Imported, and am therefore desirous to gain all the information that can be procured on the subject.

Thus far all my information tends in favor of the Imported article, and until I have more reliable proof than any yet received, I shall continue the trade, confident that seeds imported from such reliable houses as Vilmorin-Andrieux & Co., Paris; Van Houtte, of Ghent; Geo. Charlwood, of London; and Thorburn & Co., New York, and other such houses, are the only reliable seeds for the planters.

As I remarked at the opening of this letter, it is the commencement of the New Year, I feel it a very appropriate time to speak a few words with the seed purchasers of California.

Since the year 1850, our House has been established as a regular Seedstore in San Francisco, and the proprietor has given his whole time and attention to the same, and having had the pleasure of making the acquaintance, and securing the principal trade of a large number of the most influential farmers, gardeners and merchants, I cannot omit this opportunity to return them my sincere thanks for the very liberal patronage received at their hands, and to solicit a generous continuance of the same, together with their frank opinions upon the above subject, as one of great importance to the whole State.

By a reference to my advertisement in the columns of the FARMER, it will be seen that I am fully prepared, by the largest and best stock of Seeds ever offered, to supply all orders on the very best terms.

This experimenting with seeds raised by irresponsible or pretended seed-raisers, may do very well for those that want to sell them—but will certainly be of *no* benefit to those that plant them.

I remain, Yours, truly,
S. W. MOORE.

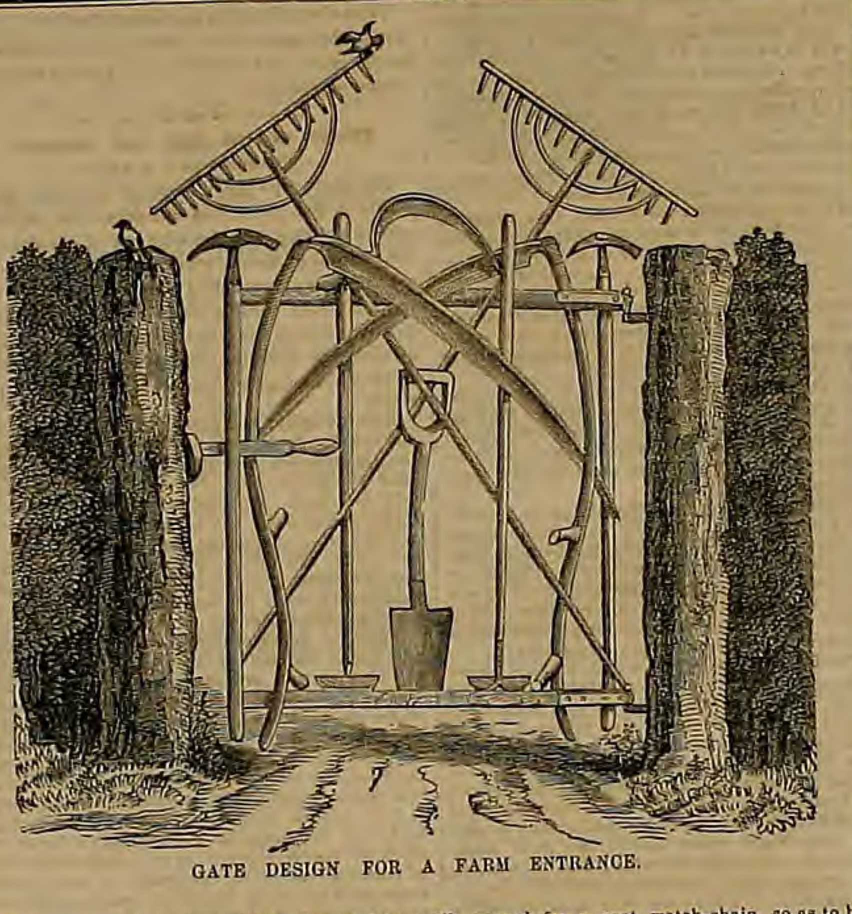
Seed Warehouse, San Francisco.

San Joaquin Agricultural Society.

WE have received copies of the Transactions of the San Joaquin Valley Agricultural Society, for the year 1861.

These transactions are published in a very neat Volume of 170 pages, and comprise a history of the Society, and all its doings, with the various Addresses of its Officers, and those delivered at the Annual Fair; together with a list of the Exhibition and Premiums awarded. The work is highly creditable to the Society.

By the Reports, we find that the Society now holds property, valued at $30,536 10, and is indebted, $14,209 10; the last Fair was a success, realizing $5000 profit. One or two years more of similar success, the Society will be free of debt. $15,640 were paid in Premiums and Expenses in 1861; and plans have been laid for great usefulness in the future. With a very efficient corps of Officers, we may say that this Society is the most efficient Institution in the State, having paid all its Premiums and Expenses promptly, while the entire indebtedness is to strong friends who have raised the means to place it on a permanent basis.



GATE DESIGN FOR A FARM ENTRANCE.

What Fruits Shall I Grow?

WE republish from the FARMER of December, a year ago, the following: As we have promised to give lists of the different Fruits that should be grown, we shall select those we *know* have been successfully grown and well approved. That there are many other kinds of most excellent character, we do not deny; but where a few (half dozen) are wanted we shall give a few for each of the seasons, and enlarge for those who wish to grow greater varieties:

Summer Apples.

Early Strawberry; July to August.
Early Harvest; July.
Red Juneating; July.
Red Astrachan; July to August.
Williams' Favorite; July to August.
Large Yellow Bough; August.

Autumn Apples.

Gravenstein; September to November.
Alexander; September to October.
Beauty of Kent; October to December.
Porter; September.
Rambo; October to December.
Fall Pippin; October to December.

Winter Apples.

Bellflower Yellow; November to February.
Baldwin; December to March.
Golden Russet; October to January.
Rhode Island Greening; October to March.
Blue Pearmain; October to February.
Yellow Newtown Pippin; December to January.

Preserving and Cooking Apples.

Siberian Crab, Red and Yellow; most excellent.
Holland Pippin.
Smiths' Cider; acid.
Gloria Mundi.
Roxbury Russet; very late.
Jersey Sweet; baking.

There are also many new kinds just introduced, which will soon be fully tested.

CHOICE APPLES.

John Lewelling, Esq., the well-known Nurseryman of the San Lorenzo Nursery, gives the following as among the best Apples grown in California:

Red Astrachan.
Am. Summer Pearmain.
Peck's Pleasant.
Rambo.
White Pearmain.
N. Y. Pippin.
N. Y. Pearmain.
Gravenstein.
Victuals and Drink.

The last must be a valuable variety, and would probably save a butcher's, baker's and milkman's bill. Lewelling grows this kind. It should be famous.

Silkworms and Silkworm Eggs.

We have been kindly favored by a parcel of Cocoons and Silkworm Eggs, from our former excellent Postmaster, C. L. Weller, Esq.

The Cocoons were clean and bright—the eggs we hope to be able to hatch, mature, and make silk enough for a neat watch-chain, so as to be ready for that New Year's Present somebody has promised us. Thanks to Mr. Weller for his kind remembrance.

Cultivation of Hyacinths.

THERE are one or two points, both as to the selection and management of the hyacinth, the most important of the bulbous group, to which it may be useful to direct the attention of amateur cultivators. The first point is as to the class of varieties to be grown. No doubt, there is a prevalent feeling, under the influence of which preference is given to double over single flowers generally, and under this influence the inexperienced cultivator might be led to prefer the double over the single hyacinth. Without denying the beauty of some of the double kinds, it may nevertheless be asserted in general terms, that the single varieties are the preferable ones for ordinary decorative purposes. They are more vigorous in constitution than the double-flowered sorts, often of brighter hues, and generally they produce more compact and massive flower-spikes, so that of the two groups, they are really the more ornamental in the majority of instances, whilst for culture in glasses, they are decidedly and at all times preferable.

Another point of some importance, where effect only is the object in view, is to make a good selection of a few distinct and decided colors rather than to multiply shades and varieties, which after all the trouble that may be taken with them, will not yield half so satisfactory a result as the fewer decided colors. Especially it is unnecessary for mere decorative purposes to have recourse to high priced varieties, the value of which, in many cases, is merely nominal, and dependent rather upon a limited supply than upon their intrinsic merit. There are, of course, among these, as among other flowers, new and also improved varieties to be met with; indeed, there has been of late years a marked advance in the quality of new kinds of hyacinths, so that those who seek for novelty, will find here a fair share of encouragement to obtain them; but the point we would particularly impress on our inexperienced readers is this, that such varieties, novel and high-priced as they may be, will afford them no advantage, looking at the matter as a mere question of ornamental display. The interest to be elicited from the cultivation of novelties, such as these, will be dependent on other sources.

There are few brighter and more beautiful spring flowers than the hyacinth, whether grown in forcing house, for the decoration of the conservatory and drawing-room, or placed in glasses of water, or in bowls or vases of moss, and treated throughout as household plants, or grouped in the beds of the flower garden. Few flowers, indeed, prove so brilliant and pleasing as those in the latter situation, to which we may more specially refer hereafter. At present, it may be useful to many readers, who are their own cultivators, if we briefly recapitulate some of the prominent features of in-door culture.

First as to glasses. Those known as Tye's hyacinth glasses are much to be preferred, on account of their appearance, to those of the older form. They may be had of plain colors or ornamented, and should be accompanied by the wire supports for the flower spikes, now commonly provided. The bulbs should be firm, clear, and evenly formed, not over large (the different sorts vary considerably in size), and perfectly sound. The glasses should be nearly filled with soft water, just so that when the bulb is placed in its position, it may all but touch the surface of the water. After planting, they should be set away in a close dark place, where the temperature is moderate and equable, and the atmosphere at least not parching; no place is better than an ordinary cellar. They remain in this position for a month or six weeks, until roots have become freely developed, and then may be removed to a cool room, and gradually inured to bear exposure to the full light. The glasses are to be kept filled up with water as it wastes; and the water is not to be used at a temperature below that of the room, and need not be changed unless it becomes offensive, which is seldom the case. A cool room, where they can be fully exposed to the light, is the best place for them after the leaves are put forth; but in cold weather, they must be removed from the window, at night, or they may be liable to sustain an injurious check, if the temperature falls very low. A portion may be accelerated by being kept in a warm living room, after they begin to grow.

When cultivated in bowls or vases, the vessel may be filled either with clean damped moss or moistened sand, the former being pressed moderately firm. In either case, the bulbs should be placed so as to leave about one-third of their upper surface exposed. Like those in glasses, they should be set in a dark dampish place to root, before being exposed to light or stimulated by heat. The colors, too, should be tastefully grouped, and the varieties selected with reference to their vigor, so that the tallest may occupy the center of the group.

By another plan, it has been recommended to place the bulbs in a flat dish of porcelain, glass, or other material, in which about half an inch of water is first put. Under such conditions, the roots are sure to spread horizontally, and to clasp each other, so as to form a mutual support. Shallow vessels of ordinary pottery-ware might be planted in this way, and afterwards set in ornamental dishes, the coarser material being hidden by a covering of moss.

After all, however, there is no mode of culture within doors, which is so thoroughly satisfactory as pot culture, and we conclude this notice with the following very judicious summary of this method of cultivation, from the Bulb Catalogue of Mr. W. Paul, of Waltham Cross, who has been a successful exhibitor, and herein explains the ground of his success:

"Hyacinths in pots may be potted from September to Christmas, in order to secure a succession of bloom. October is perhaps the best time for potting the mass. Fill the pots with a compost of turfy loam, with a plentiful admixture of sand and well-decayed manure. Five and six-inch pots are the sizes ordinarily used; but I prefer a deeper pot, with more upright sizes, and would recommend such when it can be procured. In potting, one-third of the bulb should be left above the surface of the soil, and the pots should be placed on the level ground, out of doors, having previously taken precautions to prevent the ingress of worms through the holes at the bottom of the pots. Cover the pots with six inches of cinder-ashes, coarse sand, or any porous material, leaving them so covered for at least a month, then removing them, at intervals, as required, to a cold frame or forcing-house. As the leaves expand, place the pots close to the glass; give plenty of air and water, and protect them from frost."—[Gard. Chron.

[At S. W. Moore's Seed Store, can be found a splendid collection of this and all other Bulbs.]

Grape-Vines—Fall Training.

IN our early volumes, says the Working Farmer, we published several papers, by Mr. James Galbraith, on the cultivation of the out-door grapes, in one of which he earnestly recommends the pruning in late November, as being in every way superior to spring pruning.

For Isabella, Catawba, and other out-door sorts, we have no doubt of the superiority of fall pruning. The arbors are thus freed from a mass of branches, and therefore do not hold a great weight of snow and ice during winter; the cuttings then made are not dried out, as when exposed for the winter. No bleeding occurs to weaken the vines, as with spring pruning. Capillary attraction does not entirely cease with untrimmed vines during winter, for the wind blowing fiercely among the forests of canes, increases the movement of any fluid portions contained in them, while the continued evaporation from so great an amount of surface, shrivels the vines, disturbing their organism, and leaving the capillary tubes, outer coating, etc, in worse condition than when fall pruned. The grower has more leisure in fall than in spring, and therefore the pruning, tying up, etc, are more perfectly done; the cut ends are perfectly healed, and when the sap commences to rise, it necessarily swells only those buds which are intended for growth; the pushing forward of the eyes gives earlier results, and the mass of canes is not sufficiently great to be injured by March winds. For those kinds of grapes requiring the longest season, the fall pruning is absolutely necessary for the greatest success.

Rust in wheat and Rot in Potatoes.

Mr. Klippart, in his work on drainage, gives the information that drainage prevents rust in wheat and rot in potatoes. There is no doubt of the entire truth of this statement. In the potato-crop there is quite a surety of it, as many fields, which, being under-drained, have effectually escaped the rot, while those alongside, not so prepared, have suffered severely from drought.

Wheat may be sown later in the fall in under-drained soils, and therefore will escape the Hessian fly, and by perfecting earlier in the season, will escape the midge-fly or weevil.—[Work. Farm.

COD LIVER OIL, which for some years has been the panacea, or rather stay for consumption, is about to yield the field, if we are to believe the New York Medical Times, to a more agreeable but efficient agent, in the shape of simple cream. Dr. Alonzo Clark, of that city, who is said to be the highest New York authority, declares cream to be a substitute for cod liver oil and all other "remedies" of a like character. This will be good news to cod liver patients, who dread that potion, we understand, with unqualified disgust.

Grapes and Wine.

AT a late meeting of the Brooklyn Horticultural Society, some important questions regarding the grape were submitted by the editor of the Horticulturist to Dr. Grant, who replied to them at length; and, as his remarks must be of interest and value to our vine-growers and readers, we copy them, with the questions:

1. What are the characteristics needed in a native grape, to constitute it *best* as a fruit for the table?
2. Are these characteristics inconsistent with those needed for the best grape for wine?
3. What is the comparative value of the native and foreign grape, as objects of culture for profit?
4. Is it your opinion that the native grape can be profitably grown for the purpose of wine-making?
5. Is not thorough preparation of the soil more economical than poor preparation?
6. Is not some good system of training indispensable to the continued productiveness and longevity of the vine?
7. Can grapes be grown successfully in our city yards, as a general thing? If so, what are the necessary conditions as to exposure, etc?

These questions, Mr. President, just proposed by our friend the Editor, have opened windows into all of the passages that lead to the grand hall of the Vine; and if we explore them carefully by the aid of the light which he has held up to us, we shall obtain sufficient knowledge of all that pertains to it to resolve the important questions that are now perplexing the minds of many who are much interested in the subject.

It is a matter in which every one has a real interest, whether he now feels it or not, and deserves a much more extensive examination than the present opportunity will enable us to give.

Question 1. "What are the characteristics needed in a native grape to constitute it *best* as a fruit for the table?"

Those who have eaten grapes no better than the Isabella, or the Catawba, have taken grapes as we take the lot of life—a mingling of good and ill, in which, from untoward circumstances, the ill often appears to predominate; at least it is so to those who look for unmingled enjoyment.

Persons who have enjoyed the foreign kinds in their perfection freely for a length of time, have generally lost the ability to perceive any good in the native kinds, and characterize them as "bad," or at least not attractive, by the very small amount of good which they can discover, and refuse to partake of them, when, after repeated trial, they find nothing to enjoy and much that offends.

But, in speaking of their own pure, rich grapes, they use terms of enthusiastic praise, that seem extravagant to those who are either quite ignorant of them, or only at rare intervals taste them, and that with the palate merely, and have not acquired the enlarged ability to enjoy, which, in its full development comes only from culture and use. They, under favoring circumstances, have apprehended the truth, and speak that which they know; but this knowledge and enjoyment, with its accompanying elevation and refinement, very few can have, if they look only to foreign varieties for it. They are expensive luxuries, and must remain still exotic—beyond the reach of the many. And that this is no matter of regret we shall presently more fully see.

Now let us see what the vices and virtues of our ordinary natives are. If we critically examine a well ripened Isabella in its best condition, we shall find in about two-thirds of its substance some vinous refreshment, and enough sugar to make it palatable. One-third or more of the central portion is a mass of fiber, and crude, unripe, adhesive substance, consisting chiefly of citric acid. In eating, we pass this by the palate before it is entirely divested of its mucilaginous and sugary coating, with the swiftness of a bullet in its flight, that it may not offend the taste while we enjoy the better part. The center, besides the acid mass, includes the seeds within it, and this, theoretically, is not only injurious to the health, but extremely dangerous. Practically, extensive experience not only denies the truth of this theorizing, but teaches the direct contrary, and the unanimous opinion of those who have used the Isabella most abundantly in what is considered its fully ripened condition, is, I think, that it is not only not injurious, but even in most cases positively healthful. We must, of course, except rare idiosyncracies, which can take the grape only in its most refined and concentrated form without injury. The Isabella has, in my opinion, been a friend of humanity, and its mission, which I think nearly accomplished, must be regarded as one of beneficence.

The Catawba, in consequence of not ripening so early, has not been so extensively disseminated, nor so well known, but in all that constitutes goodness of quality, is a far better grape. The Isabella may be characterized as feeble flavored, that is, deficient in tartaric acid, which is the basis of high flavor in grapes. The Isabella is only *apparently* sugary, in consequence of offering but a moderate amount of acid for the sugar to overcome. In quantity of sugar, it is much below the Catawba, as it is in tartaric acid. The ground-work of high flavor being a large amount of acid overcome or qualified by a larger amount of grape sugar, much else is required to constitute a high degree of excellence; but with a deficiency of these it cannot exist.

The Catawba contains a large proportion of both tartaric acid and sugar, when in best condition, and may be called, in contradistinction to the Isabella, a high flavored grape, and rich in the essentials of wine-making, which the Isabella is not. The Catawba is deficient in delicacy and refinement required to give it high finish; but from it, in the climate in which it matures, wine of high character is made, which cannot be said of the Isabella. From the Isabella an effervescing or sparkling wine is made, but all of the Ohio sparkling wines are made by the addition of sugar, and with that they can be made of any grape, however poor in wine-making qualities.

As a grape for the table, when well grown and ripened in a suitable climate, and particularly when produced in a long, very dry, hot season in this climate, the Catawba has a high degree of excellence, and in some important points greatly surpasses the feeble-flavored (feeble charactered) kinds of Europe, that are held in high estimation there for the table. I speak of the various Sweetwaters, Royal Muscadines, and best of all this family, the renowned Golden Chasselas of France. But it must also be remarked, that these kinds, as grown here under glass, are very different from the same fruits grown in the open air in their own country. Here they are very greatly increased in size, but as greatly deteriorated in quality, so that they may be said to consist mainly of mucilage, sugar and water, with a slight grape perfume, and are almost entirely devoid of the vinous refreshment which is the crowning excellence of the grape, and necessary to constitute it the fruit of fruits. Even in the best condition in their own country they lack the vital energy that is required for wine, and consequently cannot meet the requirements which we demand for a "best" table grape.

The Catawba may be characterized as sugary, vinous, and refreshing in an eminent degree, and not only wholesome, but positively healthful by its generous nourishing, tonic and aperient qualities. In its best condition of excellence it is a great favorite with the sick, and particularly with those suffering from nervous and febrile debility.

But with all these excellences, by reason of great defects it falls below our standard for "best." Although less acrid and pungent in its skin than the Isabella, it is never entirely unexceptionable in this respect, nor is it ever altogether devoid of a crude acid center, and always retains a degree of astringency, which, although not prominent unless carefully sought for, will not permit us to call it strictly pure in its vinous flavor; and when tried by the high standard which some of its own off-spring afford, it is found to be much wanting in that fine assemblage of qualities that gives completeness and full satisfaction.

Let us now, for a few moments, take up for examination our favorite among the foreign kinds, the Grizzly Frontignan. Here we have a large amount of the acids that lie at the base of excellence in the grape overcome by a very large amount of sugar. (It should be observed that the amount of acids is large in this only in comparison with the foreign kinds before named, for the amount is not large compared with the Pineau or Reislings, from which the Clos Vougeot, Hermitage, and Johannisberg wines are made.) But besides this, it is rich in the harmonious mingling of all those innumerable qualities which chemistry has sought in vain to detect or describe, either in the grapes or in the wine. These constitute a grape of high, finished excellence, which I, perhaps, should say satisfies at all points, and offends in nothing. Its flesh is of equal consistence to the center, sufficiently tender, and all equally flavored, and its skin is just thick enough and of sufficient strength to safely contain the abundant juice, which is little else than sugary wine. In this are joined in a very high degree, and perhaps equally, excellence for the table and for wine.

We are not ignorant of the fact that there are some who have never made the comparison in the true sense of the word, either from indifference or want of opportunity; and some, with whom nature or circumstances have been very parsimonious in their dealings in not having given them the power of perception to discriminate and enjoy, who have not discovered the great superiority of the Catawba over the Isabella.

To the careless and indifferent I would say, you are neglecting to accept good things that are offered, to the abridgement of your own enjoyment, and if we can induce you to give more attention to this matter, we shall receive your gratitude.

For those who have not the ability to perceive the finer qualities, and can only know things by their asperities and faults, we have a kind, compassionate feeling, but no words of dispute or argument, for we could not be understood by any ability with which we can address them. They cannot comprehend what the term grape implies to those of fine and cultivated perceptions.

The Grizzly Frontignan, which we have placed in the class "best," will be regarded as strictly so—that is, without a superior by very many; but those who wish for more active refreshment will seek a grape that will make a rich *dry* wine rather than the sweet Muscatella, which is the produce of the Frontignans. This may be characterized as sweet and luscious, but not the wine that Paul would have recommended for the stomach's sake. Our own Diana makes wine of the latter class, pure, rich, eminently refreshing and permanent, as if acting by large nourishment rather than by stimulation, as is the case with those marvelous Rhine wines, not followed by fever, headache, or depression as secondary effects, such as usually follow from sweet, exciting wines, which are drunk to please the palate merely, or the alcoholic, whose object is high excitement. As a grape for the table, pure, rich, and distinctively vinous and refreshing, the Diana, in its best condition, may be considered but little inferior to the Frontignans, only wanting in that uniform tenderness which should be considered indispensable in a perfect grape. In *vinous flavor* it is not, perhaps, equaled by any of the Frontignans, and its high character in this respect will be fully recognized when it becomes better known to the discriminating taste. In the matter of *delicate aroma*, however, the Frontignans may claim a superiority, though this is far from being the first point of excellence, as we have already indicated. The vinous grapes grow most upon the appetite by use, and delight not merely the palate, but the whole man. The Diana, both for the table and for wine, may be said to supply all the defects of the Catawba, to those who have known nothing better, and all pronounce it an exceeding good grape. Its full measure of goodness must not be expected from very young vines, and this is true of all the vinous class.

I have adduced numerous examples to show that the elements to be considered in the solution of this question are not few or unimportant. I will cite one more native in which these elements of quality will be found assembled in an unequaled degree of excellence, resulting in nearly equal eminence both for wine and for the table. This is the Delaware; and one important circumstance in regard to it should be noted. It is remarkable for long keeping, and dries readily to raisins, retaining both sugar and vinous life remarkably; but one important portion of its excellence is extremely fugacious, and without care will scarcely be fully retained much more than twenty-four hours. This appears to be the living force by which its components are held in effective junction, and which, when present, affords a peculiar enjoyment beyond that of any other fruit. It was first noted by Professor Warring, who speaks of it as "thrilling him with delight."

If we require the superlative in quality, we must abate something in size, with, perhaps, a seeming exception of the Muscat of Alexandria; but this, when fully understood, does not amount to an exception, unless as it is grown by the aid of fire-heat in a vinery, and even then it lacks the vinous life which is indispensable.

In foreign grapes, *thinness* of skin is an important consideration, because the skin of those kinds is inseparable from the flesh; but in the Americans it separates readily, and is not eaten except in such kinds as Herbemont, Lincoln, Lenoir and Elsingburg.

Our examination has been lenthened by a strong desire to know and to exhibit both the amount and kind of excellence *that* may be found in any grape, foreign or native, that we may be just and reasonable, as well as comprehensive, in stating the characteristics needed and to be expected in a native grape, to constitute it "best" as a fruit for the table

According to our showing, it may be said, 1st. The skin must be without offensiveness in odor or acrid pungency; 2d. The grape must be sweet and good to its center; 3d. The elements which constitute its pure, rich, sugary, vinous flavor, must be so perfect in their balance and mingling that the more intimately the grape is known, the more full will be the enjoyment of flavor and refreshment.

Among the foreigners, this may be found in a good degree in the Black Hamburgh, conjoined with great size, but in a superlative degree only in such small kinds as Reisling, etc., which are much smaller in bunch or berry than our own Delaware.

Question 2. —"Are these characteristics inconsistent with those needed for the best grape for wine?"

The answer to this will require but very little consideration, for if our views of the former question are correct, the inference will be already present in the minds of those who have followed our course of remarks on grapes for the table.

Those generous qualities which render a grape most excellent for wine, are the same that we esteem most highly in a grape to be used as fruit; but it will not do to accept this as true universally, for some kinds possess all of the high properties for wine, and are lessened in value for the table by exceeding smallness of size as to bunch or berries—by disproportion of seeds or deficiency of juice, etc.

Pure wine may be said to be the true expression of the richness of the grape after all extraneous matters are laid aside, with as little change as possible to the principles as they exist in the grape and constitute its value. A little alcohol is necessarily formed; and it should be very little, for if much is formed, valuable principles are not only wasted, but the usefulness of the beverage greatly abridged, and often destroyed, by the formation of a larger proportion of alcohol. Those remarkable wines of the Rhine, in which alcohol is but an unimportant accident, with more alcohol would be inadmissible where they now so gratefully refresh and strengthen, and soothe excitement. In this case, the mucilage and frame work of the fruit only are taken away, and the fruit in its purity remains in the form of limpid wine, by which, through the stomach, the whole languid being is refreshed.

[The above is but a portion of Dr. Grant's remarks, the remainder of which the Horticulturist has in notes, and which we will publish when it comes to hand.]

◆

Tillage of the Soil and Manure.

BY PROFESSOR J. J. MAPES.

FOR most crops the "tillage of the soil," until within a few years, has comprised the original surface plowing, and the after use of the hoe for the removal of weeds, with the occasional use of a small plow; committing wholesale butchery on roots, actually turning them over, changing their position, and, at the same time, without creating an adequate disturbance of new particles of soil so as to advantage by Nature's laws to the fullest extent.

More recently, and particularly in our part of the country, tools have been invented displacing the old style hoe and the one-horse plow in the after tillage of crops. These we have already fully described. We refer particularly to the sub-soil lifter, used for the after cultivation of corn and row crops, displacing the old style hoe, fork and spade. To this have been added the horse hoe, the carrot weeder, and a variety of similar implements, each of which takes the place of many workmen with the old style hand hoes.

"Tillage," now means, first, the thorough preparation of the soil by under-draining and sub-soil plowing, and proper surface plowing for reversing the position of the soil to the entire depth of the mold; secondly, the after cultivation of the crops, by which the surface soil may be occasionally elevated for a short distance, as in the use of the one-horse sub-soil lifter between rows of carrots, beets, parsnips, etc, or immediately adjacent to rows of corn, when the plants are three inches high, and the roots do not expand so far as to reach the spaces between the rows beyond the line of action of this plow; afterward by using such horse tools as would disturb the more immediate surface, cutting every weed, and leaving them exposed to be wilted in the sun. This continued disturbance of the immediate surface keeps those soils which contain a fair proportion of clay from stopping the surface openings with the clay silt, consequent upon rains, and in sandy soils so disturbing the surface particles as to prevent their becoming settled and packed, like the sand on the sea-beach, from the effect of rains.

The after manuring, as well as the original preparation of the soil by proper fertilizers, should consist in the use of progressed inorganic matters which have occupied organic form before: first, by the proper use of all the manures naturally produced upon the farm; second, by the use of all the fertilizing materials which can be applied to the soil with increased profit, and not by the use of merely such quantities as will produce a crop of improved but not of maximum quantity.

Teschemacher says on this subject:

"When, therefore, the farmer wishes to increase the natural fertility of his fields, two courses are to be adopted, *tillage of the soil*, and *manuring*. These are the means which from time immemorial the practical agriculturist has put in active use, and by which he has often increased the produce of his ground in a ten-fold, twenty-fold, or a still greater ratio.

"By the *tillage of the soil*, concerning which we shall speak hereafter, the farmer improves its external or physical constitution. Plowing and harrowing lessen the firm coherence of its mass, and at the same time render it more accessible to air and water. By this circumstance both the weathering of its mineral, and the decay of its organic constituents, are promoted. Deep and sub-soil plowing, etc, effect the same beneficial changes in its deeper portions, as well as an intermingling of the different kinds of soil. The latter circumstance not only places a more efficacious substratum of earth at the disposal of plants, but likewise insures a more equable distribution of its moisture. By carrying off its superabundant water, or draining the soil, is not merely rendered more dry, friable, and warm, but also more energetic and sound: more energetic, because air now penetrates, instead of water, into its interstices, producing a more active weathering and decay; sounder, because the access of air prevents the further generation of acids, which are notoriously disadvantageous to plants grown upon that land. By coating with marle or lime, the free acids already present in the soil are most rapidly neutralized, and the activity of the ground in decomposing and dissolving its organic and inorganic components is materially promoted. At the same time an excessive binding of the soil is corrected; an improvement which might also be attained, were it not in the majority of cases too expensive, by burning earths of this description. A judicious interchange or rotation of crops, may also essentially improve the physical constitution of a soil, inasmuch as leavy plants (for instance, peas, clover, etc), shade the ground, and keep it moist during a whole summer, whilst deeply-rooting plants (for instance, rape, etc) make it loose and mellow. Finally, irrigation may likewise contribute to the improvement of the character of the soil."

The relation which the cost of manures, to the extent that they can be applied with increased profit, bears to the value of crops, may be somewhat inferred from the cost of a single bushel of plaster applied to lands deficient in sulphuric acid and lime, when used for raising clover; also from the value of five bushels of salt to the acre on lands deficient in chloride or soda, or containing an excess quantity of lime, as compared with the change in the amount of crop produced by such addition, and at the cost of a single sack of nitrogenized super-phosphate of lime, when applied as a top-dressing, in the fall, to a grass crop, on soils deficient of the phosphates, as compared with the increased amount of grass produced thereby. We may also notice the improved amount of crop, consequent upon the use of five bushels of unleached wood-ashes applied to the acre, as compared with former results. With all these before us, we should ascertain by experiment the largest amount of fertilizing material which we may use with increased profit: remembering, that the degree of labor in the preparation of the soil, and in the after tillage, bears no relation to the amount of manure applied, while the amount of crop bears directly upon the supply of fertilizing material afforded it.

Teetotal Plowing "Days."

THE following, from an English paper, gives a glance at some English farm operations and customs:

At Scales Farm, near Richmond, Yorkshire, Mr. William Wilson (formerly of Skeeby) held a plowing day on the 7th of February, on strictly teetotal principles. The men had plenty of coffee and spice-bread at ten o'clock, at noon a good dinner, and between three and four o'clock in the afternoon plenty of coffee and spice-bread. At Wharton, within three miles of the above place, Mr. Harker held a plowing day on the same principles—no alcohol in any shape, but plenty of coffee, plum pudding and beef, and we hear a few complaints; of course there are some "thirsty souls" who would like a beer-barrel in the field continually. At Union House Farm, near Skeeby, about two miles from Richmond, R. M. Jaques, Esq., of Easby Abbey, held a plowing day on Wednesday, March 13th, on the same principles—no strong drink at all—coffee and spice bread at ten o'clock; also just before dinner each plowman was presented with a shilling each. At half-past twelve at noon a first-rate dinner was served up by Mr. and Mrs. Hall, Temperance Hotel, Richmond—splendid plum puddings, first-rate beef, also coffee to drink after dinner. Again at three o'clock came on bread and coffee, as before. The men worked like men; they appeared quite cheerful, contented and happy. We heard no profane swearing or lewd jests, and the men are more likely to return home like good fellows, and be fit for their work on the morrow. If we mistake not great credit is due to Mr. William Wilson, Mr. Harker, R. M. Jaques, Esq., also his worthy agent, Mr. H. J. Turner, of Richmond, for their example by facing the old custom of giving strong drink, which deceives men, and makes the plowmen as well as the gentleman, "not wise." We were pleased with a remark from Mr. Turner to this effect, that farmers generally sent to plowing days a valuable team—if they had one—sometimes worth £100. The men are generally primed with drink on those occasions, and the valuable team of horses is left to the charge of a man who cannot take care of himself. We hope the day is not far distant when all plowing days will be conducted on the same safe side, also all other work, whether farming or otherwise. A vast amount of trouble and vexation would be prevented, to say nothing about the gain in pounds, shillings, and pence, in the long run. Let the men be well treated, mix a little silver along with kind usage, and no one need fear a teetotal plowing day.

◆

Wild Flax.

ON our 'great western prairies, and in a large part of Western Canada, there is a species of wild flax, unknown to botanists formerly, which is indigenous, perennial, herbaceous and inexhaustible in quantity. It was put to no use by the early settlers, except to make straw of it for litter. Recently, the seed has been considerably collected for the manufacture of oil, but still later, its fiber has been found to be very valuable, and now it has assumed a momentous importance through the means of a very simple invention. The stalks are placed in a cylinder, and subjected to an enormous pressure of high steam—250 pounds to the inch. In less than six minutes, the contents are blown out or exploded, and the flax comes forth with the fiber divided up, and the husk or covering shattered into infinitessimal parts. It then resembles codilla or tow. It is next passed through cylinders armed with teeth, which hackle it and smooth out the fibers. It is then washed with nitric acid, and comes out as white as snow. It is then carded, drawn out into yarn, and is ready for the loom. Thus, the old, tedious and unhealthy process of water-rotting is done away with, and so is that of bleaching, to perfect which, chemistry has exhausted itself, and large fields of lawn have been indispensable.

This article, when ready for spinning, can be afforded at a uniform price of six cents a pound, and enough of it can be gathered wild—though it will be much improved by culture—from our own prairies, to clothe the world with a fabric of the finest and most durable quality. The experiments already made, and the mills already constructed to manufacture it, have furnished the most conducive evidence of the truth of this magnificent discovery. Samples of the article, in all its processes, have been forwarded to Manchester, and parties are ready to furnish as many bales of it as all the mills in England may demand.

Thus Providence seems to step in at a critical moment to destroy the value of the staples on which secession has placed its greatest reliance for its means of support, and for the attainment of foreign alliances. Let cotton be superceded by this better and cheaper article, and the Confederate States which grow this material will lose wealth, power and permanence, and be reduced to the greatest extremities. And even if they should draw back from their unjustifiable and untenable position, in all human probability, their repentance will come too late.—[N. Y. Post.

A Dialogue, Over the Fence.

"How d'ye git along hayin', nabur Job?"

"Oh! After a fashion. Put up about ten tuns."

"Ten tuns! Massy sakes! Is that all? I've got thirty tun in the stack, an' it all come off'n a dozen acres."

"What was the cost of it?"

"Not a red cent. Me' n the boys put it up. Ye don't ketch me a hirin' when I've got tew great lubberly boys, like Jim and Sam around."

"How long were you at work, Uncle Amos?"

"Jest tew weeks."

"Twelve days for yourself, at $1 25, is 15; twenty-four, at $1, for the boys, is 24; and how much team work?"

"Five days."

"Call that $4, making, in all, $43."

"Wall. I've got fifteen head o' cattle to winter, and that's—le's see— — tew dollars and eighty-seven a head. I reckon 't I can stan' that. How much d'ye say yew cut?"

"Ten tuns."

"'N twenty head o' cattle tu winter! You'll hov hides to sell in the spring, Job."

"Yes, and good round carcasses in them. I have three acres of turnips, bagas, and so on, to say nothing of my corn-stalks."

"'N ye think that's better'n thirty tun of hay—eh?"

"Better and cheaper."

"Cheaper! Wall, how?"

"Yes, cheaper, because better, even if it should cost more. But that is far from being the case. It figures up this way: three acres of plowing, $6; harrowing, $6; sowing and care, $5; harvesting, about $6;—I shall plow them out, and don't count that, as it must be done to prepare for next year's crop—then add ten tuns of hay, at $1 43, is 14 30; in all, $37 30. I expect, at least, twenty tuns of roots to the acre: so I shall have twenty tuns of feed for twenty head of cattle, at a less cost than your thirty tuns for fifteen head; and if I don't bring mine through the winter in as good condition as you do your's, I shall miss my mark."

[Uncle Amos, with head down — under-lip thrust up to his nose—and eyebrows trying to ride each other.]

"Faith! Guess he will. 'Bout a dollar a head cheaper, tew. I'll try it, next year—I will—fact!"—[Rural Minesotian.

Rosin Smoke as a Remedy for Green Fly.

THE *Aphis* is one of the most annoying insects that the gardener has to contend with, especially under glass. Fortunately, the Aphis is measurably under our control: tobacco smoke, whale oil, soap, etc., when promptly applied, are always effective, though they cannot be considered very elegant applications. The Aphis, however, has during the past season made its appearance out of doors in truly formidable numbers, and any new remedy, being equally effective with tobacco, but cheaper and more cleanly, will be welcomed by all. Such a remedy Mr. Jules Dalaleux, in a recent number of the *Revue Horticole*, claims to have discovered. It consists simply of the smoke of rosin, a substance that is cheap and within the reach of all. He says: "For some time, the great majority of horticulturists engaged in the cultivation of the peach tree have employed for the destruction of the green fly, which commits a great deal of depredation upon these trees, the smoke of tobacco, and with great success; but as I have always considered it expensive, I have replaced it with great success by another, the price of which is comparatively insignificant. For several years I have used the smoke of rosin. Rosin furnishes a larger quantity of smoke than tobacco, and till this time has given me results quite satisfactory. It is sufficient, I believe, to bring this experiment to the attention of horticulturists, who will not hesitate to make use of it, the price of rosin being a great deal cheaper than that of tobacco." We hope this simple remedy will meet with a trial.

◆

A SOLDIER'S LIFE.—The soldier's life in war is one of the greatest contrasts in the world. What a difference between the rain storm and massacre sometimes since on the Potomac, and the following picture which we had last week in a letter from Washington: "Delightful weather continues to favor those living under canvas, and quite a number of generals and field officers have the ladies of their families in camp with them. Open air concerts by the regimental bands and glee clubs, with an occasional dance on the green, make camp life quite agreeable, and the 'officers so attentive and devoted.' "

THE SLAVES AND THE UNION TROOPS.—The negroes about Beaufort stated to the Federal officers that their master's had been firing at them and driving them back in the woods, to prevent them communicating with the United States forces. Commodore Dupont writes, in a private letter, that the negroes are wild with joy and revenge. They have been shot down, they say, like dogs, because they would not go with their masters.

SPEAKING of the Ball's Bluff affair, the Philadelphia Ledger says: "For cool bravery, no troops in human history surpassed in determined courage and true discipline our troops engaged in the action. Old Pennsylvania and old Massachusetts have covered themselves with undying glory, and the Empire State, with her almost invincible soldiers, stood with them shoulder to shoulder.

TOBACCO FOR SOLDIERS.—The propriety of serving out tobacco with soldiers' rations is under consideration. Gen. McClellan is said to favor it, as a means of increasing the comfort and cheerfulness of the troops.

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. EVERY Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The CALIFORNIA FARMER has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the ONLY AGRICULTURAL JOURNAL IN CALIFORNIA.

7th. The CALIFORNIA FARMER contains the most important information relative to their interests in every branch of Agricultural science.

8th. The CALIFORNIA FARMER contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The CALIFORNIA FARMER contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Ariculture.

10th. The CALIFORNIA FARMER is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and crous of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 68 of whole Series; continued from Farmer of Dec. 27, 1861.

XII.—L.

The Indians of Lower California.

THEIR MEDICAL TREATMENT.

For the Indians are not forsaken by their priests, they redouble their cares and extend them to the whole rancheria; but when the distemper arrives at such a hight that herbs, juices, the chicuaco or wild tobacco avail nothing, they assemble all the patient's relatives, that he may die with the greatest uneasiness. In the first place, if the patient have a daughter or sister, they cut off the little finger of their hand, as the blood or mutilation relieved sickness or took sorrow from the family for his death. Clavijero says they let blood from a finger of a child or young person. Then followed the visits from the whole rancheria, who, after talking to him, and being acquainted with his desperate condition, set up a confused howling; sometimes repeating the covering the face with their hands and hair in different companies from time to time, and all in the presence of the dying person, the women in the meantime howling with passionate cries and exclamations, setting forth the merits of the patient, to excite greater pity. The howlings being over, the patient requests the company to suck and blow him with chacuaco pipes; and this last friendly office is performed by every one, sucking first the parts affected, and afterwards the eyes, ears, mouth, nose, etc., with the greatest force possible. The louder the cries the greater the degree of affection for the patient or the deceased. In the meantime, the doctors thrust their hands into the patient's mouth, pretending to pluck death forcibly out of the body. The women still continuing their outcries, give the patient many severe strokes, in order to awaken him, till, betwixt one uneasiness and another, they deprive him of life. As soon as he is found to be senseless, *they immediately proceed to bury or burn him, making no difference which method, and using that which is most convenient*, and only burying or burning with the patient his various utensils. [This is the method of burial of all the Alta California State tribes.—A. S. T.]

So little do they inquire into the reality of his death, that one day Father Salva Tierra, being near San Juan de Londo, hearing the lamentations and seeing the fire, hastened to the spot where he found them just going to burn a man who, by his motions, still retained remains of life, but which he immediately prevented.

TARAVAL'S ACCOUNT—1732.

Father Taraval, in his voyage of discoveries in 1732 [on the ocean coast from Cape San Lucas, and as it seems among the coast islands, up so far as about the latitude of San Diego.—A. S. T.], says of the island of Trinidad [probably Santa Margaritta.—A. S. T.], which he calls one of the "Dolores or Islands of Clouds or Fogs:" The governor was likewise its priest, *i. e.* sorcerer, though he had others subordinate to him, so that every community had its civil and spiritual officer. On their heads they wore such a grotesque variety of things as at once moved pity and laughter. His decalogue was as follows: 1st. That they should not eat of their first hunting or fishing, under pain of being disqualified from hunting or fishing hereafter. 2d. That they should not eat of some certain fish. 3d. That they should forbear from eating some particular parts of the game—and these were the best and fattest—saying that this fattest was that of dead old men, and that by eating it old age would immediately come upon them. Thus the best pieces fell to the share of the old hicbieseros, they alleging that, as they were already advanced in years, they had nothing to fear on this head. 4th. That they should not gather certain fruits, nor take certain species of fish—and both of these were the best—as they would do them a great deal of hurt, but that nothing injured old people. 5th. That if they caught any stag, or fish of extraordinary size, not to offer to eat it, as it belonged to the sorcerers. 6th. That they should not look at the seven stars, as they would thereby draw on themselves many misfortunes and calamities. 7th. That they should not look towards the islands of the north, for that whoever stood and looked at them would fall sick and die without remedy. 8th. That they should be mindful of their ancestors, and make feasts in commemoration of them. 9th. That in very hot weather, all should come out and pay their salutations to the sun, who would not molest them in their huntings and fishings; but, on the contrary, render every undertaking prosperous. 10th. That they should believe in their sorcerers. But this last was too difficult a task, for no sooner were the Indians returned to the Mission than they began to laugh at such absurdities.

The principal deity or spirit was a demon, in honor of whom some festivals were made. Others they made in honor of their ancestors, on whom they conferred the same name as on the demons. The canonization of their ancestors was represented by the branches of several trees placed on an eminence, after which they danced before this image, and then imagined him completely canonized. The paraphernalia used by the sorcerers in these ceremonies was almost precisely similar to those heretofore mentioned in the extracts from Venegas and Clavijeros, except that the wig, periwig, coronna, head covering and dress were made of human hair from the votive offerings of sick persons, after the manner of a canon's cape, which reaches from the shoulders to the feet as mentioned herein before. Taraval says all these ceremonies were different from those of the coast Indians, though the island or islands were all visible therefrom, but later accounts herein noted show he was mistaken.

THEY OPPOSE THE GOSPEL.

These doctors, priests and sorcerers were great enemies to the introduction of the Gospel, and opposed the Jesuits with great obstinacy, who described them as "very wicked and false." Clavijeros says the Guamas, *i. e.* sorcerers, etc., were not to be understood as officers of religion (sacerdotes) nor were they wizards and conjurers; but these acts were done merely from self-interest, to obtain power and influence. But this class of wizards seems to have prevailed among all the North American Indian tribes: their assumptions and offices all assimilate.

HISTORICAL TRADITIONS—SUPERSTITIONS.

Clavijero says that the Cochiemies nation near 30° make mention of a man who in the ancient times came from the heavens to benefit man, whom they termed Tama-ambei-ucambi-tevivichi, which signifies he who came from above; but what he did, good or bad, they don't state or know—"no haben ningun culto." It is true, they celebrate a feast called by them (in Spanish) *del hombre venido del cielo*; but this has very slight resemblance to a religious act or dogma, and is simply performed by the *guamas* to get the best of desirable fruits, animals or fish, as herein before related. Some days before the feast of this "heavens man" they instruct the women to solicit and gather up provisions, skins, etc. etc., for the ceremony, and keep them hid away till the time. When the day arrived, they chose out the liveliest or best youth to represent this deity, and secretly dressed him in paraphernalia, after painting his body so as entirely to disguise him. The youth was then hidden in an arbor in a secret place, which the men could enter to look at, and kept at a distance, though in sight, from the women and children. The hidden youth, when the time came for his apparition, made his *debut* on the top of the mountain, and from this place ran violently down to the bower or arbor, in which he was received with great acclamations. Here in the bower the guamas and men of the tribe would eat up the good things which their women had got together with so much trouble, who of course were not let into the secret, which was carefully guarded from them by their cunning lords, the poor women being firmly persuaded of the truth of these deceptions of their lying husbands. After eating the good things, they returned the "youth divinity" by the same road to their mountain (or hill-top), and where in time he made his disappearance.

Another similar deception among the Cochiemies was on the anniversary of their dead, to which they pretended the spirits of their dead came once a year from the northern countries to visit them. The women provided all the good things, as mentioned of other feasts herein noted. On the day designated, the men would get together in an inclosure or bower, and eat up all the provisions prepared by the women, who, with the children, would stand at a distance filling the air with howls and exclamations to the manes of the defunct ancestors or deceased, till they were exhausted with fatigue.

Padre Clavijero suspects that many of the dogmas, rites, feasts, etc., of the Californias were mixed from those induced by what they obtained from mingling with the Spaniards and the people of the Sonna and Sinaloa coasts, whence many of them often went over in vessels, and returned. But this is very doubtful, as they assimilate to the practices of many other tribes of Indians, in all parts of the western hemisphere.

Clavijero says the guama of the Guaicieros also affirm and teach that the sun, moon and larger stars are men and women, which every day set in the sea and float till the next day, and that the other stars were balls or flambeaus caught afire in in the sky by the spiritual divinity, which were extinguished in the sea and lighted again by the spirits.

TABOOS.

Among the superstitious taboos of the sorcerers was, says Clavijero, 1. That those who killed a lion, the act would cause the killer's death. 2. Those who killed an elk (*ciervo*, or probably he means deer), must not eat of its meat, or he could never kill another. 3. The young wives who wanted children must eat the meat of hares. 4. The mother-in-law must not look at her daughter-in-law, or she would get sick in the eyes.

MODES OF WAR.

Venegas says, "The end of these commotions or intents of wars, was not the acquisition of fame or enlargement of territory, but usually in revenge for affronts or injuries to private persons, or where a tribe or rancheria went to fish, hunt or gather fruit on another tribe's territory. They attacked by surprise or ambuscade, either an individual, or his rancheria, or his kindred: or, if they were not strong enough to conquer, they sought the aid of their allies of other clans. Their mode of declaring war was with a frightful noise, ordering every one to provide implements, arms and necessaries, taking care that their adversaries should hear of it, so as to terrify them. When they came to action, they set up a shout, and engaged without any regularity, excepting relieving the bodies in the front who had given way, either as spent or for want of arrows (of reeds with sharp heads of flint stones). When the engagement became close, they would use clubs made of wood, hardened in the fire and sharpened. Their arrows were never poisoned. Their intestine wars have been so numerous, that, from all accounts, all the southern tribes have been greatly diminished. They do not carry their revenge to great excesses generally, especially those of the north, towards 30°, who are of better dispositions and understanding.

ELECTIONS.

A great many other careful observations on the nature, customs and characteristics of the Lower California Indians may be found interspersed throughout the works of Venegas and Clavijero, which could not find room in this Indianology. As a general thing they vary but little from those related in the extracts we herein make. They all closely agree with the tribal traits of the Alta California aborigines, as recorded in our notes. The student of the North American Indianology is referred to the above two authors for more intimate details.

ROMANCE OF THE WILKES-SLIDELL AFFAIR—The Brooklyn (N. Y.) Times is responsible for the following:

Capt. Wilkes, the bold and responsibility-assuming Commander of the San Jacinto, who caused a gun to be fired across the bows of the British steamer Trent, brought her to and relieved her of Messrs. Mason and Slidell and their Secretaries, is now about 66 years of age. Consequently, as Jack Bunsby would say, he was once younger than he is now. Though every inch a sailor, and not often given to the melting mood, the blind god once succeeded in sending one of his shafts clear through his rough sou'wester, which found a lodgment in his honest heart. The bow from which the shaft was sped hung in the eyes of a fair girl, and straightway the jolly tar fell over ears in love. He prosecuted his suit with vigor. The girl was a "lass who loved a sailor"—and so smiled upon him, and consented to become his wife. But the sailor had a rival in the son of a respectable tallow-chandler, well-to-do, called Slidell, and young Slidell, feeling considerably cut up by being cut out, refused to accept the "mitten," but not having spunk enough to throw down the glove to his sailor rival, contented himself with "pisoning" the mind of the "stern parient" of the fair one, until he refused his consent to his daughter's marriage with the bold Charles Wilkes, and insisted upon her giving her hand to young Slidell, which, after many protestations and the customary amount of tears and hysterics, she did, and became Mrs. John Slidell. The bold Charlie Wilkes did not peak and pine, or let his melancholy feed on his weather-beaten cheeks, but went to sea and smothered his grief in attending to duty and sustaining the honor of his country's flag, never seeing his "lady lass" again, nor meeting his successful rival for her hand and heart, until he saw him standing a prisoner on board his ship, a traitor to his country, and a rebel against the flag the honest tar had spent his life in defending. Such is the romance of war. We congratulate the bold Charles upon having at last "got more than even."

THE Congressional Investigating Committee, it is supposed, have saved the Government several hundred thousand dollars. At their recommendation, regulations have been adopted fixing the price of arms, and established State and private agencies. They also recommended that the Navy Department discontinue George D. Morgan, the brother-in-law of Secretary Welles, who is agent for the purchase and charter of vessels, and who has been receiving 2½ per cent on the immense outlay of Government under that head. It is said he paid $54,000 for the steamer Stars and Stripes, which cost originally only $30,000. The recommendation for Mr. Morgan's removal, has so far been disregarded by Government. In another case a ship buyer, who made $7,000 on a $7,000 purchase, has been forced to disgorge the whole sum, which is sufficient to pay the salaries of the Committee and expenses.

SEED WAREHOUSE.
(ESTABLISHED IN 1850.)
S. W. MOORE,
IMPORTER
....AND....
WHOLESALE AND RETAIL DEALER IN
ALL KINDS OF
GARDEN, FLOWER, FRUIT,
Agricultural
....AND....
Ornamental Tree and Shrub
SEEDS,
NO. 110 CALIFORNIA STREET,
Between Sansome and Montgomery streets,
SAN FRANCISCO,
CALIFORNIA.

HAS FOR SALE
Alfalfa or Chile Clover,
Hungarian Grass,
Kentucky Blue-grass,
Orchard Grass,
Red-top Grass,
Sainfoin Grass,
English Rye-grass,
Timothy Grass,
Red Clover,
White Dutch Clover,
Crimson Clover,
Lucerne, &c., &c., &c., &c.

EVERY VARIETY OF
BEET, CABBAGE, CARROT,
CUCUMBER, LETTUCE, MELONS,
ONIONS, EARLY AND LATE PEAS,
RADISH, TURNIP, TOMATO,
BEANS, &c., &c., &c.

Havana Tobacco Seed.

COTTON SEED.

GUANO from Johnson's Island.

FLOWER SEEDS (300 Varieties).

BULBS:
LILIES, TULIPS, HYACINTHS,
Amaryllis, Anemones, Ranunculus,
Narcissus, Tuberoses, Peony-roots,
Gladiolus, Iris,
and in endless variety, imported direct from FRANCE and GERMANY.

Native California Evergreen
TREE AND SHRUB SEEDS,
FOR EXPORTATION.

THE UNDERSIGNED, FROM HIS EXTENSIVE facilities and
Large Stock of Every Variety of Seed,
Can offer unusual inducements to
MERCHANTS IN THE TRADE, FARMERS, AND LARGE RANCH OWNERS,
Who wish to be supplied in his line.
And would recommend that ORDERS FOR SEED be sent DIRECT to the undersigned, through the Express or by Mail, otherwise parties run GREAT RISK of being imposed upon, in case their Orders should be filled at some IRRESPONSIBLE ESTABLISHMENTS.

☞ The Agents of Wells, Fargo & Co.'s Express are hereby authorized to act as Agents for the undersigned, in taking Orders for Seeds and receipting for the same.

☞ SEND FOR A CATALOGUE.

TO THE FARMING INTEREST!
E. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.
JONES & HEWLETT,
IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN
GROCERIES,
LIQUORS,
Provisions,
AND
HARDWARE, MINING, AND
AGRICULTURAL
IMPLEMENTS.
Plows,
Harrows,
Reapers,
Mowers,
Thrashers,
Grain and Flour Sacks, Baling-Rope,
Powder, Oakum,
Shot, Tar,
Fuse, Pitch,
Cordage, Rosin,
Marline, Blocks, Oars.

The undersigned would respectfully call your attention to their large and well assorted stock of Merchandise, just received per recent arrivals from New York, Boston, and San Francisco, part of which are enumerated above, and which they are prepared to sell at the lowest San Francisco prices. Articles of our own importation are made expressly for our trade, and are of the best material and manufacture, under direct supervision of Mr. Jones.
All kinds of Country Produce taken in exchange for Goods at regular rates.
4-3m JONES & HEWLETT.

Attention, Hay-Balers!
BALING-ROPE.
JUST RECEIVED, EX SHIP "FEARLESS," and other late arrivals,
500 COILS SUPERIOR EASTERN BALE-ROPE,
Which we offer in lots to suit, at San Francisco prices.
2-3m JONES & HEWLETT.

Plant Early!
Seed! Seed! Seed! Seed!
A LARGE AND NEW ASSORTMENT soon to arrive, consisting of
FIELD, GRASS, HERB, AND VEGETABLE SEEDS
All carefully packed in tin cases. For sale very low by
2-3m JONES & HEWLETT.

Well Cleaned Grain!
FAN MILLS! FAN MILLS!
J. T. GRANT'S PATENT, IMPROVED BY JONES & HEWLETT, for taking out Barley and Oats; 25 just received.
2-3m JONES & HEWLETT.

Sportsmen!
Powder AND SHOT.
Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.
Parties purchasing will please give us a call. Our stock consists, in part, of
500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1 lb cans.
25 cases in ½ lb cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by
2-3m JONES & HEWLETT.

Manila Cordage.
250 COILS, OF ALL SIZES, OF EASTERN MANUFACTURE. For sale in lots to suit.
2-3m JONES & HEWLETT.

HUNTER'S
GRAIN SEPARATOR!
THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.
The undersigned would offer them his
NEW GRAIN SEPARATOR,
Patented April 9th, 1861,
As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.
The importance of this Implement can be seen at once, as the
INCREASED VALUE
OF
Well-Cleaned Wheat
Will be more than sufficient to every Grain-Grower of any amount
TO PAY FOR A MACHINE.
The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.
He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.
A. HUNTER,
Inventor and Patentee.

The California Farmer.

SAN FRANCISCO:
FRIDAY............................ JAN. 3, 1862.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

To Book Publishers.

We invite Book Publishers, here and in the Atlantic States, to our columns, as a medium for advertising their Works. By our circulation they can make known their business throughout the entire State, and thus widely extend their business.

The Close of the Year.

In two weeks more, the Year 1861 will leave us, and a "New Year" will dawn upon us. May we not consistently ask those who have been indebted to us, for some time, and who have received bills from us, to remit those dues at once?

By the new arrangement we have made, we wish to close those old debts, and we know those who are indebted to us, can pay us with but little effort.

It is a season of the year when we can use our means to good advantage, and when we need all such dues. It is a season, too, when every person wishes to feel a little rich, so as to enjoy the "Holidays," and reciprocate the favors of the season.

It is so much more pleasant to receive a voluntary remittance than to be obliged to go or send for it; and we must, in justice, "ask" our dues.

Perhaps newspaper readers may think it is but a small sum; but the aggregate due us, will count in Thousands; and now we ask it, and must do so in earnest. We hope this call will be enough.

The Loss of Stock by the Flood.

We desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Don't Forget our New Year's Gift.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of these articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent. together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

NEW PRODUCTIONS.

With a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public interest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

To all who are "Under the Cloud."

"'Under the cloud' most surely, and its big shadow falls so heavy upon me that its darkness almost shuts out hope." Such were the words of one who in his sorrow and misfortune solicited food at our door.

Where, in heaven's name, is there a door that will be shut at the call of humanity, when sorrow and distress are so widely scattered over the land? or where is there a heart that can resist the appeals of those who are houseless, homeless, penniless and hungry for want of food? How glorious is the remembrance of the bounteous Charities of San Francisco to her sister city, Sacramento, in this dark day of her calamity. But the work is not all done. The floods are not yet abated, nor is all the suffering alleviated. There are hundreds and thousands of hearts that are deeply cast down, and hundreds of cases of real woe that can be relieved, not only in Sacramento, but all around us; for there is a cry gone up to Heaven, "There is *sorrow in the land!*" Sorrow is everywhere. The present calamity by the flood sends its shaft to many hearts secretly. No one can tell where the blow does not fall. Men's interests are so diversified that this calamity will reach hundreds and thousands far away from the scene of the flood; and from the loss by the flood, many will be indirectly heavy losers.

This terrible visitation should be met by a *universal sympathy* among business men—kindness, forbearance and generosity; for no one knows how soon he may need kindness from others which others claim at his hands. No one is safe from calamity. Fire, flood, earthquake, sickness, death, are the lot of mortals, and while we stay here on this earth let us feel for others' woes. "Feed the hungry," "clothe the naked," "relieve the distressed," "visit the sick;" and thus prepare the way to Live in a better world, where these calamities cannot reach us.

California has been a History of Human Losses, Sufferings and Disappointments. Who shall write its history? for *Washington Irving is dead!*

"Under the cloud!" From the metropolis to the Sierra's summit, north, south, east and west, the winter of 1861 will send sorrow to many homes and hearts. And not only with us in California, but in Oregon, our sister State, they too have felt the calamity, and they too need our deepest sympathies.

Let, then, the rich give of their abundance, and all give what they can; to each and every call of humanity give liberally, give freely, and let it be done quickly, ere hope dies out, and human hearts break for want of aid.

Thousands of our fellow creatures are now "under the cloud." May heaven inspire men to do deeds of noble charity that shall be so bright that the light shall scatter the cloud, as quickly as the morning sun scatters the mist upon the hill-tops, and the brightest glory of the deed shall illumine the souls of the doers thereof.

S. W. Moore's Letter on Seeds.

We call the especial attention of planters of Seeds, of all kinds, to the letter addressed to the Editor of this Journal, in this issue.

The discussion upon the relative merits of the Home-grown and the imported Seeds can only be settled by the evidence of the *Planters themselves*—and if they will but speak out boldly, the question would be at once settled.

Newspaper editors may give their opinions—Importers and growers may give theirs—but, after all, it is the purchasers and planters that can alone give the information which the great masses are desirous to know.

As the Editor of the Farmer, and the only Agricultural Journal in the State, we have given our opinion; we gave it in full in a long editorial last January (11), from which extracts, we see, are made in Mr. Moore's letter. Our opinion is made up from years' experience as a Seedsman, by a careful examination of the system of seed-raising in Europe, and by the comparative results of the harvests in this State, from seeds imported and seeds grown here; and in all our remarks it should be understood that we have always been and always shall be the warm friend of "Home Productions," and giving them the preference over all others—yet, while we advocate this doctrine, we would have those productions *approximate* a standard of *excellence and purity.* For, surely, while all advocate the cause of *Home-made Wines,* we could not be called upon to advocate those who are making *Spurious Wines*—yet this would be *Home Manufacture!* So neither could we plead the cause of Home-grown seeds unless they were of a reliable growth, and pure.

That there are good and pure seeds grown here, this Journal has frequently asserted, and that large masses have been sold of a spurious kind is notorious.

What we most earnestly desire now, is, that the grower, the planter and seller shall enter into the arena, in a pleasant and earnest, yet fearless and truthful way, they shall discuss this all-important subject now.

For further remarks we shall wait the response of others.

California Broadcloth.

We had the great satisfaction of seeing *the first roll of Broadcloth manufactured in California.* It is from the Mission Woolen Factory, being a very handsome dark blue, with a fine finish; the color most excellent; the cloth one and a half yards wide; it is the first roll of a large quantity made for our army; and a most honorable testimonial of the rapid progress and skill of the proprietors of the Mission Woolen Mill. Our State is truly and largely indebted to Mr. McClennan, by whose great perseverance and energy this large and prosperous Woolen Factory has been so successfully established.

It will be seen by the card in our columns that Col. E. W. Leonard, one of the early Pioneers of our State, and favorably known among business men, has become a partner in the Woolen Mill. Most truly can we wish such enterprises the most unbounded success.

Ruin to the Farming Interest, Caused by the Washings from Mining Claims.

The present floods have revealed a *new danger* to the Agricultural Interests along the banks of the rivers; and one, too, which has never been duly considered.

By the present plan of sluicing, there is a vast amount of sand, gravel, and small stones, piled up along the rivers, which, when such floods occur, must be inevitably swept down by the swollen streams, and spread over the Valleys below, covering Farms, Gardens, Orchards, Vineyards, and doing to these, incalculable and irretrievable injury. So terribly destructive has been the effect of this, in the recent calamity, that hundreds of beautiful Gardens, Orchards, Vineyards and Farms, have suffered to such an extent, by deposits (one to three feet in depth), that they will have to be abandoned.

Now, this calamity is one that must excite public attention; and some remedy must be provided in the future, for like evils.

In all times past, Mining has been considered the paramount interest of this State; now, Agriculture counts by *millions annually* in Exports, and the aggregate of this interest now, in Stock, Orchards, Vineyards, Grain Fields, and other interests connected with Agriculture, outweighs, in real value and reliability, all those of the Mines.

These calamities upon the Farming interest, should call the attention of our Legislature to the great importance of some Law, by which evils of like character may be avoided in the future.

If the law of the land does not allow the streams to be diverted from their course, or to be dammed up, or in any manner meddled with as to injure those bordering on the same, we would seriously inquire, *how far the present plan of filling up our rivers with the washings from Mining Claims, is a violation of that Law?*

We call the attention of our Farmers to this important subject; and if a man is liable for damages, for damming up or turning a stream in the ordinary way—how far are Mining Companies liable for injuries resulting from the filling up of rivers, and turning them from their source, and causing them to overflow, and thus do injury?

If the Sacramento Valley Railroad Company are liable for the damage they have done to the City of Sacramento, then Mining Companies are also liable for the damage they have done. These are questions of great moment, and from them will spring the discussions that shall show the justice of an equal *tax* upon Mining Interests, as well as upon the Agricultural—both to bear alike the burdens of the State.

Home Manufactures in Stockton.

This City is fast making her mark in Manufactures, and in various kinds of Industrial pursuits.

We called at the "Mechanic Mills," situated on the river side, and were gratified to find such a Workshop or Hive of Industry. The Mills are owned by Messrs. Williams, Wormell & Meader. We found here the following pieces of Machinery: Andrews' Planing Mill, Doane & Mason's Re-sawing Machine, Fay's Sticker for Morticing, and Smith's Tenoning Machine. At this Mill there are Machineries for Sawing, Slitting, and Planing; also, a new and curious Machine for making Moldings of all the finest and most curious patterns; there is also a Morticer, one Gig, two Split- and one Cut-Off Saws, one Shaping Machine, and a Turning Lathe, by which Stair-Rails, Bed-Posts, Table-Legs, and all kinds of Turning, are done.

There are eight men besides the Partners employed, and the work done is of the very best character.

The Broom Factory, of which we have spoken in our last, is a great gain to Stockton: it furnishes the people with Home-made Brooms at their own doors; and friend Smiley must have a pretty wagon "running all about town," to make his excellent Brooms known. When the housekeepers see Smiley's Brooms, it will make some of them *Smile(y)*, we guess, for he is a "nice young man."

The Butter-Stamp Factory, at Pettee's Mill, is an interesting feature, indeed. How nice to see a cake of fresh Butter with roses nestling down on the top of the lump! Thanks to Mr. Pettee for that pretty one we have.

The Lard Factory of Messrs. Hatch & Sedgewick, near Weber House, where pure, clean, white Lard can be had for sixteen cents a pound, for family use; this is also a gain to the citizens there.

Matteson & Brother, near the new Agricultural Hall, are Manufacturers of Plows that cannot be surpassed for excellence in any workshop in the land. They change from iron and steel into silver and gold in the hands of a skillful Farmer. Matteson & Brother have done much to benefit the Farmers of San Joaquin, and now the Farmers should reciprocate the benefit. We shall soon speak of a new Invention by this Firm, that will "wake up" some folks.

The Wagonmakers of Stockton have long been celebrated for famous Wagons; and Miller's famed Mule-Wagons have beat the world.

Stockton is doing nobly for the Industry of the country.

Increase in the Value of Stock.

We have all along asserted that all Good Stock had reached the *bottom*, and the next change would be an increased value.

Good, fat Cattle, Sheep and Swine are now advancing steadily in price. Good, fat Hogs are worth 25 per cent increase from prices last month, and Beef Cattle have advanced; good Sheep are more wanted, and by reason of the loss of Stock here and at Oregon, we have no doubts of a large increase in value within the six months to come. Now is the time to invest in good stock.

Tuckers' Academy of Music.—One of the good chances of Investment now in our city is the stock of "Tucker's Academy of Music." Already have the Trustees declared and paid a dividend of one per cent, thus giving an assurance of an annual income and a sure one of *Twelve per cent* per annum. Miners and others, who have capital unemployed, can find no better Investment than this property.

The Telegraph.

The completion of the Transcontinental Telegraph was hailed on all hands as a gratifying triumph of science over the great obstacles presented by nature on its route. This gratification was only equaled by the quiver of joy that ran through every fiber of the community at this far-western terminus, on the announcement that we of the Pacific slope were placed in instant communication with our brethren on the Atlantic seaboard. But the joy was short-lived, for scarcely had the Governors and Mayors of the different States and cities most intimately interested in the enterprise exchanged congratulatory messages, than we were informed that communication was interrupted by casualities that might have been foreseen, and should have been prevented. Since then the connection has been spasmodically renewed—say once a week, for a few hours at a time—and again repeatedly broken off. The flashes of electricity across the wires have done credit to the fitful and evanescent character of that element in its free unbridled home of the storm-cloud. The sage of the electric-kite, were he alive and present at this end of the wire, would have lost all patience with the repeated failures of transmission.

What increases the disgust of the denizens of the Pacific—hungering for war and commercial news—is the fact that the telegraph gave a quietus to the Pony—the faithful Pony, that weathered the storms of the mountains, that waded the swollen streams of the valleys, that plunged on through drifting snows, and pelting rains, and seldom failed to bring us his closely packed and important budget within the schedule time. Truly, we have learned by his loss how to appreciate the gallant Pony of the Plains! We had come to calculate the hour of his arrival, so punctual was he; and the "Arrival of the Pony" created in all circles quite a sensation. But, alas! he is laid up in ordinary, and the red-men along his route, who had learned to know the flying courser as he became visible in the dim distance, shall know him no more. He is gone, and we are left to mourn his loss. We now get our news by "instantaneous communication."

But, seriously, is there no remedy for these continued accidents to the Telegraph? Is there no means of providing permanently against them? If the wires are blown down by the winds, or the poles upturned by the surcharged streams, would it not be well to lay the Telegraph in the earth, whenever there is reason to apprehend danger from storms? If seas can be spanned by submerging the wire beneath the water, surely there is no valid objection to running over stormy mountains a few inches, or a few feet if need be, under the surface soil. Granting, even, that it would be a trifle more expensive in the first laying down, it would certainly be less expensive to keep it in repair, aside from the great advantage to the Company, as well as its patrons, of constant and reliable communication.

These remarks are merely suggestive; we leave it for those who are better acquainted with telegraphing to mature into something of desirable permanency, certainty, and constancy. But something must be done by way of improvement, or we may well pray for a revival of the Pony.

Look Not On the Dark Side Only.

We know that the present destructive floods have caused loss and ruin to many of our hard-working and most industrious citizens in various parts of the State. We know this and feel it, and our deepest sympathies are awakened to do do all in our power to relieve those who have suffered.

This great calamity, we hope, will serve to call out the best and noblest traits of human character; it would afford an opportunity to every noble heart to go forth and seek out the sorrowful and desponding and by encouraging word, give relief to the mind, and by *acts*, nobler than words, lift off the load from many a distressed spirit.

Now is the time for men, good men to carry joy and gladness to the disconsolate—now is the time for those to whom Bounteous Providence has given wealth—for them, as the almoners of Heaven, to make use of that wealth for a truly Heavenly purpose.

To all, however, who may be sufferers, we say, be not cast down, but be encouraged—look for the bright side—for help will come when least expected—help will come, most especially to those who bear misfortunes bravely. Look, then, on the bright side—for, however dark, it could be darker.

Prophetic—Reading the Future.

Some three years and a half since Senator Broderick uttered the following words in the United States Senate:

"*I am an artisan, and have been a mechanic.*" * * * They submit too tamely to oppression, and are too prone to neglect their duties as citizens.

"But, sir, the class to whose toil I was born, under our form of government, WILL CONTROL THE DESTINIES OF OUR NATION!"

These were the words of that Senator who felt proud of being a Mechanic—Broderick sleeps at "Lone Mountain."

Another Senator from the Pacific Coast, a noble friend of our Industrial Interests (Col. E. D. Baker)—he, too, while contending for their rights and that Constitution and Flag, that he felt was the Bulwark and Defender of the Great Industrial Interests—he has fallen—and his ashes are mingling in the same soil with that of Senator Broderick.

Mechanics and working men should remember these great and startling facts, and make them not only Prophetic, but speedily so.

Early Blossoms.—We have in our "Garden Spot," corner of Mason and Pacific streets, a *Pear Tree* in blossom, and the Lawton Blackberry, several vines in blossom, and also with green and ripe berries. This variety of fruit has been in constant bearing all the season, and the prospect is that it will prove at "Our Ranch" a constant bearer.

A Silver Cup.—No gift is more appropriate for the New Year's offering than a beautiful Silver Cup, and none can be made more beautiful than those now manufactured by Vanderslice & Co., whose work is an honor to our State.

Wheeler & Wilson's Sewing Machine.

We have taken considerable pains of late, in our travels, to learn the comparative merits and success of the various Sewing Machines now in use. We have endeavored to ascertain with great correctness the degree of satisfaction given by the working of the different machines, and we are satisfied that in every district in our State where there have been Sewing Machines sold, the Wheeler & Wilson machine has far exceeded all others.

By the new improvements made in their machine, their perfect work from the most delicate and the nicest finish up to a heavy drilling, and thence to woolens and to leather, the most unbounded satisfaction is given.

As it may be of interest to many persons, it should be stated that a large number of the beautiful cases of these machines are *made in this State,* and for style of finish and beauty they cannot be surpassed.

If a stronger evidence were needed of the largely increasing favor now being given to the Wheeler & Wilson machine, it will be seen any and every day in the largely increasing business at the office of H. C. Hayden, Esq., corner of Sacramento and Montgomery street, where, by the liberal business arrangements of Mr. Hayden, and the prompt and courteous attentions of his assistants, there is a steady and constant stream of customers, keeping all hands busy in getting machines ready for shipping to every part of the State, to Oregon, to the Islands, and to Mexico.

California Garden Seeds.

The card of Messrs. Graves, Williams & Buckley, who offer a large assortment of California Garden Seeds, is worthy of attention from our Farmers and Gardeners.

It will be remembered that we always have been glad to herald every success in our own products; and have been right glad at the success of Mr. Perkins, the grower of the seeds now advertised by Messrs. G., W. & B.

From an examination of the seeds shown by Mr. Perkins, and of the various products he exhibited at various Fairs, as samples from which seeds were to be raised, we feel a pleasure in knowing that many of the leading articles of seeds such as peas, beans, corns, and seeds of root crops, with melons, cucumbers, &c., have been thus admirably grown, and we hope ere many years to know that the great mass of our seeds have been grown in a scientific manner; yet while we earnestly commend what has thus been so successfully accomplished, we cannot withold the truth, that we are not yet so far advanced in the knowledge of *scientific seed raising,* nor are we prepared to go to the cost of it, so as to enable us to furnish a seed store in California with *all the complete assortment of seeds,* such as is found in a long established House, like S. W. Moore, who is familiar with all the wants in every department, both Farm, Garden, Field, Orchard, and all the immense varieties in the department of Flora, which can only be furnished from abroad, till we can give to the business that time, skill and means and wealth, which its importance demands.

Are You Insured?—We can be insured from fire, but cannot from the floods; therefore it behooves every man to have his property well protected from the devouring element, especially at this season of the year. We can earnestly recommend the office of Messrs. Bigelow Brothers & Flint, who have always a large cash capital on deposit so as to pay losses on the instant. If you were not insured this last year, do not run the risk of the coming year. Better pay a little to be safe, than to run the risk of losing house, home and all.

Eating Cheap—American Coin.—We are pleased to know of one establishment that has abolished the fashion of Bit currency, and adopted the American. Alden's fine Restaurant, corner of Sansome and Halleck streets is now the cheapest Eating place in the State, many of the dishes being only 5 cents each. Pies, Puddings, Cakes, Tea, Coffee, etc., 5 cents each. Meats, various kinds, 10 cents. We like the plan of American Coin—5, 10, 15, 20, 25 cents. This is right; let it be generally practiced.

A Farmer's Mill in High Water.—While the roads are impassable and where the flouring mills are swept away, Farmers should immediately procure the Union Farm and Plantation Mill, now offered by Greene, Heath & Allen. This will answer all the purposes of a Flouring Mill for a whole neighborhood. These are the Mills for the times. See advertisement.

The Weather.—After Christmas, last week, the rain poured down in torrents for several days; the first of this week it came in frequent heavy showers, but Tuesday was mostly fair, and it is to be hoped such will continue till our submerged regions are restored to equilibrum. In the interior the waters are gradually receding. An uncommonly large amount of rain, for the season, has fallen thus far here, and much more in the interior.

On Christmas day, the St. Mary's Cathedral, on California street, was so crowded by those attending church service, that women fainted from the pressure and heat, and men were thrown down by the crowd and trampled upon. Every available space was occupied, even to standing on the pew-rails.

The steamer Uncle Sam arrived here from Panama December 26th, with about 650 passengers, including a large number of women and children, and 300 tuns of freight.

In the Broderick will case, Judge Hager delivered an opinion on Tuesday, in which he finds that the will is a forgery, and grants the injunction as prayed for.

General McClellan says the poorest regiment in the army of the Potomac is superior to any of the volunteer regiments in the Mexican war.

The body of T. B. McManus, the Irish patriot, was followed from Dublin to Glasnevin by a procession five miles long.

Gun-cotton is considered too inflammable and dangerous to be used in place of powder at present. But paper nearly as inflammable as gun-cotton, is now used for making cartridges, and is a good improvement, as it is entirely consumed in the discharge and tends to keep the interior of the rifle clean.

STATE SUMMARY.

The amount of stock drowned at Missouri Bend, says the Butte Record, is estimated at eight hundred head.

The Klamath river in the recent flood was one hundred and fifty feet above low-water mark.

The citizens of San Andreas have raised $1000 for the purpose of constructing a race-track at that place.

The State printing for the ensuing two years, the Union says, will be done by John McComb, under contract with B. P. Avery, State Printer.

Proposals of the Postoffice Department for carrying the United States mails over the various California routes, from July 1, 1862, to July 1, 1866, have been published.

Plaster-of-Paris has been discovered at Santa Anna, Los Angeles county, said to be superior to the imported article, being much whiter and of a finer texture.

A rich vein of good hydraulic cement has lately been discovered near Martinez, similar to that found at Benicia, and said to be equal to any brought from the East.

The Stockton ranch, between San Jose and Santa Clara, has been sold to a New York company for $150,000. As the ranch contains 1500 acres, this will make the cost $100 per acre.

Oregon has sent to this State, during the past six years, 20,000 barrels of cider. Oregon will get over that soon, for we will make our own cider at home, besides having plenty to ship to other countries.

A sad account is given of the ravages of the flood in Shasta county. Not a house was left standing at Lincoln, Union City or Latona, which were flourishing small towns.

A notice in the Sacramento papers for a funeral on Monday last, states that those who attended would be conveyed from the Pavilion to the city cemetery in boats, as there was no other way of reaching that point.

As the Marysville opposition steamer Defiance was coming down the river on Saturday, she struck the draw of the Sacramento bridge (which was but partially open), and her entire upper works were carried away, including the Calliope.

A Military School in this State is advocated by the San Jose Mercury. It says the drill and the ordinary evolutions of the common soldier would not only be pleasing to the youth, but it would be a good exercise for the limbs, and give grace of motion to the man.

A great number of live stock, principally cattle, are mired on the ranches near Marysville. The Express is informed by a cattle dealer that probably as much stock will be lost by miring, as perished in the freshet a few weeks since; but this seems to the Express rather doubtful.

At an auction sale at Lawson's ranch, in San Joaquin county, on the 21st December, four American colts brought from $60 to $200 each; cows, $20 each; baled hay, $60 per ton; barley, $1 per 100 pounds; feed, $1 15. For a hay-press $100 was paid, and $27 for a twin pair of heifers.

Some grapes which had been preserved by being packed in cotton-wool, were lately received by the Contra Costa Gazette. It says they were put up some time before the grape season was over, and on being taken out a day or two ago, were found as fair and perfect as when taken from the vine.

The Howard Benevolent Society, of Sacramento city, on the night of December 23d housed and bedded four hundred women and children. Next morning they breakfasted six hundred persons. This Society is making itself a blessing to the poor and destitute, and an honor to the city and State. May Heaven smile upon its efforts, and make its organization perpetual.

The Commissioner of the General Land Office has made an important decision on the Donation Act of Sept. 27, 1850, to the effect that when a settler is compelled by hostile Indians to leave his claim—provided he returns to it as soon as practicable—it takes him out of the statutes, and the time of his involuntary absence shall run as if he had actually remained upon his claim.

Fort Yuma is the key to Southern California, and possesses great advantages for military purposes. Nine companies of the 1st regiment California Volunteers are to be permanently stationed there, under the command of Col. Davis. The volunteers now there work five hours daily at the fortifications. The health of the troops is excellent. Showalter and his party are to be confined there. No secessionists can now cross the Colorado.

Since the trail down the Klamath river has become impassable for other animals, J. D. Hickox is about starting an express composed of Chinamen, as a substitute for pack-mules. He calculates each Chinaman will carry one hundred pounds, while one good one can carry the express and mail matter. Mr. Hickox expects to have an easy time, as Chinamen, unlike mules, can do their own packing. At Happy Camp provisions are scarce, and tobacco, candles, tea, sugar, coffee and other articles are about to run out, rendering the freight by this train salable at double the cost, and the aggregate expense of freight not being above ten cents per pound from Scott Bar.

The fact of California rivers changing their beds, is illustrated by the case of Bear river. This stream became, during the late storm, so completely filled up with gravel that it was forced out of the old channel, a mile or two above Johnson's crossing, forming an entirely new bed for a distance of some six or seven miles, and returning to its old channel near Kempton's crossing. The river now passes Johnson's half a mile to the south of the old bridge, which, were it now standing, would span a bed of gravel some twelve or fifteen feet deep. The new channel has been cut directly through a range of fine ranches, and the destruction of property in consequence is very great. Large tracts of fine agricultural lands along the river have been ruined by the immense amount of gravel deposited upon them by the overflow.

The Supreme Court has lately delivered three important decisions. One of interest to settlers, entitled Lathrop vs. Mills et al., was a question whether the 11th section of the Act of 1856, concerning a suit on a patent being brought within two years was constitutional. It was decided to be unconstitutional, and the judgment reversed.......One affecting the claims to "outside property" in the city of San Francisco, under the Van Ness Ordinance, was in the case of Wolf vs. Baldwin, and decides that to hold by possession under that ordinance, actual occupancy or use is required. An inclosure by an ordinary fence of the premises, without residence thereon, or improvements or cultivation, or other acts of ownership, is of itself insufficient......The third decision was as to the right to tax foreign (Chinese) miners employed in mining on private land (or land held under Mexican grants, like the Fremont estate), and it is decided that they are only subject to the tax when working on public land.

The Third Flood of 1861.

We referred last week to the second flood, the rise of the American river, and its again breaking through Burns' slough near Sacramento, by which a portion of the city was submerged. The fair weather of Christmas day gave hope of better times, which was dashed by the torrents of rain the succeeding day, and every day since, resulting in what may appropriately be called the Third Flood of 1861, and which affected some portions of the country which had previously escaped. Stockton was partially overflowed on Saturday, the water coming principally from the Calaveras, though but little damage was done. The streams in Santa Clara, Alameda and other counties also overflowed their banks, and some damage was sustained by farmers and others. In the mountains, the rise of the streams appears not to have been so great or sudden as at the first flood, while the people were prepared to protect themselves and what was left from the previous overflow.

The highest water on record in the Sacramento river was at sunset on the 27th, when it stood 22 feet 7 inches above low-water mark, having risen ten inches during the previous twenty-four hours. This is one inch higher than the highest mark of 1853, or than the river has ever attained since the settlement of the State by Americans. It is mentioned as a significant fact, that at that time the levee on the American east of the Tivoli was washed away in many places, the waters flowing uninterruptedly through, and the crevasse two miles below the city was still open, and a torrent was pouring through, yet the business portion of the city was entirely free from inundation. Even with their present grade J, K and L streets were not flooded by the highest water ever attained by the Sacramento, so long as the passage of the water was uninterrupted.

The Yuba river, at its greatest hight on the 23d and 24th (the second flood) failed by several feet to reach the point attained during the first freshet. Some places situated on the bottom lands up the Yuba, liable to inundation at all seasons of high water, suffered some, but the damage is slight, and in most cases can easily be repaired.

BY OVERLAND TELEGRAPH.

After a silence of about a week, the telegraph furnished a small budget of news to the papers on Wednesday morning, which we give below, the latest dates being to the 27th:

Prince Albert, the royal consort of Queen Victoria of England, died on the 15th inst. His death was occasioned by gastric fever----Lord Lyons had an interview with Secretary Seward Dec. 23d. It was friendly and satisfactory in its results.

Gen Kelly is driving the rebels before him, near Winchester, Va.----Wm Pickering, of Illinois, has been confirmed Governor of Washington Territory.----Skirmishes occur almost daily on the Potomac. One near Newmarket bridge on the 28th. 20 rebels were killed.----Lieut. Hurd, of the 2d Maine Regiment a prisoner, who escaped from Charleston jail during the great fire, says Col. Corcoran also escaped, but has not been heard from since.----The Irago has arrived off Cape Race. Gen. Scott is passenger. He had an interview with Napoleon before leaving.

A telegram from Charleston states that four Federal gunboats ascended the Edisto on Tuesday last, and anchored opposite Rocheville and St. John's Island, thirty miles from Charleston, and shelled the camp of the First South Carolina Regiment. Under cover of the fire they landed a large force, and the Carolinians retreated to the brick Church.----The Secessionists burned the bridge over Czariton river, 16 miles east of Brookfield, on the Hannibal and St Joe Railroad.----A deserter from the rebel lines near Centreville, says the rebel army has gone into winter quarters. It numbers 100,000. The rebels on the Lower Potomac, numbering 37,000, have also built winter huts.----Gen Sumner fell from his horse, at a review, two weeks ago, and injured himself so severely that it is thought he will not be able again to mount his horse. He has been relieved from the command of his division.----Congressman Ely has arrived from Richmond, having been exchanged for Mr. Faulkner.

A field battery, 1,265 troops, and large amunition stores came over to Canada on the Australia. It is rumored that France has offered herself as a mediator, and that General Scott brings important dispatches from Louis Napoleon. Prince Napoleon is using all his influence in favor of the Federal Government.

In the Senate, 26th, Hale made a speech against delivering up Mason and Slidell, and advocated a war with England rather than sacrifice our national honor.

Gen. Sumner has been assigned to the command of a division to be composed of twelve regiments of infantry, some of which are now in the provisional army of the Potomac, and not yet formed into brigades, and others are yet to arrive. A proportionate amount of cavalry and artillery will be attached to the division, which will for the present occupy a position at Springfield, on the line of the Orange and Alexandria Railroad.

The latest news from Salt Lake would seem to indicate that everything was going on quietly. The Legislature had assembled and organized, and Governor Dawson had delivered a patriotic message, which appeared to please the whole Mormon people. Trade and travel were good.

The Commissioner of Patents has refused to extend the McCormick Reaper Patent, for the reason that the sum already received by McCormick, and the sums that he is entitled to receive on account of infringements, amount to more than an adequate remuneration.

Wm. B. Astor, of New York, who is worth thirty millions of dollars, and whose annual income is two millions, has joined the staff of Gen. McClellan. As an intelligent capitalist, he perceives the only protection for his property to lie in the preservation of the Union.

A stringent bill to prevent Chinese emigration to Australia has passed the Colonial Legislature without a division. It has been found impossible to procure evidence to secure the conviction of those engaged in the miners' riots against the Chinese, some time since.

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,
11tf Pacific Fruit Market, San Francisco.

Chapeau La Cassimer.—Collins & Co., Montgomery street, have just received a new and very beautiful Beaver, the very latest style. It is a soft and delicate Hat, of the most beautiful finish. Color—Brown, Drab, and Black. They should be seen and tried by all.

MISSION WOOLEN MILLS.

THE UNDERSIGNED HAVE FORMED A COPARTNERSHIP for the purpose of prosecuting the business of the Mission Woolen Mills, taking effect December 11th, 1861, under the name and firm of LEONARD & McLENNAN.

EPHRAIM W. LEONARD,
DONALD McLENNAN.

OFFICE—Over Parrott & Co's Bank, cor Montgomery and Sacramento streets. 13

HOSE SEWING BY STEAM.

THE SUBSCRIBER HAS JUST FITTED UP A ROOM on Maiden Lane, between Second and Third streets,

MARYSVILLE,

where he is prepared to execute

Hydraulic Hose Sewing,

at the shortest notice, at low prices, having Steam Power attached to the Machine.

☞ All Hose Warranted.
13 S. HOWARD.

Flax-seed.

THOSE PERSONS WHO DESIRE TO SECURE SAMples of FLAX-SEED can be supplied on application at the Farmer office. Terms low for large quantities.

Flax should be planted largely the present year of 1862.

WOOL, HIDES, AND SKINS,
Purchased
AT THE HIGHEST MARKET RATES,
BY
LONING & FUERSTEIN,
50 FRONT STREET.

WE ARE ALSO PREPARED to make liberal *Cash Advances on WOOL* shipped to our friends in New York. Every lot of Wool intrusted to us, under advances, will be shipped under a separate mark. For further information, apply to us as soon as possible.
LONING & FEUERSTEIN,
16-13 No. 50 Front street

Important to Farmers!

ENGLISH
WHITE BINE HOP-ROOTS.
....FOR SALE BY....
GRAVES, WILLIAMS & BUCKLEY,
Pacific Fruit Market,
11 San Francisco.

$1,000 Reward!

JOHN C. BELL,
Nos. 634 and 636 Clay street,

WILL GIVE THE ABOVE REWARD TO ANY person that will prove to him that they can purchase

OIL CLOTHS,
CARPETS,
PAPER HANGINGS AND BORDERS,
MATS AND MATTING,
Rugs for Christmas Presents,
GILT CORNERS AND POLES,
Damasks and Window-shades, and House-Furnishing Goods of every Description,

Cheaper than we will sell for CASH for the next

TEN DAYS!

☞ All remnants remaining on hand at that time will be sold at Auction.

CLAY STREET—the second Carpet Store between Montgomery and Kearny—
Nos. 634 and 636.
12 JOHN C. BELL,

Collegiate Institute,
BENICIA.
FOR MALES ONLY.

THE NEXT SESSION OF THE INSTITUTE, THE FOURTEENTH,
Will Open on the 12th of January.

Home Miscellany.

RAIN-DROPS.

BY DELIA LOUISE COLTON.

"The silver rain, the golden rain, the trippling dancing laughing rain!"
Stringing its pearls on the green leaf's edge,
Fringing with gems the brown rock's ledge,
Spinning a vail for the waterfall,
And building an amber-colored wall
Across the west where the sunbeams fall:
The gentle rain, in the shaded lane—the pattering, peering, winning rain!

The noisy rain, the marching rain, the rushing tread of the heavy rain!
Pouring its rivers from out the blue,
Down on the grass where the daises grew,
Darting in clouds of angry drops
Across the hills and green tree-tops,
And kissing at last, in its giant glee,
The foaming lips of the great green sea:
The fierce wild rain, the riotous rain, the boisterous dashing shouting rain!

The still night rain, the solemn rain, the soldier-step of the midnight rain!
With its measured beat on the roof o'erhead,
With its tidings sweet of the faithful dead,
Whispers from loves who are laid asleep
Under the sod where the myrtles creep,
Calling bouquets from the sun-lit past,
Of flowers too sweet, too fair, to last:
The faithful rain, the untiring rain, the cooing sobbing weeping rain!

The sulky rain, the spiteful rain, the bothering pilfering thieving rain!
Creeping so lazily over the sky,
A leaden mask o'er a bright blue eye,
And shutting in with its damp strong hands,
The rosy faces in curls and bands,
Of girls who think with unwonted frown
Of the charming laces and things down-town,
That might as well for this tiresome rain,
Be in the rose-land of Almahain:
The horrid rain, the tedious rain, the never-ending dingy rain!

The "California Farmer."

Like the calm and gentle influence of the Sabbath, to that of other days, comes the California Farmer, in comparison with those newspapers filled with exciting details of war and bloodshed (half of which is unfounded), adding fuel to the flame of civil dissension; such themes finding but a faint echo along its columns, which reverberate rather with the sound and tread of the march of Science and Progress.

How beautiful the panorama that flits before me, as I read of the quiet scenes of Agricultural life; of orchards and vineyards; of seed-time and harvest; of fruits and flowers: things that are not seen here in this desert land, but which are among the bright and loved spots along the wayside of the past.

The Colonel must have eyes like the fabled Argus, for in his short stay and hasty glance at places I have visited many times, he sees more than I had thought was to be seen; but then, what can a woman see of any place, shut up inside a stage-coach where she must sit perfectly still, nor dare to ask any question, for fear of being called inquisitive or strong-minded? I say, with the Colonel, let all the women, who dare, ride on the outside; and should there not be room enough for all of them, the smallest and prettiest might take the seat of postillions upon the backs of the horses, where, without any trouble of guiding them, they could look around and enjoy the scenery on all sides, and no gallant driver would object to having such fine *bell(e)s* on his horses. But, alas! the world's *proprieties* mar most of human joys, and make women the weak and timid things we see them, wholly unfitted for life's pleasures or its pains.

Here, shut in from the rest of the world, I can still look out through the "port-holes of the Press," and take a peep at what may be going on in any part of the habitable globe, and, also, take a survey of "imagination's world of air."

Ever welcome is the Farmer, which comes as a white-winged dove of peace, and nestles with others upon my center-table, and like a magnetic chain, links me with kindred minds.

Lillia De Montana.

Aurora, Dec. 3, 1861.

[We are pleased to hear from our Correspondent in the mountains, and ever glad to know, that welcome is so cheerfully given to the Farmer. It has always been our aim to create a love of the Beautiful, a taste for Beautifying Home, by pointing out the various means to do so. We do feel that there is more profit to our readers and the public at large, in acquiring a taste for Horticulture, than in continually heralding wars, murders, suicides, and other like calamities. We rather shut our eyes to those dark pictures (for they are shown by others often enough), and present to our readers that which shall educate, and elevate the mind, stimulating to better things. Some time since, we know, we advocated the privilege of Ladies riding upon the outside of the stage, and know this privilege should be granted when desired and the route safe. But always preferring a quiet and peaceable "Life in the Country," we cannot now advocate *bell(e)s* on the horses, especially to *lead off;* and, again, perhaps there might be danger in permitting all *belles* to take the lead-reins. We admire companionship in all the "Beautiful in Nature:" but some of the pathways in this life, it requires the strong arm of man to guide the leaders, else the Barge of Life over our mountains and defiles may be dashed to atoms. We hope our Gallantry will not be assailed by the "Lily of the Mountain," because we object to *bell(e)s* on the horses, over dangerous roads on "hard ground:" we rather have the *bell(e)s* by our side; there, softly jingling, they make the "music of life," when, in other hands, they are apt to be discordant. Now, the "Lily" must be content to have the free air and high seat by the side of those who *hold* the reins: then all are safe, and stumbling horses will not endanger life.]

England does not liberally patronize its own authors. Dickens' last story, "Great Expectations," has run through only four editions, each of one thousand, in England, while one publishing firm in Philadelphia, have already sold about fifteen thousand copies, with thirty-four illustrations, by McLean, of New York, none of which have appeared in London.

Model wives formerly took "a stitch in time;" now, with the aid of a sewing machine, they take one in no time.

THE EAGLE.

BY MISS ELIZA A. PITTSINGER.

Once upon an April twilight—calm, serene, majestic twilight—
As I watched fair Hesper beaming from the blue and crystal shore,
I espied far in the distance, either "shadow, show, or substance,"
Of a golden-crested eagle circuiting the heavens o'er,
Where the glorious realms of ether clasp the blue and boundless shore,
Meeting, mingling evermore.

Up the towering cliff I wandered, where at eve I oft had pondered
On our country's past and present—on her ever golden store—
Mused on mighty men and nations—on their manifold gradations—
And the myriad constellations that begem the heavens o'er;
When this golden-crested eagle from the blue and crystal shore
Passed my wandering eyes before.

"Oh, thou beauteous bird of omen, from the crystal ether roaming,
Come, I pray you, perch beside me on this rude and rock-bound shore;
Tell me of your curious mission, passing thus before my vision—
Dost thou come from fields elysian? art thou skilled in modern lore?
Bringest thou the branch of olive that the radiant goddess bore,
In the fabled days of yore?"

This proud bird I thus did query, as he came and perched so near me,
That his green and golden plumage he so gaily, proudly wore,
Like an azure wavelet dancing, to the mellow breeze advancing,
That makes sad and sighing music all along the star-lit shore—
Glittered in the mistic twilight like a wave along the shore,
Gleaming, glittering, more and more.

"Pray, oh tell me, dost thou hear me? listening thus to every query,
Why not answer like the ebon bird that spake in days of yore?
Why not teach me some grand lesson, while I here will sit and listen
Earnestly as did the poet skilled in quaint and curious lore—
Subtle, grand, etherial poet, who so taught his curious lore—
On this bleak, tempestuous shore."

As I spake he sat and listened, while his waving plumage glistened,
And his eyes were full of meaning, such as I could ne'er explore;
Quickly from his beak depending, with the azure twilight blending,
O'er the rocky cliff descending, towering high above the shore—
A silken scroll did then unroll these very words—and nothing more:
"What secret would thy mind explore?"

"Well, thou Shadow-Bird, or Substance—coming from etherial distance,
Where, perchance, the Great Departed to the hights of wisdom soar—
I would know if Traitors ever, with their basely-linked endeavor,
Can our glorious Union sever, spreading now from shore to shore—
Long-cemented, mighty Union, towering up from shore to shore?"
On the scroll was—"Nevermore!"

"Can I, prophet-bird, believe thee? comest thou to thus relieve me
From the torturing doubts and shadows that have rent my bosom's core?
From tormenting, weak delusion—soul-absorbing dire confusion—
From a hopeless, mad conclusion, I so long in silence bore?
If, to me, thou e'er speak falsely, mayest thou wander evermore
On the 'dark Plutonian shore.'

"If thou art a bird of omen—prophet-bird from ether roaming—
Give me truly, now, I pray thee, and my earnest thoughts restore—
Give me here a revelation—something more than speculation—
Of the future of our Nation—dost thou see her conflict o'er?
Must her children's blood be spilt, her peace and safety to restore?
Tell me *this*—I ask no more."

This I earnestly did utter, something louder than a mutter,
While an echo then resounded all along the beaten shore,
And my wondering eyes were lifted to the silken parchment gifted
With a meaning that I sifted, word by word, and omen o'er—
Every word and omen sifted that this wondrous eagle bore
To this rude and rock-bound shore.

"Oh, thou child in shadows roaming, I will give you now an omen—
I will give you here a lesson that you ne'er have heard before;
See these stars in glory blending—to a radiant center tending—
See their azure brightness lending to your country's future store—
All of which shall shed a luster brighter still than e'er before;
Purer, brighter than before."

From this cluster thus out-beaming, o'er the silken parchment gleaming,
O'er the parchment then I numbered quite distinctly thirty-four;
And they seemed so linked together, with a cord that none might sever
With their basely-linked endeavor—with their threats and chafings sore;
Even then a hideous monster, with a fierce and warlike roar,
At this cord in madness tore.

Quickly came the fabled maiden, with defensive armor laden—
Crushed the grim, ferocious monster—left him weltering in his gore—
When with proud and peerless daring—noble, proud, and queenly bearing—
O'er the radiant constellation then the *branch of olive* bore;
Donned the golden shield and helmet—left me dreaming on the shore
Of this quaint, mysterious lore.

Then the scroll was slowly lifted by the bird, who proudly drifted
Like a dimly-crested vapor floating on the crystal shore—
Left me dreaming in the moonlight—'neath the calm and silent moonlight—
Of this maiden and the monster—while the bird did proudly soar
Where the glorious realms of ether clasp the blue and boundless shore—
Meeting, mingling evermore.

True Courage.—A company of boys, in ——— street, Boston, one day, after school, were engaged in snow-balling. William had made a good hard snow-ball. In throwing it, he "put in too much powder," as the boys say—he threw it too hard—and it went further than he intended, right through a parlor window. All the boys shouted: "There, you will catch it now; run, Bill, run!" Then they took to their heels. But the brave William straightened up and said, "I shall *not* run." He then started directly for the house where the window had been broken. He rang at the door, acknowledged what he had done, and expressed his regret. He then gave his name, and the name of his father, and his father's place of business, and said the injury should be repaired. Was not that noble? That was true courage. It is cowardice that would lead a boy, when he has done an injury like that, to sneak away, and run to conceal it. Give us William, whenever any real courage is called for, rather than all those boys who cried out, "run, Bill, run!" He will face the danger, while *they* will sneak.

My Wife's Economy—The Calico Dress.

Mrs. Jones is a jewel of a woman. The dear creature lately came home from a shopping excursion, in the most extravagant spirits.

"I have made such a bargain to-day!" said she. "I have bought such a beautiful dress for thirty shillings only! So I said to myself, even if I get Madame Flourish to make it up, it will be economical!"

Now Madame Flourish is a French *modiste*, who had lately come from Paris, and had really great taste, but was most extravagant in her charges—and I never heard her name without a shudder. A few moments before, she made up a brocade for Mrs. Jones, which everybody said fitted beautifully. "It looks as if you were born in it," enthusiastically declared a friend, "and it had grown with you!" But my pleasure in contemplating this masterpiece, I must confess, was somewhat diminished when the bill came in, to the tune of two pounds sterling, for making and trimming it. However, "it was'nt so astonishing after all," as my wife reasoned, "that a dress which was worth six pounds sterling should cost two pounds sterling to make it up," and with this reflection I consoled myself. So when I heard the proposition, her bill would be only ten shillings, which struck me as not excessive; and accordingly I made no objection to the suggestion, but, lighting a cigar, sat thinking of Mary Ann's many virtues, and especially her knack for economy.

In about a fortnight the dress came home. It was a pretty, blue affair, with palms set in stripes, and Mrs. Jones really looked like a summer cloud in it, as she floated about the room, displaying it in every aspect, and expatiating upon its merits. The sleeves which were short, were neatly trimmed with a sort of narrow lace; and the cape, for it was cut low on the shoulders—and dear Mary Ann always wears capes over her dresses—was embellished with a wider lace of similar pattern. I thought it was the cheapest dress for two pounds sterling, making and all, that I had ever seen; and as I smoked my cigar I said mentally, "Ah! Jones, what a happy dog you are to have a wife with such a knack for economy!"

Two days after the bill came in. My wife opened it first, and I saw her draw a very long face as she ran her eye over it. However, she rallied immediately, and handed the missive to me. I glanced over it.

"Whew!" said I. "Twenty-five shillings for making a dress that cost only thirty! Surely, Mary Ann, there must be some mistake here?"

"Oh, no, my dear," she said, briskly. "My brocade, you know, cost two pounds sterling to make and trim, and this is fifteen shillings cheaper."

"But this dress cost only thirty shillings," said I.

"The cost of the dress, my dear," she replied, smiling benevolently at my ignorance, "has very little to do with the cost of making and trimming it."

"The dickens it has'nt!" I began.

"Hush!" said my wife, playfully putting her hand over my mouth. "Smithy, dear, you mus'nt swear." And taking the bill, she commenced going over it, item by item.

"Here," she said, 'is the charge for making the dress—that is, for fitting and sewing it together, eight shillings. Now, I'm sure that's reasonable; for it takes just as long, you know, to fit and sew together a cheap dress as a costly one!—it's the time that has to be paid for. Don't you see, my dear?"

I was forced to nod assent to the fair logician, though it was with an internal groan.

"Then here's the linings, buttons, and other small item, five shillings, which is low, very low. Consider how these matters count up. Besides, it takes time to go about among the shops, matching the buttons to the dress."

I could not gainsay this, either; but I said to myself that there were twelve shillings still unaccounted for, and that it would "puzzle a Philadelphia lawyer" to reconcile this sum to any rational being's notion of economy.

"There's twelve shillings left," resumed Mrs. J., "which is for the Valenciennes—"

"The what!" I exclaimed.

"The Valenciennes, with which the cape and sleeves are trimmed."

"Oh! that common-looking lace!" said I.

"Common-looking!" cried Mary Ann, her eyes sparkling. Then she laughed comically. "That shows what you men know about laces! Why, Smithy, dear, its real Valenciennes, and very cheap; and what's more, I can use it on something else, after the dress is worn out."

"But why put real Valenciennes, as you call it, on so cheap a dress?" I asked in a tone of vexation.

"It's that very Valenciennes that gives the dress such a stylish look," said my wife. "Everybody knows it's a cheap material, and it's only the trimming that redeems it. All that I require is a Valenciennes collar to match it, and I shall be complete."

I could not speak for amazement. I was dumb, not merely at this strange notion of economical dress, but at the utter unconsciousness my wife had that there was any extravagance about it. She availed herself of my silence to expatiate on the beauty of Valenciennes laces in general, and on that which trimmed her dress in particular; and warming with her subject, made it finally to appear that we were under infinite obligations to Madame Flourish for the opportunity of paying this bill and buying a collar to match her Valenciennes. Mrs. Jones was so earnest and sincere, that I thought it would be a pity to break her charming delusion. I resolved, therefore, to smoke second-rate cigars for the next six months, and indulge the dear creature in her wishes; and she looks so lovely, and seems so happy, in her new dress and collar, that, to confess the truth, I dont regret what I have done.

Nevertheless, as an abstract proposition, I still hold to the secret opinoin, that paying twenty-five shillings for making and trimming a dress that cost only thirty, does't exactly show a knack for economy.

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop:
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As BEST FOR BEDS, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

FOREST HYMN.

I keep my haunts within the woodland solemn;
My chartered comrade is the stainless beam;
My bed is made beside some old oak's column;
My goblet is the stream.
Whole years are mine in this majestic dwelling,
Where Nature yet frowns back the sounding mart;
What waves of life forevermore are swelling
Their rapture through my heart.

But not for these I wander o'er the mountains;
And not for these I dare the hurricane;
And not for these I quaff the virgin-fountains—
A Prince of hill and plain!
Oh! mighty meanings from the mountain hoary,
All natural objects, o'er me solemnly roll;
These give the longed-for prize and sacred glory
Unto my pilgrim soul.

Amid the strange, the beautiful, holy places,
With noonday bright or tender twilight dim,
What joy is mine to measure all the spaces,
And find the prints of HIM!
Yon long, long river, like an anthem pouring;
Yon thoughtful silence of the lonely mere;
Yon eagle to the sun divinely soaring—
All, all have meanings here.

To find and read them is my joy and duty;
Then hail, ye boundless scenes! forevermore;
How will I drink and drink your perfect beauty
Upon the virgin shore!
Oh! give me welcome, every woodland solemn,
And long-swept plain and mountain-piling sod,
For I pass by each stately forest-column,
To learn the thoughts of God.—[*Audubon.*

* * *

ANECDOTES ABOUT THE FLOOD.—A Sacramento paper tells the following anecdotes connected with the inundation:

"How high did the water get on your floor," we inquired of a resident of one of the more favored localities of the city.

"Just high enough to take the starch out of my shirt collar," said he. But as if anxious to maintain the good standing of real estate in the neighborhood, he added:

"But then, you know, I'm a very short man."

Somebody was bantering citizen Caulfield about the magnificent waterscape which his ranch presented, to which he promptly replied:

"I would't give a copper for a man that could'nt have a lake of his own."

Yesterday morning we met a citizen who, notwithstanding a heavy loss, wore his customary cheerful look.

"You have lost your house, we hear?"

"Yes."

"And all your furniture, of course?"

"Yes, but I saved my family."

"What is the damage to your stock of goods?"

"About five thousand dollars."

"Heavy, isn't it?"

"Yes, but it's h—ll on the rats."

That man will never commit suicide. A few such will give backbone to any place, and we have them by the hundred—the right place for once.

HOW TO CAPTURE WILD GEESE.—The Los Angeles Star says: From the Los Nietos, on the Los Coyotes, in the vicinity of Anaheim, and along the Santa Anna river, immense flocks of wild geese are constantly found. This has suggested the idea of making them useful, and so a regular business has been set up of killing them. This is done in three ways: first, by the old-fashioned style, powder and shot; next, by the novel style of soaking grain in alcohol, which they greedily devour, and so getting *high*, and cutting all kinds of tricks, they soon fall over and are easy prey to the watchers, who, in a very short time, fill sacks with them. The other plan is also ingenious, but it is prosecuted at night. One man drives a horse in among them, holding a large burning torch, while another follows with a club, and knocks the silly geese on the head. By this means very few of a flock escape. It has been observed that there is a regular plan which governs the movement of this bird. A flock arrives at the places referred to about daylight; they remain during the day, and at night, about a given time, take their departure. An observation of their habits has taught the hunter the best time to secure them; and so a good many of them fly no further.

THEY have, it is said, a rifle company in Vermont, whose captain takes them out once a week to practice; he draws them up in single file, and sets a cider barrel rolling down the hill; the men commence shooting from right to left at the bung-hole, as it comes up. After the shooting is over, the captain examines the barrel, and if he finds a shot that did not enter the bung-hole, the member who missed is expelled. None have been expelled for the last eight years.

A LITTLE boy who had lived for some time with a very penurious uncle, who was walking out one day with the child at his side, when a friend accosted him, accompanied by a greyhound. The little fellow, never having seen a dog so slim and of so slight a texture, clasped the creature round the neck with the impassioned cry—"Oh, doggie, doggie, and did ye live wi' your uncle that you are so thin!"

A gentleman calling at a stable to see a pair of horses that had been advertised for sale, but finding but one of them there, asked the man in attendance, "Where's his mate?" "Faith, sir, an' I think he gives 'em *mate* but wonce a week," was the reply.

THAT was a pretty conceit of a romantic husband and father, whose name was Rose, who named his daughter, "Wild," so that she grew up under the appellation of "Wild Rose." But the romance of the name was sadly spoiled in a few years, for she married a man by the name of "Bull."

A schoolboy having good-naturedly helped another in a difficult ciphering lesson, was angrily questioned by the dominie: "Why did you work his lesson?"

"To *lessen* his work," replied the youngster.

MANY a poor woman thinks she can do nothing without a husband, and when she gets one, finds she can do nothing with him.

WHEN a young lady hems handkerchiefs for a rich bachelor, she probably sews in order that she may reap.

THERE is just this difference in the matrimonial process: the bride is always given away—the bridegroom often regularly *sold*.

THERE is often but a slight separation between a woman's love and her hate. Her keen teeth are very near her sweet lips.

AN old toper out West says the two most precious things now encircled in hoops are girls and kegs of whisky.

WINK at small injuries rather than avenge them. If, to destroy a single bee, you throw down the hive, instead of one enemy, you make a thousand.

SOME men's mouths seem to be like the dikes of Holland: made to keep out water.

WHEN Mr. White looks black, does he change color?

WHY was St. Paul like a horse? Because he loved Timothy.

MEN of talent are often the captives of beautiful fools.

BETTER to have rough hands than the dyspepsia.

East India Tea Store.
ESTABLISHED IN 1857.
631 Washington street,
Nearly opposite Maguire's Opera House.

GEO. M. SMITH & CO.
DEALERS EXCLUSIVELY IN
Choice Green and Black TEAS
Of Chinese and Japanese production;
COFFEE, SUGAR, AND CHOCOLATE.

Our TEAS are acknowledged to be the Best ever offered in this Market.

MANUFACTURES BEST OF FAMILY SOAPS.
Near corner of Mason and Pacific streets.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine
FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N SWEZY, President, and CHAS. M. GORHAM, Secretary. The Committee was composed of H. HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,
For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
3-3m 119 First street.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms—say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861. 8

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are n t as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only bestudied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universall commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamen al when ao in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING MACHINE.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Jan. 2

Trade in the Grain market has been very slim since our last weekly report, attributable in part to the long continued storm and the near approach of the New Year, many preferring to close up all old scores and start anew. By the arrival of the bark Helen W. Almy, from Sidney, we have dates as late as Oct. 31st. The markets for California produce were very unfavorable, and prices much less than was expected. Several loads of California Grain arriving on such a dull market, it as thought they would proceed to Liverpool, seeking a better market. The few hours of fair weather that we occasionally have had recently have been fully improved. The ships Zephyr and Punjaub we may say are loading between showers. We note the charter of the bark Betty Perlbach, to load Wheat and Flour for London. Shippers show a disposition to reduce the price of Wheat, and now only offer 2c for choice round parcels. We are of the opinion, judging from from the limited quantity of receipts that this decline is not looked upon favorably by our farmers and holders, who would not sell at $2 12½ @ $2 20. Our receits for the past week, have been as follows: Wheat, 11,284 sks; Flour, 1,800 qr sks; Barley, 6,225 sks; Oats, 950 sks; Corn, 150 sks; Onions, 200 sks; Potatoes, 1,300 sacks; Salt, 1,380 sks; Bran, 886 sks—Wool, 52 bales; Hay, 158 tons.

New and Valuable Invention.

Mr. S. N. Rice, of this village, has invented, and has now nearly finished, a musical instrument, that, in our opinion, is destined to take entire precedence of the piano, and in fact, all that class of instruments. The tone of this instrument approaches nearer the human voice than anything in the music line that we ever heard: it is in fact so near, that it is almost impossible to distinguish one from the other.

It also resembles somewhat the tone of an organ, in its deep and lengthened vibrations. The principle upon which the tone is produced, is entirely different from any other instrument.

It is fourteen years since the idea first occurred to Mr. Rice, and was first suggested to him in his endeavors to improve upon the piano. The cost of the instrument will be about the same as the piano. Mr. Rice intends soon to apply for a patent, and has made arrangements with a wealthy gentleman in Chicago, to furnish means for manufacturing. It is truly an important and useful invention, and demonstrates a great inventive genius in the originator. We trust that fortune which has so long tempted him, may now reward his efforts with success.—[Horicon Gazette.

Durham Cattle.

We invite special notice to the splendid Durham Cattle offered for sale by us in our Special column. Such chances are very seldom given as we now offer.

There is also other valuable Stock offered worthy special notice.

Samples of Grain.

Some of the finest Samples of Grain grown in the State can be seen at the Office of the Farmer.

A Fine Residence in Stockton.

We were attracted, when in Stockton, while passing down to the steamer landing, to a very handsome dwelling-house, not yet completely finished inside, but which for size and style was peculiarly imposing.

This house is situated near the landing; size 36x26, with an addition for bath-room, kitchen, &c., the style somewhat after the Italian-Gothic villa residences. Color of the house fine dark stone, and set up from the ground some four feet, gave it an airy and graceful look. The manner of the outside finish is unique in itself; the house is boarded lengthwise as usual, over this tight casing uprightly, and the joints covered with a batten moulding, the top board at each story having a circular or Gothic head, thus forming a handsome finish. By thus elevating the building, a fine dry cellar and store-room has been secured, at the same time the *health of all the inmates* also secured from that miasma always produced beneath the floor, and sent up into the dwellings of those that rest on the ground. Low houses resting on the earth and low-set stores also, is the prevailing fault around Stockton. We believe the diseases of the children, in many cases rises from this cause, and we hope it will be looked into.

This dwelling has been erected with reference to comfort, to health and convenience, as well as most excellent taste and style. The parlors, with folding doors, are large and lofty, twelve feet high in the clear, with fixtures for gas, breakfast-room and closets ample and convenient, large and airy chambers, well lighted, with an excellent bath-room (this should be in every house). From the top of the house one of the finest panoramic views of Stockton, and miles around it, can be had. It is really one of the grandest views in our State. Passing from the top of the house to the cellar, we found a good wood and coal cellar; outside, good yard, garden ground and stable. The finish of each of these will be had in due time. There were many other items worthy of note, but our object was to call attention to what we esteem one of the finest and best dwelling houses in Stockton, and hope the example of elevating dwellings and giving them character and style will be followed by many who shall hereafter build. This is an example worthy of imitation. The owner of this fair residence is Wm. M. Baggs, Esq., of the firm of Baggs & Grumsky, Lumber Merchants, and his work and taste will do him credit.

F. Page, Esq., erected a very elegant residence near the Female Institute of Dr. Collins, a large and elegantly designed dwelling, finished in perfect taste. The house is elevated from the ground, has a good cellar, bath-houses, fountains, &c. It is one of the No. 1's.

The Future of [illegible] Towns.

The Marysville Appeal, under the above head, presents some suggestive thoughts upon the present temporary decline and future prosperity of our river towns. Says the Appeal:

It is a law of trade to gravitate more and more to the great seaports. New York has absorbed the wholesale traffic from the inland cities of the Empire State; and San Francisco has been drawing to herself, and of late very rapidly, the wholesale trade of the interior of California. It is her inevitable destiny to absorb it all. She can offer better facilities, more extended stocks, and more favorable terms to the country retailers, than can the merchants of the valley cities. * * * * * It is now fully evident that the leading interior tows are to owe their future prosperity to the settlement of the agricultural region surrounding them; to the steady increase of local traffic; to the healthful change in the character of their population by a larger infusion of the female element; to a growth of the tendency to home investment; to the multiplication and improvement of the modes of communication with all portions of the State; to the cultivation of a greater variety of agricultural products; to an increased diversity of pursuits; and last, but not least, to the growth and encouragement of a system of home manufactures. These new conditions of prosperity are already developing themselves, and under their influence the chief towns of the interior—including Marysville, the third city in California—have entered upon a fresh and lasting growth, and are assuming new and pleasanter aspects. The old frame and one-story brick edifices, in which the rough-and-ready wholesale business was transacted, and people lived most uncomfortably, are rapidly giving place to commodious and handsome structures, which are built of such materials that they can be insured at low rates. Attractive homesteads, with blooming and verdurous surroundings, now outnumber the business houses—and schools, churches, libraries and manufactories begin to outnumber the liquor saloons; With a more intelligent and active appreciation of the needs of these towns, on the part of those interested in their progress, they will flourish and grow faster and better than under the original conditions, and their future will be one of assured wealth and felicity.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

The Farm and Plantation Mill.—Every Farmer, every Stock-raiser, who uses his own grain for stock, or who is at all distant from a grist mill, should have one of the famous mills. A large farmer will save the cost of it in one year, aside from the convenience of grinding his own grist and saving the toll. These mills are for sale at the warehouse of Messrs. Greene, Heath & Allen, on Front street, near Jackson. They are the best mills known.

[From the Farmer of Dec. 20, 1861.]

New Business Arrangement of the Farmer.

For eight years past we have given our entire time, day and night, summer and winter, rain or shine, to the duties of our profession, until we have found that the accumulation of business and duties were of such an amount that if longer continued human strength would not endure it. We have borne the entire care of the Editorial department, with the selection of all other matter; we have been our own bookkeeper, collector, traveling agent, and have answered all our own correspondence; beside these duties we have canvassed for the journal, and given time to examinations of farms, gardens, and vineyards, and all the many matters connected with our enterprise as far as it was possible, and often beyond our strength. Such, however, has been the accumulation of duties and cares, and now so constantly increasing, that we found it would be ruinous to our health and life if longer continued. We have found, also, that the increase of duties was such that we were often delayed and hindered in our plans, as it was by far too much labor for any one mind.

In order, therefore, to relieve ourself from some of these heavy duties, and regain our exhausted strength, and give ourself full command of time whereby we could go over the entire State and look more extensively after the all-important interests of this great science of Agriculture, we have called to our aid an assistant in our labors.

We have therefore, from this issue, associated with us in the California Farmer, J. K. Phillips, Esq., who has been in our employ as the Foreman of this Journal from its very commencement.

Mr. Phillips will from this date take charge of the publishing and principal business department of the Farmer, and thus relieve us of great care and laborious duties, so that we can be at more leisure to visit all our friends far and near. Our duties, however, will still demand of us that we shall in these visits solicit the aid and coöperation of all our friends and the friends of the cause, and having more time, and being enabled to be away more from the office we hope to do it more effectually.

In our absence from the Editorial room Mr. P. will attend to all matters of business; he will also receive subscriptions, advertisements, attend to business generally, and in our united interest we kindly commend him as one who has most faithfully served us in that important position for the period of eight years.

We hope we can also call upon our many friends to give to us now a renewal of their subscriptions for the year close at hand, and to give us also their kind influence among their friends.

We give to all our most sincere thanks for the many favors of this long period, and hope by this new plan to increase the interest and value of our journal, and to have its appearance, as we intend it shall be, greatly improved with every issue, and with more promptness than ever before, as with this new aid we shall be enabled so to do.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

An Experienced Man, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the Farmer Office.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

Machine for Making Wine.

☞ Several Valuable MACHINES for WINE-MAKING, including a Machine for stripping the Grapes from the bunches, with presses, etc., capable of making Wine in the best and most rapid manner, can be had on application to this office.

FAMILY MARKETING.

Stall No. 1, Washington Market.

Receiving a copy of the FARMER with this paragraph marked, may understand it is an invitation to advertise in its columns. All their favors will be promptly attended to.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES

VOLUME XVI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, JANUARY 10, 1862. NUMBER 14.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor.

PUBLISHED EVERY FRIDAY MORNING.
BY J. K. PHILLIPS,
Office—No. 728 Montgomery street (up stairs), near Jackson
SAN FRANCISCO.

TERMS.—By mail, for one year, $4; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER,
SAN FRANCISCO, Cal.

PERUVIAN SHEEP.

The Llama, Alpaca, Vicunia, and Huanaco.

LETTER FROM GOVERNOR BIGLER.

[It will be recollected by many of our readers that Governor Bigler (whose letter upon the Llama and its species we now present) during his sojourn as Minister at Chili, has ever been watchful of the interests of California, as his letters which have appeared in the FARMER upon the Llama and Alpaca, and upon the culture of the Alfalfa, will prove. We now present a very important and interesting letter from Governor Bigler, which we hope will call attention to these animals and induce measures that will lead to their speedy introduction into California—for this purpose see special card in our advertising columns.]

SACRAMENTO, Jan. 6th, 1862.

EDITOR FARMER: But for pressing engagements, which were greatly increased by the recent floods, I would ere this have complied with your request and prepared a brief notice of the Llama (of which I brought a male and female from Peru), the Alpaca, Vicunia and Huanaco, the four varieties of Peruvian sheep.

Of the four varieties of sheep above named, Prescott represents the Llama as the one most generally known but least valuable, *on account of its wool*. This may be true as to the Alpaca and Vicunia, but is certainly not so as to the Huanaco. The Llama, Alpaca and Vicunia are not found in the country south of the desert of Attacama, which forms the boundary line between Chile and Bolivia. The Huanaco, the largest of the variety, is found in the Cordilleras south of the desert of Attacama, and *there* is only valued for its flesh and skin, and not for its wool. The skin, after having been so carefully tanned on the flesh side as to preserve the natural color of the the hair, is used as a rug, and is placed in front of sofas in the parlors of the wealthy. In Chile, as before remarked, the Huanaco is not valued for its wool, and is hunted like the deer and antelope in our own country for its skin and flesh.

The Llama is easily tamed and costs but a trifle for maintenance. In Peru and Bolivia, the male is used as a beast of burden, and is as useful to the people of the countries named as the camel is to travelers on the deserts of Arabia. (The female is not so used, and has young twice a year.) They will safely carry one hundred pounds over roads too dangerous for the mule or ass, making from fifteen to twenty miles per day. They are used for carrying silver from the mines of the countries named to La Paz, Lima, and the ports of the Pacific. The Indian drivers carry whips, but seldom have occasion to use them, so obedient are these animals to the voice of the driver. They never give trouble to the driver unless overladen, in which case they will lie down and refuse to rise until relieved of part of their burden. They will perform the days' travel above stated' "subsisting upon the moss and stunted herbage, which grows so scantily along the rugged steeps of the Andes."

Like the camel, the structure of the Llama's stomach is such as to enable it to do without water for days, and even a week at a time. The hoof of the Llama is spungy, armed with a claw or talon, which enables it to take secure hold, and renders shoeing unnecessary.

In Peru and Bolivia they travel in troops of 500 and 1,000, and so regular are they in their steps and movements as never to get into confusion or disorder. The load is laid upon the Llama's back without girth or saddle, and, imbedded in the wool, rests securely even in ascending and descending the steeps of the Andes. "The motions of the head and neck, as they pass the mountain crags," says Lieut. Gibbons, "may be likened to those of the swan as it floats over smooth water."

Llamas are never put under cover at night; nor is it necessary, for they are very hardy and can remain in the open air without suffering, even in the coldest temperature. They are very gentle, and, if carefully watched over and handled tenderly, soon become very much attached to their driver, or keeper. The Llama has a heavy fleece of wool, which is highly prized by the Indians of Peru and Bolivia, and from which they manufacture a coarse cloth to protect them against the severity of the cold in the mountainous districts.

The wool of the Llama, it is true, is coarse and less valuable than that produced by the Alpaca and Vicunia, but during a conversation which I recently had with Señor Melgar, the Minister of Foreign Relations of the Republic of Peru, a gentleman well-informed on the subject, he expressed the opinion that the wool of Llama would, in the mountainous districts of California, very soon change in fineness and value, at least ten per cent. It has been said that the Llama, when enraged, would spit, and that the saliva is poisonous, and will leave a mark on the skin wherever it touches. This, I am inclined to believe, is true as to the Huanaco, but not as to the Llama, the saliva of which is harmless.

I have obtained permission of the Government of Peru to ship from the port of Arica two pairs of Alpacas, and as many of Vicunia.

The Alpaca is the smallest of the four varieties of Peruvian sheep. Its body resembles the sheep, with the head and neck of the Llama. The Vicunia, although smaller in body, head and neck, may be said to differ none in form from the Llama.

Prescott, the historian, to whom I am indebted for part of the information given above, states that "these animals, the Llama, Alpaca, Vicunia, and Huanaco, are not unfrequently seen scaling the snow-covered peaks and frozen ranges of the Cordilleras, where no other living thing has been seen, save the Condor, the huge bird of the Andes, whose broad pinions bear him up in the atmosphere to the height of more than twenty thousand feet above the level of the sea. In these rugged pastures the Llama, Alpaca, and Vicunia find sufficient sustenance in the *Yelm*, a species of grass, which is found scattered all along the great ridge of the Cordilleras from the Equator to the southern limits of Patagonia."

The Llama, Alpaca, and Vicunia, whether wild or under the care of a driver, or herdsman, can neither be hunted or killed by the peasants or Indians of the country. They are protected by laws as severe as those enacted for the security of horses, cattle and mules, which are pastured upon the lower and cultivated slopes of the Andes. "During the time of the Incas, these animals were hunted once in four years, which was done by large bodies of men surrounding a district of country and driving all animals found in it to the center of a point fixed for the purpose. Of the animals captured, the coarser kinds were slaughtered, their skins reserved for various purposes; their flesh cut into thin slices, and distributed among the people, who converted it into *Charqui*. The Llama, Alpaca and Vicunia, which generally numbered thousands, after having been carefully sheared, were suffered to escape and again resume their haunts in the mountains. The wool thus collected was deposited in the Royal Magazines, from which, in due time, it was dealt out to the people. The coarser (that of the Llama) was worked into garments for their own use, and the finer for the Inca, for none but an *Inca noble* could wear the fine fabric of the Vicunia."

The laws of Peru and Bolivia are still rigid in relation to these animals. Not only is it unlawful to hunt or kill them, but it is also forbidden to take or send them out of either country, without the consent of Government. In both imprisonment for life is the penalty inflicted for a violation of this law.

Before leaving Arica, I was told by the natives of that place, that the Llamas then under my care would not live to see California—that the heat of the tropics would certainly prove fatal to them. I was also assured that they had many peculiarities and could only be successfully managed by persons very well informed as to their nature and wants. The Peruvian proverb, "The Indian for the Llama, and the Llama for the Indian," was oft repeated to me, with the remark added, that the Llama never had and never would prosper in any other country, or in charge of any other race of people. But, I have already seen and learned enough of the nature and peculiarities of the Llama, to satisfy me that proper care and ample provision will do as much for them as for other domesticated animals.

I have caused the pair of Llamas, which I brought with me, to be well cared for and fed, and they are now more lively and in a much better condition in every respect than they were when delivered to me in Arica. Whilst on board of the steamer I fed them with green and dried Alfalfa, and since in California, they have received only oat hay, of which they appear to be very fond, and which appears to agree well with them.

The Llama, Alpaca, and Vicunia, are sheared once every year. The fleece of one Alpaca will exceed in weight the fleeces of two fair-sized Merino sheep. The fleece of the Llama, although not so fine or valuable as that of the Alpaca, will nearly equal it in weight. The wool of the Vicunia is maroon-color, and is still finer and more valuable that that of the Alpaca. The "Lima Hat," so generally worn and highly prized in California, is manufactured from the wool of the Vicunia.

The cross between the Alpaca and Vicunia, called the *paco-vicunia*, produces wool which is said to be as fine as that of the Vicunia, and to have the length of staple of that of the Alpaca.

I was also careful in my inquiries as to the price of and demand for the wool of the animals above-named, and was assured that the supply was not equal to the demand—that twenty times the number of pounds shipped to England and France could be yearly sold at the prices now paid.

At Islay, and other ports south of Callao, the wool of the Alpaca sells readily to the agents of English and French manufacturers at 50 and 56 cents per pound. The wool of the Vicunia is worth still more, commanding at times as high as 80 and 85 cents per pound.

The information which I obtained, and investigations made, have satisfied me that the Llama, Alpaca, and Vicunia, will prosper as well in the mountains of California as in Peru or Bolivia, and that, properly cared for, they will yield the wool-grower, in net profits, more than double, perhaps treble, the amount which can be realized from raising and shearing sheep.

I am, very truly, Yours, &c.,
JOHN BIGLER.

◆

Suggestions Concerning Fruit Culture.

FROM PRACTICAL EXPERIENCE.

IN the Transactions of the San Joaquin Agricultural Society, we find an article from Messrs. West & Brother, who are located near Stockton, and were successful exhibitors at the late Fair. The statements are the result of their experience, and of value to our readers. They say:

We have been requested to make a report upon "our modes of fruit culture, with suggestions relative thereto."

We have about seven acres in nursery, mostly fruit-trees; ten in vineyard; a good stock of evergreen and deciduous shrubbery—trees mostly young.

We commenced our orchard in 1854, and have been planting a little every year since. Our aim has been to test as many varieties of fruit as possible, especially pears and grapes. We have made many experiments in irrigation, and have formed our opinion, as to what fruits require irrigation, and what do not, in our soil.

PEARS

Seem to thrive in any soil; they are free from blight and insect ravages, and seem to be perfectly at home here. They produce very young; standards frequently bearing a good crop the third year from the bud, and dwarfs the second. For substantial durable trees, the pear-stock is preferable, but for early fruiting and for large crops of fine fruit, the quince is the best. We always get our best specimens on dwarf trees, some of which have produced one hundred pounds of fine fruit this year.

We would recommend the following:

Early Varieties.—Madeleine, ripe from June 6th to July 1st; Early Catherine, productive; Dearborn's Seedling, hardy, productive, ripens its fruits gradually from July 1st to August 1st; Rosteizer, fine fruit, July.

Fall Varieties.—Bartlett; Flemish Beauty; Louise Bonne de Jersey; Seckel, Beurre Diel; White Doyenne; Doyenne Boursack.

Winter Varieties.—Easter Beurre; Winter Nelis; Vicar of Winkfield.

We have over one hundred varieties, many of them very good, some worthless; the above list are all good productive kinds, and ripen in succession. We believe it advisable to irrigate dwarf trees.

GRAPES

Have done very well this year; free from mildew. We do not irrigate after the first year: our vines planted last year have produced a small crop, the grapes were very sweet; the vines are in a thrifty condition, making a good growth. Our five-year old vines bore as fine large grapes as we ever produced with irrigation.

We cultivate thirty varieties. The following are No. 1 kinds:

Black Hamburgh; Black Prince; White Frontignan; Grizzly Frontignan; Chasselas, in variety; Isabella; California.

It may be useful to some to learn our method of planting vines. First, the land is sub-soiled, by running a bull-tongue after a large plow; the first plow is drawn by six good horses, the second by four, plowing one and a half acres per day, eighteen or twenty inches deep. The land is then harrowed and rolled, so that the pegs may be seen easily. A line two or three hundred feet long is stretched down the piece, as the rows are desired to run; then, with a pole forty feet long, we measure down the line, sticking a peg every eight feet, and so on all through. When the land is all staked, dig the hole close to the peg, all on the same side, throwing the surface to the right, and the bottom to the left. The top of the vine is placed near the stake; the surface soil is thrown around the roots, and the bottom soil on the top. We always plant rooted vines, because they are sure to live; we have not lost more than a dozen in ten thousand. If cuttings are planted, a large number will not live; the cost of replacing them, the lost time, and the watering another year, more than counterbalances the original cost of vines. After the land is prepared and staked off, a gang of six men will dig the holes and plant six hundred vines per day.

APPLES.

Ours have done much better than ever before; as the trees get age, they hold their fruit much better. We do not irrigate after the first year. Apple-trees, in our vicinity, are generally healthy. We have no borers, except in trees from other localities; also, no mildew. A few varieties are troubled with a blight in the leaves, caused probably by the hot sun. Woodpeckers are the worst enemy the fruit has.

Early Varieties.—Red Astrachan; Early Harvest; Early Strawberry; Summer Pearmain.

Fall Varieties.—Porter; Maiden's Blush; Fall Pippin; Rambo; Golden Russet; Baldwin, productive, but drop their fruit and do not keep; Rhode Island Greening, productive, but drop their fruit and do not keep.

Winter Varieties.—Wagener; Newtown Pippin Winesap; Winter Pearmain.

Persons planting orchards for commercial purposes, should be careful not to have too many varieties. Select a few that are good bearers, hardy kinds, that come at the best season for your market, be it early or late. It is far better to have one hundred pounds of fruit of one kind, than of two or three kinds. Those who plant for their own use, should select such as bear in succession throughout the season, so that they may not be out of fruit at any time when it can be had. For instance: the Madeleine pear ripens the sixth of June; it is followed by the Dearborn's Seedling, and it by others, until the Easter Beurre, which keeps until April. The Red Astrachan apple ripens the fifteenth of June; the Newtown Pippin will keep until that time next year. A little care will save much disappointment by and by. Many people will not plant any but large fruit, no matter what may be its other qualities. Our advice is to plant good trees well; it is poor economy to save a few cents in the price of a tree; to plant it, water it, cultivate it, and finally, throw it away.

PEACHES

Have never done well with us, and appear to do worse every year. We have had no curled leaf this season, and our trees are healthy, still the fruit was small and bitter. We did not irrigate. Our opinion is, that on clayey soil, irrigation is necessary; on sandy soil, where the roots have a larger range, they may do better without water. Almost any variety of peach will do well on proper soil when not affected with the curl.

The following are free from that disease: Crawford's Early; Myer's Rareripe; Smock's Free; Snow.

PLUMS

Do well; in our clayey soil they are perfectly at home. When planted two or three years, they bear heavily. They are subject to no blight or curculio. The only objection is, they produce more than they can well mature.

ALMONDS.

Most of this variety which has come under our observation, are not old enough to test their value as a crop. We have several varieties of the soft-shell which promise well. The best is a seedling produced by Mr. W. P. Miller, of Stockton; it has borne three crops, and there is no doubt of its value.

FIGS

Have done very well this year, much better than ever before; even our nursery trees have produced an abundance of fine fruit. We think they can be made a profitable crop, and have put up a few boxes which compare favorably with any we have ever seen.

The best variety is the White Smyrna. The White Ischia, Genoa, and Marseilles are fine but small. The Brunswick is immensely large, but coarse; Brown Turkey, productive, coarse; California, productive, coarse.

It has been supposed that *Evergreens*, especially coniferous trees, would not thrive in our hot dry climate and stiff clayey soil, but it is a great mistake; have never seen a better growth than is made by the Arbor Vitæ, Pine and Cypress. The only requisite is to raise them from seed, and nurse them through the first and second year. They then become strong and hardy, and grow thrifty; will do with less water than any other ornamental tree. We think the day will soon come when they will be plenty and cheap, so that we may adorn our dwellings, make hedges, and use them freely. The want of them is sadly felt in our landscape. We have many fine natives, which are much sought in the Atlantic States, such as the Sequoia Gigantea, or Big Tree; the Torrega Myerstica, or Nutmeg-tree; Cypresus Macrocarpa, or Monterey Cypress; the California Arbor Vitæ, and some of our Pines. The California Holly and Ceanothus are the most beautiful hedge-plants in the world. Many trees and shrubs, which are greenhouse shrubs in Northern States, grow in the open air without much cultivation; the Acacias, the Euonymicus Japonica, the Pepper, and many others, very beautiful.

◆

What Grapes Shall I Plant?

We are continually inquired of "What Grapes shall I plant? and therefore re-publish what we said in January last. It is always important that those who write such inquiries should state whether they want grapes for the *table* or for *wine making*.

We herewith furnish what we esteem some of the best known for each use, and we can place purchasers in the way of finding the very choicest lots in the country.

GRAPES FOR THE TABLE.

Victoria Hamburg.—A large black grape, larger than the Old Hamburg, plump berry, very large bunches, and very fine clusters.

Black St. Peter's.—A very black grape, long, handsome clusters, and a sweet rich grape; very showy bunches.

Muscat of Alexandria.—Creamy white, large clusters; one of the best and most delicious table grapes known.

Cannon Hall Muscat.—Large splendid berries and clusters, making a grand desert fruit.

Violet Chasselas.—Showy, rich, fine clusters; No. 1.

Palestine.—Pale white; clusters thin, but long and showy, often two and three feet long, when grown under glass.

Early Black July.—A compact cluster, fine berry, juicy and sweet. This variety has a fine bloom. A showy desert fruit.

Grizzly Frontignan.—Large berries, bunches showy, berries reddish tinge; fine showy table fruit, musk flavor.

To these may be added:

Chasselas of Fontainebleau.—White; a medium grape, somewhat showy.

Royal Muscadine.—A smart musk-flavored grape, golden color, and showy bunches.

White Nice.—A showy grape, and esteemed by many as a handsome table grape.

In our Nursery Catalogues there are many other good and showy varieties, but these are our preference for the table.

GRAPES FOR WINE.

The American grapes, the *Catawba*, the *Isabella*, the *Concord*, the *Diana*, and the *Rebecca*, will all make fine wine. The first two are the Longworth favorites, the others just beginning to be known.

The foreign varieties, that will soon lead off, are all the fine German and French grapes known to experienced vintners, such as the best varieties of the *Chasselas* and *Muscat* grapes, the *Malvasia Madeline*, *Black July*, and that known as the *Royal Muscadine*. To these and better will come all the *Reissling* grapes and the *Burgundies*, which are known and esteemed already, and will soon be better appreciated here. From time to time, from experiments made, we shall give results.

◆

"New Productions"—Rape-Seed—Inquiries.

SACRAMENTO, Jan. 4, 1861.

EDITOR FARMER: I see in your Mumber of the FARMER, of Jan. 5, a heading, "New Productions," in which you state you hope to ascertain to what extent many of the New Productions, that have been tried, have been grown successfully in California? I would like to see in that list *Rape-Seed* mentioned. I noticed some time last summer, a communication in your Paper, from a gentleman in Alameda county I think, who proposed to sow twenty acres with this Seed. I would like to hear how he succeeded. Is it your opinion that it can be made a profitable crop, to raise the Seed for Oil? Is the Oil manufactured in a similar manner, as Oil from Flax-seed? By answering as many of the above Inquiries in your valuable Journal, as you see proper, you will confer a favor on your most obedient servant A SUBSCRIBER.

IN reply to our Correspondent, we would say, we think there can be no question that Rape would be a profitable crop in this State to raise for its oil. It is also held to be of great value (where it is cultivated) for feeding cattle and sheep, and for this purpose would seem to be very useful here, especially on our dairy ranches. The cake after the oil is expressed, we suppose is also of the same value as that from Flax. The oil is expressed from the seed in the same manner as from Flax-seed. We published an article some time since, giving full particulars in regard to the Rape plant, and would be happy to furnish any information possible. There are several varieties of the plant, some of which are cultivated very extensively in Flanders, where it is regarded as a very valuable crop. It is described as a very hardy plant, and "with fair treatment never fails on any soil." We hope our Correspondent in Alameda, will inform us if he carried out his proposition, and give us the result of his experiment, for the benefit of our readers.

◆

Plant Orchards and Vineyards on the Hills and Mountains.

Now is the time for those who have *high land* to put it into a state of preparation for future Orchards and Vineyards. The long-continued rains will prove of immense value to owners of high land, and they should not lose a moment in putting Plows to work. As soon as a little good weather shall dry the surface and warm the air, set Plows to work. Plow only on a clear warm, day, and the earth will turn off rich.

Plow deep—re-plow, and finely prepare the earth—it will well repay all the labor given to it. Let every acre of high land that can possibly be prepared, be done this year. Plow now, and plant with *Wheat*, or some good crop; make everything tell, for much will be lost upon low lands. Plant Orchards and plant Vineyards on high ground—they will pay. Look well to the quantity and variety of the fruits you plant. Buy of reliable nurserymen, and all will be well.

◆

A HINT TO GARDENERS.—As our houses and gardens are always, more or less, infested with vermin, it is satisfactory to know that benzine, an article sufficiently well known as a detergent, is no less efficacious as an agent in insecticide. One or two drops are sufficient to asphyxiate the most redoubtable insect-pest, be it beetle, cockchafer, spider, slug, caterpillar, or other creeping thing. Even rats and mice will speedily decamp from any place sprinkled with a few drops of the potent benzine. A singular fact connected with this application of benzine is, that the bodies of insects killed by it, become so rigid, that their wings, legs, etc, will break rather than bend, if touched. Next day, however, when the benzine has evaporated, suppleness is restored.—[London Chronicle.

A VARNISH FOR IRON WORK.—To make a good black varnish for iron work, take eight pounds of asphaltum, and fuse it in an iron kettle, then add five gallons of linseed-oil, one pound of litharge, one-half pound sulphate of zinc (add these slowly or it will fume over), and boil them for about three hours. Now add one and a half pounds of dark gum-amber, and boil for two hours longer, or until the mass will become quite thick when cool, after which it should be thinned with spirits of turpentine to due consistency.

Cultivation of the Cranberry.

In the Farmer of the 27th ult, we published an article on Cranberry cultivation, but referring more particularly to location, soil and mode of preparation for planting. We continue the subject as to other particulars, as given by Eastwood.

VINES.

It is possible that an intending cultivator (says Eastwood) may have the advantage of location and soils, plant vines, and fail. If the bearing or fruitful vine is not chosen, the result of the first attempt will be unprofitable. In determining upon making a trial, it is necessary that the inexperienced should have some knowledge of the plants which he is about to purchase, or he should have implicit confidence in the person from whom he buys them.

The cranberry vine is such a simple, insignificant-looking plant, and the difference in the varieties is so hard to be distinguished, that this fact accounts in some measure for the utter failure of so many. There are instances, where even some of the most experienced have been misled and deceived by the appearance of the vine: then, we cannot wonder at the beginner suffering loss.

In some cases the vine will be planted in the fall, and at such times they are purchased most probably immediately before setting out. Of course, the leaf will be examined, and the color and strength of the spears noticed. If the purchaser relies upon the green appearance of the vine as an indication of its fruitfulness, he may be deceived, and regret that he allowed himself to be misled by such a sign. But the spring is under some circumstances the most favorable season for planting; and in such case the location could be selected and prepared in the course of the winter. The *Healthy Vine* is meant to be understood as that which is the most fruitful; for there is a vine which is barren, and that is described as the *Unhealthy Vine*. The Healthy Vine presents an appearance of greenish brown on the leaf, the spears and runners are fine and thin, remarkable for their wiry nature and aspect. They seem of stunted growth, but form beautiful and tufted groups of spears in their process of matting. The Unhealthy Vine appears altogether brighter and stronger, and hence from this peculiarity some are apt to be mistaken. A grower gives his experience thus: "The barren vines looked greener, had more bushy leaves, and stronger or thicker spears than those which produced the most fruit. I felt confident from their *appearance* that they were the best vines I ever saw; but I lived to find out that those *signs* which I took to indicate the productiveness of the plant, were only symptoms of *disease*, which disease means *barrenness*."

The healthy vine, by some cultivators, is stated to be of medium thickness, or strength of spear, and bushy leaves. All the barren vines which we have examined are stouter than the yielding ones.

THE CRANBERRY PATCH—MAKING.

We now give the methods of making a patch. On some farms, locations and soils are all that can be desired for the purpose; in such a case there will be little demanded beyond labor. Should the situation be that of a shallow pond, with a sandy bottom, in which the water stands deep in the winter, and in summer it almost dries up, the first step to be taken is, either to construct a drain or ditch, by which to draw off the water from the pond. Should the bottom or surface be uneven or irregular, you must endeavor to make it more level. It is not an uncommon practice with some growers, to make their patches flat, but this is rather passing into disrepute; the incline plan of construction or formation being preferred by most cultivators. The sand on the edges of the pond can be carted or wheeled to the center, and the patch raked over, giving it that degree of sloping which will carry off the cold spring water. The object, in such a situation as this, of making a drain, is to carry off the water in the spring and summer; but however favorable it may be to have vines "flowed" in the winter, that "flowing" must in the summer be prevented; the drain does this effectually.

Swamps or bogs generally involve more labor and expense in their preparation than other places. First, the brush and undergrowth must be cleared off. Secondly, the top turf ought to be removed if possible. The surface should then be covered about four inches deep with sand; this keeps out the coarse wild grass, which in such situations is the enemy of the vine. A drain must also be made, if necessary to prevent the vines being overflowed in summer.

The banks of fresh-water ponds, when properly managed and prepared, are good. Land that is liable to be overflowed with salt water, if desired to be used, should be dyked so as to effectually keep out the salt water, and then prepared by taking off the sward and covering it with beach sand. This land must lie exposed to the rains and atmosphere a sufficient length of time to get freshened, as it is not safe to plant till the salt has been taken out it. And no cranberry yard is completed until it is fenced in such a manner as to keep out the cattle.

PLANTING VINES.

The cranberry vine can be removed from the the soil in which it has been cultivated, or from its native swamp, either in the spring or fall of the year. Experiment has proved that the vine can be taken up and have all the soil taken from its roots, be packed in barrels, and forwarded to any part of the country without being injured: yet all cultivators prefer to plant their vines immediately after removal. It is admitted by most cultivators of the cranberry that in the absence of ability to "flood the patch" in the winter, that it is better to plant in the spring than the fall, because those vines set out in the fall, which are not "flowed," will get frozen, and when the frost is thawed out, it will throw the young plants up and out of the soil. In circumstances like these, spring planting is the best.

Sod planting is the oldest plan, but experience has taught that it is not the best; rank weeds and foul grasses are brought with the sod, which retard the matting process of the vine. A favorite method among the most successful growers of the cranberry, is to separate the vines from the sod, being careful to leave two or three small spears or runners on the roots. In planting, place the roots in the soil first, then spread out the spears or runners, and bury them in the soil, but being careful to leave out of the earth the ends or tips of those spears or runners. From each of the latter will start new roots, and each root will be a new vine; thus giving a number of roots, in place of one, from which the vine may start. A patch planted on this system mats rapidly, and has rarely been known to fail.

In cutting planting, the vine is cut up into convenient lengths, say from four to six inches. One of these cuttings is taken, but not planted with the end down and one end out of the soil; it is planted in the middle of the cutting, leaving up both ends, so that when it takes root, instead of there being but one runner, there will be two. This is a good and safe method.

Broadcast planting, when sufficient vines are at hand, is done by cutting them to about two inches in length with a common hay-cutter, when (the patch being prepared) they are scattered over the surface like wheat or oats, and then well harrowed into the soil. The cuttings will take root from the base of the leaves, and will soon spring up and present the appearance of young and healthy vines. Some prefer to bury these cuttings in in drills, but it is mere matter of opinion.

As to distances of planting, this is regulated by the quantity of vines at hand, and the extent of land to be covered. Some plant them three feet apart, when it must take them a long time to mat. Some plant eighteen inches apart, which is better, because they will be matted the sooner. The rule is, the nearer planted the better, provided the patch is not overrun with weeds and foul grass.

When the vines have been planted, their development depends upon the treatment they receive from the cultivator. Though no great labor is required, all weeds and grass must be removed, and generally after two or three years, the vines will take care of themselves, thus leaving little to be done by the grower.

In fall planting it is always best to flood, where it can be done. It is not well to drain off the water until frost disappears, as the water prevents its blossoming. Though the vine is a hardy plant, yet its blossoms, and berries, are very sensitive, and are soon injured by the frost, early or late. In managing the vines, the cultivator will have to be guided by the condition of his yard whether it is weedy or otherwise, dry, or too moist, and the nature of the climate in which his patch is situated. Flooding is not of so much value in those regions where frost disappears early in the spring, as in those where it continues to June.

◆

Planting Pear-Trees.

We copy an article on this subject, by a writer in an Eastern periodical. He says: From the experience of those who have planted pear-trees on an extended scale, and have been most successful, we learn that a thorough preparation of the soil is essential to insure profitable results; and until the soil is in a condition to allow the rains "to enter, pass through it and out of it in as short a time as possible," the cultivation of the pear cannot be made a profitable business.

On clay lands, under-draining previous to planting the trees, is the first step towards accomplishing the required condition, and the next in order, is a thorough surface and sub-soil plowing. This last operation may be repeated with profit three or four times, and will compensate fully for the extra labor occasioned. Land that will produce sixty to seventy bushels of corn to the acre, prepared in the way described, will give satisfactory returns in pears, and produce new wood enough to sustain the tree in a healthy condition. When we see a pear-tree heavily laden with fruit, and with no new wood, it is fair to suppose the tree is not in a healthy state, which is proved by the fact that this overbearing brings on premature death. It is frequently the case that persons are willing to condemn dwarf-pears as unprofitable and short-lived, when numerous facts show mismanagement on the part of the owners, by neglect in providing the necessary food, bad pruning, and allowing the trees to over-bear.

When the location of the rows for pear-trees is decided upon, run a large sized sub-soil plow a dozen or more times in the intended rows; this operation lessens the labor of loosening the soil, and leaves it in a thoroughly pulverized condition. The size of the hole matters little; the proper way is to have the entire field like one large hole, filled loosely with earth, and if the under-draining, surface and sub-soil plowing are attended to, in the way we have recommended, the object will be fully accomplished. The proper distance between dwarfs, as far as we have learned from our own experience, is eight by ten feet, and fifteen by twenty feet for standards. In removing the earth from the holes, keep the surface and sub-soil separate, and fill the hole to the depth the tree is to be set, with surface soil, mixing it with bone-dust, super-phosphate, and wood-ashes.

In taking the trees from nursery rows, the greatest care should be exercised. A large number of the trees that die the first year after planting, are lost from injuries received in careless handling in the nurseries. The roots should not be exposed to a dry air and hot sun for any length of time, but heeled in or planted soon. Purchasers should select trees of which the pear-buds were inserted near the surface. High worked trees are already too numerous in market. On those high worked dwarfs, when the pear-stock is planted three inches below the surface, the quince-roots are buried out of reach of the genial sun and beneficial effects of the atmosphere.

When the tree is planted in the hole made ready for its reception, place the side of the tree with the fewest branches, southeast. Trees put forth the strongest growth in that direction; by placing the weakest side southeats, the tree will become balanced in a few years, by moderate pruning. Dwarf pear-trees should be placed so that the pear-stock will be at least three inches below the surface. This will insure the early bearing characteristic of the quince, and the longevity peculiar to the pear. Fill the hole around the roots with surface-soil, and spread the soil taken from the bottom of the hole, on the surface between the trees. It is a good plan to mulch the surface as far as the roots extend, thus protecting the young roots from alternate freezings and thawings.

It is too often the case that the long, thin branches, on the trees coming from the nursery, are left on, in the hope of having a large tree in a short time. When left uncut, the mistake is discovered at the expiration of three or four years, when it is too late to remedy the evil. The pruning-knife must be used freely the first year, if a good shaped tree is to be obtained, and if well performed, then little work is needed afterward.

◆

Sale of Exmoor Ponies.—Nearly seventy of Mr. Knight's clever ponies, warranted to be "bred like deer on the Exmoor Hills," were offered for sale handy the railroad station at Reading, recently. They averaged, at all ages, about 10gs. each, the highest price being 26 gs; but the herd was clearly not as fine a sample as had previously been sent to Bampton Fair. Mr. Knight, however, intends wintering them with more care, and will, no doubt, make a better show in London next summer. Lately, Mr. Robert Smith, of Emmett's, brought up his own lot of Exmore galloways and ponies to Taunton, when five of them went as high as £44 each, eight at over £40, twelve at £37 10s, forty-five at over £30, and forty at £25 each. The young things and small ponies averaged £12 each, but Mr. Smith's success is mainly attributable to his crossing the Exmoor into something better by the aid of the thoroughbred sire.

How to Raise Fine Crops of Wheat.

Here is what a writer in the Wisconsin Farmer says on his experience in raising wheat, where they attach some value to manure, and where they have winters of frost and snow (which we don't have much of in our wheat-growing localities):

As it is the season of the year when preparations are made for the wheat crop, to commence to raise it, I will tell you my method. In the first place, I don't calculate to sow any more than I can prepare the soil for. Plant and manure once in three years; plow about ten inches deep, if done with one team; cut about the same in width, and not plow over an acre per day. It is very essential that it should be plowed in the fall, that the new soil plowed up may become pulverized by the action of the frost during the winter and spring; *also, that the whole soil stirred by the plow may become somewhat compact before the wheat is sown.*

After I have used all the manure made on the place, I have made a practice of drawing it from town and top-dressing the land before or after sowing, which has paid well, producing about one-third more than that which was not top-dressed.

Sow as early in the spring as the frost is out and the land dry.

Prepare the seed by washing in strong brine; dry with lime; sow one bushel and a half per acre; put it in well; harvest early, before it is dry enough to shell; get it clean by cutting it all, raking and binding it well. The result is that it averaged last year over 40 bushels per acre, and this year 32½ bushels. One acre that was top-dressed one year ago last spring, yielded 65 bushels. The quality both seasons was the best.

The plan that I have practiced for the few years past has increased the quantity from twenty or twenty-two bushels per acre to the figures above.

The motto is, "Sow less and do it better; manure well, and get more." M. C. Bushnell.

How would this plan do in California? Observe what he puts forth as very essential, that "the whole soil stirred by the plow may become somewhat compact before the wheat is sown." And bluestone is safer than lime for washing.

◆

Flax Culture.

An adjourned meeting of the prominent citizens of Niagara county, and others interested, was held at the American Hotel, Lockport, in August last, to hear the report of a committee appointed to ascertain the facts in regard to the culture of flax in that locality, and to confer with the "American Flax Company." The practical conclusions of the committee may be gathered from the following:

That from the best information they could obtain from farmers and publications upon the subject, a fair average yield of dry straw after the seed has been thrashed off, is a tun and a half per acre, and ten bushels of seed, although two tuns of straw and eighteen bushels of seed have frequently been raised upon an acre of land. That the lands of this county and the adjoining counties of Erie, Orleans and Genesee, are well adapted to the growth of flax, and that the crop in these counties would be highly remunerative to the farmers. We do not regard it as a peculiarly exhausting crop, and it has the great advantage of keeping the land clean and free from weeds, and is a good crop to seed with, either for timothy or clover.

After hearing the report, a discussion of the subject ensued, in which Hon. Washington Hunt, Hon. S. B. Ruggles, and Mr. Turner, of Black Rock, and other distinguished gentlemen took part. The following resolutions were adopted:

On motion of Governor Hunt, it was resolved, that it is the opinion of this meeting that the "American Flax Company" will be able to procure all they want at $8 per tun, and that we will do all in our power to aid and assist in procuring such supply.

On motion of Dr. Morse, it was resolved, that a committee of three be appointed to get the pledge of farmers to raise from one to three thousand tuns of flax straw, to see that a sufficient supply of the best kind of flax seed be brought into market, and to make such other arrangements as are necessary to forward the enterprise.

◆

A Trip to the Tule Lands.—On the 29th of Dec., a number of gentlemen of Stockton, says the Republican, interested in tule lands, started down the river on the steamer Cristiana, for the purpose of examining what effect the high water had on these lands, and of seeing the location at high tide. It was found that all the lands, commencing at the vicinity of Twenty-one-Mile Slough, downwards, were high and dry at low tide; and that levees two and one-half feet in height, and of proper base, would be sufficient to keep off the water. The tides during the past week have risen beyond anything before known on this river. On Lyons and Beaumont's ranch, which is leveed on but three sides, a band of 150 or 200 head of cattle were grazing, apparently unconscious of any flood. Those put on last summer are in splendid condition for beef. The most skeptical of the party returned fully convinced that these lands can be reclaimed, after which they will be the most valuable in the State. This land, a year or two since considered a barren waste, now begins to show signs of cultivation. Houses have been built on the river, between Disappointment Slough and the Moquelumne, by W. B. Norman, Joseph Belcher, Messrs. Lyons and Beaumont, A. G. Kimball, and Mr. Webb, all of whom have a considerable quantity of land wholly or partially inclosed. Mr. Dana of San Francisco, on the north side of the river below Disappointment Slough, is inclosing a tract of 320 acres. As yet he has built no house, but intends doing so at an early day. Mr. Webb has contracted to have a wharf at an early period. The house just built by Mr. Kimball is large and commodious, and presents a fine appearance from the river. He intends removing his family into it in a few days.

Remedy for the Bite of Mad Dogs.—A Saxon forester, named Gastell, now of the venerable age of 82, unwilling to take to the grave with him, a secret of so much importance, has made public in the Leipsic Journal, the means which he has used for fifty years, and wherewith, he affirms, he has rescued many human beings and cattle from the fearful death of hydrophobia. Take, immediately, warm vinegar or tepid water; wash the wound therewith, and then dry it; then pour upon the wound a few drops of hydro-chloric acid, because mineral acids destroy the poison of the saliva, by which means the latter is neutralized.

To Dress Sheep Skins.—Nail the skin on a board, with the flesh side out; rub on plenty of powdered chalk; after it is dry and begins to rub off, rub on some alum and roll it up and lay it in a dry place three or four days; shake it out and rub it well.

Ladies' Department.

The Ladies' Flower Garden.

Aside from the intrinsic beauty of flowers, and the graceful, refined air imparted to dwellings by their presence and neighborhood—advantages too apparent to need more than the merest mention here—I beg to urge upon my sisters who are country dwellers (and few others, I suppose, read our agricultural papers, though they thus lose information I should be sorry to forego), the cultivation of flowers as a means of health.

English people who come here, and tourists generally, while they allow that the early type of womanhood in America is usually beautiful, they lament that that beauty is so fleeting and evanescent. It is said that "while English ladies, from thirty to fifty, and even sixty, are in the full bloom of matured womanly beauty, the good looks of our ladies are in the wane long before they reach the age of thirty."

Thin, sallow, and nervous, if not confirmed invalids, as most of us become, soon after the teens are passed (for we must acknowledge that there is "more truth than poetry" in these assertions), it certainly behooves us to look about and see if the fault is chargeable upon the dryness of our climate as compared with the humidity of England—the eating of fresh instead of stale bread—the "red-hot stoves" that scorch us like the simoon of the desert—or the difference in the daily life of English and American women, as regards out-of-door air and exercise—either, or all of these, that make so wide a difference in the health and personal appearance of ourselves and our "sisters across the water."

It is scarcely to be doubted that the three first named peculiarities may have certain ill consesequences, since climatologists and physiologists so assure us; but judging from the magical effects of a pleasant drive—a walk, not too long, among the fields and forests—or an hour's work in the flower garden, upon my own depressed spirits and tired limbs, and from similar effects observed in others, I am induced to believe that the acknowledged early depreciation of feminine strength and loveliness in our otherwise favored country is owing, in a greater degree, to this last named peculiarity of our domestic habits, than to all other causes combined.

What we most need is *air*—abundant and unadulterated! Not taken in the homeopathic doses that we find within the four walls of our dwellings—fenced off from the outer world by hermetical ceiling and windows—contaminated by odors from the culinary department, and robbed of its purifying and invigorating qualities by repeated inhalations and exhalations, till it has become a noxious rather than a healthful element; but sweet and fresh and pure, as Nature evolves it from her great laboratory, and sends it out to all her children, free as the light and more unfailing!

I might refer you to England, where the physical training of both sexes is considered hardly, if at all, inferior to mental education; and where long out-of-door exercises alternate with shorter in-door studies; and while the latter are dropped, perhaps, when school and college days are ended, the former are continued through life. It is, doubtless, owing to this fact that there are, we are assurred, more perfect specimens of the *genus homo*—"sound minds in sound bodies"—in that country than in any other in the world.

France expresses her out-of-door life in the single fact that she has in her language no word signifying "home."

Germany turns out her people like an overgrown school enjoying perpetual holiday; and though they smoke and drink beer *ad infinitum*, the pure outer air, which they take in along with these "slow poisons," carries them through a long and happy life in spite of pipe and potation.

But is useless to multiply words about what we already fully understand. We want a remedy for this confirmed habit of in-door seclusion and consequent premature decay. And devotion to Floriculture generally and extensively, on the part of all *country* ladies at least, seems the most pleasant available, and all things considered, the most effectual means of securing the needed fresh air and healthful exercise.

I do not suppose but that prolonged daily walks, rides and drives, may be equally advantageous to feminine health; but it somehow does not comport "with the genius of our matter-of-fact people" to make persistent effort for what has in it no more business element than the improvement or continuance of health. Then the two latter modes of out-of-door progression are not within reach of thousands; and a "walk for nothing," to a lady already fatigued with household cares and duties, is not sufficiently tempting to induce her to undertake it often—while a flower-garden at the door, arranged as it should always be, with nice gravel or plank walks, is attainable at all times, even in the early morning, and directly after a shower. There is enough of business in its cultivation, even on a small scale, to satisfy an energetic woman that she is not quite throwing away the time spent upon it. Its quiet, unpretending air, soothing to excited nerves, and inducing pleasant thoughts and gentle cares, is refreshment and rest. The flowers to one, especially who has no other pets, become like sweet familiar children—they acknowledge your attention so gracefully, do not chide your neglect—and finally, forgetting that they are not sentient beings, you come to talk to them and caress them, as if they appreciated your society, and were grateful for your care; and you come in from your ministry to the gentle creatures, with a freshness about the heart and cheek that your tired self an hour before would not have believed possible.—[N. Y. Mentor.

A "Scare Crow."—The following is said to be a remedy against the depredations of the crow and blackbird, in the cornfield: Take fine plump seed corn—a quantity of it—string each kernel on a horse hair—white is best—tying a knot in it to prevent its slipping off. Scatter it over the field in spots where the birds will see it and alight. They will eat but one kernel of it, and will not trouble that field (or any other) again. The two ends of a horse hair sticking out of their mouths well anchored in their craw by a fine kernel of corn, is by no means a pleasure to them.

A Washington correspondent gives the following as the most recent declaration of Mr. Seward in relation to the war, which, he intimates, he heard from his own lips: "The effective part of the war, on our side, is over. There may be more fighting—*but the less of it the surer we are of speedy peace.* Every battle saved—which can be honorably avoided—is a gain to the cause of the Union. The real danger is over. If we escape danger in our foreign affairs, all will be well.

Animal charcoal broken in small pieces about the size of beans, is allowed to be the best filtering medium for water in the world. Ordinary rain-water filtered through this medium becomes as pure as distilled water.

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

$1,000 Reward!

JOHN C. BELL,

Nos. 634 and 636 Clay street,

WILL GIVE THE ABOVE REWARD TO ANY

person that will prove to him that they can purchase

OIL CLOTHS,

CARPETS,

PAPER HANGINGS AND BORDERS,

MATS AND MATTING,

Rugs for Christmas Presents,

GILT CORNERS AND POLES,

Damasks and Window-shades, and House-Furnishing Goods of every Description,

Cheaper than we will sell for CASH for the next

TEN DAYS!

No. 144 Sacramento street,

Above Montgomery street……… *SAN FRANCISCO.*

LADIES' DRESS TRIMMINGS.

This being the only regular Ladies' Dress Trimmings Store in San Francisco, ladies can always rely upon finding the largest assortment and best style goods in the city.

Having just visited the East, and completed all our arrangements with the best manufacturers of Europe for the importation of Fine Goods, as also with the largest and heaviest factors of our own country, thereby having all our goods come through first hands, we flatter ourselves our facilities are such as to make it an inducement for ladies to give us their trade exclusively for

UNDER LINEN,
HOSIERY
UNDER CLOTHING,

And all Goods in our line.

3 MRS. D. NORCROSS, No. 144 Sacramento street.

Manila Cordage.

250 COILS, OF ALL SIZES, OF EASTERN MANUFACTURE. For sale in lots to suit.
2-3m JONES & HEWLETT.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 67 of whole Series; continued from Farmer of Jan. 3, 1862.

XII.—L.

The Indians of Lower California Coasts.

NOTA MISCELLANÆ IN LOWER CALIFORNIA.

THE DOUBLE-TOOTHED RACE OF CALIFORNIA INDIANS.

MENTION has been made in the first series of the Indianology, in several places (particularly in the No. of 9th March, 1860), of the existence among the Islanders of the Santa Barbara channel of Indians whose skulls were found about 1830–33, with *double rows of teeth, among the caves and on the site of the old rancherias thereaway.* I have been assured by old hunters and seamen (Messrs. Nidever, Hill and others) of Santa Barbara, *still living* (January, 1861), that they were met with in abundance on the islands of San Clemente, San Nicholas and San Miguel even since 1850 to 1860. There can be little doubt of this as a well established fact, confirmatory of Hugo Reid's statement. These skulls would bring, in San Francisco and Europe, from ten to twenty dollars apiece, as they are matters of great scientific curiosity.

THE FISH AND SHELLS, FOSSIL AND LIVING, OF THE CALIFORNIAS.

Mention is made by the Jesuit historian of the abundance of immense sharks among the pearl beds of the gulf and of the ocean coasts, and the dread the pearl divers had of them. Some of these sharks are of immense proportions and great ferocity, and have been stated to measure over forty feet long. An immense shark was killed in Monterey bay by the Portuguese whalers, in the fall of 1857, the liver, etc., of which made forty gallons of oil. A fossil shark's tooth was also found in digging a well in the town, in 1855, about a thousand yards from the beach, which was nearly as large as the palm of the hands. Sharks are also very common as far up as Fuca straits, and are caught every year for the liver oil. The island of Tiburson, north of Guaymas, abounds in its vicinity with immense sharks, the terror of sailors and pearl divers. These pearl waters also abound with *Mantarays*, a species of sea-devil, with immense flaps and long tails, which hover over the divers and suffocate them in their immense folds. The six and eight armed Sepid or Squid also is found on the rocky shores of the Californias, as far up as Monterey, where it is not uncommon to see the smaller species thrown ashore after a storm. Its back is very hard, and of the size and shape of a large parrot. An interesting account of this formidable animal may be seen, with illustrations, in the May, 1860, number of Harper's New York Magazine, where they are stated to be large enough to haul ships over, as in the Indian and African seas. The Monterey species is sometimes found with arms two and three feet long, with the suckers or plates the size of a half dollar. Their enemies, the sperm whales, before 1825 were also often found in the waters of the Californias south of Point Concepcion; at one time (1826–1830) three or four of them were cast ashore at San Pedro, and made many gallons of fine sperm oil. The fossil remains of the *Cetacea* abound in the mountain ranges of Alta California. The existing Cetacea are very abundant in all the waters between Cape San Lucas and Puget Sound. Clavijero mentions the existence of beds of immense fossil oysters in the mountains of Lower California, a foot and a half long, as well as of other fossil Mollusca. The fossil Mollusca are very common in all the coast ranges, of all species. In San Luis Obispo county they are found in immense layers, particularly of the *Ostrea Titania*, or Great Oyster [see Railroad Exploring volumes], and have always been used for making lime, a use the Lower California species were put to by the Jesuits, as stated by Clavijero.

CLAVIJERO'S BOOK—DOMINICAN FRIARS' BOOK OF 1794.

We know of no copy of Clavijero's California in the original Italian existing in any private or public library of our State. Our Mexican edition of 1852 belongs to the Santa Clara College. A very valuable folio work on the Missions of Lower California, founded by the Dominicans between San Fernando Villacata of 1769 to San Miguel of 1790, was published in folio by a Dominican friar, at Valencia, in Spain, about 1794, entitled "Noticias de la Provincia de California." This work is said to contain detailed notations on the Indians of the northern portion of California, to be found in no other work; it is, however, exceedingly scarce. All the Missions of the Peninsula, Jesuit and Dominican, have been for many years in complete ruin, and not more than three or four priests have resided in that retired country for the last thirty years. The Indians of all the old Mission districts have almost completely disappeared, except in the Lower Colorado and its western sub valleys of the desert.

JUAN DE FUCA, DISCOVERER OF OREGON.

It is very singular that neither Venegas nor Clavijero, though very excellent, dilligent compilers, make any kind of mention of De Fuca, though his account was pulished in Pierchase's Pilgrims, a hundred years anterior to them. A full account of the identity of De Fuca may be found in notes written by the author of these papers in Hutching's California Magazine for September and October, 1860.

THE CALIFORNIA CONDOR.

In reference to the account of the Los Angeles county Indians of Hugo Reid, in the Indianology, second series, *vide* FARMER of January and February, 1861, it should be remembered that when he is speaking of the Indian feast of "the Bald-headed Eagle," he doubtless means the bald yellow-headed Vulture of our State; the *Auron* of the Spaniards and the *Sarcoramphus Californianus* of naturalists. This bird is often mistakenly called by the Americans in California "the Bald-headed Eagle." The Indians in all parts of the State had a great veneration for the Condor Vulture, but we never heard of their extra veneration for any of the eagles, which are also abundant in the country. The Indians in many parts of the State are related to catch the Condor when young, and after fattening it for a year or more, kill it and make a great feast of eating it. [See the writer's notes on the California Condor in the FARMER from May to July, 1859.]

REMAINS OF THE ANCIENT INDIADA OF CALIFORNIA IN CAVES AND GOLD WASHINGS.

Mr. E. G. Squiers, of New York city, the eminent writer on the Indian Histories of the United States and Central America, is desirous of ascertaining the particulars of the discovery of a flint arrowhead found at "Buckeye Flat," or "Hill," 60 feet from the surface, as related at 31 of the No. 3 paper on the Sacramento Indians [*vide* FARMER of 9th November, 1860, second series of the Indianology.] Any *carefully notated* information on Indian remains, in the gold diggings or elsewhere, will be acceptable to Mr. Squiers by direct correspondence, or insertion in the FARMER or other of our State periodicals, and copies sent to his address, for which full credit will be given. The desire and design of Mr. Squiers is to collect all California or North American facts relating to the existence on the earth of races of men prior to the appearance or knowledge of the historic races which now populate our little planet. A reference to Glyddon & Nott's "Types of Mankind" of 1855 will show the great value of a collection of such facts, or to late numbers of the English Edinburgh and Westminster Reviews of 1860. This subject is attracting very great attention in Europe, where a great many facts have been recently accumulated on what we may term pre-Adamite and antediluvian Man

THE GIANTS BEFORE NOAH.

In the old earth before Noah, we are told, "Now giants were upon the earth in those days."—[Genesis chap. vi. 4], which may mean the people contemporary with Clavijero's giant skeletons of Lower California (1765), or those of Tuolumne county of 1860. The careful observation of all such facts is of great value in the sciences of the Hombreology.

The above verse of Genesis adds: "For after the sons of God *went in* to the daughters of men, and they brought forth children; these are the *mighty men* of old, men of renown." This is as full, and most likely as true, when said 4000 years before Christ, and as replete with enigmatical meaning, as what King David said 2500 years before Columbus, to wit: "The *round* world, and all that therein is." He could only know this by inspiration.

Touching this verse on the antediluvian giants, the learned Dr. Challoner, in his edition of the English Catholic Bible, from the Douay edition of 1609, makes the following comments: "It is likely the generality of men before the flood were of a gigantic stature, in comparison with what men now are. But these here spoken of are called giants, as being not only tall in stature, but violent and savage in their disposition, and mere monsters of cruelty and lust."

The gigantic skeleton mentioned before, as discovered about 1765 was found in the vicinity of San Ignacio de Kada Kamang, near latitude 28°, about thirty miles east from the ocean in front of the island of Cerros. The discovery was made by Father Jose Rotea, a German, who is described by Clavijero as an entirely reliable person. The caves with *painted figures* seem to be situated in the vicinity, as the Volcan de los Virgenes is some fifty miles due east from San Ignacio. The Mission of San Ignacio was one of the best built and founded of all the Missions of the Peninsula. It is highly desirable that some intelligent observer hereafter may visit these districts, and carefully examine these fossil human remains and the caves of painted figures, and give to the California world a detailed description of these curious and valuable relics of a defunct race. A perfect skeleton of a gigantic human being of *eleven feet hight* would be of the value of several thousand dollars in Europe, if carefully authenticated, and as a pecuniary speculation would no doubt pay. But let no foolish, careless person undertake this expedition. It seems that there are more than one of the caves with painted figures of Indians, as mentioned by Clavijero. The figures of men and animals should be faithfully copied.

THE STRANGE FISHES OF THE CALIFORNIA SEAS.

Clavijero mentions that the Mantaray of the pearl divers is sometimes found twelve feet broad, nine and a half feet from the head to the insertion of the tail, and two feet in the thickness of the body; the tail is fifteen feet long. The skin of this horrid beast is thicker than that of a bullock, and covered with spines as strong as nails, and after the same shape or manner. It is the terror of bathers and pearl divers. Its scientific name and description is as yet unknown.

The Mulier, Douyon or Mermaid of Lower California.—Clavijero mentions that this animal was several times seen by the Jesuit fathers on the coasts of the Pacific, and particularly by Father Arnes about 1766, near the newly found Mission of Santa Maria, which on Monk's 1855 map of the United States and Mexico, is situated in about 27° 30′; but Clavijero says in about 31°, and situated about four leagues from the *gulf* shore; it must be remembered in this connection that the geography and hydrography of Lower California is in all maps and books merely approximative. Probably no district of the American continent would so well reward the prolonged visit of a zealous naturalist or scientific traveler as this retired part of the world. It must be remembered that it has never been traversed in its longitudinal extent by any other than mere superficial roamers and passengers. To show what can be done, Mr. De Xantus, an officer in the U. S. Coast Survey service, was despatched in 1858 by Prof. Bache, to establish a tidal station at Cape San Lucas, in co-operation with the stations in Alta California of the same office. This indefatigable naturalist sent home to the Smithsonian Institute some thirty packages of specimens of shells, birds, animals, fishes, etc. etc., even from the local field of his observations, and established many entirely new species. [*Vide* Smithsonian Reports, 1859.] Mr. Henry Cummings of London also made immense collections in Conchology in the marine waters of the Peninsula about the years 1825–35, which are now deposited in his cabinet in England, and is stated to be the most extensive collection in the world.

To continue about the Mulier or Mermaid. Clavijero says that Father Arnes saw one of these animals, but it was nearly spoiled. He states that it measured about two palms or hands long and the same broad; that the upper part of its body had a resemblance to that of a woman, and the lower part to that of a fish with scales, and the tail half-moon shaped (la cola lunada). The breasts, neck and eyes are very white. The fish is stated to have been found several times on the coasts of the Pacific very distinctly, and Clavijero says the fish merits *particular mention.* We have never heard of its discovery by any traveler since 1767, but consider Clavijero entirely truthful and reliable. The possession of this animal would be a valuable pecuniary acquisition to its finder.

Molusca.—A curious bivalve shell is mentioned by Clavijero, called the "Burro," which is the terror of the pearl divers; for if their feet are once caught in its open mouth—its habit being to live attached to the rocks under water among the pearl oyster beds—the divers are held fast and cannot rise, and are thus drowned. Clavijero also mentions the abundance of the univalves, and particularly that we call the *Aulon*, in Alta California (or *abelone* improperly), which is a word or term derived from the Achasta Indians of Monterey town, and as used by the Spaniards there since 1770. It seems from post 1770 conchologists that there are not less than fifteen distinct species of the Aulon (Haliotus family) in the California seas.

VERMILION CORROSIVE WATERS.

Clavijero says that "at the head of the gulf, near the mouth of the river, on the west side, there are two lagunas of red water which are of such a caustic and malignant quality that whatever part of the body they touch will quickly make blisters or boils, and occasion such an ardent heat that it lasts for several days. It is probable that the cause of this effect is certain mineral bituminous substances at the bottom of these lagoons, which have been observed when navigators have raised their anchors." He also says that Padre Kino [from 1790 to 1810], in his different expeditions, ascended the Colorado on the west as high up as between 34° and 35°, where he found beautiful plains of fine pastures, covered with trees and abundant in water. [Probably in his last trips he got as far up as the Mohave villages, or even into the coast valleys of Los Angeles county.—A. S. T.]

SULPHUR AND NITER.

It seems, also, that sulphur is found in great abundance near the Volcan Virgenes, of great purity, and easily got at. Also niter or saltpeter is found in the same vicinity. It appears, when the Jesuits left Lower California, according to Clavijero, there were no bees, fleas nor bugs [such as afflict sleepers in beds].

TO THE FARMING INTEREST!

E. F. JONES, 51 Wall street, New York. | HENRY H. HEWLETT, Stockton.

JONES & HEWLETT,

IMPORTERS AND WHOLESALE AND RETAIL DEALERS IN

GROCERIES,
LIQUORS,
Provisions,
AND
HARDWARE, MINING, AND AGRICULTURAL IMPLEMENTS.

Sportsmen!

Powder AND SHOT.

Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.

Parties purchasing will please give us a call. Our stock consists, in part, of

500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1 lb cans.
25 cases in ½ lb cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by

2-3m JONES & HEWLETT.

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,

Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE OF Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

Something New.

HALSTED'S PORTABLE

CIDER OR WINE MILL.

THIS IS A CALIFORNIA INVENTION, COMBINING both the Grinding and Pressing processes within a space of three by four feet.

With it the smallest amount may be made at a moment's notice, or one person can make from two to three barrels per day. The inventor will make these Mills to order on very short notice, and guarantee them superior to any imported. Price, $75. Larger Mills made to order.

A sample Mill can be seen in operation in the Pacific Fruit Market, Clay street, San Francisco.

The inventor would respectfully refer those interested to Messrs. GRAVES, WILLIAMS & BUCKLEY, Fruit Dealers, for further information. Or address

JOEL HALSTED,
(By Express) San Francisco.

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................JAN. 10, 1862.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

To Book Publishers.

We invite Book Publishers, here and in the Atlantic States, to our columns, as a medium for advertising their Works. By our circulation they can make known their business throughout the entire State, and thus widely extend their business.

* * *

The Lama and Alpaca Goats.

We invite the special attention of Stock Men to the Letter of Gov. Bigler in columns this week.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

* * *

NEW PRODUCTIONS.

With a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public interest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

* * *

The Loss of Stock by the Flood.

We desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

* * *

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

* * *

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

* * *

Don't Forget our New Year's Gift.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Advertise Your Trees Early!

Those Nurserymen who have Fruit-Trees, and Grape-Vines, and Garden-Stock, for sale, should by all means make known what they have for sale at an early day.

It is now a well established fact that Orchards and Vineyards should be prepared early in the Autumn, and those who are about to plant wish to know where they can purchase on the best terms. It is therefore for the interest of all who have this kind of Stock for sale to make it known early. By this means they secure the first and best customers.

Our wide circulation will enable all sellers to make known their plans over the whole State.

Nurserymen's Catalogues.—Those nurserymen who desire to make their business widely known, should send us their priced catalogues for distribution from our office.

As many purchasers send to us a request to send them a catalogue of the Best Nurseries, we ask all who claim to stand No. 1, to send us their catalogues and we will scatter them into good hands. As we only advertise those of the best character, we hope those who claim to be No. 1, will send us their business cards.

Loss of the State Agricultural Society by the Flood, at Sacramento.

Desirous of seeing the condition of the Agricultural Hall, which had been justly named the "Home of the Houseless," at Sacramento, during the flood, we spent some time the early part of the week, in visiting the Hall.

The waters having abated, and Homes having been provided, from time to time, the last of some *Five Hundred* persons, that had been fed, clothed, and cared for in that building, left the Hall on the 4th, and now the Hall is clear again, save the echoes of grateful hearts that will ever make that Hall memorable; for the noble and magnanimous charity of San Franciscans, for the devoted faithfulness of the Sacramento Howard Benevolent Society, and the citizens, can never be forgotten, while the parents and children thus relieved shall have memories.

The water came into the lower Hall, about five feet deep, and percolating under the floors, they were forced upwards in a waving form, like the waves of the sea, in rolls of two to three feet, tearing up the flooring-timber as with giant power. We regretted to see a beautiful Monumental Statue, by Devine, that remained since the Fair, that was overthrown and broken: a valuable work, worth $300. Our greatest regret was on entering the Rooms of the Agricultural Society, which being on the lower floor also, the water caused a ruin that no money can replace or make good. The entire Library of the Society, of some 5000 volumes—many of them of great value, being Scientific Works and Records of the several State Agricultural Societies of the Union—were wholly buried in the muddy water, and so saturated as to be worthless. All the Books and Records of the Society, with the Doings and Reports of the last year, shared the same fate. Very fortunately, copies had been preserved of the Reports for publication. To this was added the loss of many valuable specimens in glass jars, which were upon tables; these being lifted by the water, were overturned and entirely destroyed.

Another severe loss occurred in the overturning of the table, which held the glass cases containing the Cabinet of the Society; this was very valuable, being several thousand specimens—among them rich gold and silver specimens. The tables were upset; the cases turned bottom up, and the specimens scattered amid broken glass and the muddy sediment of several inches which had rested on them when the water abated.

Many other valuable things, models, engravings, pictures, etc, with samples of various products of the past year, utterly ruined. As we looked around the rooms and passed through them, and saw the ruin, we could not but contrast the difference now, from its beautiful appearance at the time of the Fair. This is a very severe loss for the Society, and deeply to be regretted. The waters came in so rapidly, that there was no time to rescue the property from ruin, as all attention was demanded to look after the lives of women and children. Although we learn that the Corresponding Secretary, Mr. Wheeler, did all in his power, working until the water was three feet in the rooms, the loss to the Society cannot be less than $5000.

This loss is the more deeply to be regretted, from the fact that the citizens have been called upon so heavily, for two or three years, for the Hall and the Grounds, that they are now, by reason of this calamitous flood, wholly unable to replace the loss.

It is to be hoped that our Legislature, now being in Session, will consider this loss to a Society, as one affecting a great Interest of the State, and offer that aid promptly which the importance demands.

* * *

"Youth's Budget."

In most families there are youthful minds that require a peculiar kind of aliment—something that is tender, nutritious and easily digested. As the weaning lambs that go skipping over the fields beside their dams in the Spring, seek out and nibble, in imitation, the pale-green and tender spears of grass, and gradually learn, as their teeth become more firmly set, to eat promiscuously whatever the older members of the flock feed upon; so do our children's minds, as they are weaning from the milky food of the primers and picture-books, require a sort of intellectual tender grass suitable to the transition period from infancy to adolescence. Thinking thus, and deeming it important that every periodical intended for the family should make some provision for this interesting class of readers—the *future* men and women of the country—we have determined to dedicate a portion of our paper to this object. We do not forget how eagerly, when at that age ourselves, we turned to certain lively and prattling columns of the weekly visitor from a distant city, and scarcely took time to eat until the food *they* contained was devoured! Remembering this, we do not fail to realize the importance of a judicious selection of material for the department under consideration; and, in reading extensively to that end, we shall not only be richly repaid in the satisfaction of fulfilling a pleasant duty, but will be living over again the dear, delightful days of youth, when Miss Porter's Wallace and Thaddeus were our beau ideals of manhood and heroism, and the enchanting tales of the Arabian Nights had not yet lost their racy flavor. We anticipate as much pleasure from the task, as we venture to promise our young readers in its fulfillment. The "Youth's Budget" will be found on the last page of the Farmer.

* * *

St. George Hotel—Sacramento.—This Hotel appears to be the head-quarters of our Legislators and men of business; it is thronged all the time. The St. George is in tip-top order; fine rooms; excellent table; kind and prompt attention; and every facility for business and comfort. Strangers visiting the "City of Floods, Fires, and Legislative Movements", and all who like excitement and amusement, as well as all who wish to see what the rains and snows can do, should go to Sacramento now. They can find good quarters at the St. George's.

[For the California Farmer.]

War! War!! War!!!

Sacred History seems to foretell the events that are now occurring upon the earth. We read that "Nation shall rise against Nation," and "Kingdom against Kingdom," and "there shall be Famine and Pestilence, and Earthquakes, in divers places."

The commotion at present existing in Europe; the Famine now commencing in down-trodden Ireland; and the sad calamity that "darkens our own country," seem to have been foretold in Sacred History, so vividly, that these startling truths should be regarded as almost a fulfillment of Prophecy.

When we review the condition of our own unhappy country, we cannot shut out the terrible truths, that it is a War among Bretheren of one great Family; and although great and alarming evils existed, even criminally so, yet what say the Sacred Writings?

"Brother shall deliver up Brother to Death."

"Children shall rise up against their Parents, and cause them to be put to Death."

"I came to set a man at varianne against his Father, the Daughter against her Mother, the Daughter-in-law against the Mother-in-law."

"*A man's Foes are those of his own Household.*"

It must be perceived that these words are true, in the posture of our country; and this spirit is most unhappily too true over all our land, and Society is rent asunder by this spirit. Let him that reads understand.

Washington in his last great words said, "In time of peace, *prepare* for war."

The present aspect of the world would indicate a fulfilment of the Prophesies: there is, at least, such a semblance of truth in them and their applicability to our times, that thinking men will lose nothing by a perusal of them; and a comparison with the occurrence that are moving Men and Nations.

The recent news from Europe makes appear that all the principal Nations are excited; all are arming for Battle; ships are building: armies moving; strong places are being fortified; Conferences going on: these are indications of some great convulsion moving the very life-force of Nations. "Let him that runs," *Read.* "There are signs on the Sun." "There are signs on the Moon." "There are signs on the Stars." "Nation shall lift up its sword against Nation." Thus it is written:

"Watchman! What of the Night!"

We hear of the combined power of great Nations to check the progress of Liberty, and the rapid growth of *free* Institutions and Popular forms of Government.

"*Gog* and *Magog*" are around for battle; and the Earth echoes with the tramp of mighty Armies going forth to the contest.

So we hear of the combination of France, England, Austria, Prussia and Russia, to compel the United States to make *concessions* to them; give up our Rights; yield our authority over our own Territory, and obey the dictates of a foreign Power, or fear the threats of their vengeance. Why this combination? Who are the Powers? And what are their motives? Can it be possible that Russia—a nation that has so recently proclaimed Liberty to their Serfs, and pledged her faith and good feeling and friendship to the United States—can join a conspiracy *against* us? No—never!

Look well to that "Great Chess-Board" of Nations; look well to the *movers*; look well to every move!

Russia may be put forth: she may even have the appearance of leaping forth in the Affray, in a strange movement, as "Knights" upon the squares of the chess-board; but as quickly will she spring back again over the heads of Kings, Queens, Emperors and all, in defense of the great principles of Liberty; it will be found so in the hour of need. *Russia will never Fight the United States.*

France, Sunny France!! Gay, Joyous, Happy France; France, the enemy of the United States? Impossible! Will France spill the blood of a Nation, for whom the *immortal* Lafayette perilled *his* blood? Will Frenchmen fight against a People, with whom their ancestors joined to achieve Liberty? Will they fight against the Children of a People whose Fathers fought together under the Lead of Washington and Lafayette, with the Glorious, Triumphant and United Banners of *France*—its "Red, White and Blue" mingling with that Flaming Banner, the Glorious Stars and Stripes, that united *won the Victory?* No! No!! No!!! *France will never raise her Banner against that of the Stars and Stripes.*

Look well to the game; look to the move, and look to the mover!

Napoleon moves now his hand; has touched several pieces. Each in turn draws off the attention of all eyes from his great object: he moves Russia; but this "Knight" leaves not his fingers; it is placed back again. He lifts the "Bishop," and Austria goes forward a little; but he says, "back again." Another "Bishop," and Prussia is lifted—but "again back," for that is not wanted now. Once more he essays, and looks to the "Castle;" but *the game is not ready.* I can command all the pieces I have touched, says the mover; they move at my command; they obey my will. The *Castles* too are mine; but first; I will take the *Queen boldly* (for there is *no King*), and the Castles are mine; the Game is mine. I have won the Victory of my soul's aspirations; and my Life's great aim is accomplished. The *Ashes* of Napoleon the First will now repose in Peace.

Who that watches the "signs of the times;" that is at all conversant with the History of France and England, but sees France is *the* Great Power now: we mean the Great *Scheming* power—France. Napoleon's spirit is not a spirit of Peace; it is like a great cauldron with the heated flame beneath; it is in continual motion. Napoleon is the ruling spirit of the world, and will never rest contented until the "object of his life," and his Mission have been fulfilled; and the Events are fast hurrying on that will accomplish those ends.

It will be remembered that France volunteered to join England against Russia, in the Crimea. What had Russia done to France? Nothing to demand war on the part of France; but Louis Napoleon desired to do battle, side by side with England, that he might study the power and skill of the English army, so as to be able to cope with them, when his "Star of Destiny demands it," Louis Napoleon *did* do battle side by side with the very flower of England's armies, and *Napoleon was there in person;* and then his mighty spirit prompted him so to plan as to take all the Glory from England, and place it on his own *Armies;* and then to complete his own Glory, by dictating "Terms of Peace" *in his own Capitol!* That was his Mission: not merely to fight Russia, but to *Triumph over England!*

Napoleon moves again, and with the Armies of the Earth; and this will be his Great and Final Move: if the "Star of Destiny" proves true; if the time has come: it will prove true. If it fails now, it will yet come. If England proves false to her own great principles of *Freedom*; if England declares war upon the United States—upon the North—for this will be the war; if England, thus false to her own great fame, throws down the gage of war; then, the Great Move of Napoleon will be made, his Mission be accomplished, and his Name be declared even greater than that of his "Uncle," whose name he bears, whose fame he cherishes, whose Battles he is fighting, and whose wrongs he is redressing. Napoleon only moves his men now upon the chess-board, to "deceive his opponent," for all such moves are fair in war.

Napoleon only moves to embroil England, until his time comes, to avenge the wrongs England committed upon the Great Napoleon; and the moment England declares war with the United States, *that time has come!*

For as sure as this event occurs, France will raise her banner of "Red, White and Blue," and again joining with the Stars and Stripes, there will be seen the *New* Watchword of France written in flaming characters upon its blazoned front: "St. Helena and Napoleon;" and with that watchword, the Armies of France will never lay down their weapons, until the St. George and the Dragon shall bite the dust, and the memory of England's wrong to Napoleon thus wiped out in blood.

This is the "Handwriting upon the Wall;" and it will be transcribed upon the skies in blood also: ere the world's horizon shall hear again the echoing song of "Peace on Earth; good will to Man." * * *

The Flood at Stanislaus County.

Mobley's Ranch, Dec. 27, 1861.

Editor Farmer: We have had one of the greatest floods in this section of the State since 1851-52. The Tuolumne river is now out of its banks almost from bluff to bluff. C. Osborn's ferry-boat is sunk. Branch's rope is down. The La Grange flouring mill and Rhodes' have all been in trouble. Some of the roads and bridges have washed away with the flood. The mill came near going, and is not now out of danger by a long way. The farmers have lost a large amount of fencing. Some stock has been lost, and much more is in imminent danger, and standing only on small tracts of dry land, perhaps not more than six inches above water. At 4 p. m., this day the water had fallen one foot, and this afternoon not much rain, for the last half hour none. The storm commenced on Monday morning last, there is no possible chance for teams to travel. A great amount of damage has been done, and at this time it is utterly impossible for me to make an approximate estimate as to damage caused by the flood. Yours, in haste,

December 30.:—I now propose to state some of the damages done by the late flood in this portion of the State, in part mentioned in my last letter to you, of date December 27th. On Saturday night the storm commenced anew. Sunday and Sunday night almost constant rain; and yet it rains, and the most of the time it rains hard. On the 27th the bridge over the Tuolumne at Don Pedro Bar was swept away; next, down the river, the great dam owned by the Water Company at La Grange. This dam was half a mile above town, and some thirty feet high. Next, the dam owned by E. Dye, at the town of La Grange, and which was for the purpose of propelling large pumps, to throw water on the hill back of the town, for mining; total loss. And all the ranches, from La Grange and Garde's down, so far as I can learn, were badly injured, water running over grain fields, and carrying away a large amount of fencing. I had 80 to 100 rods of board fence, five boards high, carried down the stream. The most of the grapevines were entirely ruined, and a large amount of fruit trees; in fact, the garden and orchard were nearly ruined. Some 600 to 700 feet of flume was taken away from my garden; this conducted water from a large water-wheel I have to supply garden and orchard. The wheel withstood the torrent of waters. It stands on boats, and is twenty-nine feet high.

On the Merced river Wm. Nelson had his bridge taken away; this came down against C. Murray's bridge, and that also was taken, and a portion of Nelson's grist-mill, which stands a few feet below Murray's bridge. And in all probability a large amount of damage was done on the Merced below Snelling Town, as the country was low and full of sloughs. The damage done is beyond calculation at this time, in fences, buildings, stock, &c. Many of the farmers had their grain fields planted in wheat and barley. Yours, in haste,

I. D. Morley.

P. S. At Osborn's Ferry, 2 o'clock P. M., I have learned that the bridge at Don Pedro is only one-half gone, and that all the bridges and ferries on the Merced river are gone. And I am just informed that the La Grange mill-dam has gone; this was three miles from my house, and four miles below the town of La Grange. And yet it rains. Yours,

I. D. M.

* * *

Remedy for Cholic in Horses.—Many horses are suddenly attacked with cholic and pains, caused frequently by being fed with sour barley, or from over-feeding with barley. We have been informed by Mr. Matteson, of Murphy's, that he has found an effective remedy in the following simple ingredient: Take a piece of saleratus of the size of an egg; dissolve in a bottle, in warm water, and give to the horse; lead him to and fro immediately. This remedy and the exercise will relieve the horse effectually in ten or fifteen minutes. Simple as this remedy is, it is a valuable one, and will save horsemen trouble, anxiety, and often the life of a valuable animal.

CALIFORNIA LEGISLATURE, 1862.

THE SENATE.

Senators Hold Over.—Alameda and Santa Clara—A. L. Rhodes, R.

Meeting of the Legislature.

The Thirteenth Session of the California Legislature convened at Sacramento, on Monday, Jan. 6th. A list of the members will be found in our columns.

The Senate was called to order at 12 M., by the President of last session, Pablo de la Guerra. On calling the roll, only three were absent. The members were sworn in by Judge Norton, when the Senate adjourned without transacting any other business.

The House was called to order at 12 o'clock, by J. M. Anderson, clerk of last session. After calling the roll, and taking the oath of office, several members being absent, the House adjourned.

The Republicans met in the evening in caucus with several Union Democrats, and nominated Mr. Barstow, of San Francisco, for Speaker.

On Tuesday morning the Senate met, and organized by the election of the following officers: President *pro tem.*, J. McM. Shafter, of San Francisco (R.); Secretary, Thomas Hill, of Sacramento (R.); Assistant Secretary, A. A. De Long, of Folsom (R.); Journal Clerk, W. T. Huestis, of Humboldt county (R.); Sergeant-at-Arms, A. G. Turner, of Yuba (U. D.); Assistant do., E. Howe, of Santa Cruz (R.); Enrolling Clerk, H. C. Kibbe, of Sacramento (U. D.); Engrossing Clerk, G. Gillespie, of Sonoma (R.); Minute Clerk, Charles E. Abbott, of Sacramento (R.); Copying Clerks, G. C. Harriman, and E. Bonnestel, of El Dorado (Reps.)

The House also met and organized at 11 o'clock by the election of the following officers: Speaker, George Barstow, of San Francisco (R.); Chief Clerk, John Sedgwick (R.); Assistant Clerk, W. N. Slocum, of Santa Clara (R.); Minute Clerk, W. G. Wood of San Francisco, (U. D.); Journal Clerk, Henry S. Fellows, of Sacramento (R.); Enrolling Clerk, Selden Allen, of San Francisco (R.); Engrossing Clerk, G. A. Hill, of Tehama (R.); Sergeant-at-Arms, H. P. Clayton, of Sonoma (R.); Assistant do., Jeremiah Watts, of Nevada (R.); Copying Clerks, Geo. C. Kaugh, of Sierra (R.), and E. T. Jennings, of Yolo, (U. D).

Prosperity of California.—No State is now, says the Scientific American, more prosperous than California. The war which is so destructive to industrial pursuits in other States, has no injurious effects there. Citizens here represent that the idea which once prevailed of a political separation of the State from the Federal Government is obsolete. The failure of the three road bills is not regretted. One route, and that a practicable one, will no doubt be designated and the work commenced under the auspices of the Federal Government before the end of another year. Any alarm of war with foreign naval powers that may occur during the next session of Congress, will cause the immediate enactment of a Pacific railroad bill. It is even believed that President Lincoln and Secretary Cameron will recommend it to Congress as a military necessity. There are many noble mechanics and manufacturers in the young State of California, in whose prosperity we cannot but feel a deep interest.

BY OVERLAND TELEGRAPH.

DATES from Quincy, Ill., to Jan. 4th, state the Washington rumors current in the newspapers that further troubles may be expected with England, arising out of the blockade of Charleston and Savannah with stone hulks, are entirely without foundation.......It is not probable that there will be a favorable report from the Committee on Gurley's Confiscation bill, members being generally opposed to it. The Committee will probably prepare a bill predicated upon suggestions contained in the President's Message. The Committee also favor the removal of the restriction limiting the President to the call for five hundred thousand volunteers, and propose authorizing him to bring into service whatever troops the commanding General or War Department may require......It is said orders have been given for movements by way of Occoquan; also, that Burnside will advance up the Rappahannock. The Government is preparing for a new naval expedition. Gunboats are concentrating large numbers of armed launches, and practicing in the work of assisting in landing troops. Ten thousand men could be spared from Hilton Head to operate against Charleston or Savannah......It is said that circumstances have transpired within the last few days, leading to the belief that it will not be difficult to designate with certainty the source whence the rebels have derived their information within the last two months......A dispatch from Louisville states, that up to the date of the latest advices from Buell's army no engagement had taken place. It was expected that there would be a decisive battle fought or a rapid retreat. The rebels were reported to have taken their position, and the Unionists were within one day's march of them......The steamer Northern Light arrived at New York Jan. 4th, from Aspinwall, with $710,842 in treasure......A fight occurred on the 2d of January between the Union gunboats Yankee and Anacosta, of the Potomac flotilla, and the rebel battery at Cockpit Point. The missiles from the rifled guns of the battery struck the Yankee, doing small damage. Several projectiles from the gunboats took effect in the midst of the battery......In Kentucky, the bridge over Green river would be completed Jan. 5. Federal reconnoissances are made almost daily south of the river, and the rebels are retiring before Col. Garfield, in Eastern Kentucky. Col. Garfield is advancing on Prestonburg. Gen. Schoepf has made several ineffectual attempts to draw Zollicoffer from his Somerset intrenchment. There is no prospect of an immediate engagement there. All the Kentucky banks located where rebel domination prevails have been consolidated under Henry J. Lyons, formerly of Louisville, as President, who has authority to run them for the Southern Confederacy.......The steamship George Washington left Old Point at 11 o'clock, Jan. 4, and proceeded up James river about nine miles above Newport News, when the rebel steamer Northampton was met, with the Union prisoners from Richmond. They stepped on board, under protection of the national flag, as their names were called. Such happy looking men are seldom seen. Cheer after cheer arose from each boat as they approached, and the bands of the Fourth Artillery played "Home, Sweet Home," which added to the enthusiasm. As the boat passed Newport News, the crews of the United States frigates Cumberland and Congress manned the rigging, and the troops at Camp Butler crowded the beach and the wharves, and sent over the water their shouts of welcome. The number released is 240, nearly all of whom were taken at the battle of Bull Run. The prisoners left Richmond at 7 o'clock, a. m......Hon. Alfred Ely arrived at home Jan. 4, and had an enthusiastic reception. After a few days rest he will take his seat in Congress......A New Orleans dispatch of the 29th ult. says the powder mill opposite the city exploded the night previous......In the Senate, Jan. 2d, Mr. King, of New York, presented a petition numerously signed by citizens of New York, praying for the emancipation of slaves under the war power. Latham, of California, presented a petition from the Chamber of Commerce in San Francisco, asking for a steamship mail line from that port to China......Rebel accounts state that the Federals attempted to advance from Port Royal Ferry, but were repulsed by the 14th regiment of South Carolina volunteers, under Col. James. The Confederate loss is not otherwise given...... Gen. Lee has informed Jeff. Davis that he is confident he can prevent the Federals from advancing on Charleston or Savannah......A deserter from the rebel army in Virginia says that the entire army is utterly demorized. Regimental drills have ceased entirely; the men spending their time with cards, and great numbers are offering large sums for substitutes. Many offered as high as $1500. The Government is urged to do something to remedy the evil. Such a demoralized condition of the army cannot go on. Thousands who would enlist are deterred by the discouraging condition of the army. ......The steamer Edinburgh, for Liverpool Jan. 4, took out 350,000 in specie. There was a little more harmony among the banks, with a disposition to encourage the circulation of U. S. demand notes. Instead of paying out their own bills, they use these these notes......Important news from the South is contained in the late papers at hand. A dispatch from Pensacola, dated Jan. 1, says: "Fort Pickens opened fire yesterday, but the fire was not renewed. Our batteries are silent." The Charleston Mercury has a dispatch stating that a large force of Federal troops had landed on the coast of Edisto, and had made the seizure of the railroad station No. 4, on the Charleston and Savannah railroad. Sixteen war vessels are reported at Ship Island, in Mississippi Sound, near the entrance to Lake Ponchartrain. A destructive fire has occurred at Richmond, Va., burning the theatre and other valuable property.......The weather during two days in Montreal was very severe. Jan. 4 the thermometer was fifteen degrees below zero. The 9th regiment of New York Volunteers left that city Jan. 4, in the steamship Illinois, for Key West......The destination of the expedition of Gen. Burnside remains as much a mystery as was that of Gen. Sherman....... A Confederate steamer, going from Pensacola to the Navy Yard, was fired upon from the batteries at Fort Pickens. Gen. Bragg's batteries replied, and the firing was continued at the last account.......Depatches from New York say that the Spanish squadron took possession of San Juan de Ulloa on the 16th of December. Vera Cruz was evacuated without firing a gun. Havana letters say that Santa Anna and Miramon are both to go to Mexico. The General commanding, on landing, issued a proclamation to the people, to the effect that the troops came only to demand satisfaction for failure of treaties, and violence committed against their compatriots, and to obtain guarantees against similar outrages......Carl Schurz, Minister to Spain, has resigned, to take command in the army......Gen. McClellan is recovering, and is now considered out of danger......Rumors were current in Halifax of the loss of the steamship Parana on the St. Lawrence, with 1100 British troops on Board. The steamship Bohemian, with British troops on board, passed Cape Race Jan. 3d......The rumors that further trouble may be expected with England, arising out of the blockade of Charleston and Savannah with stone-laden hulks, are without foundation.

Dispatches received here since our last issue state that our Government have given up Mason and Slidell, the rebel Commissioners captured on the Trent, and they have sailed for England on a British vessel. The French government had given an opinion that the arrest was not defensible under the law of nations. Mr. Seward informed the British Minister that Capt. Wilkes acted on his own responsibility, and that the prisoners would be given up "in order that the principles which the American Government has always contended for may be maintained, and he hopes England will adhere to" those principles.......A dispatch of 31st ult. says: Within the past two weeks, the Union army in Missouri has captured 2500 rebels, including about seventy commissioned officers, 1200 horses and mules, 1100 stand of arms, two tuns powder, a great number of wagons, an immense amount of commissary stores and camp equipage, and the large foundry at Lexington used by the rebels for casting shot and shell. More rebel craft in Missouri, including four gunboats, have been destroyed or captured, and a pretty clean sweep has been made of the whole country between the Missouri and Osage rivers. Gen. Price has been cut off from all supplies and recruits from Northern Missouri. Price is in full retreat for Arkansas, with his whole army. Our loss in accomplishing these important results in Missouri has not exceeded 100 men, in killed and wounded.

* * *

THE weather of late has been remarkable, and we allude to it for that reason, more than for the purpose of making a paragraph. Succeeding New Year's, for a few days there was no rain, but the weather was cool, and Friday night last was colder than known here for a number of years, the mercury falling to 26° and not rising above the freezing point for a portion of of the next day, and ice a quarter of an inch thick was found in many places Saturday morning. This cold was the premonition, as usual, to a rain! From early Sunday morning till Monday, it *poured* almost incessantly, a very large amount of water falling, for the time. The gutters of the streets ran torrents, and the lower portions of the city were flooded. The wind here was from an unusal quarter during the storm, about northeast, and cold. The storm appears to have been about the same in the Interior, except that it was snow in the elevated portions. At Sacramento, the Union says, the wind was northwest; and snow fell there a portion of the time. The hills across and around the bay presented the unusual sight of a snow covering, on Monday, quite low down. Snow fell in many places in the Interior, where it is seen but seldom. The mountains on both sides of Sacramento, the Sierras and Coast Ranges, were covered with snow to the foot hills, the latter more generally than ever before observed. At Strawberry, on Saturday, the mercury fell to 15° below zero. At Red Bluff, the snow fell eight inches deep. The amount of rain at Sacramento during this storm, was 2.69 inches, about the same as here, yet owing to cold weather and mostly snow in the mountains, no material rise in the rivers, which had been falling previously, occurred. After a fair day Tuesday, the rain came down liberally again on Wednesday. Thursday (at this writing), it *pours*, and the worse for the flooded, it is *warm*. The anxious question is, "Will it ever dry up?"

* * *

ABOUT six feet of snow fell on the summit of the Sierras on Monday last.

THE Central Railroad is in running order between Folsom and Lincoln, all damages by the late flood having been repaired, not in a temporary but in a substantial and permanent manner.

THE salaries of Federal employes in this State (except chief officers) have been reduced, on account of the war; in the Custom House 40 per cent, in the Mint 20. The latter were previously much the highest. A reduction of the number of officers is also to be made.

BY the recent flood in Sacramento, 94 pianos were more or less injured. Of this total, 38 have been entirely ruined, 37 badly damaged, and 12 slightly damaged. Good judges state that the loss in injury to pianos alone cannot amount to less than thirty thousand dollars.

☞ DON'T READ THIS. ☜

THE PULU.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new DAY PULU is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

To Vineyard Planters.

IF our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

MR. PERKINS will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

The Wheeler and Wilson Family Sewing Machines are acknowledged to be far superior to all others in use.

They are adapted to every variety of Family Sewing, they are not liable to get out of order, and a child can learn to use them.

Do not buy a chain-stitch Machine, the seam has a cord on one side very unseemly and liable to wear off and rip.

The Wheeler and Wilson Machines make a stitch alike upon both sides of the fabric, and it will not rip or ravel out.

GOING TO SERVICE.

BY MISS PARDOE.

THE day was bright, the hour was noon,
'Twas laughing, lightsome, leafy June;
The breath of flowers was on the breeze,
The birds were singing mid the trees,
The sun was warm on every glade,
The cattle rested in the shade,
And on the wind there swelled along
The chorus of the mowers' song.

At such a season of delight,
When all is beautiful and bright;
When summer smiles on trees and streams,
How worse than dull the city seems!
And, oh, for one who long had dwelt
'Mid rural scenes, and who had felt
The simple joys the country yields,
How hard to quit her native fields!

Young Mary was the sweetest flower
That ever bloomed in rustic bower;
As blithesome, graceful, glad and gay,
As the wild bird upon the spray;
And like that bird when sickening
With heavy eye and drooping wing,
Within some network close and small,
So looked she to the city's thrall.

Her mother, silent, wept apart,
The grief was heavy at her heart;
Her father stood with downcast air,
And whistled, to conceal his care;
Her little brother hushed his glee,
And gazed around him stealthily;
While she, though sad enough the while,
Controlled her tears, and strove to smile.

The longest, last embrace was o'er,
Her roof-tree sheltered her no more;
Yet still she paused a little while
When she had passed the nearest stile,
And looked, how lingeringly! to see
The home of her glad infancy,
Nestling in quietude and peace
Amid its patriarchal trees.

Then turned she from that cherished spot—
How sad 'twould seem when she was not!
Her little brother at her side,
Divided between grief and pride;
The grief which grows with each caress,
The simple pride of usefulness;
While she—ah! see what she appears—
A lovely thing of smiles and tears!

How quickened Mary's step, how rushed
The life-blood to her cheek, which blushed
Like a hedge-rose beneath the sun,
As forth upon her path came one
Who had not seen, who had not heard,
Her parting smile, her parting word;
From whom—so whispered her young heart—
'Twould be the keenest pang to part.

Who cannot shadow out the scene?
The memories of what had been,
The clasping hands, the tearful vows,
All love's fond catalogue of woes?
Or who shall marvel, though once more
They stood beside her father's door,
She blushing in her happy pride,
He sworn to claim her as his bride?

They could not part! And now they came
To tell their tale to sire and dame;
The words were few in which 'twas told,
For love had made the suitor bold;
While Mary to her mother's breast
Flew like wild-bird to its nest,
And whispered, with a blushing brow,
"I need not seek a service now!"

◆

CHOCORUA'S CURSE.

BY THE AUTHOR OF "HOBOMOK."

THE rocky county of Stafford, New Hampshire, is remarkable for its wild and broken scenery. Ranges of hills towering one above another, as if eager to look upon the beautiful country, which afar off lies sleeping in the embrace of heaven; precipices, from which the young eagles take their flight to the sun; dells rugged and tangled as the dominions of Roderich Vich Alpine, and ravines dark and deep enough for the death scene of a bandit, form the magnificent characteristics of this picturesque region.

A high precipice, called Chocorua's Cliff, is rendered peculiarly interesting by a legend which tradition has scarcely saved from utter oblivion. Had it been in Scotland, perhaps the genius of Sir Walter would have hallowed it, and Americans would have crowded there to kindle fancy on the altar of memory. Being in the midst of our own romantic scenery, it is little known, and less visited; for the vicinity is as yet untraversed by railroads or canals, and no "Mountain House," perched on these tremendous battlements, allures the traveler hither to mock the majesty of nature with the insipidities of fashion. Our distinguished artist, Mr. Cole, found the sunshine and the winds sleeping upon it in solitude and secrecy; and his pencil has brought it before us in its stern repose.

In olden time, when Goffe and Whalley passed for wizards and mountain spirits among the superstitious, the vicinity of the spot we have been describing was occupied by a very small colony, which, either from discontent or enterprise, had retired into this remote part of New Hampshire. Most of them were ordinary men, led to this independent life from an impatience of restraint, which as frequently accompanies vulgar obstinacy as generous pride. But there was one master spirit among them, who was capable of a higher destiny than he ever fulfilled. The consciousness of this had stamped something of proud humility on the face of Cornelius Campbell; something of a haughty spirit strongly curbed by circumstances he could not control, at which he scorned to murmur. He assumed no superiority; but unconsciously he threw around him the spell of intellect, and his companions felt, they knew not why, that he "was among them, but not of them." His stature was gigantic, and he had the bold and quick tread of one who had wandered frequently and fearlessly among the terrible hiding-places of nature. His voice was harsh, but his whole countenance possessed singular capabilities for tenderness of expression; and sometimes, under the gentle influence of domestic excitement, his hard features would be rapidly lighted up, seeming like the sunshine flying over the shaded fields in an April day.

His companion was one peculiarly calculated to excite and retain the deep, strong energies of manly love. She had possessed extraordinary beauty; and, had, in the full maturity of an excellent judgment, relinquished several splendid alliances, and incurred her father's displeasure, for the sake of Cornelius Campbell. Had political circumstances proved favorable, his talents and ambition would unquestionably have worked out a path to emolument and fame; but he had been a zealous and active enemy of the Stuarts, and the restoration of Charles the Second was the death-warrant of his hopes. Immediate flight became necessary, and America was the chosen place of refuge. His adherence to Cromwell's party was not occasioned by religious sympathy, but by political views, too liberal and philosophical for the state of the people; therefore Cornelius Campbell was no favorite with our forefathers, and being of a proud nature, he withdrew with his family to the solitary place we have mentioned.

It seemed a hard fate for one who had from childhood been accustomed to indulgence and admiration, yet Mrs. Campbell enjoyed more than she had done in her days of splendor; so much deeper are the sources of happiness than those of gaiety. Even her face had suffered little from time and hardship. The bloom on her cheek, which in youth had been like the sweet pea-blossom, that most feminine of all flowers, had, it is true, somewhat faded; but her rich, intellectual expression, did but receive additional majesty from years; and the exercise of quiet domestic love, which, where it is suffered to exist, always deepens and brightens with time, had given a bland and placid expression, which might well have atoned for the absence of more striking beauty. To such a woman as Caroline Campbell, of what use would have been some modern doctrines of equality and independence?

With a mind sufficiently cultivated to appreciate and enjoy her husband's intellectual energies, she had a heart that could not have found another home. The bird will drop into its nest, though the treasures of earth and sky are open. To have proved marriage a tyranny, and the cares of domestic life a thraldom, would have affected Caroline Campbell as little, as to be told that the pure, sweet atmosphere she breathed, was pressing upon her so many pounds to every square inch! Over such a heart, and such a soul, external circumstances have little power; all worldly interest was concentrated in her husband and babes, and her spirit was satisfied with that inexhaustible fountain of joy which nature gives, and God has blessed.

A very small settlement, in such a remote place, was of course subject to inconvenience and occasional suffering. From the Indians they received neither injury or insult. No cause of quarrel had ever arisen; and, although their frequent visits were sometimes troublesome, they never had given indications of jealousy or malice. Chocorua was a prophet among them, and as such an object of peculiar respect. He had a mind which education and motive would have nerved with giant strength; but growing up in savage freedom, it wasted itself in dark, fierce, ungovernable passions. There was something fearful in the quiet haughtiness of his lip—it seemed so like slumbering power, too proud to be lightly roused, and too implacable to sleep again. In his small, black, fiery eye, expression lay coiled up like a beautiful snake. The white people knew that his hatred would be terrible; but they had never provoked it, and even the children became too much accustomed to him to fear him.

Chocorua had a son, about nine or ten years of age, to whom Caroline Campbell had occasionally made such gaudy presents as were likely to attract his savage fancy. This won the child's affections, so that he became a familiar visitant, almost an inmate of their dwelling; and being unrestrained by the courtesies of civilized life, he would inspect everything, and taste of everything that came in his way. Some poison, prepared for a mischievous fox, which had long troubled the little settlement, was discovered and drunk by the Indian boy; and he went home to his father to sicken and die. From that moment jealousy and hatred took possession of Chocorua's soul. He never told his suspicions—he brooded over them in secret, to nourish the deadly revenge he contemplated against Cornelius Campbell.

The story of Indian animosity is always the same. Cornelius Campbell left his hut for the field early one bright, balmy, morning in June. Still a lover, though ten years a husband, his last look was turned towards his wife, answering her parting smile—his last action a kiss for each of his children. When he returned to dinner, they were dead—all dead! and their disfigured bodies too cruelly showed that an Indian's hand had done the work!

In such a mind grief, like all other emotions, was tempestuous. Home had been to him the only verdant spot in the wide desert of life. In his wife and children, he had garnered up all his heart; and now they were torn from him, the remembrance of their love clung to him like the death-grapple of a drowning man, sinking him down, down, into darkness and death. This was followed by a calm a thousand times more terrible—the creeping agony of despair, that brings with it no power of resistance.

"It was as if the dead could feel
The icy worm around him steal."

Such, for many days, was the state of Cornelius Campbell. Those who knew and reverenced him, feared that the spark of reason was forever extinguished. But it rekindled again, and with it came a wild, demoniac spirit of revenge. The death-groan of Chocorua would make him smile in his dreams; and when he waked, death seemed too pitiful a vengeance for the anguish that was eating into his very soul.

Chocorua's brethren were absent on a hunting expedition at the time he committed the murder; and those who watched his movements observed that he frequently climbed the high precipice, which afterwards took his name, probably looking out for indications of their return.

Here Cornelius Campbell resolved to effect his deadly purpose. A party was formed under his guidance, to cut of all chance of retreat, and the dark-minded prophet was to be hunted like a wild beast to his lair.

The morning sun had scarce cleared away the fogs when Chocorua started at a loud voice from beneath the precipice, commanding him to throw himself into the deep abyss below. He knew the voice of his enemy, and replied with an Indian's calmness. "The Great Spirit gave life to Chocorua; and Chocorua will not throw it away at the command of a white man." "Then hear the Great Spirit speak in the white man's thunder!" exclaimed Cornelius Campbell, as he pointed his gun to the precipice. Chocorua, though fierce and fearless as a panther, had never overcome his dread of fire-arms. He placed his hands upon his ears to shut out the stunning report; the next moment the blood bubbled from his neck, and he reeled fearfully on the edge of the precipice. But he recovered himself, and raising himself on his hands, he spoke in a loud voice, that grew more terrific as its huskiness increased. "A curse upon ye, white men! May the Great Spirit curse ye when he speaks in the clouds, and his words are fire! Chocorua had a son—and ye killed him while the sky looked bright! Lightning blast your crops! Wind and fire destroy your dwellings! The Evil Spirit breathe death to your cattle! Your graves lie in the war path of the Indian! Panthers howl, and wolves fatten over your bones! Chocorua goes to the Great Spirit—his curse stays with the white men!"

The prophet sunk upon the ground, still uttering inaudible curses—and they left his bones to whiten in the sun. But his curse rested on the settlement. The tomahawk and scalping knife were busy among them, the winds tore up trees and hurled them at their dwellings, their crops were blasted, their cattle died, and sickness came upon their strongest men. At last the remnant of them departed from the fatal spot to mingle with more populous and prosperous colonies. Cornelius Campbell became a hermit, seldom seeking or seeing his fellow-men; and two years after he was found dead in his hut.

To this day the town of Burton, in New Hampshire, is remarkable for a pestilence which infects its cattle; and the superstitious think that Chocorua's still sits enthroned upon his precipice, breathing a curse upon them.

◆

TRUTH itself becomes falsehood if it is presented in any other than its right relations. There is no truth but the "whole truth."

"CAN you return my love most adorable Julia?"
"Certainly, sir, I don't want it."

A PLAIN MAN'S PHILOSOPHY.

BY CHARLES MACKAY.

I'VE a guinea I can spend,
I've a wife, and I've a friend,
And a troop of little children at my knee, John Brown;
I've a cottage of my own,
With the ivy overgrown,
And a garden with a view of the sea, John Brown;
So come and drain a glass
In my arbor, as you pass,
And I'll tell you what I love and what I hate, John Brown.

I love the song of birds,
And the children's early words,
And a loving woman's voice, low and sweet, John Brown;
And I hate a false pretence,
And the want of common sense,
And arrogance, and fawning, and deceit, John Brown;
I love the meadow flowers,
And the brier in the bowers,
And I love an open face without guile, John Brown;
And I hate a selfish knave,
And a proud, contented slave,
And a lout who'd rather borrow than he'd toil, John Brown;

I love a simple song
That awakes emotions strong,
And the word of hope that raises him who faints, John Brown;
And I hate the constant whine
Of the foolish who repine,
And turn their good to evil by complaints, John Brown;
But ever, when I hate,
If I seek my garden gate,
And survey the world around me and above, John Brown,
The hatred flies my mind,
And I sigh for human kind,
And excuse the faults of those I cannot love, John Brown.

So, if you like my ways,
And the comfort of my days,
I will tell you how I live so unvexed, John Brown:
I never scorn my health,
Nor sell my soul for wealth,
Nor destroy one day the pleasure of the next, John Brown;
I've parted with my pride,
And I take the sunny side,
For I've found it worse than folly to be sad, John Brown;
I keep a conscience clear,
I've a hundred pounds a year,
And I manage to exist and to be glad, John Brown.

Educational.

The Teacher's Mission.

THE mission of the teacher is a noble one. He is called to a glorious work, and if he is faithful he will receive a glorious reward. But it is a sad fact that many enter upon the work who utterly fail to produce any good results, and of course to receive any true reward; for the highest and most satisfactory reward comes from a consciousness of well directed and successful efforts. Let us briefly consider some of the essentials to success in the teacher's profession.

1. *A comprehension of the Nature of the Work, or the true Mission of the Teacher.*—It is the teacher's work to deal with the tender and plastic minds of youth; to guide and direct them; to mould and fashion them; to lead and lure them through the "devious paths of childhood," and rightly equip them for the duties of life, for true manhood, for active and useful service. It is for the teacher to determine, to a very great extent, what shall be the future condition and influence of his pupils. If he is earnest and faithful, wise and judicious, he will daily impart such training and instruction as will tend to expand the being of the youth under his charge, into useful and virtuous action. What he *is*, what he *says* and what he *does* will be manifested in the lives of his pupils. Indeed, he will live in them and through them, so that he will be largely accountable, under God, for their future action. What a responsibility, then, has the teacher! And a proper sense of this responsibility is assential to success—indeed, it is the foundation of success.

2. *Enthusiasm.*—No man can be successful in any calling unless he has much of the spirit of enthusiasm; and in order to have this he must feel that his work is an important one, a work worthy of all his talents, energies and efforts. John Milton said: "If two angels were to be sent from heaven, the one to be monarch of an empire, and the other to be a chimney-sweep, the difference in their minds would not be the value of a straw." The idea was that a consciousness of the true importance of the work assigned would entirely engross the mind and capacities of the agent called to its performance. This spirit should inspire the teacher. He should feel—and certainly he may feel—that his mission is not only an honorable one, but that it is highly important, and with this spirit and feeling he should, with all his heart and powers, devote himself to the prosecution of required duties. Then he will possess enthusiasm, or rather enthusiasm will possess him; and if his zeal is tempered with knowledge, and modified by common sense, his labors will be crowned by abundant success. Teacher, have you this enthusiasm? If you have not, you are not thoroughly equipped for your work, and you cannot reasonably hope for the best results. Do you ask how you shall secure it? In answer we would say, meditate much and often upon the nature and bearing of your work. Instead of looking upon your pupils as so many heedless youth over whom you are to hold a sort of control a few hours daily, regard them as so many deathless and priceless gems, which you are so to fashion and polish that they will become both useful and ornamental parts in the great frame-work of society.

3. *Professional Feeling, and if possible Professional Training.*—Too many engage in the work of teaching who have no feelings or sympathies in common with others engaged in the same work. They isolate themselves, and say nothing, do nothing, think nothing, for the general good of their calling. They are supremely selfish and secluded, and the profession receives no benefit from their efforts. We believe that the best good of the profession demands special professional training, and that such training, rightly given, will tend to promote true professional spirit and feeling. The clergyman, the physician, the lawyer, each and all pursue a special course of study to qualify themselves for their duties. The teacher quite as much needs special preparatory training, and yet, until within a few years, no attention has been given to the subject. We hope the time will come when a professional course of study will be deemed as essential for the teacher as for either of the other professions.

4. *The Teacher should aim to Extend his Influence beyond the School-room.*—While it is undoubtedly true that the great work of the teacher is with his pupils and within the school-room, it is no less true that his influence and usefulness will be very much modified by what he is as a man and citizen. Especially should the teacher in all his movements and doings show himself to be a gentleman in feeling, in word and in act, and as such his influence should be felt through the community no less than in the school-room.—*Ct. Com. School Jour.*

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

RECONCILIATION.

'T is true that you and I fell out,
Yesterday!
I 've no idea what about,
Johnnie Gray!
I only know the sun shines on,
Though yesterday be dead and gone,
And through the trellis by the door
The light comes dancing as before,
Johnnie Gray!

The evening followed glowing noon,
Yesterday!
And driving clouds obscured the moon,
Johnnie Gray!
But night is past, and morn is here;
The fields are green, the skies are clear;
The rose and lily gleam with dew;
And I' ve two loving lips for you,
Johnnie Gray!—[Mackay.

Lessing, the German philosopher, being absent-minded, knocked at his own door one evening, when the servant girl looking out of the window, and not recognizing him, said:

"The Professor is not at home."

"O, very well," said Lessing, composedly, walking away, "I shall call another time."

A peasant went to his priest to confess having stolen hay from a large stack belonging to a neighbor.

"How many loads did you take?" asked the father confessor.

"You may as well reckon the whole stack at once," said the peasant, "as I and my wife intend to fetch it all away before we stop."

A Cork paper contains the following advertisement:

"To Let—To a small family, the second loft of Mr. McDermott's barn, with the privilege of the scuttle."

For a small family who want an airy location, we should think this afforded very superior inducements.

A diffident lover, going to a town clerk, to request him to publish the bans of matrimony, found him at work alone in the middle of a fifteen acre field, and asked him to *step aside* a moment, as he had something for his private ear.

'Tis not the fairest form that holds
The mildest, purest soul within:
'Tis not the fairest flower that folds
The sweetest breath of fragrance in.

The late Colonel —— was once importuned by a diminutive tailor for payment of a bill, contemptuosly exclaimed:

"If you were not such a little reptile I would kick you down stairs!" remonstrated the dun; "and what if I am? Recollect, Colonel, that we can't all be great brutes!"

A well known sporting character in Providence tried his luck the other day, and found it *bad*. The bank refused to discount for him, and his deposits were exhausted. On turning his back upon the scene of operations, a sympathizing friend asked him if he was broke. "Yes," said Tom, with a sigh, "and so dead broke, that if steamboats were selling at a cent apiece, I could not buy a gangway plank!"

A gentleman traveling in Ireland, said to a very importunate beggar:

"You have lost all your teeth."

The beggar quickly answered:

"Sure, an' it's time I parted with 'em, when I've nothing for 'em to do!"

A good book and a good woman are excellent things for those who know how to justly appreciate their value. There are men, however, who judge both from the beauty of their covering.

An old lady who did not know whether her plantation was in Virginia or North Carolina, found, when the line was drawn, that she was a resident of the former. "Well," said she, "I am glad that I don't live in North Carolina—it was always such a sickly place."

Revenge is a common passion; it is the sin of the uninstructed. The savage deems it noble; but Christ's religion, which is the sublime civilizer, emphatically condemns it. Why? Because religion ever seeks to ennoble man, and he is debased by revenge.

One little garden patch of ours has been very unprofitable this season. The snails ate up the cucumbers, the chickens ate up the snails, the neighbors' cats ate up the chickens, and we are now in search of something that will eat up the cats. Can our agricultural friends aid us?

Cork-screws have sunk more people than cork jackets will ever save.

A certain physician says that young ladies may try all the antidotes in the world for depressed spirits, but till they have recourse to a small dose of husband, they need not hope for any long continued convalescence.

Ike Marvel says, after hearing a dull sermon preached by a dandified parson, he asked a friend what he thought of the discourse. He replied: "If they go on preaching in this way, the grass will soon be knee-deep in the streets of heaven!"

Some one blamed Dr. Marsh for changing his mind. "Well," said he, "that is the difference between a man and a jackass—the jackass can't change his mind, and a man can: it is a human privilege."

Nothing inflates a small mind like superficial attainments. Great scholars are usually humble, while small ones are vain and pedantic. Newton was humiliated by the reflection that he knew so little!

The editor of an Eastern paper says that many of his patrons would make good wheel-horses, they hold back so well.

An honest dame in an interior town, standing beside the corpse of her deceased husband, bewailing in piteous tones his untimely departure, observed: "It is a pity he's dead, for his teeth are as good as ever they was."

The Scotch have a saying, "Who cheats me once, shame befall him; if he cheats me twice, shame befall me!

EAR-RINGS.

The shepherd marks with cruel shears
The auricles of all his stock;
So Folly bores the women's ears,
Putting her ear-marks on her flock.

The squaws have ears and noses graced
With rings of metal or of bone;
Our girls, with like but lessened taste,
Append them to the ears alone.

Naught can restrain the silly crowd,
They pierce the flesh, they tear the skin,
They bore the image of their God,
To hang a little tinsel in.

A witness was asked what he meant by a "gentleman."

"I mean a man who pays his debts the first time they are presented to him."

To catch mice—place sweetmeats in your mouth before going to bed, and keep your mouth wide open. When you feel the whiskers of the mouse, bite!

"Sir," said a tailor to his debtor, "if you will let me have the amount of my bill, you will oblige me; if not, *I must oblige you!*"

MANUFACTURES BEST OF FAMILY SOAPS.

Near corner of Mason and Pacific streets.

PATENT

HYDRAULIC HOSE

MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, Grain and Feed Bags, Garden Hose, &c;

And I have the Society's DIPLOMA, signed by G N Swezy, President, and Chas. M. Gorham, Secretary. The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
119 First street.

1000 Acres of Land,

120 COWS,

AND

A Good Milk and Dairy Business,

For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms—say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL WARREN, Editor California Farmer, who will furnish all needed information.

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,

Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic bath is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	230
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860.

P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universall commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when as in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

THE CATARACT

Washing Machine

AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

BAILEY'S PATENT

COMBINED

WASHING AND WRINGING

MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

TUCKER!

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Jan. 9.

The continued unfavorable weather and wretched condition of our roads in the interior, have materially acted to restrict our receipts of grain. Our various city warehouses have furnished sufficient amounts of Wheat and Flour to about complete the loading of all vessels now chartered to load with grain. We note the clearances of the following ships since our last report: The Golden Fleece, for Cork, took 39,581 sks Wheat, valued at $84,386 69. The Betty Perlback, for London, took 10,254 sks Wheat and 500 flasks Quicksilver, valued at $38,670 00. There has been a disposition on the part of shippers and others to ascertain the amount of Wheat at present remaining in the State. The estimate is as correct as it can be, considering the source of information it is derived from, and the inventory shows that we still have between 800,000 and 900,000 sks of Wheat alone, and about two months supply of Flour. The consumption of our State will not require more than one-half of the above, and unless we do continue to ship, we have no reason to believe that present prices will be sustained, and there is almost a certainty that we will carry of the crop of 1861 a large amount over, or be compelled to sell at less than present prices during the months of April and May; when the traveling in the country gets passable and those who have grain wish to market the same, it will be a misfortune that we shall all feel if shippers are compelled to withdraw from our market. Our stocks of Wheat and Flour in our city warehouses are light, and less than they were one year since, attributable as before named, and at the present moment no demand exists but our milling requirements. We have reason to suppose that the new mines (Cariboo) will draw a large number of our population there, and the bulk of their supplies will go from this State, and some even predict a second Fraser river excitement. If their calculation prove correct, we shall have a lively spring trade. This will not use all our surplus, although it will help consume a portion of our grain. Barley and Oats remain without change. The stocks of these are heavy, and demand light. Corn, Buckwheat and Rye are scarce, and in active demand. Hay has materially declined in price, large quantities in a damaged condition being forced on our market. Our receipts of grain for the past week have been as follows: Wheat, 12,577 sks; Barley, 7,815 sks; Oats, 908 sks; Corn, 60 sks; Onions, 300 sks; Potatoes, 934 sks; Salt, 1,500 sks; Hay, 98 tons—not including a liberal supply coastwise, from which direction we are assured there are large quantities yet to arrive.

San Francisco Cattle Market.

Jan. 9.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

We have to report a material advance in prices in the Stock market since our last, not only as regards Beef, but also Mutton, Hogs and Veal. They have all advanced in price, in consequence of the great amount of rain making the traveling bad. There has scarcely enough stock arrived to supply the demand; and, should the weather continue as bad for the next few weeks as it has for the past, a still further advance may be expected—not, we think, that there is any scarcity of stock in the country, though considerable has been lost, but from reasons above stated. If there should be more destruction of stock than we know of, or enough to cause any scarcity in the market, we may look for a still further advance, with a prospect of its continuation. But should the latter not be the case, and we have some weeks of pleasant weather, with a rush of stock, in the hope of getting good prices, the probability is it willl soon come down to the old figures. We quote:

AVERAGE SLAUGHTERERS' PRICES.

Beef—American, first quality 4c to 9c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ℘ ℔.

Veal—first quality, 7c@8c.

Hogs—Stock Hogs 1½ to 2c; fat Hogs on foot—4c; Dressed 7c@8c.

Mutton—dressed, 7c@9c, according to quality.

Milch Cows—1st quality $25@$60; 2d quality $15@$25.

Retail Prices at Washington Market.—Jan. 9.

Youth's Budget.

GIVE AS YOU WOULD TAKE.

My bairnies dear, when you go out
With other bairns to play,
Take heed of everything you do,
Of every word you say;
From tricky, wee, mischievous loons
Keep back, my bairns, keep back;
And aye to all such usage give
As you would like to take.

To twist the mouth and call ill names
Is surely very bad;
Then all such doings still avoid,
They'd make your mother sad.
To shield the weakly from the strong
Be neither slow nor slack,
And aye to all such usage give
As you would like to take.

A kindly word, a soothing look,
Have ready aye for all;
We are one Maker's handiwork—
He made us great and small.
We're all the children of His care,
Oh, then, for His dear sake,
Be sure such usage then to give
As you would like to take.

ENIGMA.

I am composed of twenty-five letters:

My 9th, 20th, 1st, 25th, 18th, 2d, 11th, 21st, 17th, 23d, 3d and 22d, is a large town in a slave State.

My 8th, 12th and 18th, is a favorite with school-boys.

My 14th, 6th, 10th and 23d, is a metal.

My 15th, 5th, 18th, 12th, 4th, 19th, 10th and 23d, a hero of history.

My 13th, 17th, 20th, 24th and 19th, is useful on a farm.

My 3d, 12th, 4th and 8th, is a domestic animal.

My 9th, 23d, 16th, 14th, 5th and 20th, is the name of an ocean.

My 18th, 25th, 8th, 2d and 6th, is a Scripture name.

My 4th, 7th, 6th, 14th, 5th and 8th, a part of horse gear.

My 3d, 14th, 11th, 21st, 2d, 6th, 25th, 4th, 4th and 5th, a heroine of fable.

My 16th, 5th, 11th, 24th and 2d, what most youngsters like to do.

My 7th, 15th, 8th, 17th, 7th, 8th, 22d and 6th, is a wild animal.

My 18th, 2d, 8th, 17th, 6th, 18th, 22d, 15th, 3d and 19th, is a tribute to the Pope of Rome.

My 24th, 19th, 15th, 5th and 6th, is a tree.

My 21st, 9th, 15th, 23d, 17th and 6th, what we all like.

My whole is the crowning glory of our Revolutionary fathers.

A CUNNING WILL.

A wealthy old lady had a nephew and niece, and a more distant relative, a young lady. These were the only persons to whom her property would descend by law, when she should die. The first two always made a great show of affection when they visited her, which was but seldom, although she wished that one of them might live with and care for her in her old age. But neither would consent to this, and she therefore employed the young lady, her distant relative, as a servant.

The old lady was very pious, and spent much time with her Bible, and her young companion, who was also a sincere Christian, loved nothing better than to read to her from its consoling pages. She was faithful in her duties, not merely because she was paid for it, but she was sincerely attached to her mistress, and delighted to promote her comfort.

In course of time the old lady died, and after the funeral, according to custom, a lawyer came to open and read the will in the presence of the surviving relatives. It ordered all her possessions to be divided into three parts. The first portion was to consist of the house and lands surrounding it; the second, of the furniture, plate and jewelry, of which there was a large quantity; and the third was only the old Bible, which had afforded her so much comfort and happiness in life. It was further directed that the nephew should have the first choice of his portion, the niece the second, and the young lady should have what remained.

The nephew instantly chose the house and farm, which were valuable, saying in a sneering tone: "The old lady was not to be fooled by pretended devotion, she well knew who were her friends," meaning by this to cast reflection upon the faithful servant. The niece was equally unkind, for she said: "Since Janet loved the old Bible so well, of course she would prefer I should leave it for her, and I will therefore take the furniture and plate." Janet's only reply, on receiving the Bible, was: "I am content; this book is to me a treasure, and I find in it more than wealth can give."

When all was over, and Janet retired to her room, she turned at once to her Bible, to find some passage that might soothe her wounded feelings. What was her astonisment to find, laid between its leaves, bank-notes amounting to more than a hundred thousand dollars, which had been placed there on the day before the old lady's death, and which made up the bulk of her fortune! So you see how in this instance, greediness outwitted itself, and true devotion was abundantly rewarded. Do not forget, though, that Janet would have been happier with her book alone, and a contented disposition, than the others could possibly be while they cherished the evil feelings of avarice and jealousy.

A MONKEY'S FUN.

A monkey, tied to a stake, in the West Indies, was robbed by the Johnny Crows of his food; and he conceived the following plan of punishing the thieves. He feigned death, and lay perfectly motionless on the ground, near to his stake. The birds approached by degrees, and got near enough to steal his food, which he allowed them to do. This he repeated several times, till they became so bold as to come within reach of his claws. He calculated his distance, and laid hold of one of them. Death was not his plan of punishment. He was more refined in his cruelty. He plucked every feather out of the bird, and then let him go and show himself to his companions. He made a man of him, according to the ancient definition—"Man, a biped without feathers."

SENDING A "CLUB."

"Tommy, my son, what are you going to do with that club?"

"Send it to the editor of the Farmer."

"But why are you going to send it to him?"

"Because he says, if anybody will send him a club he will send them a copy of his paper."

The mother came near fainting, but retained consciousness enough to ask:

"But Tommy, dear, what do you suppose he wants with a club?"

"Well, I don't know," replied the hopeful urchin, "unless it is to knock down subscribers as don't pay for his paper."

A GHOST "SOLD."

The Rev. Dr. Wolff tells a story of a certain M. Preisweg, of Geneva, an excellent Christian, to whom a ghost appeared as he was going to bed, and said: "I am the ghost of a person who was hanged here six weeks ago."

"That is no business of mine," replied Preisweg, "so good night."

The man who traded a "saw-horse" for a "night-mare," was run over by the "wheel of Fortune," and was almost hurt.

(From the Farmer of Dec. 20, 1861.)

New Business Arrangement of the Farmer.

For eight years past we have given our entire time, day and night, summer and winter, rain or shine, to the duties of our profession, until we have found that the accumulation of business and duties were of such an amount that if longer continued human strength would not endure it. We have borne the entire care of the Editorial department, with the selection of all other matter; we have been our own bookkeeper, collector, traveling agent, and have answered all our own correspondence; beside these duties we have canvassed for the journal, and given time to examinations of farms, gardens, and vineyards, and all the many matters connected with our enterprise as far as it was possible, and often beyond our strength. Such, however, has been the accumulation of duties and cares, and now so constantly increasing, that we found it would be ruinous to our health and life if longer continued. We have found, also, that the increase of duties was such that we were often delayed and hindered in our plans, as it was by far too much labor for any one mind.

In order, therefore, to relieve ourself from some of these heavy duties, and regain our exhausted strength, and give ourself full command of time whereby we could go over the entire State and look more extensively after the all-important interests of this great science of Agriculture, we have called to our aid an assistant in our labors.

We have therefore, from this issue, associated with us in the California Farmer, J. K. Phillips, Esq., who has been in our employ as the Foreman of this Journal from its very commencement.

Mr. Phillips will from this date take charge of the publishing and principal business department of the Farmer, and thus relieve us of great care and laborious duties, so that we can be at more leisure to visit all our friends far and near. Our duties, however, will still demand of us that we shall in these visits solicit the aid and coöperation of all our friends and the friends of the cause, and having more time, and being enabled to be away more from the office we hope to do it more effectually.

In our absence from the Editorial room Mr. P. will attend to all matters of business; he will also receive subscriptions, advertisements, attend to business generally, and in our united interest we kindly commend him as one who has most faithfully served us in that important position for the period of eight years.

We hope we can also call upon our many friends to give to us now a renewal of their subscriptions for the year close at hand, and to give us also their kind influence among their friends.

We give to all our most sincere thanks for the many favors of this long period, and hope by this new plan to increase the interest and value of our journal, and to have its appearance, as we intend it shall be, greatly improved with every issue, and with more promptness than ever before, as with this new aid we shall be enabled so to do.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

An Experienced Man, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the Farmer Office.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

American Ewes Wanted.

One Thousand or Fifteen Hundred fine American Ewes wanted immediately. If graded with fine-wooled Sheep, so much the better. Inquire of Editor of Farmer.

Machine for Making Wine.

☞ Several Valuable MACHINES for WINE-MAKING, including a Machine for stripping the Grapes from the bunches, with presses, etc., capable of making Wine in the best and most rapid manner, can be had on application to this office.

FAMILY MARKETING.

Stall No. 1, Washington Market.

Office—No. 728 Montgomery street (up stairs), near Jackson
SAN FRANCISCO.

TERMS.—By mail, for one year, $4; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, SAN FRANCISCO, Cal.

VINEYARDS AND WINES.

Capabilities of our State—Should Produce a Natural Wine, not Imitate Foreign—Vineyards in Europe—The Schloss Johannisberg, its Manager and Owner—Aspect, and Liebig's Analyses—Wine from Unripe Grapes—Wine Seasons—Prospects for Vine-Planting—Simplicity of the Business—Testing Soils—The Varieties of Grapes—California Grapes, Etc.

MILLER'S GARDEN, Placer co., Jan. 6, 1862.

EDITOR FARMER: When you was up here last summer, I promised to write a few words to you, in regard to Vineyard and Wine-culture. I shall try to give you what feeble ideas I have, and also what little experience and information I can. This will be but little; but if it should do any good to those who intend to plant Vineyards, I shall be satisfied to have offered my mite, and hope some more skilled and experienced man and abler pen will take up the subject, as, in my opinion, there cannot be too much said or written on this subject, for it is one of the highest importance to our young State. There is not the least doubt in my mind, that our State will produce as good a wine as ever was produced in any part of the world (mind, not in every place where any person fancies to lay out a vineyard, and makes wild calculations), and her name as such will rank amongst the first, at some future time, and not long hence. But Wine-producers of California must make up their minds to give to the world the pure fermented Grape-juice commonly called "Wine," and not be lulled into the belief, that there is more money to be made by adulterating their wines, either by imitating the wines of other countries, such as *Portwine*, *Hock*, Rheinwines, or Clarets, etc., to tickle the palates of consumers in this or the Atlantic States, when we have all the facilities which Nature can give, to produce a good and pure article; the soil as good, if not superior; the climate better and more favorable than most of the wine-producing countries of Europe; and we must get the world accustomed to our California wine *as Nature gives it*, and not imitate others, and spoil our reputation by presenting spurious or doctored wines to the public, and call that California wine. We have no show to compete with the manufacturers of Europe, or the Atlantic States, to make an artificial wine (which is nothing more nor less than an unwholesome, *vile*, and abominable beverage, in comparison with the pure wine, no matter how they are produced): but if we want to succeed in establishing our name, we have to lay our wines before the world as Nature gives them. I shall say more about that at some future time.

I will now mention some ways the most renowned Vineyards of Europe get their name and keep their name: there is that well-known "Schloss Johannisberg," on the river Rhine, which your excellent correspondent, Mr. A. Haraszthy, describes in your Number of Dec. 26th; he describes that beautiful place most ably, though he did not give us much of the manner they planted the vine, nor the way they made their wine. The name of the head manager of that Vineyard, a few years ago, was (perhaps is yet) Johann Baptist Heckler, a very able writer, a good manager, and a close observer; he has been Controller of all the vineyards and cellars for about fifty years; wrote several treatises on the culture of the Grape, and the making of Wine. The present proprietor is Prince Richard von Metternich, a high functionary in the Austrian service, Knight of considerable many Orders, high Ticoon, possessor of a good many other Estates, and a mint of money to back him; he inherited from the former possessor, that great illustrious "Staatsman" of Austria, the old Prince, the right arm of that Government, who was a great politician, and a precious slippery fox. The vineyard was presented to him by that Government, for some *coup de main*, and which paid an enormous price for it, if I remember right. The "Schlossweinberg" (vineyard of the Castle or Chateau) contains about 65 morgen (one morgen is about one acre of land) on a hill or mount; its aspect is from the east to the southwest, and by observation, they found that the easterly part produced a better wine than the south; and the southerly, better than the southwesterly. In 1846, Professor Liebig analyzed the soils of the three different aspects, for the purpose of finding out the cause of the aroma and bouquet of that wine, for which that Vineyard is most celebrated, but without much satisfaction. I think the analysis is in Justus Liebig's work on Agricultural Chemistry. The value of the wines there is rated according to the year in which it is grown, as most of their seasons are cold, wet and rough, and if they have a favorable season every fifth or seventh year, they consider themselves well off, that is, such weather as we have here every year, though they make wine every year. In poor seasons, when the grapes do not ripen there; they rot in cold, wet weather, before they ripen; and not to lose such crops entirely, they have, after years of experimenting, found that out of green, unripe grapes, they can make Wine. The process of which was illustrated in the Patent Office Report on Agriculture, of 1859, page 94, which was copied by most of the papers of this State; it was used and spoken of to some extent, years ago, by Chaptal, Minister under Napoleon I., also by Dr. Doebereiner, in 1822; and Dr. L. Gall published that method in 1850 and 1851. The substance of it is: the riper the grapes are, the less sugar and water you need, and *the better the wine*; the greener and poorer the grapes, the more sugar and water you have to add, to get that normal state, and the more the wine will be like ginger-pop, spruce-beer, "Dr. Cronk," and other such molasses fixings, as an excuse for a pure, rich wine. If places like Johannisberg, ever have to resort to such a mixture (though I do not mean to say they ever have), they sell that beverage off very secretly, and cheap, and never own it as a product of that vineyard. They may pick a few of the best berries and bunches in such seasons, and make a little pure wine, calling it a poor article, and rate it lower than others, in more favorable seasons; their object and profits are not to raise a *quantity* of wine, but an excellent *quality* is their strong force. J. B. Heckler states in one of his works on Grapes (I think edited in 1856): "The wine of 1811 (one of the best seasons known in Europe) was sweet and palatable soon after fermentation; everybody wanted that wine, and wines of former seasons were at a discount; 1812 was a "Mittelwine," and only found purchasers after the yield of 1813 and 1814 proved to be of a poor quality; 1815 was a good "Mittelwine," but only one-third of a crop in quantity, and only was bought because 1816 and 1817 were extremely poor; 1818 was a good "Mittelwine," but only one-half of a crop, and was mostly bought and used by Wine-merchants, to mix with 1811; 1819 was a full crop, of good quality; 1820 and 1821 were poor; 1822, in quality and quantity, excellent; in 1831 they left the grapes on the vine till they were partly turned into raisins, then they assorted and picked some of the choicest out of them: these produced a wine superior to that of 1811, and sold at their cellar, one "Stueck" at 14,000 florins, and another at 16,000 florins (one "Stueck" contains 400 gallons or thereabouts), consequently, 800 gallons of that wine brought the round sum of 30,000 florins, or $12,000, which would bring it at $15 a gallon." I shall give you some more statistics some other time.

When people intend to go into the wine business they cannot expect, as I have heard a great many express themselves, to get rich in three years. For instance: A plants a vineyard this season, with comparatively little expense, of about 30,000 vines. Three years hence, he expects to have a return of about ten pounds of grapes to the vine, which, at 5 cents a pound, makes $15,000. This is getting along too fast to last long; but there is not the least doubt that if persons go into that business (*the more the better for all*, for then we are more able to find out the best situations, soil, &c., for excellent wine), they all will do well, have a healthy occupation, make a sure home, and if they carry on right, they cannot help but accumulate wealth in course of time, as also it will be a great increase of wealth to the State (look at the revenue France has only from Wine). There is no art whatever in planting the grape or making wine[!]; not any more than there is in raising a patch of potatoes or making a barrel of cider; and all those persons who pretend to know so much about the wine-culture, and wine-making, and have and keep secrets of their own, are charlatans; and people ought to beware of such customers. As a matter of course, a person acquainted with the business gets along better than those who are not; but there are lots of people who do not know how to raise a patch of "taters." It would be easy for them to learn. It is just as easy to learn the one as the other, and the better and higher you cultivate either, the better results you may expect. And as we are only beginning in the production of wine (as a wine-producing State), it is only by experiments and exchange of opinions and results, we can find out what is wanted in California, in the way of soils, situations, aspects and varieties of grapevines, etc; but more about that some other time.

There is a way taught in the Agricultural Schools in Germany, to test the soil of a vineyard, which is very simple, viz: After you find a situation that will suit you otherwise, take a quantity of the soil you are going to plant, about a shovelful, put it in a bucket or any kind of clean vessel, pour boiling water over it till covered; then stir it up several times with a wooden paddle, cover it, and let stand for 24 hours; then pour off the clear water. Test it; and if there is any salty, moldy, bitter, or any other bad smell or flavor to it, that soil is not fit for a vineyard: but if it is good and pleasant, the soil will produce good wine: for the wine is sure to take the same flavor as the water. In way of planting a vineyard a great deal depends upon the situation, the soil, the aspect, etc. Any person who has ever traveled in Europe where they plant the vine, must have noticed that all the vineyards were planted on hills or hillsides, and never bottom land or valleys—at least I never saw any of the latter—but I have seen terraces fixed with stone walls, on hillsides nearly perpendicular, and which produce a first-rate wine, especially if they were rocky.

I shall close this with a few remarks as to the varieties which ought to be planted here. This we only can find out by experimenting, for, probably, the grape that would do the very best in Los Angeles in all respects, would not be worth planting here amongst the foothills, and, *vice versa*, which has been proven over and over again, by individuals as well as by societies, all over Europe. For my part I should rather risk those varieties mostly cultivated in the southern part of France, Italy, Spain, Portugal, Madeira, Hungary and Syria, in preference to those of a colder climate. Next time I shall give you some extracts of Committee Reports on grapes and wine in different wine-growing districts in different countries. I am not interested in the least in trumpeting certain varieties of grapes for the sake of gain, and to impose upon the credulity of the public. I do not want to buy or sell. I have been importing, for the last three or four years, from France, Germany, and Italy, the choicest that could be had from the very best and most reliable Nurserymen there; as also from the Atlantic States most of the new native grapes, but have not yet tried them sufficiently to find out which I would like best. I shall have most of them bearing this season, and you shall hear from me and see the grapes, and then judge; in the meantime I only say that the Los Angeles, or commonly called California Grape, is a noble grape, considering it all around; acclimated, hardy, a good and sure bearer; good for wine and table; but as there may be many varieties prove far superior to it, there will be as many or more that will prove inferior in this soil or climate. It would be more esteemed if it was more scarce, or lately imported from some foreign country, and called "Chasselas de la Los Angeles," raised a great cry about and charged an enormous price for.

Yours, most respectfully,
LOUIS EMIL MILLER.

TRIP TO THE COUNTRY.

Views of Agriculture—Description of "Novato Ranch"—Field Sports.

EDITOR FARMER: While the scores of dailies and weeklies teem with sulphureous topics; while Mars has monopolized so large a share of their columns, as to incur the charge—want of variety—the "spice of life," it has occurred to me to throw in an interlude, and treat the readers of your journal to a brief outline of a ramble in the country—a week of recreation spent in Marin county. So sure as there is

> "———Truth in the running brooks
> Sermons in stones, and good in everything,"

how can I fail to serve a hash, that shall prove savory, or at least, furnish matter "to point a moral or adorn a tale."

On the 17th of December, I shook the dust, or, rather, the mud of the city, from my feet, and stepped on board the Petaluma steamer, and soon lost sight of this modern Babel, and was well under weigh towards my destination. The skies were serene, and the mellow rays of the sun kissed lovingly the waters of the bay. The green hills and overarching heavens reminded me of

> "Emerald Isles on ocean sleeping,
> Skies that seem to stretch forever."

An hour's steaming landed us at San Quentin—a depot for rogues and rascals, without which no State can rise above the condition of semi-barbarism.

It was the remark of a shrewd Frenchman, while traveling in a foreign country, on seeing a gallows, that it was a mark of civilization! So I say of a State-Prison; it is an index of progress, and indicates a growth in civilization and refinement.

At this point I mounted a Mexican saddle, and putting spurs to a mettlesome mustang, in due time hauled up at San Rafael, four miles distant. This is a thriving town—the county seat of Marin county.

"Novato Ranch," owned by Sweitser & Delong, the place of my destination, was still nine miles distant, and as it was now dark, I anticipated rather a cheerless ride over the hills.

The four miles of rapid mustang riding had well nigh unsettled all my former exalted views of "the poetry of motion," to say nothing of my loss of confidence in the dignity and sublimity of this kind of locomotion. In spite of my growing and skillful attainments, the spirited mustang devised ways and means to produce too great a degree of friction; and this, you know, is sure to spoil the harmony of all mechanism.

While we were berating our condition and inclined to indulge in the sentiment thus Hudibrastically hit off—

> "Who makes his bed of briar and thorn,
> Must be content to lie forlorn,"

a felicitous circumstance turned up. An old sea-captain had just chartered a livery team to take him over the same road. Now the Captain was fond of sea-room, and had far more confidence in his ability to navigate safely the hills and ravines astride a half-trained mustang than when buttoned into a carriage. So we had no difficulty in swapping crafts, and what brightened the transaction, each verily believed he had the best of the bargain.

The Captain had no idea of getting water-logged, and so whiskyed up before starting, and with sails set and streamers (long locks) flying, he left his moorings, and was soon gallantly bearing away through the streets of the town, at the rate of ten knots an hour.

We left soon after—drove rapidly over a smooth, hard, but circuitous road, the bright stars lending their kind assistance, and the cheerful frogs serenading us—the merry fellows uniting their full volume of voice, in whistling an oratorio, as an evening's entertainment.

We overhauled the fleet craft of the gallant Captain some two miles inside our destination. It was anchored near, and secured by hauser, to a tall sign-post, while the dim form of the commanding officer was traceable through the windows, evidently taking in additional freight and discussing the superior merits of mustangs for overland navigation! By nine o'clock I made my destination, and, after partaking of refreshments, gave myself up to the agreeable stimulus of enlivening conversation around a blazing wood fire in an open fire-place. An hour passed, and we yielded to the embrace of Morpheus, and slept—and rose to look upon the beauties and glories of as fine a morning as has dawned upon the world in 5000 years.

AGRICULTURE.

It was the remark of General Washington that Agriculture is the most healthful,[*] the most useful, and the most noble employment, of man. Verity, it is the chief corner-stone—the underlying source and agency of the wealth, grandeur, and material greatness of a State! Every citizen of California has either a direct or indirect interest in the occupancy, culture, and improvement of its soil. As fast as ranches are purchased, and fenced and improved by buildings and orchards and vineyards, and occupied by sound practical farmers, demanding good roads and churches and school-houses, so fast will California rise in her growing greatness, and instead of remaining a play-ground, a race track for contestants to enter and win and bear away prizes to other shores, shall become the permanent resting-place of an industrious, intelligent and enterprising rural population.

Well does the poet say, with most persuasive truth—

> "What constitutes a State?
> Not high-raised battlement or labored mound,
> Thick wall, or moated gate;
> Not cities proud with spires and turrets crowned,
> Not bays and broad-armed ports,
> Where laughing at the storm rich navies ride;
> But MEN, high-minded MEN!"

And who, we confidently ask, shall be regarded as MEN—high-minded and useful men, in a more preëminent sense than others, unless it be those who, by ax and fire, by plow and spade, with nerve and energy seize the rude and uncultivated wastes—the forest and marshes, and convert and array them in artistic beauty—who harness the waterfalls to useful toil, and dot the wide country o'er with farm houses and snow-white cottages, where Ceres and Pomona deign to dwell, and pour out their united Horn of Plenty.

"NOVATO RANCH."

With this view, we offer no apology for giving a concise outline drawing of "Novato Ranch." It contains no less than 13,000 acres, situated on the west side of San Pablo Bay, thus connecting it by water communication with San Francisco, 25 miles distant. With no expense for land carriage, it is favored with cheap communication with this market for its products. It is composed mainly of a rich alluvial soil of bottom lands, but extending up on to the low foot-hills which surround it on the north, south, and west sides.

It is all inclosed by a substantial redwood post and wire fence (wire very large)—the posts were all grown on the ranch, the ravines of which furnish an abundance of wood and timber.

The fence inclosing the ranch is 15 miles in length, and the various cross fences are unitedly 9 miles in length—in all 24 miles—built at an average cost of $500 the mile. About 5 miles of the surrounding fence is maintained by parties owning adjoining lands.

ORCHARDS AND VINEYARDS.

About 125 acres are devoted to Fruit culture. There are 18,000 apple trees (grafted fruit) from 2 to four years old; 500 peach trees; from 200 to 300 plum trees; from 250 to 300 quince trees. Of pears, apricot, fig and almond trees, some 150; while of grape there are over 11,000 vines, mostly of the California varieties. The Ranch has a good number of never failing springs of pure water, some of which afford a sufficiency for mill seats.

STOCK.

Messrs. Sweetser & DeLong informed me that they now have on the Ranch 1,000 head of cattle—100 of which are cows; 300 horses, old and young, several of which are the get of their celebrated Black Hawk—"Novato Chief"; most of these are highly promising colts. They have some 1700 sheep, 1000 of which are ewes, and have this season all been crossed with imported *Spanish* (Vermont bred) Merino Bucks.

HAY AND GRAIN.

Of wheat, oats and barley, they harvested only about 6000 bushels. They cut and put up for market rising of 400 tuns of hay, worth at the present time $15 per tun.

MODUS OPERANDI.

The proprietors employ a Foreman, Mr. Stephens, who has been in their employ for the last three years, at a yearly salary of $500 and board. He is a native of Maine, and appears to be active, intelligent, and well-fitted for the position. Other help costs them from $25 to 40 per month and board. The shepherd, Mr. Samuel Bingham, a native of Vermont—a young man of industrious and attentive habits to business, and everyway qualified to fill his place with credit to himself and advantage to his employers—receives a salary at present of $400 per year, besides perquisites and board.

The proprietors say the chief drawback to good dividends is the high price of labor; but they expect that the steady immigration of laborers from the East will soon remove this obstacle.

LOCATION OF BUILDINGS.

The farm buildings consist of a medium sized dwelling-house—a granary—tool shop, blacksmith shop—store house—sheds—and a barn 70x50, with a basement for stabling. They are prettily situated on a gentle elevation, which overlooks the entire valley, and sheltered by some half dozen patriarchial oaks, imparting a cheerful aspect to the homestead. The Ranch is intersected by the public road, leading from San Rafael to Petaluma.

The generous and enterprising proprietors of this estate can congratulate themselves on its prospective increasing value. When San Francisco shall have a population of 200,000, which will be the case by 1872, all good farming lands within a radius of 30 miles of the metropolis, will possess almost a priceless value. Then the man who owns but a *small* farm of choice land can place his hands in his pockets, and contentedly say, in the words of Pope—

> "Happy the man whose guardian care,
> A few paternal acres bound,
> Content to breath his native air,
> In his own ground."

We must briefly allude to our field sports. Mr. D—— is an expert marksman—has a passion in that direction equal to an Englishman—keeps hounds, and setters and pointers of first quality, and with plenty of game on his own lands, and plenty of leisure to devote to its capture, he derives much rational enjoyment combined with health-giving exercise, and besides, his table is constantly supplied with a variety of wild meats. He is "sure shot," and I at length came to the conclusion that escape by wing or leg was next to impossible—that almost invariably as he discharged his piece, the quail, the duck, the hare, gave up the ghost—they died

> "———— A fair, straight death,
> From loss of blood and want of breath."

We returned to the city in time for Christmas, revised and improved spiritually, socially and physically. The grinding friction of business cares finds its cure in the lubricating breezes, radiant skies, and soft airs of the country.

S. B. ROCKWELL.

SAN FRANCISCO, Dec. 28th, 1861.

---

[*] It appears from the Massachusetts Registry of Births and Deaths, for 1854, that the duration of the lives of Agriculturists was twelve years above the general average—nearly 29 years above that of common laborers, and eighteen per cent above the average age at death of mechanics!

The Duty of Cultivators in the Mountains.

THE present disastrous floods which have swept over all the valleys, and, in many places, utterly ruining the cultivator and rendering his grounds either unfit to plant the present year, by reason of the large deposits of slum upon the soil, or causing delay till too late to plant this season, should call the prompt and earnest attention of all our mountain Cultivators to the duty they owe the public, by preparing as largely as possible for planting, so as to not only supply the mountain demands, but to have a surplus for the valleys: for it is very evident from the condition of the valleys now, that they cannot possibly raise their *own early wants*, consequently our markets will run bare of such vegetables as are usually so abundant. To the mountains, then, we must look for the supply for the table, especially for all our early wants.

The word must go forth, then; the order is reversed: the Valleys have supplied the Mountains heretofore; now, the Mountains must supply the Valleys. Now, therefore, is the time to prepare the lands and put in the seed. Every opportunity that offers, the Plow must be at work: then the Mountains will yield, in addition to their other wealth, Agricultural Riches also.

The Peruvian Cotton-Tree.

This new subject for the attention of our farmers has lately been brought into notice through the efforts of Mr. R. C. Kendall, a practical Agriculturist, who has cultivated the tree in Maryland, and demonstrated its value, as well as its adaptation to Northern latitudes. As this perennial cotton-tree appears to be a desirable product for our farmers, and as they are soon likely to have an opportunity of giving it a trial, we copy from an address by Mr. Kendall an estimate of the cost of producing cotton from the tree as compared with the cotton plant of the Southern States. He says:

Now having shown that the production of cotton to an unlimited extent in a large proportion of the Free States is possible, let us consider, briefly, the relative difference between producing and preparing for market, an acre of cotton in the Slave States, and an acre grown and prepared by free labor at the North.

The interest on an average field hand in the Cotton States is	$80 00
Clothing and food annually	75 00
Loss of time by sickness and medical attendance	30 00
	$185 00

Allowing four acres for each hand to cultivate, and 500 lbs. per acre (both allowances being above the actual average), and allowing ten cents per pound, we have as a result of a year's labor per hand, $200; leaving the slender balance of $3 75 per acre, which is very often more than absorbed by commissions, transportation, and other incidental expenses, always greater in the Slave than the Free States. There are a great many Southern cotton planters who do much better than this; but there are also thousands who do a great deal worse.

Let us now turn to the Northern side of the picture. Allowing that the perennial cotton required the same amount of culture and care annually that the herbaceous variety does (which it does not), a good farm hand will cultivate six acres, occupying only six months of the twelve in preparing, planting, tending and picking.

This, at $12 per month, gives	$72 00
Board for six months, at $10	60 00
	$132 00
The minimum yield per acre of the perennial cotton, wherever it can be grown, would be 1000 lbs. per acre, an aggregate of 6000 lbs. for six acres, which, at ten cents per pound, gives	$600 00
Deduct from this board and wages of men	132 00
And we have	$468 00

which gives $78 per acre.

In this estimate I have considered the interest on land, cost of fertilizers, teams, and implements as being the same North and South, and given the yield of the perennial cotton at its lowest rate—but as I know the tree to be capable of producing 2,000 pounds per acre, and as it can just as well be grown in lawns, by the wayside, and divers nooks and corners, where it would not materially interfere with other crops or farm occupations, we might safely add fifty per cent to the credit side of cotton grown by free labor in the Middle States.

At the South, the everlasting complaint is the insufficiency of plantation help, while in the Free States labor is always abundant, and procurable at reasonable rates. Besides, from my own observation and all the information I have been able to obtain, the perennial cotton is never liable to damages by vicissitudes of weather, or destruction by the numerous pests so inimical to the herbaceous plant.

He continues:

The period is not very remote, when hedges, most as efficient fences, shall yield annual dividends of superior cotton; ornamental trees blending the useful with the beautiful, shall repay tenfold their cost and culture; when the rugged heights of the Hudson, the plains of New Jersey, the fertile valleys of the Keystone State, and the undulating prairies of the Great West, shall gleam in the sunlight, white as the winter drift, with the generous pods of Democratic Cotton.

Having thus communicated the conclusions arrived at after a year's diligent study of the growth, habits, produce and general economy of the perennial tree-cotton, and also detailed the result of my own patient experiments in a latitude where the climate is as rigorous as it is in New York, permit me to introduce testimony towards establishing the fact that cotton can be grown abundantly and profitably in three-fourths of the Free States.

In the first instance, that the cotton-tree of South America does grow both spontaneously, and under culture, producing a beautiful, fine, and long glossy staple, in high Southern latitudes, where snow covers the ground three months out of the twelve, seems to be evidence conclusive that it will flourish equally well in latitudes North of the Equator corresponding to those of the Southern Hemisphere in which it abounds, and defies the rigors of a climate that nothing less hardy than a North American apple tree could withstand.

I will here take occasion to introduce the opinion entertained by a veteran Cotton planter of Mississippi, in regard to the merit of my protegé, as written by himself, and published a year since in one of the leading commercial papers of the South.

PERUVIAN COTTON-TREE.

The true *Gossypium Arborium* of Linnæus.

Grateful in its shade, magnificent in its beauty, and invaluable for its rich and abundant crops.

"Perhaps one of the most striking instances where the utilitarianism of the age, ever ready to grasp the substantial benefits of every hint derived from the votaries of science, has been at fault, is shown in the fact that a cotton-bearing tree, producing annual crops in the greatest abundance, enduring without replanting, through a series of years, yielding a fair crop in the third, and attaining its maximum in the sixth or seventh year of its growth; is now flourishing within 2,000 miles of the cotton fields of the United States, in a soil and climate similar to those of the Middle States of this Union, where it has grown neglected for all practical purposes, only claiming the eye of the savage, or occasionally employing his rude industry, from a period anterior perhaps the far-off times when ancient Greece and Rome paid tribute to the cotton looms of India.

"We do not allude to the giant *Gossypium* of Borneo, the cultivation of which for commercial purposes would be utterly impracticable in all latitudes; nor to the stunted, perennial shrub common to the desert regions of the Chira Valley; but to a legitimate *Cotton-Tree*—hardy in its habits, annual its yield, excellent in its staple, and generous in its production; now blooming in the wilds of Peru, Bolivia, and Chili.

The attention of the cotton-growing and manufacturing world having been lately attracted towards Peru as a country well adapted to the production of Cotton, some slight notices of this tree have found their way into the public journals, and various claims have already been set up by different parties, claiming the merit of its discovery.

But we know that long anterior to any of these supposed discoveries, our Mr. Kendall having been called by his profession to those remote regions first noticed the tree, and having carefully studied its habits, and familiarized himself with its economy, thus assuring himself of its entire adaptability to our soil, and to a climate much colder than ours in our Cotton States, brought with him on his return, not only samples of the staple, which were pronounced by competent judges to be fully equal to any, and superior to most United States cotton, but also a small parcel of seed, which he distributed to different parties. These persons, doubtful of the result, opposed to progress, or more probably oblivious of the fact that they had these seed in possession, never committed them to the ground. Two other parcels intended for distribution, were unfortunately lost, as will be seen by a late article in the Southern Field and Fireside. So that the only experiment really made, was by Mr. Kendall himself, with a few seeds, the result of which proves most conclusively, that the Peruvian perennial, or tree-cotton, can be successfully produced as far North as the parallel of 40° at least."

In conclusion, I would remark that the regions to which the perennial cotton-tree is indigenous, are not so remote or inaccessable, but that full and reliable information in regard to it may be easily obtained, and if our farmers and cotton capitalists will set to work with but half the energy which has characterized our Northern horticulturists, we shall ere long produce, in the Free States, an abundant supply of the best good cotton.

If, however, no other person should move a single step in the matter, I shall, myself, with what energy I possess and such means as can be honestly obtained, prosecute experiment and research, until the profitable production of cotton in Free territory, by free labor, can be no longer a debatable question.

A Word about Figs.

We find an article with this caption in the N. Y. Horticulturist, from a New Jersey writer, which is interesting; and, though the directions for culture are intended to apply to a colder region than the general climate of our State, they will be found applicable by a portion of our readers, and more or less useful to all. He says:

How few there are in this latitude who have ever eaten Figs, ripe and fresh from the tree! Or if, perchance, they have tasted a single specimen raised by dint of great care in a pot or tub, can scarcely credit the fact that Figs may be grown, even in this Northern latitude, not as exotics under glass, but as an out-door fruit; and gathered, not in single specimens, but in generous abundance and luscious sweetness. Yet the fact is nevertheless so, and under favorable circumstances two crops may be realized in a single season.

The flavor of this fruit is not generally esteemed by those to whom it is a new sensation. The taste must be cultivated, and then it becomes as fascinating as the Tomato or the Olive. Who does not remember the unmitigated disgust which the first taste of the Tomato or Olive excited? How hard it was to be persuaded that they were fit food for mortal man, or even to be tempted to make a second trial! Yet who can tell how the taste grew upon him? It is even so with the Fig. We have heard the tyro pronounce a fine luscious Fig *insipid*, or *too sweet*. We once thought so ourselves, but with years came wisdom—*experientia docet*—and we now sigh over the breakfasts which, whilom under the canopy of sunny Tuscany, we used to make off a well piled-up plate of fresh and luscious Figs, eschewing all meats or other solids. Reader, this is not poetry, but fact; and in the plenitude of our benevolence excited by such recollections, we desire for you a similar experience.

As to the culture of the Fig, there is nothing difficult. The chief requisite is to protect the tree against the severity of the winter; and this is done in precisely the same manner as the tenderer varieties of the Raspberry, viz., by covering with earth. We have seen a protection of straw resorted to, but have never known it successful in this latitude. The best method of protection is to dig about the tree in the fall, deferring the act as long as the ground remains unfrozen, and then underming and throwing the tree, so that all the branches and canes lie upon the ground; and then to shovel upon them soil enough to thoroughly bury them beyond the reach of frost, taking care to so leave the ground that all excess of water will readily drain off.

There is a decided advantage achieved in this way of root-pruning, which prevents the plant developing too much into a tree shape, and thereby rendering it, as years increase, more difficult of being protected. The uncovering should be delayed as long in the spring as possible—at any rate, until the long cold storms of early May are passed, say until about the 12th of May. Then, if nothing untoward happens, you may look for a summer and autumn crop. The season this year has been decidedly favorable to the fall crop, and at this moment of writing [probably October] we are luxuriating in abundance, with a promise of still more. Those that come too late to ripen should not be despised as worthless; for they may by skillful hands, be converted into a delicate and delicious preserve. We have an ancient spinster aunt who—bless her dear old heart!—put the idea into our head, and once, while on a visit to us, gathered the last of the Figs, and made us a jar of preserves which went far ahead of any East India preserves.

But enough about Figs for the present. Should our Editors care a *fig* about us, we may hereafter have another word to say about *culture*.

Governor's Message—Agriculture.

Though Gov. Downey, last year, forgot, or did not then think the subject of sufficient importance, to make any allusions to, or recommendations concerning, Agriculture, he seems to have become aware of his remissness in that respect, and in his retiring Message to the Legislature, endeavored to make amends. We give in full that portion of his Message devoted to

AGRICULTURE.

The report of the State Agricultural Society will be presented to you in due time. This Society has done much towards stimulating a healthy and beneficial rivalry in all branches of this ennobling pursuit through all its varied interests in this State. I commend it to your care and bounty. Small appropriations to this and local societies of the same character throughout the State will be productive of much good. It would be well for the Legislature to offer premiums, or bounties, for the cultivation of flax, to which our soil in many sections of the State is admirably adapted; also, for the production of coffee, tea and sugar, which can be grown in other sections of California. Where the orange and sugar cane flourish so well, I can see no reason why coffee and tea cannot also be produced.

In obedience to your concurrent resolution of last session, I appointed three Commissioners to examine and report upon the cultivation of the grape-vine, and upon the capabilities of this State for the growth of this interesting product, to wit: Messrs. J. J. Warner of Los Angeles, A. Haraszthy of Sonoma, and J. A. Ramirez of Marysville—gentlemen of ability, who have devoted much time and reflection to this subject. Mr. Haraszthy has just returned from Europe, and brings back with him much valuable information, the result of his personal observations, both as to the mode of its culture, the varieties best suited to our soil, and, still as important, the mode and manner of making and preserving the wine. Mr. Ramirez, I believe, visits South America, and will give the result of his intelligent and practical observations in that country. No appropriation has yet been made to defray the expenses of this commission. I recommend that its effort in behalf of this great interest, yearly becoming more valuable, may be rewarded in a manner becoming the subject and the dignity of the State. You will receive the report of this Commission in due time.

The necessities of all countries and communities suggest for them appropriate laws, and it should be the duty of the Legislature to frame statues to meet the necessities incident to the natural and physical condition of the State, and to the wants and resources of the inhabitants, rather than to follow in their enactments the precedents or customs existing in the communities whence they emigrated to this country. Our system of local laws, suggested by the necessities arising in the different mining localities of the State, acquiesced in by the Legislature, and recognized by our Courts as binding and obligatory upon them in determining the rights of property, which have already entered into and compose a part of our peculiar judicature, is a proper illustration of the idea that different countries require different local laws, which are suggested by their natural and physical necessities.

The agricultural interest is second to no other in the State in importance, both as a means of wealth and of industry and good order in society. Already the exports of our cereals, after supplying our domestic wants, begin to awaken attention at home and abroad, to this great resource of California wealth. This, like all other branches of industry, requires wholesome legislation, adapted to its natural necessities, to insure its encouragement and protection. The farmer in California labors under one great difficulty: that is, in the procuring of proper and cheap materials for fencing in his lands. In many localities of the State, it will require an expense threefold more to fence his lands and protect his crops against trespass from live stock, than the lands and crops will sell for. Thousands are prevented from cultivating grains and fruits by this cause alone. I can discover no hardship in compelling the stock-raiser to herd his stock and prevent their trespass, greater than that requiring the farmer to inclose his cultivated fields to secure the profits of his capital and labor.

To compel the farmer to sustain a legal fence in this country, as now defined, is to prevent his cultivating his land or enjoying the use of his own property. The grazier should be required by law to herd his stock, and keep them from trespassing upon cultivated grounds. If this were the rule, it would ultimately result in his own benefit, as he would select a choicer variety of stock, would make provision for their care during the rainy season, and, as a consequence, would ask and receive more remunerative prices at their sale in the markets. According to the present practice of our loose husbandry, whereby stock are suffered to roam at large over our extensive plains, number and not quality has become the rule. They die by thousands every winter, and those that survive the ordeal of famine have little value beyond that of their hide and tallow. Besides the bad economy of the present system, there is a cruelty practiced by the owner that deserves to be punished by statute.

In accordance with the requirements of an Act providing for the permanent improvement of the stock grounds of the State Agricultural Society, the Board of Managers having charge of this duty submitted to me their plans, which were approved. The work has been substantially and creditably done, under the immediate supervision of the President, Jerome C. Davis. It reflects much credit on that gentleman, and it will be satisfactory to you to learn that the appropriation to this object, provided for in the Act referred to, has been expended prudently and with rigid economy. The complaints made in their statement, herewith transmitted are not entitled to any peculiar consideration. They complain that they were compelled to pay interest to a considerable amount in having their warrants discounted. When they asked for this appropriation, they were aware, or were presumed to be aware, of the condition of the treasury; besides, the language making all appropriations—and this case affords no exception—always is, "of any moneys in the treasury not otherwise appropriated;" and a portion of this appropriation was not made to take effect until the month of November, in the year 1862. Notwithstanding these facts, they have taken upon themselves the *onus* of hypothecating the credit of the State—a practice which should be discountenanced—because the money could not be immediately realized from the donation, the necessities of the State being greater at the time than the wants of the Society.

◆

Horace, a disciple of Epicurus, said: "Neither the clamors of a raging mob, nor the frowns of a threatening tyrant, neither the furious storms nor roaring thunders can move a righteous man, who stands firm to his resolution. The wreck of the world might crush his body to atoms, but could not shake his soul with fear."

The Hides of the River Plata.

From "Japan, the Amoor and the Pacific. By Henry A. Tilley."

They were that day killing mares, more than five hundred of which pretty creatures were penned up in a corral. These corrals communicate one with another, a portcullis door being between each two. The last is in the shape of a pear, strongly boarded in, and surrounded by a platform. In the narrow end is a truck, which moves from it on iron rails, up and down a long shed. A strong bar of wood crosses the opening where the truck fits into the narrow end of the corral, and on this bar is a block through which the lasso runs, having one end fastened to the saddles of two Gauchos, while the noose remains in the hands of the Matador on the platform. When all is ready the Gauchos ride into the farther corral, and drive the animals into the pear-shaped one, and the portcullis is dropped. The Matador whirls his lasso, sometimes over the heads of three or four mares at once, gives a signal to the mounted Gauchos, who spur their horses, and the mares are dragged on to the moving platform, with their heads against the bar. The Matador then strikes them on the head with a heavy iron hammer, the truck moves up the shed, and another mounted Gaucho, with a rope, drags them off the truck on either side of the tram-road, when other men are ready to skin and cut them up.

Oxen.—The same mode is adopted with oxen, only they are killed by the stab of a knife in the neck, which divides the spinal marrow. The first stab is generally sufficient; the animal ceases to feel instantaneously. The only suffering for the poor beasts is being kept long in the corrals without food or water, sometimes for two or three days. Barbarous as it seems to a European to see horses thus slaughtered for their skins, it is a painful necessity. The Gaucho will never ride on a mare, and if a stranger were to venture to do so, he would be hooted and jeered by every urchin he met. The Gaucho is far from being like the Arab, who, it is known, rides only mares, and treats them a little more kindly than human beings. But the Gaucho will not only not ride mares, but treats the horses he does ride in a most barbarous manner; his spurs have points an inch in length, and on a journey these are applied to the blood-stained sides of the beast till he drops exhausted. What does that matter to the rider? He easily finds another; in fact, in the country they have hardly any value at all.

The rotting carcase or the skeleton of the horse by the wayside is a usual sight, even in the vicinity of the city of Buenos Ayres. Among the five hundred mares mentioned three were saved from the fate of the others by an English gentleman, who had lately brought with him from England three fine horses, and was about to try to improve the breed. For these mares he only paid sixteen shillings each. The five hundred mares were killed and disposed of in about six hours.

Slaughtering.—In many establishments as many as eight hundred horses or oxen are slaughtered every day, and that nearly throughout the year. In winter only, when the animals are not fat, is there a little relaxation. In the long shed above-mentioned the work of dismembering the animals is going on, and the expertness with which it is performed may be judged of by the fact, that five minutes hardly elapse from the time the ox leaves the corral before it is already cut up and salted. The men employed in this work are Basques, and often children with faces like an angel are among them deep in blood, and reveling in their disgusting work. When the hide, the principal object of value, is removed, the flesh is cut up in lumps off the carcase, and removed to other hands, which slice it, and throw it in brine, from which it passes to still other hands, which pack it in stacks, with layers of salt between. The flesh is turned every day for a few days, until it is dried by the air, and in that state forms the *carne seco*, which is exported in vast quantities to Havana, the Brazils, Chili, Peru and the African coasts.

Salting.—The hides are salted in the same manner, the superfluous brine running from the meat to the reservoir which contains them. Most of the salt used is brought from Cadiz. The bones undergo a different treatment. Those containing marrow are subjected to the action of steam, and the fat thus procured is likewise largely exported to the same places as the meat, besides being much used as butter by the natives, who are excessively fond of it. The rest of the bones, entrails and all that contains fat, are steamed in another vat for tallow. The tongues are salted and consumed at home. The sinews, horsehair, &c., are also utilized, but still there is an enormous waste, for everything is performed in a very rough manner, on account of the high price of labor. Formerly only the hides were taken, and the rest left to perish on the spot. The mares are killed for their hides and hair alone. The flesh is useless, and is either burnt or thrown away.

The proprietor pointed out to me a plot of ground which he had formerly caused to be excavated to raise the ground of his premises, and the holes had been entirely filled up with mares' flesh. Most of the men employed keep huge and disgusting swine, which they fatten on the flesh and blood thus obtained without stint. Thousands of sea-gulls whiten the air and the ground, revelling on the disgusting remains. The small quantity of fat procured from the flesh and bones of the mares, contains but little stearine or hard fat.

Refuse.—The refuse is strained from it by hanging it in long bags, through which a clear but dark-colored oil drips out. This is chiefly used for burning in lamps. The furnaces are entirely fed with flesh, bones and refuse, and the stench which is produced from the reeking blood, the ammoniacal fumes from the scorching bones and other substances, are quite enough to sicken the strongest stomach. The residue or bone-ash has lately become a valuable export to Europe, where it is used as a manure. Soap and candles are also made in the factories, for home consumption.

Statistics.—In the three *Partidos* of the province of Buenos Ayres alone, there were, according to the returns of 1858, 3,875,742 horses, 8,672,075 oxen, and 1,385, 280 sheep. In the year 1838, the number of horned cattle did not exceed four millions; but since the pampas south of the Salado have been cleared of Indians, and the country in general become more settled, the above enormous increase has taken place. The same with the sheep, the wool of which was formerly so coarse that it was only fit for carpets; whereas, since the improvement of the breed by a cross with fine-wooled sheep, it is largely exported for finer manufactures. The exportation for 1858 consisted of 969,604 dry and 318,304 salted ox-hides, 68,874 dry and 120,757 salted horse-hides, wool to the amount of 37,423 fardos, tallow, 240,382 cwt., beside horns, oil, bones and hair. The number of ships in which these were exported was 404.

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The California Farmer has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the only Agricultural Journal in California.

7th. The California Farmer contains the most important information relative to their interests in every branch of Agricultural science.

8th. The California Farmer contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The California Farmer contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The California Farmer is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Another Herd of Noble Stock for Sale.

We can offer to those who want the best kind of Blood-Stock, the following:

A Full-Blood Devon Bull; pedigree perfect.

Several Calves, Full-Blood, and cross of same.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

$1,000 Reward!

JOHN C. BELL,

Nos. 634 and 636 Clay street,

WILL GIVE THE ABOVE REWARD TO ANY person that will prove to him that they can purchase

OIL CLOTHS,

CARPETS,

PAPER HANGINGS AND BORDERS,

MATS AND MATTING.

Rugs for Christmas Presents,

GILT CORNERS AND POLES,

Damasks and Window-shades, and House-Furnishing Goods of every Description,

Cheaper than we will sell for CASH for the next

TEN DAYS!

☞ All remnants remaining on hand at that time will be sold at Auction.

CLAY STREET—the second Carpet Store between Montgomery and Kearny—

Nos. 634 and 636.

12 JOHN C. BELL.

MRS. D. NORCROSS,

No. 144 Sacramento street,

Above Montgomery street......... *SAN FRANCISCO.*

LADIES' DRESS TRIMMINGS.

This being the only regular Ladies' Dress Trimmings Store in San Francisco, ladies can always rely upon finding the largest assortment and best style goods in the city.

Having just visited the East, and completed all our arrangements with the best manufacturers of Europe for the importation of Fine Goods, as also with the largest and heaviest factors of our own country, thereby having all our goods come through first hands, we flatter ourselves our facilities are such as to make it an inducement for ladies to give us their trade exclusively for

UNDER LINEN,
HOSIERY
UNDER CLOTHING,

And all Goods in our line.

3 MRS. D. NORCROSS,
No. 144 Sacramento street.

Manila Cordage.

250 COILS, OF ALL SIZES, OF EASTERN MANUFACTURE. For sale in lots to suit.
2-3m JONES & HEWLETT.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 68 of whole Series; continued from Farmer of Jan. 10. 1862.

XII.—L.

The Indians of Lower California Coasts.
NOTA MISCELLANEA IN LOWER CALIFORNIA.

THE LANGUAGES OF LOWER CALIFORNIA.

WITH the exceptions of the Lord's Prayer in the Cochiemies language, given from Clavijero in the Second Series of the Indianology, and that of San Miguel, in the First Series of the same, we are unacquainted with any other. The following words are gleaned from Clavijero:

The Cochiemies.—*Tammia* or *dammia*, the fruit of the sweet pitahayas cactus; *tajua*, the acid pitahayas. *A* is the term for the fruit of the nopal cactus. *Anaba*, fruit like a fig; *medesa*, fruit of a tree; *ciyanda*, fruit of a species of acacia or mesquit; *jojoba*, a prized fruit of the Cochiemies, the nut of which gives an excellent oil for salad; *tedda*, seeds of a bush which are toasted for food; *tedegua*, fruit like an almond. *Guaribo*, a timber tree of California; *guatia*, a timber tree; *ghokio*, timber tree. *Cadese*, a species of sweet reed or cane. *Guigil*, *millipe*, *muber*, a species of mermaid. *Coyote*, a spcies of fox or wolf; *chimbi*, a species of wild-cat; *chimbica*, a species of lion or puma; *taje*, Rocky Mountain or big horn sheep; *amagoguio*, the antelope; *ijju*, the skunk. *Kadakamang*, the locality or rancheria of San Ignacio mission. *Tepeg*, one; *goguo*, two; *combio*, three; *macacubugua*, four; five, or the fingers of the hand, *neganna*, *tejueg ignimel*; for the hands, or ten, *naganna*, *ignimbal demejuag*. *Ibo*, the sun. *Mejibo*, season of the ripe pitahayas; *amada appi*, the season after memjibo, for seeds; the next season is called *amada appigula*; the fourth season is *majibel*; *majiben*, the fifth season; the sixth or worst season is *majiben-maji*. *Adda*, a kind of bowl or basin. *Nipiraja* or *tupuran*, the great spirit; his wife is called *anacojondi*. *Acaragui*, a district where these gods live in the Pericues country. *Tupuran*, a warrior spirit. *Purutahui*, or *cucunumic*, name of a spirit. These names from *nipiraja* are Pericues; the terms preceding *nipiraja* are Cochiemies words, or language prevailing at San Ignacio and further north.

The Guaicuras.—*Guamongo*, a spirit which causes infirmities; *gujiaqui* a spirit that sowed the pitahayas; *dicuinocho*, sorcerers.

The Cochiemies.—*Tama ambei ucambi tevivichi*, the good spirit who came from heaven to benefit mankind; *guama*, sorcerer or doctor.

Liguig or *Malibat*, a coast country southward from Loretto. *Muleje*, a name of a mission rancheria of Santa Rosalia north of Loretto. *Londo*, *Liguig*, districts south of Loretto. *Tugnuelia*, locality of Dolores mission. *Comondu*, or mission of San Jose de Comondu. *Adac*, rancheria of Santa Gertrudis mission. *Afegua* and *Huamalgua*, islands on Pacific coast near 31°. *Hualimea*, a rancheria of San Ignacio mission. *Fehual*, a famous sorcerer of San Ignacio mission. *Cadegomo*, site of Purisima mission. *Vigga Biaundo*, locality of San Xavier mission. *Purum*, locality near Cape San Lucas. *Colagnujuet*, *Iuzai* and *Cagnajuet*, localities in the vicinity of San Francisco Borgia.

The words, with those of the Lord's Prayer in the dialects of the missions of San Xavier, San Jose Comondu, San Francisco Borgia, Santa Gertrudis, Santa Maria and San Ignacio, before alluded to, are all which appear to have been saved from oblivion of the Indians of the Jesuit missions. These forms of the Lord's Prayer will be found in the section of the Notes under the head of the Indians of the Southern Coast Countries in the Second Series of the Indianology.

NATURAL HISTORY OF LOWER CALIFORNIA.

At a meeting of the California Academy of Natural Sciences, held Sept. 30, at their rooms in San Francisco, Samuel Hubbard read a paper of considerable interest. It was a description, or perhaps it should be called a catalogue, of specimens in Natural History, collected by John Xantus, a celebrated Hungarian naturalist, in Lower California and the islands adjacent, during twenty-eight months, ending July 31, 1861. We give it entire:

Mammals—3000 specimens, representing 325 species, 27 of which proved to be new to science; and 6 species doubtful. Some are decidedly new.

Reptiles—2000 specimens, representing about 25 species of lizard-likes, 17 species of serpents, and 4 species of turtles; in all about 50 species, nearly 40 of which turned out new discoveries.

Fishes—Over 20,000 specimens collected, and of this number only about 100 dry skins, the rest in alcohol. These fishes represent about 800 species, over 650 of which are new. Among them about 25 new genera.

Insects—In this branch were obtained about 50 species of *Lepidoptera*, about 150 species of *Diptera*, and about the same number of *Hymenoptera*, with a few *Orthoptera*. This branch is principally represented with *Coleoptera*, of which probably about 30,000 specimens were collected, represented by only 300 species, but nine-tenths of them new to entomology, and already described in the proceedings of the Philadelphia Academy of Natural Sciences.

Marine Invertebrata of Crustacea—The collection contains over 800 species; fully 711 are new, embracing 9 new genera. All the above are described by Wm. Stimpson in the "Annals of the New York Lyceum of Natural History."

The *Radiata*, or Starfishes, will probably contain about 40 species, with many novelties.

The *Mollusca* are represented by over 5000 specimens not yet considered.

Shells—P. P. Carpenter gave, after a hurried survey of the collection, 1700 species last year, but since then the collection has more than doubled. About half of the whole is pronounced by Mr. Carpenter and Isaac Lee to be new.

Plants—A new series of plants has been collected, including sections of wood, seed, flowers, &c., and represent about 340 new species out of 390. Of the *Algæ*, the collection contains about 75 additional species, every one of which is new to science.

Geology and Mineralogy—Are represented by specimens of gypsum, selenites, gold, silver and copper ores, with many specimens of primitive rocks of every composition. Mineral and other waters have been collected for chemical analysis, and paleontological specimens in great abundance. The result, however, is not ascertained as yet.

Oology and Nidology—Received particular attention, as the collection contains over 3000 nests, with nearly 9000 eggs in the best condition, nine-tenths of which are pronounced by Mr. Brewer of Boston as additional to North American Oology.

Ethnology—Received also some attention, as far as the circumstances of position and the state of the country would allow. Crania of aborigines, sundry implements and war apparatus, are in the collection, with some copies of hieroglyphics, which will be of practical value to determine the race that once inhabited this interesting peninsula.

Corals—8 species, 6 which are new.

Sponges—14 species, 10 of which are new.

The naturalist named above, Mr. Xantus de Vesey, is well in literary and scientific circles for his collections and notes in the physical sciences, in the Rocky Mountain country and Alta California, accounts of which may be seen at large in the scientific journals of the Eastern States and Europe. The diligent and multifarious labors of this eminent naturalist confer an imperishable and truly honored name in the future annals of the two Californias. And his being an adopted citizen, shows the entire and abominable futility of that national jealousy which a few years ago would ostracise all but native Americans. All the work performed in Lower California by Mr. Xantus was during the period he held the office of Special Agent of the U. S. Coast Survey office, to make observations on the rise and fall of the tides of Lower California, the station of which was at at Cape San Lucas.

SAN BUENAVENTURA MISSION INDIANS, SANTA ROSA ISLAND.

Talking with an American resident of these parts, acting as the mayor domo for the Messrs. Moore of Saticoy Rancho, he informs us that in a recent stay on Santa Rosa island, in the summer of 1861, rodeoing cattle, he often met with the entire skeletons of Indains in the caves of that Island The signs of their rancherias or camps were very frequent, and the remains of metates, mortars, earthen pots and other utensils very common. The metates were of a dark stone, and made something after the pattern of the Mexican. Extensive caves were often met with which seemed to serve as burial places of the Indians, as entire skeletons and numerous skulls were plentifully scattered about in their recesses.

THE SATICOY VALLEY INDIANS.

This valley is often improperly called Santa Clara, and extends in a wide plain running from the ocean up to the San Fernando valley, and pertains to the old mission of San Buenaventura. It contains some of the best land in the State, with the Saticoy river, draining its entire length of some thirty miles. At its mouth, the plains extend out on the ocean shore for a distance of twenty miles, affording pasturage to many thousand head of stock. The valley at its upper end communicates with the Tejon and Los Angeles roads, and for the last forty years has been a gate for the entrance of the Utahs, Paiutes, Yutes, Mohaves and other desert and mountain Indians who possess horses. Their visits were always made to run off the mules and horses of the Padres, and latterly the rancheros up to 1850. In this way probably the Shoshone affilees entered these parts of California.

The Indians of these parts seemed to have been very numerous, as are related in the voyages of Cabrillo, Viscaino, and the accounts of the missionary fathers. These branches empty into the Saticoy or main river, to wit: the Mopu, the Sespe and the Piru. At the Piru are still to be found a rancheria of some forty Indians. Near the embouchure of the Sespe are to be found remains of ancient Acequias, or irrigating canals, made exactly after the plans of those of the Gila, covering a space of some four hundred acres, and which is the only thing of the kind probably to be met with in California. Speaking with the mayor domo aforementioned, he could give us no account of this matter, but in his opinion they were not the work of the mission Indians, and, as he has lived in these parts several years and knows the country well, his opinion is worthy of attention. It will be remembered that in a former part of the Indianology mention is made by Cabrillo (1542) of finding among the Indians of this vicinity maize or corn, and also cows (vachas), by which he likely means buffaloes. Mr. Robbins (the mayor domo) sees no good reason to doubt these facts, as he was informed that the horns and bones of buffaloes have been found in the valley. This fact was confirmed to me by Mr. Williams, an American resident of San Buenaventura.

ASPHALTUM DEPOSITS.

Asphaltum is found scattered in immense beds all over the county of Santa Barbara. It exists in all stages of its formations—hard as rock, brittle as rosin, liquid as oil, thick as tar, plastic as dough, and in the waters of the canal thin as water. It is all situated in the vicinity of the ocean, and is inexhaustible in quantity. It will soon form an important article of export from this part of the State.

SULPHUR.

This mineral is also plentifully found in the San Buenaventura valley mountains, but as yet the working of a deposit thereaway, at a cost of $10,000, has not been found to be remunerative enough, unless refined on the spot, which will require a large outlay. Note of 13th November, 1861.

◆

GOING TO THE WAR.
Inscribed to a member of the New York Highland Regiment.

BY MADGE CARROLL.

Going to the war!
Oh! blue eyes! light of the hearth and the board,
How the home faces have watched ye;
How your least glance has been stored.
Ah! the days shortened as never before,
At the fireside, blue eyes, going to the war.

Going to the war!
Oh! brother, the desolate, desolate home!
The pang of the parting is over,
But the bitterest season has come;
There are whispers haunting the house all o'er
Of ill to ye, blue eyes, going to the war.

Going to the war!
Fond lover, the twilight knows only the tears
Of the dearest you're leaving behind you;
Kind angels are numbering the fears
Troubling the dreams of the girl you adore,
Blue eyes, true eyes, going to the war.

Going to the war!
Leal-hearted, hope of our country, its pride,
Woe to the cowardly traitors
When such forms in battle shall ride;
Victory marches our banner before,
When such eyes, brave eyes, go to the war.

Going to the war!
Dear stranger, eyes that you know not will hold
The brightness of yours and their courage;
Good spirits wait over the fold
Where they slumber or watch, day or night, evermore,
Blue eyes, true eyes, gone to the war.

◆

A Pleasure for a Child.

Blessed be the hand that prepares a pleasure for a child! for there is no saying when and where it may again bloom forth. Does not almost everybody remember some kind-hearted man who showed him a kindness in the quiet days of his childhood?

The writer of this recollects himself at this moment as a bare-footed lad, standing at the wooden fence of a poor little garden in his native village; with longing eyes he gazed on the flowers which were blooming there quietly in the brightness of a Sunday morning. The possessor came from his little cottage; he was a wood-cutter by trade, and spent the whole week at work in the woods. He had come into the garden to gather flowers to stick in his coat when he went to church. He saw the boy, and breaking off the most beautiful of his carnations—it was streaked with red and white—he gave it to him. Neither the giver or the receiver spoke a word; and with bounding steps the boy ran home; and now, here at a distance from home, after so many events of so many years, the feeling of gratitude which agitated the breast of that boy expresses itself on paper. The carnation has long since withered, but it now blooms afresh.

SEED WAREHOUSE.

(ESTABLISHED IN 1850.)

S. W. MOORE,

IMPORTER

... AND....

WHOLESALE AND RETAIL DEALER IN

ALL KINDS OF

CARDEN, FLOWER, FRUIT,

Agricultural

....AND....

Ornamental Tree and Shrub

SEEDS,

NO. 110 CALIFORNIA STREET,

Between Sansome and Montgomery streets,

SAN FRANCISCO,
CALIFORNIA.

HAS FOR SALE

Sportsmen!

Powder AND SHOT.

Having perfected our arrangements with the manufacturers of Powder and Shot, we are enabled to offer purchasers the very best at the very lowest rates. We are receiving supplies by almost every clipper-ship.

Parties purchasing will please give us a call. Our stock consists, in part, of

500 kegs Blasting and Mining.
500 qr. kegs Sporting.
100 qr. kegs Eagle Sporting.
100 cases in 1 lb cans.
25 cases in ½ lb cans.
Hazard, Dupont, and Oriental.
1000 bags Tatham Bro.'s Shot. For sale by
2-3m JONES & HEWLETT.

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.

The California Farmer.

SAN FRANCISCO:
FRIDAY............................JAN. 14, 1862

☞ THOSE who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

To Book Publishers.

WE invite Book Publishers, here and in the Atlantic States, to our columns, as a medium for advertising their Works. By our circulation they can make known their business throughout the entire State, and thus widely extend their business.

The Lama and Alpaca Goats.

WE invite the special attention of STOCK MEN to the Letter of Gov. BIGLER in columns this week.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

NEW PRODUCTIONS.

WITH a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public interest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

The Loss of Stock by the Flood.

WE desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

* * *

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Read this—High-landers, Pay Vp.

OUR subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

TO CORRESPONDENTS AND READERS.

WE call the particular attention of our readers to the articles of our correspondents, Dr. Miller, and Mr. Rockwell, as containing much that will be found not only interesting, but truly valuable—and hope the series will be continued. Other valuable and interesting articles will be found in this number.

* * *

INDIAN RANCHERIES—THEIR FORESIGHT.—Whoever has traveled on our rivers, and in any place where there has been anything like a flood or rise of water, might have observed that the grounds of the old rancheries are always found to be *above water*. Thus far they have always been *above* the highest water, and those farmers who have built upon the old rancheries are high and dry on these premises, while all around is one vast sea. Let these facts make a due impression, and serve as a lesson.

DRAINAGE OF LANDS.—Now is the time for Farmers to study the subject of Drainage of Lands. This is an important subject for them. We refer them, for remarks on the same connected with an article, in another column, on the "Benefits of the Flood."

MILLS ALL GONE.—Remember the Farm and Plantation Mill for grinding wheat, now all the flouring mills are gone.

Homesteads and Cultivation on the River Banks.

As a faithful chronicler of events, and ever watching for opportunities to advance the interest of the cause we serve, and to admonish, where we believe *good* will result from it: we are again reviewing the calamity that has fallen upon the Agricultural interest all over the country, wherever there is a river, or stream, or water-course; but more on our River Banks.

Some four or five years ago, and several times since, we have urged upon those who dwell upon the River banks, the importance of making a due preparation for the rise of waters during the winter season.

We have repeatedly urged upon those who had Stock in places exposed to a sudden rise of waters, the importance of having buildings or platforms properly elevated above the possibility of loss by flood, into which, or upon which, Stock could be taken, or to which they would go, and thus be safe. Such safeguards could have been effected at very little cost, all along the Sacramento river, and many other rivers and places, and a large amount of Stock could have been saved, as timber is easily to be procured; and, besides, such a plan would have saved a large amount of Hay, Grain, Tools, which have now been lost.

We know that some will say that even the Buildings have been swept away. However true this may be, these Buildings could all have been saved, had proper precautions been taken, by having all buildings built on strong piles, and elevated above the reach of the flood: this can easily be done—all that is required is a little foresight.

To us, there seems no excuse, in cases where the parties have been exposed many times in former years.

Now, by the recent extended flood over so vast an extent of territory, and the prospect of its occurrence often in future years, it becomes the duty of all who are now located on the River banks, to ask themselves very seriously the question, whether that is the place for a Homestead, for a good permanent residence for a Home—for an Orchard—for a Vineyard—for the growth of of anything that will be injuriously affected by these floods.

This is a serious question now; and it should be put now, and answered now: for years of prosperity or adversity will come to all as they shall now decide this question, each for himself.

That our River banks are rich and fertile and worthy of cultivation, is true; and valuable gardens for Summer-Vegetable Crops can be made to grow thereon, there is no doubt; and this can be done every year. These lands can also be converted into extensive Grass fields and Pasture grounds when high land feed fails, and large portions of them be used as Cranberry meadows, with great profit; but to expect to make them a good location for a permanent, a good, healthy and pleasant Home—it is impossible: for, whatever others may say, California *has not yet seen its highest water!*

We believe, from a large amount of evidence gathered from early Settlers, and the Indians, that the time has been when the congregated force of all the rivers have poured their torrents upon Sacramento (or where she now is), until that immense body of water came almost covering her up. We feel satisfied, we shall all see "Higher Water," than we old '49ers have yet seen.

Believing this, we hope the dwellers upon the flooded districts will look well to the future, and thus be saved from further calamity.

Our Legislators.

Adjourned for ten days! So reads the Record. We have no time now to look into the details of causes *why* the *Legislators*, the Guardians and *Protectors* of the People should leave their "*Post of Duty*," when the State is in Peril! We know not of any possible excuse for it. We may be greatly in error in judgment, but we should as soon think of the leaders of our armies leaving *their Post* on the "eve of battle," or in the event of the "Food giving out," as for *Legislatures* leaving the Capital when a great calamity like the present one has come upon the People.

In the name of Humanity, in the name of Justice and Right, we ask for what are men selected as the *Peoples' Representatives* if not to guard their rights and give them relief and protection when most needed; and in Heaven's name when has there ever been a period of time when the *People* needed aid like the present.

And now, when *one-third* of our whole populations are about being made Houseless and Penniless, when the wives and children are gathered up by the noble and generous-hearted, and saved from a watery grave—now, when of all other times the Guardians of the People should be assembled in Council and save them—where, oh! where are these Counsellors, where these Representatives? Where these Guardians of the People?

We heard for a brief time the debate on the subject of adjournment, of removal from the "City of Waters"—but those who advocated the measure seemed only actuated by *their own convenience*. This was the principal motive put forth. They could not legislate and do business with *facility*, with *convenience*, with *comfort!*

In God's name tell us if the convenience and comfort of one hundred and twenty men are to outweigh the balance in the Homes, and the lives of one hundred and fifty thousand people now in peril!

Tell us in God's name if the convenience of paid men, at $10 per day, is to outweigh in the scale the property of the State, *a hundred millions of dollars* that is likely to be swept away by the floods, which bid fair to continue.

Men talk of comfort and convenience! *Adjourn for ten days!* leave the post of duty! leave the whole State in peril! leave the people to perish, and not one word uttered yet in their behalf, not so much as a resolution of condolence and sympathy to the hardy miners, whose mills and cabins are swept away. Not one word to the Millwright and Miller, who furnish the lumber with which our dwellings are built, and grind the food for the hungry. No word for them, though all their works are carried off by the roaring waters.

No word either for the cultivators of the soil, whose thousands of happy homes are gone, whose families are houseless, whose children are penniless—but, thank God, *not friendless*, nor homeless while San Francisco stands—a Platt's Hall, a Music Hall, or a house stands here. They will be fed, and clothed, and cared for, though *Legislators* fail in their duty to a suffering people.

The Flood on the Sacramento, and Its Tributaries.

The remarkable floods on the Sacramento, the American, and the Feather and Yuba rivers, have spread terror and alarm, as well as loss and ruin, upon thousands. Never in the history of California has any evil befallen our people that will compare with it—for the ruin is so wide-spread, so disastrous, so sweeping, as to affect not one city or one locality, but all, and for the whole extent of the Sacramento Valley. From the Bluffs to Benicia the marks of desolation have been made that will take years to wipe out, even upon the surface; while many "Homes," once happy, and hearts then brave, and hands inured to industrial labor, will be no more; this calamity has set a *despairing* seal upon many a soul that never had yielded to misfortune.

Twice, and thrice, and again, *we* have suffered by these calamities of flood, and thrice by *Fire;* but, though each case was hard and disastrous, the Fire is the easiest to bear, for it leaves us the warm earth to tread upon, and the heart energies are aroused into life again; but the wintery floods send their sweeping desolations, chilling body and mind by their coldness, making the very air cold and dreary, and the very earth is left like the "Slough of Despond"—so desolate that the heart tries in vain to warm into life.

"The *rains* descended and the *floods* came!" how fearfully true have these words been to us this winter—and the fatal result, too: "And the *winds* blew and beat upon that house; *and it fell*, for it was built upon the *sand;*" and thus has it been with hundreds and thousands of "Happy Homes" that have been built upon the alluvial wash of our river banks and the made-lands of our valleys—making the prophecies bitterly true.

We have given some ten days to a visit to Sacramento and Marysville to witness the Realities of the flood, and to see the true condition, not only of each city, but of those who dwell in the "Garden Spots" around them, on the banks of their rivers, and the plains adjoining. Our mission has been a sad one, the saddest of our life, for never have we seen such ruin and so much desolation and suffering, although in another form we have witnessed it; for we saw the hungry, starved and dying poor of England, Ireland and Scotland in the dread famine of '46–47, while on a business visit there—but, although it *was* suffering, it was of a different nature; it was there surrounded with those who were not in affliction; here among our cultivators it is *universal;* all are suffering; and in our cities all are "under the waters—a universal suffering; a universal affliction.

The present universal calamity upon this State demands alike universal sympathy, kindness and forbearance, and it should appear in the noblest form, so as not to make the recipient feel the pang of dependence like a charity—when the relief should be tendered delicately, like Christian mercy, that does not let "the right hand know what the left hand doeth."

Sacramento may be said to be the most heavily afflicted of all the cities thus far. The loss of property cannot fall short of Two and a half millions in merchandise and buildings, and a half a million in agricultural and horticultural products; and were a carefel estimate made of all losses, it would go beyond that sum.

Many a "beautiful Home" has been swept away, and will leave a desolate spot where so recently that Home was fragrant with blossoms—but the blow fell, not only upon that which meets the eye, the blossoms of Hope and Joy and the heart are left desolate.

To those who have not seen Sacramento "under the water," it need only be said that the last flood was much higher than that of December 9th, and the water in the city two feet higher than ever before known; the entire city, save a portion of I street, all under water. Portions of it in the lower part covering buildings 14 and 15 feet deep, and sweeping them away a mass of ruins—all the principal business streets submerged 2 to 4 feet, destroying merchandise to a very large amount—so far different to all anticipations and to all fears was the rise, that merchandise piled up on the counters of the stores was lost and ruined, the water rising upon it. Water was in the St. George Hotel two and a half feet, putting out all the fires, so that the boarders were obliged to get their food elsewhere. So it was with many other Hotels, and most of the private families.

The continuance of the water over a great portion of the city for a month (from Dec. 9th), has caused great and real distress, and the now new flood of Jan. 9th and 10th seems to have put the *climax* of troubles upon the brave and sorrowing hearts, for many parts of the city had become passable, and many business places begun to look cheerful from the removal of the "flood-marks."

Sacramento! Brave Sacramento, yet unfortunate Sacramento! Continue yet to be Brave and and Enduring, and thy days of better things shall yet come.

While all these calamities have been transpiring there have been generous sympathies and noble deeds performed, which have gone like sunlight into many a darkened heart. Of these we have many pleasant records, which with incidents numerous, we shall note in due time. On Saturday last in the afternoon the water reached its highest point; it had come in at the back part until it flowed out over the Levee at the front of the city, and when it fell, on Sunday morning it was running into the city over the front levee near the Water Works, and also at the R street levee front.

It is to be regretted that some skillful artist had not photographed the city front at each of the principal streets; those pictures would in the future be valuable mementos of its sad history.

It would also be interesting to know the number af boats that were upon the waters of that city during its greatest peril; we think they would have counted *one thousand.*

In passing up I street to the Capitol, we counted 504 horses tied out on that street, and many buildings were also full, besides Sixth was full up above the State House; on the levee bank; we think, at least, there were 500 horses in that vicinity, and a large number also on the Front street levee, in all, 2000 horses.

The city, in spite of the calamity, appeared clear and bright; for like Venice, with her thousand gondoliers and streaming banners, so appeared this devoted city, and many joyous, merry, parties would try to conceal their sadness, for a while, so as to appear to those who were afflicted, with a pleasant look.

On Monday morning, the Great Gift of San Franciscans was landed upon the levee—food for the hungry, clothing for the cold and naked ones. Never have we seen a deed of noble, generous and prompt charity bring so ready a return, as load after load came from the Antelope and the Nevada; it seemed like the "Widow's Cruise," that it never would give out, and we heard the spontaneous outgushings from grateful hearts almost one universal shout, "God bless San Franciscans! Noble, generous souls! May they prosper!"

Would that every donor could have seen what we saw in the countenances of men, women and children. Oh, how God-like is true Charity! San Francisco has done a deed without a parallel in history, by its true munificence.

At the Pavilion, there were about 600 women and children, and as many more fed and cared for. The Howard Benevolent Society are doing a work that will be recorded in Heaven as among the great deeds of Earth. All the members are engaged in earnest, but we cannot refrain to make mention of the labors of those prominent members, N. A. H. Ball, whose soul seemed to beam on his face, as he sprung from place to place with giant strides on his Errands of Love and Mercy. What will that man do, when his present work shall have been done: he seemed made for such especial Missions of Mercy. J. A. Carroll, also, was going from place to place, forgetful of his own business, but caring for others. Dr. J. F. Morse, like a good Samaritan, was among the sick, his soul bent on Deeds of Mercy. But why speak of only a few, when, from what we saw, all good and true men were doing so much?

From this city, we visited Marysville; from Sacramento up to that city, and thence to Red Bluff, to Oroville, even to every upper portion, the same wide-spread ruin is apparent. Marysville has not, however, suffered so much as has Sacramento, and the citizens bravely bear it, and stand ready to go and do noble deeds to those who have suffered around them. The block where the Merchants' Hotel stood, of some six or eight buildings, is partially in ruins, and around Marysville, on the Yuba, great loss has accrued to the Cultivators of the soil; on them the heaviest blow falls.

G. G. Briggs' Orchards suffered greatly, the damage being to the extent, propably, of $30,000; but Mr. B. can bear this, and still, with his generous spirit, he is ready not only to feel for others' woes, but lend a helping hand. Mr. Covillaud's loss will be, probably, $5000; J. Westcott, $10,000; Col. Brophy & Brothers' loss is very heavy—nearly everything; Mr. Landis, Mr. Hedges, and all on the Yuba, suffered in Stock, buildings, and fences, very largely; Mr. Hostetter loses 160 cows of the best kind; but these are isolated cases: thousand and tens of thousands over our State are now in deep distress, and it is demanded of the people that at the earliest day possible, there shall be public meetings called in every city, to take into consideration the condition of our whole State; for the entire State is in distress, and all deserve a common sympathy.

We regret we cannot offer all the facts the present week; but our work is just begun; we extend, however, our sympathy to all.

Benefits of the Flood.

WE have repeatedly spoken of the *benefits* that would result to our State, from the universal flood of waters which has covered the earth to such an extent in all our Valleys, and the heavy rains that have so thoroughly drenched the soil on all our Hills and Mountains.

The first great good, is the thorough moisture infused into the soil to its greatest depths, reaching the springs and causing an action of the soil such as it has not had for years. It has also destroyed, as we have said, almost every species of Vermin, from the Gopher to the egg of the Grasshopper, and thus cut off those destroyers of the "Hopes of the Husbandman;" in addition to this, it is a well-established fact, that all such heavy rains act as fertilizers of the soil in various ways, often not understood and unappreciated. Farmers can, however, always note that after such a season of rains, a prosperous year is certain to the generality of crops.

Now, if Farmers would but use these benefits to the greatest advantage, let them *immediately* see that their low lands are *drained* as much as possible. Good deep drains through Orchards, Vineyards, Gardens, and Farms, will add greatly to the benefits now secured by these floods.

If Farmers will only examine the best works on "Drainage of Lands," they will see their great benefits: and now is the time to avail themselves of them.

We hope the present opportunity will not be lost; by a prompt action, in a little time, there are large portions of our land that would be saved for even this year's use, that otherwise would be lost for the year.

The Alpaca.

THE valuable Communication we published in our last week's issue, from Gov. Bigler, who has recently returned from Chile, has elicited considerable interest for these animals, and which we are pleased to know; for they will prove a very valuable acquisition to our State.

We went with Gov. Bigler to see the pair of Alpacas which he has so successfully introduced into California; they were in a stable on Second street, Sacramento, and by the skillful treatment of these animals, from the time they were received and during the voyage hither, they have become quite domesticated.

We spent some time in examining them; they are in form a handsome animal, standing nearly four feet high; their bodies about the same length, with slim and well-formed legs; and their necks of beautiful and graceful proportions, moving them like that of a Fawn; the head, when erect, is about 5½ feet high; the form of the head is fine; the eye very intelligent and full of that speaking-instinct that craves domestication: they seem to desire attention and kindness.

The Buck is almost black, with some white spots, one white leg, and neck, in part. The Dam is a brownish color, and partly white; the pair seem to be fond of each other, and always side by side.

It is to be regretted that by reason of a fall from the ship when they were landed, the Dam lost her kids, otherwise another success would have attended their introduction here.

Persons wishing any information respecting them, have only to address this Office, and their wishes will be attended to.

* * *

THE semi-annual apportionment of the State School Fund has beeen made to the School Districts where schools have been maintained in accordance with law, for three months in the year ending October 31st, 1861. The returns foot up 67,642 children between the ages of 4 and 18 years. The amount divided is $33,821, equal to 50 cents for each pupil. This gives San Francisco, with 13,316 children, $6,658; Alameda, 1825 children, $912 50; Contra Costa, 1318 children, $659; San Mateo, 709 children, $354 50; San Joaquin, 2729 children $1364 50; Mapa, 1104 children, $552; Solano, 1882 children, $941; Santa Cruz, 1312 children, $656; Sacramento 4374 children, $2187.

AT Washoe last week the snow was about two feet deep, with excellent sleighing. The Enterprise says: Any quantity of cutters and sleighs are out, and the jingle of bells in the past two days has grown to be a familiar sound.

Annual Meeting—State Agricultural Society.

BY a Call put forth by the Corresponding Secretary of the State Agricultural Society, the Annual Meeting of that Society is to be holden at at Sacramento, on the 29th of this month.

It is to be hoped that there will be a full attendance of the members from all parts of the State, a very important business will come up for action. The members from every county should visit Sacramento now, to see its condition and the recent loss of the Society's Library and Records, and many other questions promptly demand their attention, interest, and kind sympathy: for these reasons, members should make extra efforts to be present at this Annual Meeting.

As the Annual Election of Officers is one of vital moment to the interest and welfare of the Society, it is important that good, efficient, and popular men, be elected, so as to give to the Society its greatest and best influence.

We do hope the friends of this Society will guard it from merging all its capital and influence into a partisan Society, or from diverting the interest of the Industrial part of the Exhibition, and merging it into the Stock-ground and Race-course.

Loss of Stock by the Flood.

IT is impossible to ascertain the entire Loss by the Floods: yet we have no doubt that the Loss will reach the enormous number of *Forty Thousand head*, of all kinds, in this State alone. Oregon has also lost heavily; and from these facts, it must be self-evident, that Stock must increase in value; and the stormy season is not over yet, nor has the winter past.

We have no doubt that a great number will yet perish from cold and starvation. We are, indeed, surprised at the course of many Stock-men; they have large bands of Cattle now wandering about their Ranches browsing as best as they can—cold, hungry and sickly, and nothing to eat save leaves and waste, while, perhaps, the same owner may have *burned* ten, twenty, or forty tuns of good Wheat or Barley-straw, that would now save his Cattle.

Cattle, too, will die for want of shelter. In these cold and chilling rains, these poor dumb animals, as they wander about bent nearly double with wet and cold, look piteously to *humans* for relief; but they find only neglect in too many cases.

Should these rains continue through this month, *Ten Thousand* more of these poor animals will be added to lost Stock. Such a scene and such a result, we hope may never occur again.

Take Good Care of the Flooded Trees and Vines.

WE would have all Trees and Vines taken good care of always; but at the present time, and under the calamity which has befallen our whole State, we would call special attention to those Trees and Vines, to orchards and vineyards, that are or have been under water, as demanding more particular attention than usual.

The prolonged soaking of the roots by the floods will cause them to start early; and, if the water remain long on the roots, great injury will be the result.

In order to stay injury as far as possible, it is of importance that all Trees and Vines should be pruned very short, and the quicker this is done the better. The same rule will apply to all Roses, Vines and Creepers and herbaceous plants and garden shrubs. Such a shortening will not only materially strengthen them when they commence growing, but it will give them a beautiful form.

Many of the fine gardens in Sacramento which have been so ruinously flooded, and where the creeping Roses and Vines have been torn down and injured, these should be *pruned very close*, even to the cutting away of *one-half* or *two-thirds* of the Vines. By such a course it will invigorate the roots, which would otherwise have so much top to support, and have been so badly injured by water, that too large a top would be very apt to cause its death.

All climbing Roses and Vines, and all garden Roses and Shrubs should be pruned every season to insure a healthy plant.

Seed-store in Marysville.

ALTHOUGH the present flood must of necessity retard all planting upon our valley land, yet the high land and the hill-sides and mountain gardens are or soon will be in excellent order for extensive cultivation. Messrs. J. H. Wright & Co. have now in Marysville a large and valuable stock of *Field, Grass* and *Garden Seeds* of the very best and purest kind. Knowing the source from whence they came, and having personally seen and examined the seeds, we feel that it is a pleasure to recommend them to all who desire seeds of the best quality.

In addition to Seeds, Messrs. Wright & Co. have received direct from Holland a large and very fine collection of Bulbous and Tuberous Roots, comprising all the most desirable kinds. We also examined these Bulbs, which are in the best order for planting. The *Japan Lilies* are new and rare, and every one who has a "Home Garden" should secure a collection of these valuable bloomers. What can be more gratifying than the fragrance of the gorgeous Hyacinth in its most perfect blooming? The Tuberose, whose unequaled perfume may be perceived at a great distance, is also one of the most beautiful bloomers.

We hope the citizens of Marysville will show their full appreciation of these gems of Flora by liberal purchases in early season. By referring to the advertisements of Messrs. Wright & Co. in our columns, purchasers will see the excellent opportunity they have, this stock being the only large and perfect assortment in the upper country.

* * *

RAIN AGAIN.—After two or three days of partially fair weather, allowing the waters to recede to some extent, another rain storm set in on Wednesday, and continues steadily up to the time we go to press, Thursday evening. It seems to have got so used to raining that it can't stop. The disease has become chronic! This is a cold rain, however, likely snow in the mountains, and will not, we trust, cause much rise of water.

THE Editor of the American Flag, at Placerville, was presented on New Year's day, with a lot of fine ripe peaches, grown upon the ranch of Mr. Smith Mitchell, near Sonora.

THE GREAT FLOOD OF 1862.

A flood of a most unprecedented and devastating character has swept over the State within a week past. The floods near the close of 1861 were of such extent, that we did not think it possible for them to be equaled this season; but the year 1862 opens with storms and inundations that completely surpass those earlier in the season, and exceed any of which there is record since the settlement of the country. The overflow of the 9th of December was the result of circumstances which can hardly occur again in combination, except at long intervals. But this season, within a month from that time, the same causes have produced results far exceeding the first overflow. We referred in our last issue to the cold rain storm which prevailed here during the early part of the week, which was snow in the mountains, and to a succeeding warm rain. During this rain, of three or four days, a larger quantity of water fell than ever known here in the same space of time. On Thursday it poured in torrents, and even San Francisco was flooded, and much damage done by washing, submerging cellars, underming buildings, etc. But this was nothing compared to the ruin wrought upon the country in every direction. The large quantity of snow which had accumulated in the mountains was rapidly melted by the warm rains, and together with the immense amount of water falling, precipitated upon the doomed valleys. The American river, at Folsom, is said to have risen sixty feet above low water mark on Friday night! Every creek and rivulet became a rushing torrent, sweeping the hopes of men and everything destructible before it, in some cases even involving human life. Every portion of the State, so far as heard from, has suffered more or less, though the Sacramento valley probably the most severely. The rush of water reached the city of Sacramento on Friday, and the river rose rapidly. The citizens had prepared for it, supposing it could not exceed the hight of the previous flood, but in this they were mistaken, and on Saturday morning the water had attained a hight twenty inches above that of 9th December, completely submerging the whole city, except a portion of the levee, and admitting the passage of boats in every part. The water even ran over the levee *from* the city into the Sacramento river, which was then lower than the water in the city coming from the American. This unprecedented hight of water caused immense damage and suffering, and the boats coming to this city were crowded with fugitives seeking a place of safety. In the middle of Fourth street, opposite the St. George, the water, at 1 o'clock Saturday, was over four feet high, and the general average in the city was about five feet. The water put out all the fires and drifted away the wood, and many people were absolutely without food. The whole country, as far as the eye could reach, was one vast surging sea, covered with drifting debris and struggling animals, with here and there a more elevated island covered with stock, and along the river banks the tops of houses and trees only to be seen. No pen or tongue could adequately picture the scene. When it is recollected that, from the nature of the country, this desolation extended over an area of 300 miles long by 40 or 50 broad, some faint conception may be arrived at of the ruin which has swept our valley country.

The highest water in the Sacramento was about twenty-four feet above low-water mark, as shown by the city gauge—about twenty inches above that of 9th December.

The Howard Association re-opened the Pavilion as a place of refuge, and on Saturday had over six hundred people under its charge, mostly women and children. As the waters subside, and some are enabled to leave, their places are supplied by sufferers coming in from the country. The number of distressed poor seeking relief of the Association is still large, and there is an urgent need of funds.

The steamers Defiance and Gov. Dana went up the American river on Monday, the 13th, as far as Patterson's Hotel, with loads of freight and passengers, and to connect with the Railroad.

The water in Sacramento is slowly receding, leaving the whole city in a slough of mud, and most of the sidewalks and street-crossings, where they have not floated off, are in a dilapidated condition. Several dead bodies have been found, and hundreds of defunct animals are scattered about. Among the damage was the falling of a portion of Carpenter's building, and about one thousand feet of the brick wall around Agricultural Park was thrown down.

At Folsom, the immense rise in the American river, as noticed above, destroyed a great amount of property. The old mill, built seven years ago, by Stockton & Cooner, and the new and extensive mill built last summer, were both carried away, together with a large quantity of wheat, taking off in their course the fine wire suspension bridge of Kinsey & Thompson, which was sixty-five feet above low water. The Railroad bridge, fifteen feet higher, of a single span, still stands.

A correspondent of the Bulletin writing from Sacramento in a melancholy vein, suggests that it was the true policy of that city to have proposed to the Legislature to remove temporarily to more comfortable quarters, instead of fighting against it; and thinks that by doing so the Capital city would have made fast friends of the entire body of law-makers, whereas by remaining, under all the disadvantageous circumstances of flood and mud, nothing but a "big disgust" on their part can result.

On Friday last, says the Stockton Republican, Mr. Powell, whose entire ranch is nearly six feet under water, lost 150 head of cattle by drowning.

The floods have been fatal to the gophers and squirrels. Large numbers were drowned, and the survivors have been compelled to take to the trees and bushes, and they may be dispatched by hundreds.

In many places in the Southern mines the waters have swept everything before them. At Knight's Ferry the whole town is gone, with the exception of the Hotel and the storehouse of Hestress & Magendi. The towns of Jacksonville and Don Pedro's Bar are both gone. Athearn's spendid bridge over the Mokelumne, the highest structure of the kind in that part of the country, was carried off. Loring's bridge also was destroyed. Probably most of our mountain towns have suffered greatly, and of many the sites alone remain, as they were mostly built near the rivers and on the bars; and, as the rise of the streams was sudden and overwhelming, the loss of human life may prove to have been great.

The San Joaquin valley escaped the previous inundations, but it has suffered severely in this one. The city of Stockton was overflowed on Saturday, the water being higher than ever before known. Fremont Square was eighteen inches under water. Some buildings were not flooded, and no very great damage was done. The water did not reach the Insane Asylum. The farmers in the valley suffered greatly. It is doubtful whether there is a bridge left in the State, the consequence of which is that stage traveling is stopped and communication with the interior towns interrupted.

A terrible snow-slide occurred in Sierra county, at Excelsior Hill, near Monte Cristo, at 6 p. m. of the 8th inst., which carried off Johnson's store, Beaumont's house, a cabin and part of a residence. G. A. Johnson and B. Marshall were killed, and several persons more or less injured.

In the northern part of Sierra county a great amount of damage has been done to flumes, bridges, ditches, etc. The bridge across Rabbit creek, at La Porte, was carried away. Oroville, Butte county, was again cut off from the surrounding country by high water. The Feather river, at that point, was higher than during the flood a month ago.

Large portions of Napa and Sanoma counties were submerged, the creeks becoming large rivers, and the farmers suffering severely.

The rain damaged the roads leading out of San Francisco, as well as those in the counties across and around the bay, bridges being carried away, and the country inundated so that stages could not make trips in any direction for several days. The town of Alviso was under water, so that passengers by the San Jose steamer could not land. Many of the towns in Alameda county were flooded, Alvarado being reported six feet under water. In Contra Costa county, Alamo valley, the town of Pacheco, and other portions, were swept by the flood, and buildings, fences and other property swept away. Santa Clara and San Mateo counties suffered in the same way, lives being lost in some cases. And even from as far down as Los Angeles, the report is about the same—property swept off, and immense damage done. Our whole space would not suffice to record all the reports received. Some further accounts of the flood on the Sacramento, as witnessed by the Editor, will be found in another column.

BY OVERLAND TELEGRAPH.

From the East we have no news of importance, owing to the disarrangement of the Telegraph by the storm. A brief dispatch was published yesterday morning, dated Jan. 9th. A forward movement of the army is strongly urged at Washington. The railroads through Missouri have been repaired, and mails hither will be more regular than for some time back. Troops are concentrating in Kentucky 75,000 strong, for a march on Nashville, thence to proceed to New Orleans......Previous dispatches state that the resignation of Gen. Sigel created great excitement among the troops at St. Louis, and many of the German officers had resigned.......Gen. Shields had arrived at Washington.......Col. Dunning commanding a Federal regiment, met 2000 rebels in Blue Gap, Va., 70 miles east of Romney, and routed them. The enemy lost 15 killed; the Federals lost none......More fires had occurred in Charleston, Norfolk and Richmond.

The Charleston papers say the fire in that city on Dec. 11th, destroyed 576 buildings, and the loss is estimated at five to seven millions of dollars. The fire is supposed to have been set by negroes.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

FRESH GARDEN SEEDS.

☞ **The undersigned are the Sole Agents of** DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,
11tf Pacific Fruit Market, San Francisco.

Collegiate Institute, BENICIA.

FOR MALES ONLY.

THE NEXT SESSION OF THE INSTITUTE, THE FOURTEENTH,

Will Open on the 12th of January.

Pupils are requested to come on the 10th or 11th.

TERMS: Board and Tuition in the studies belonging to either the English or Classical Course,

per month	$31 00
Washing, " "	4 00

The rooms are ready furnished. No Entrance Fee is charged.

Persons wishing more particular information in regard to terms, range of studies taught, &c, will please request a Circular from the Principal,

THE WOLVES.

Ye who listen to stories, told
When hearths are cheery and nights are cold,

Of the lone wood-side, and the hungry pack
That howls on the fainting traveler's track—

Flame-red eye-balls that waylay,
By the wintry moon, the belated sleigh—

The lost child sought in the dismal wood,
The little shoes and the stains of blood

On the trampled snow—O ye that hear,
With thrills of pity or chills of fear,

Wishing some angel had been sent
To shield the hapless and innocent—

Know ye the fiend that is crueller far
Than the gaunt gray herds of the forest are?

Swiftly vanish the wild fleet tracks
Before the rifle and woodman's ax:

But hark to the coming of unseen feet,
Pattering by night through the city street!

Each wolf that dies in the woodland brown
Lives a specter and haunts the town.

By square and market they slink and prowl,
In lane and alley they leap and howl.

All night they snuff and snarl before
The poor patched window and broken door.

They paw the clapboards and claw the latch,
At every crevice they whine and scratch.

Their tongues are subtle and long and thin,
And they lap the living blood within.

Icy keen are the teeth that tear,
Red as ruin the eyes that glare.

Children crouched in corners cold
Shiver in tattered garments old,

And start from sleep with bitter pangs
At the touch of the phantoms' viewless fangs.

Weary the mother and worn with strife,
Still she watches and fights for life.

But her hand is feeble and weapon small:
One little needle against them all!

In evil hour the daughter fled
From her poor shelter and wretched bed.

Through the city's pitiless solitude
To the door of sin the wolves pursued.

Fierce the father and grim with want,
His heart is gnawed by the specters gaunt.

Frenzied, stealing forth by night,
With whetted knife, to the desperate fight,

He thought to strike the specters dead,
But he smites his brother man instead.

O you that listen to stories, told
When hearths are cheery and nights are cold,

Weep no more at the tales you hear;
The danger is close and the wolves are near.

Shudder not at the murderer's name;
Marvel not at the maiden's shame.

Pass not by with averted eye
The door where the stricken children cry.

But when the beat of the unseen feet
Sounds by night through the stormy street,

Follow thou where the specters glide;
Stand like Hope by the mother's side;

And be thyself the angel sent
To shield the hapless and innocent.

He gives but little who gives his tears,
He gives his best who aids and cheers.

He does well, in the forest wild,
Who slays the monster and saves the child;

But he does better, and merits more,
Who drives the wolf from the poor man's door.

[Atlantic Monthly.

A Yankee Man-Trap.

Ethan Balch was not swearing exactly; yet he was undeniably wishing uncharitable wishes, respecting the future of certain Englishmen, and using exclamatory expletives to do it with. It was August the 15th, 1813, and Mr. Balch was walking slowly homeward from the sea-shore of New London county, Connecticut; and as he went, he whittled. The precise expressions in which he indulged were these:

"Consarn them darned Britishers to darnation! Blame their everlastin' picters! I hope to gracious the plaguy old boat'll go slam daown with 'em, sarse and all!"

Then, after a pause, he added:

"Jest as ef I mightn't a knowed they'd a done it! Ef I'd only kept her hum till night, and crep raound, I could a gone strate into New London jest as *easy*. Near abaout two hundred dollars gone slap-dab for nothin'! O, good thunder!" cried the mourning young Yankee in the bitterness of his soul, as this crowning misery rose fresh in his mind.

It is no wonder that he was seriously displeased, for the British, then maintaining a strict blockade upon Commodore Decatur, who, with the frigates United States and Macedonian, and the brig-of-war Hornet, had run up the River Thames, had that day made prize of a certain small craft, in which, together with her cargo, was invested a full moiety of his private worldly estate.

Nevertheless, with continuous whittling, and many quaint execrations, home went Ethan, and told his sad tale to his parents, who sympathized with him and were grieved.

"Who was there in the boat, Ethan?" asked Mr. Balch, senior.

"That's the wust on't, father," said the junior gentleman. "I've got to go'n tell Marthy Robbins—and what on 'arth she'll say, I dont know. They was Peleg and Zack Robbins; and them darned everlastin' rotten pizen cusses has got 'em, and the boat besides, and sarse enough to keep the fleet a week."

"Wal, my son," said the old gentlemen, "I rather guess you'd better go right over'n tell her, and hev it done with. She'll take on some at fust, that's sartain; but the boys'll come back some time anuther, and she'n Misses Robbins kin come'n stay with us ef they're a mind to. I guess we could tend up to that 'ere little farm, a while."

For Mrs. Robbins, the widowed mother of "Marthy," and of Peleg and Zachariah, owned and occupied, with her children, a small farm near by, and carried on the same; and the capture of her two stout sons had, of course, left the farm quite bare of men. Ethan walked moodily over to Mrs. Robbins' house. He was warmly welcomed by the two women, but received their greeting with so much embarrassment, that they perceived that something was wrong.

"What on 'arth's the matter with ye, Ethan?" asked the old lady, cocking back her head so that she could peer at him through her spectacles, which usually abode some ways down on her nose; "your shorter'n pie-crust, seems to me."

"Perhaps, said Miss Robbins, with a small smirk, "he didn't want to come. 'Taint necessary to come here unless you enjoy it, Mister Balch."

"Well, well!" expostulated the disconsolate Yankee, "don't go plaguin' a man, when he's in trouble already. I *didn't* want to come, and it's the fust time; and you know it, Marthy. But 'twasn't cos I wasn't glad to see *you*. I s'pose I might jest as well out with it. Them ere darned British has ketched the boat, and Peleg and Zach along with it."

An outburst of lamentation from the women interrupted the further progress of the tale, which Ethan's awkward attempts at consolation did not avail to quench. They gradually recovered themselves, however, and proceeded to inquire how it happened.

"It was," Ethan said, "by means of a well-known row-galley belonging to Admiral Hardy's flag-ship, the Ramilles, seventy-four, which had already captured many small coasting crafts, and which had secured its booty, in the present instance, by 'snakin' out,' as he described it, with joint use of sails and oars, the fair breeze with which the Martha (as Ethan's boat was named) had set sail, having unexpectedly died away nearly to a calm."

Miss Martha Robbins having cried a good deal, did now, as womankind are often apt to do, experience a sudden and not very reasonable reaction into anger; and chose to insinuate, first, that her lover had very cunningly avoided any personal risk to himself, by sending her brothers off with the boat alone; secondly, that anybody who had not sufficient brains to keep him from such losses as that, was hardly likely to make a thrifty or a prosperous helpmate.

These aspersions Ethan vigorously repelled, asserting that "the boys" had chosen to go together, both desiring to visit New London; and that, as three were not necessary for managing the boat or for selling the cargo, he had given them their own way; and as to the latter part of the accusation, he inquired:

"I want to know ef you think a man ort to hev brains enough to know exactly when it's agoin' to fall calm on the Sound, ten hours a head?"

But, Miss Robbins being, as we have insinuated, a womanly woman, vouchsafed no answer to these considerations, which he urged by way of argument—argument being a thing totally unknown and unintelligible to the majority of the female sex—and of the male, too, for that matter. And she accordingly said over again what she had said before, rather more loudly and earnestly; and having thus refuted Ethan in the discussion, she informed him that unless he could get her brothers out of the captivity into which he had been the means of their falling, he need not look upon her face again.

Ethan remonstrated, and even Mrs. Robbins ventured a few mild expostulations, but all in vain; the Yankee damsel's blood was up, and the discomfitted lover, not considering that it was highly complimentary to him that his lady love should take it for granted that he was simply able to rescue the prisoners from the whole British fleet, pursued his homeward way in much dejection of mind.

"I wish to gracious they'd been fifty men in her!" he exclaimed. "'Twould a been frustrate fun to jump up and gin em' a volley!"

Then his keen Yankee intellect, pursuing the train of thought thus started, a scheme suggested itself to him which seemed to promise him both a fair revenge and the means of liberating the two brethren of his obdurate mistress. Hastening homeward, he consulted with his father, and, after some difficulty, succeeded in gaining his cooperation. Early next morning the two men, harnessing up the old farm-horse, drove speedily over to New London, and procuring introductions from one or two gentlemen of standing in that place, who bore witness to the trustworthiness and abilities of the bearers, they proceeded up the river to Norwich, near which place the three American vessels were moored.

With the customary formalities, they were admitted on board the Macedonian, then Commodore Decatur's flag-ship: and, having introduced themselves and presented their testimonials, they proceeded to request his assistance in carrying out the scheme which they unfolded to him. After careful investigation and inquiry the mode, time, and manner of proceeding were agreed upon, and Decatur agreed that a sufficient number of marines should be at the appointed place upon the afternoon of the succeeding day; and, having partaken of the refreshments which the hospitable sailor set before them, the well-satisfied Yankee farmers set out on their return.

We pass over to the next day, at a little past noon. At that time there crept out of Mystic river, taking the inside passage between Ram Island and the main land, a sail-boat, heavily laden, and managed by two men. With a fine breeze from the West of North, they steered along, close hauled and hugging the shore, until they had passed Long Point, perhaps a third of the distance between the mouth of the Mystic and New London light. They could now see distinctly the lofty hulls and towering masts and rigging of Sir Thomas Hardy's fleet, riding at single anchor inside of Fisher's Island; the two seventy-fours booming up in the warm air, and attended, as it were, by the smaller Orpheus and Eolus frigates, and by two or three gun-brigs and tenders. After passing Long Point, the sail-boat stood rather further out at sea.

"Don't bear away too fur, father," said Ethan—for he and Mr. Balch, senior, constituted the boat's crew—"they'll smell a rat."

"No they won't, my son," said the old gentleman, luffing a little, however. "They don't give us no credit fur knowin' how to handle a boat—I reckon they'll hev to allow we kin manage a frigate, though! There they be, Ethan," said the old man, his eyes brightening with excitement. "Set still—set still. They've got good glasses—they'll see us. Make b'leve you don't see nothin' on em."

And sure enough, as he spoke, there shot out from behind the Ramilies the low, long, black row-galley, which had been the means of so many petty depredations along the coast. Hoisting a lug-sail and bracing sharp up, she steered, with the double impetus of sail and oar, straight across in a direction to cut off the deeply-laden and slow moving boat.

"Aint it almost time to go about, father?" asked Ethan, after ten minutes of rather uneasy silence.

"Don't git worried, my son," said the old gentleman, drily. "Your father's sailed a great many boats. We was to run ashore with them two high trees in range, wasn't we?"

"Yes—there's a peeled pole on the beach, jest at the spot."

"Wal, I reckon we kin see them fellows aboard the galley now," said the elder Balch, with a grin. "You kin be jest frightened as you please."

And he pretended to espy the unfriendly pursuers for the first time; and with an elaborate display of terrified haste and awkwardness, the boat was put about, and steered straight for the beach, now nearly half a mile distant. The English galley, hereupon slightly varying her course, came in pursuit. Ethan and his father, as the foe approached, by way of maintaining the deception, crouched out of sight, occasionally popping up, as if to watch the enemy, and then quickly hiding again.

"*Peek-a boo!*" said Ethan, looking up a moment. "We shall be hard aground in three minutes, father. They're coming up, hand over hand. There's the pole on the beach."

"Come well aft, Ethan," said his father, "lets run her well on."

"Hello, there, you Yankee lubbers!" hailed the English lieutenant, now within three rods, "if you beach the boat we'll shoot you!"

But as he spoke the boat grounded, and the two men quickly disappeared over the steep sand-hills bordering the shore. The English galley grounded fast on the sand in full pursuit. As she stopped, fifty American marines rose from behind the crest of the sand hills, poured in a fatal volley, and rushing forward, captured the remaining crew. One third of their number were dead or desperately wounded, the lieutenant and two or three others being all that were unhurt of thirty men.

"You've paid rather mor'n 'ts wuth," said Ethan, pointing to the load of cobble stones. "I reckon we're even with ye now for hookin' that boat-load of garding-sarse of mine, day before yesterday, and ketchin' them two fellers."

In the exchange of prisoners, shortly after negotiated, the liberation of the Messrs. Robbins was secured, and this fulfillment, by Ethan's means, of the hard commands of his lady-love, restored, and even enhanced, the amicableness of the relations heretofore existing between them.—[New Haven Palladium.

THE CRAMMING SYSTEM.

Your defence, my Lord Pam, of the system of Cram,
Is, of all we have met with, the best;
Yet *to cram*, after all, if things rightly we call,
Is, to bolt what we cannot digest.

Now, although any meat, we thus rapidly eat
May be better than simple starvation,
You'll allow that our food does us ten times more good
When subjected to due mastication.

A resemblance we find betwixt body and mind,
In this, as in some other matters;
And a wise man just looks to what's read in our books,
As he does to what's put on our platters.

Let us fancy the case, that a man for a place
Was wanted by you or Lord Russell—
Not an everyday clerk, but a servant whose work
Stood in need both of marrow and muscle;

Would it be a good plan, in selecting your man,
To have dishes of beef, veal and mutton,
And to offer the prize, not to strength or to size,
But to him who was most of a glutton?

I suppose your tariff, besides mutton and beef,
Would both poultry and pork introduce:
Ham and turkey you'd count at a given amount,
And have so many marks for a goose!

But a whole *table d'hote* shoveled over the throat,
Though the quantity reached a high figure,
Might yet be put in to a very bad skin,
And impart neither valor nor vigor.

So a man or a boy may a twelvemonth employ
In reading, and writing, and learning
A lot of fine things about Egypt's old kings,
That would show neither wit nor discerning.

Where the Memory's strong other parts may be wrong;
And if chiefly that talent you nourish,
Can you hope that the Soul will assert her control,
Or that Reason and Judgment will flourish?

A child overfed with the wholesomest bread,
Will have met not a boon, but a curse;
And still less will it thrive, or at manhood arrive,
If it's once overlaid by its nurse.

So a man's mother-wit will not profit a bit,
If his teaching is huddled and hurried;
It will prostrate be laid, like the famed Roman Maid,
Beneath her own ornaments buried.

Besides, you must own, 'tis not reading alone
That will fit us for life and its labors:
We must have at command eye and ear, foot and hand,
For serving the Queen or our neighbors.

Then, statesmen, look to it, and don't overdo it,
Nor promote mere mechanical merit:
Try to find out the test which will get for us best
Sense, diligence, talent and spirit.

[Blackwood's Magazine.

Girls.

"MAY glides onward into June." This is the beautiful figure by which Longfellow describes the transition from girlhood to womanhood. But any one who has stood—

> Where the brook and river meet—
> Womanhood and childhood fleet,

can tell him that the position is far pleasanter in poetry than in reality. She can say with emphasis, "When I was a child, I spake as a child, and acted as a child; but now, before I have become a woman, I must put away my childish things, and become as much of a young lady in manner as I am in size." A second time she must learn to walk, and has as little confidence in her first efforts as a child has in its first steps, and is doomed to as many failures. Heretofore she has felt and acted upon the feeling that she was a little girl and could depend upon others; now she is told that she is large enough to act for herself.

Her size is a favorite subject of comment among her acquaintances. "How you grow!" "You'll soon be taller than your mother!" "How you do run up! you need topping!" are the expressions with which she is constantly greeted, until she feels that she must look very like a crane or giraffe. When she was a little girl, any awkwardness was excused; but now, being supposed to have passed that critical period when she does not know what to do with her hands, she must put on ease and grace with her long dresses, or have their absence apologized for by the explanation that she is at an awkward age—is an overgrown girl. She must endure the humiliation of hearing her older sisters and young lady acquaintances complacently remark that they wear smaller gloves and gaiters than she, forgetful of the time when they suffered a like mortification.

A few months since she could sit in a room all the evening without speaking, and it was not noticed; but now she must be able to discuss, with people three times her age, the prominent topics of the day. And she cannot join the conversation without running the risk of a private lecture on the subject of deference to the presence and opinion of elders. So, while endeavoring to avoid the Scylla of silence, she falls into the Charydbis of talking too much.

Everything considered, this is one of the most trying periods in a girl's life. In reference to her toilet, she is constantly halting between two opinions; she is tortured with the fear of getting on something too old or something too young. I would commend her deplorable situation to manufacturers and ladies of taste, with the suggestion that they provide a remedy. She cannot dispose of that most troublesome piece of property, her hair, by having it cut at her ears, because that would be too childish! it is at such a length that she cannot put it up, or even if she can, she has'nt the courage to do it, for fear of being suspected of apeing the lady.

She is considered a child or a young lady, according to the convenience of either. Nobody thinks of her when making up a party for a sleigh ride; she is too old to go to children's parties and too young to attend those of grown-up people. When she makes her appearance at one of these latter, she is sure to be monopolized by some old bachelor or widower, who was invited for what he has been in the days long ago. Now it is very trying to immature patience to be sacrificed to some man old enough to be her grandfather, because all the young ladies in the room persist in being oblivious to his presence, though he has been trying to bow to them the whole evening. Nor is this the worst of it: he has been studying woman-nature so long that he can look into her heart, can flutter her and make her appear ridiculous, and then laugh over it at his leisure.

So far as her lessons are concerned, she is treated by her teacher as though her mind was fully matured. Prodigies are expected of her in the way of composition, although the most unpleasant thing about it is, that she can no longer write on "Spring," or "Flowers," "Birds," or any of the brute creation. I have no doubt that the honorable Committee—long may they live—are reading this composition, with all their critical powers as much on the *qui vive* as though the writer was a mature young lady instead of one of the "girls."

—LIZZIE.

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 400, on Sansome street. 1

FRUITS, GRAIN, AND PRODUCE.

CALIFORNIA WINE!

CARD.

LAKE VINEYARD, Los Angeles Co., Cal.,
March 21, 1861.

BEING OFTEN APPLIED TO BY ACQUAINTANCES throughout the State for my WINE in small quantities, I hereby notify them, as well as the public generally, that I have appointed

Messrs. HOBBS, GILMORE & Co.,

SAN FRANCISCO,

My Sole and Exclusive Agents

With the Improved Instruments of For the State of California, for the sale of all the different classes of WINE manufactured by me at LAKE VINEYARD (and that they cannot be obtained of any other parties), giving the assurance that they will obtain from them the same article in every respect as I have in my cellars. B. D. WILSON.

NOTICE.

IN CONFORMITY WITH THE ABOVE CARD, the public are informed that we, the subscribers, have for sale at our

Wine Cellars,

Southeast Corner of Market and Beale streets

Nearly opposite the Railroad Depot,

PURE WINES!

CONSISTING OF

Port, Angelica, and White Wines

ALL WARRANTED TO BE THE PURE JUICE OF THE GRAPE,

Which we will sell in quantities to suit purchasers, put up in shipping packages or otherwise.

HOBBS, GILMORE & CO.,
17 Market street, opposite the Railroad Depot

PACIFIC FRUIT MARKET.

OUR ARRANGEMENTS ARE NOW COMPLETED to supply our customers with the choicest Fruit of California production. We receive consignments daily from

OAK KNOLL, NAPA.
SUSCOL, NAPA.
FERNSIDE, ALAMEDA.
WASHINGTON NURSERY, SACRAMENTO.
SANTA CLARA NURSERY, SANTA CLARA.

And many other Orchards, embracing Fruits of every variety and flavor.

OUR JOBBING DEPARTMENT

Will meet the wants of families.

OUR WHOLESALE DEPARTMENT

The requisitions of buyers throught the State.

The superior manner in which most of our Fruit is packed renders it very desirable for shipping purposes.

WINE!

OUR CELLAR IS ADMITTED to be the best in our State for the Storage of Wine, and is capable of holding 200,000 gallons.

We are now ready to

RECEIVE WINE ON STORAGE,

OR FOR SALE,

And offer facilities to all Wine-Makers with whom we may make business arrangements.

24 GRAVES, WILLIAMS & BUCKLEY.

Literary Shrubbery.

AN ARMY OF ANTS.

It is their habit to march through the forests in a long and regular line, about two inches broad and often ten miles in length. All along this line are larger ants, who act as officers, stand outside the ranks, and keep this singular army in order. If they come to a place where there are no trees to shelter them from the sun, whose heat they cannot bear, they immediately build underground tunnels, through which the whole army passes in columns to the forest beyond. These tunnels are four or five feet under ground, and are used only in the heat of the day or during a storm.

When they get hungry the long file spreads itself through the forest in a front line, and devours all it comes to with a fury which is quite irresistible. The elephant and gorilla fly before this attack. The black men run for their lives. Every animal that lives in their line of march is chased. They seem to understand and act upon the tactics of Napoleon, and concentrate with great speed their heaviest forces upon the point of attack. In an incredibly short space of time, the mouse, or dog, or leopard, or deer, is overwhelmed, killed, eaten, and the bare skeleton only remains.

They seem to travel night and day. Many a time have I been awakened out of a sleep, and obliged to rush from the hut and into the water to save my life, and after all suffered intolerable agony from the bites of the advance guard, who had got into my clothes. When they enter a house they clear it of all living things. Roaches are devoured in an instant. Rats and mice spring around the room in vain. An overwhelming force of ants kills a strong rat in less than a minute, in spite of the most frantic struggles, and in less than another minute its bones are stripped. Every living thing is devoured. They will not touch vegetable matter. Thus they are in reality very useful, as well as dangerous, to the negroes, who have their huts cleaned of all the abounding vermin, such as immense roaches and centipedes, at least several times a year.

When on their march, the insect world flies before them, and I have often had the approach of a bashikouay army heralded to me by this means. Wherever they go they make a clean sweep, even ascending to the tops of the highest trees in pursuit of their prey. Their manner of attack is an impetuous *leap*. Instantly the strong pincers are fastened, and they only let go when the piece gives way. At such times this little animal seems animated by a kind of fury, which causes it to disregard entirely its own safety, and to seek only the conquest of its prey. The bite is very painful.

The negroes relate that criminals were in former times exposed in the path of the bashikouay ants, as the most cruel manner of putting them to death.

Two very remarkable practices of theirs remain to be related. When on their line of march they must cross a stream, they throw themselves across and form a tunnel, a living tunnel, connecting two trees, or high bushes, on opposite sides of the stream. This is done with great speed, and is effected by a great number of ants, each of which clings with its fore claws to its next neighbor's body or hind claws. Thus they form a high, safe tubular bridge, through which the whole vast regiment marches in regular order. If disturbed, or if the arch is broken by the violence of some animal, they instantly attack the offender with the greatest animosity.

The bashikouay have the sense of smell finely developed, as indeed have all the ants I know of; and they are guided very much by it. They are larger than any ant we have in America, being at least half an inch long, and are armed with very powerful fore legs and sharp jaws, with which they bite. They are red or dark brown in color. Their numbers are so great that one does not like to enter into calculations; but I have seen one continual line passing at good speed a particular place for twelve hours. The reader may imagine for himself how many millions on millions there were in this immense army.—[Du Chaillu's African travels.

"JUSTICE."

An English paper states that a schoolmaster at Mountjoy prison gives a lively and characteristic account of his efforts to give a healthful tone and moral strength to a prisoner's mind when he arrives full of anger, and brings continually his trifling complaints of some petty injustice or other:

"And do you want justice?" asks the pedagogue.

"Of course I do," replies the prisoner.

"Well, my boy, you are looking for a thing you can't get."

He replies that he must get it.

The rejoinder is that he might as well be crying for the moon; that there is no justice, strictly so called, to be had in this world; that to get full justice he must wait for the next world, and then possibly it is not full justice, but mercy, he will then be wishing for.

The man looks thoughtful and somewhat calmed, and the schoolmaster goes on: "Do you think I get full justice? I never expected it in this world. The most fortunate receive but a small measure of it; the wise are contented to do without what they can't get; the foolish are discontented and cry for it like children for the moon, until they learn better sense." Still further: "Now, did you ever do anything deserving of punishment, and escape?"

"Often."

"Well, have you ever been punished without deserving it?"

"Very seldom."

"All right. Now put that and that together, and be satisfied."

The man smiles, and the schoolmaster dismisses him with the advice to "put this little bit of injustice in his pocket, and think no more of it."

The race between Howard's bay mare Catalina and Humphrey's black horse St. Louis came off at Snelling's the other day. Little or no betting on the track. One fellow with a cat-hammed mustang, with a blazed face and tail full of burs, tried to spur his animal into a bucking fit in order to show off some Comanche horsemanship. He "done" the yelling admirably, but his horrible brute was too weak to "rar up," so he subsided. He was one of the kind our sporting reporter has been charging about the turf in Tulare county, offering to bet "a *thousand* dollars in good American cattle, flip up and flip up, that my hoss can beat anything that ever was foal-ded in this county, from the fust jump to a *thousand* yards—whoop, whoop, whoopee-hoo! git!" A very exciting race occurred between a buck rabbit and two or three flop-eared hounds of the "sick-'em-Tige" variety, in which the rabbit took the lead and kept it.—[Mariposa Gazette.

A Treasure of a Wife.—A young English traveler contracted in Valencia a love affair with a pretty gypsy girl. The mother wished that he should marry her at once; but the Englishman declared that he was not rich enough to keep a wife. "What!" said the gypsy, laughing, "not rich enough, in the land of guineas! With so renowned a thief as my daughter, you will be a rich man in a year!"

What color does flogging give to an unruly boy? It makes him yell oh!

East India Tea Store.

ESTABLISHED IN 1857.

631 Washington street,

Nearly opposite Maguire's Opera House.

GEO. M. SMITH & CO.

DEALERS EXCLUSIVELY IN

Choice Green and Black TEAS

Of Chinese and Japanese production;

COFFEE, SUGAR, AND CHOCOLATE.

Our TEAS are acknowledged to be the Best ever offered in this Market.

☞ Observe, this is the ONLY BONA FIDE TEA STORE in this State. 1

MANUFACTURES BEST OF FAMILY SOAPS.

Near corner of Mason and Pacific streets.

PATENT HYDRAULIC HOSE MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N Swezy, President, and Chas. M. Gorham, Secretary. The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
3-3m 119 First street.

1000 Acres of Land, 120 COWS, AND A Good Milk and Dairy Business,

For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861. 8

MASONIC REGALIA.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new Inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

9 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT COMBINED WASHING AND WRINGING MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT Washing Machine AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

TUCKER!

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.]
Jan. 16.

Since our last report the transactions in Grain have been meager, notwithstanding our receipts have been heavy for this season, attributable to the necessity of finding a safe place to store. In several localities the flood has damaged, and threatens to damage more grain. In view of this, large quantities of Wheat, Barley and Oats have come here and gone in store. The quantity of Barley and Oats damaged or destroyed has been very great. These two grains, in consequence of the low price they have borne, many have held and stored in insecure places. It is the opinion of many that Barley and Oats will rapidly improve in price. Hay has also materially advanced. This, in connection with the loss by the floods, argues favorably for an advance in feed grains. As regards Wheat, our confidence is somewhat shaken—shippers having wholly withdrawn from the market, leaving us with a large stock for the season on hand; and only a milling demand exists. As we, in our last report, gave our views, and having since been more fully convinced of the large quantity of wheat in our State, we still argue there is but a slim prospect of an advance. Present prices are remunerative to the producer; and years past have shown conclusively the risk that is incurred by holding or demanding more than consumers can pay. Our market is bare of Rye, Buckwheat and Corn, and the demand good. A speculative feeling has been manifest in Beans, parties thinking an advance almost certain, predicated on the short crop and increased demand. Our receipts of grain for the past week have been as follows: Wheat, 12,452 sks; Flour, 3430 qr sks; Barley, 4346 sks; Oats, 1214 sks; Salt, 360 sks; Potatoes, 1177 sks; Hay, 78 tuns; Beans, 50 sks; Bran, 650 sks.

The loss of animals by the present flood will be immense. We learn from persons from various portions of the interior that the wailings of the sorrowing animals which still maintain a precarious footing upon the knolls amid the great waste of waters that now overflow the valleys, are heart-rending. Their prospective fate of starvation or death by drowning, within a short time, seems to be as perceptible to these dumb brutes as it is to the reasoning beings who are unable to afford any relief to these useful dependents of man.

On Saturday, Governor Stanford sent to the Senate a message announcing the appointment of W. H. Weeks as his Secretary of State, and Wm. E. Brown as Private Secretary to the Governor.

Youth's Budget.

In consequence of the interest excited by the Enigma in our last number, we propose to say a few words as to the usefulness of such puzzles, and the readiest mode of explication. A slight examination of the character of those we have given will convince any one that they are provocative of thought and investigation in many useful branches of knowledge. They serve to revive in the schoolboy's memory many of his former acquisitions, which may have been almost or quite forgotten. His desire to unravel the mystery leads him, in fact, to overhaul his entire stock of information; while the difficulties attending its solution call into exercise all the faculties of his mind, tending to increase their vigor and activity, and the power of concentration, combination and analysis. In addition to this, these Enigmas are harmless and fertile sources of amusement in the family circle.

The first requisite in unfolding the puzzle is to place in a line, upon slate or paper, the numbers, from one to the end. Then run over the various items, until you come to one that seems more easily guessed than the rest, and place the letters of the name—town, animal or thing you think it is—under their appropriate figures. Then proceed with another, making use of the letters already ascertained. For instance (to take last week's Enigma), there are two metals with four letters, *iron* and *gold*; spell them both out, one beneath the other (under the proper figures). Thus:

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25
o l g d
r o i n

Then choose for your next example an item that has one or more of these same numbers. By this process you will be continually guided as you go on by the letters already ascertained, until a large portion of the figures have their appropriate letters under them, when you will be able, perhaps, to make short work of it, and guess the whole. In order that our young readers—and older ones too, if they like—may have further opportunity to exercise their ingenuity, we refrain from giving the solution this week.

ENIGMA NO. 2.

I am composed of twenty-five letters:

My 19th, 14th, 3d and 16th, is a simple fellow.

My 7th, 17th, 6th, 14th and 5th, the name of an ancient instrument of music.

My 17th, 3d, 4th and 11th, is a wild animal.

My 16th, 9th, 21st, 3d, 4th and 8th, is a part of a boat.

My 12th, 17th, 3d, 14th and 22d, a mammal.

My 6th, 23d, 13th and 25th, a locality not in the Atlas.

My 1st, 3d and 8th, an instrument of punishment.

My 21st, 10th, 13th, 23d and 20th, useless on a farm.

My 9th, 18th, 25th and 13th, much used by carpenters.

My 21st, 10th, 3d, 14th, 8th and 17th, the bane of many, but the desire of all.

My 14th, 3d, 4th, 1st and 9th, a species of tree.

My 15th, 18th, 3d and 5th, a domestic animal.

My 20th, 9th, 8d and 12th, an English grove.

My 4th, 24th, 7th and 16th, what a laborer loves.

My 17th, 22d, 3d and 23d, useful to everybody.

My 15th, 5th, 24th, 7th and 2d, part of an animal.

My 1st, 4th, 6th, 12th, 22d and 14th, an article used by ladies.

My 23d, 18th, 5th and 8th, is he who cannot guess this riddle.

My whole, a monarch of modern times.

A GREAT PERFORMANCE.

We received, last week, from a valued friend, the following extract from a newspaper published at Newport, Rhode Island, in 1789, which we have before us. If our correspondent has any more of the same sort left, we shall be glad to hear from him:

> By permission of the Town Council. William Powers, just arrived from London, will perform a Variety of very extraordinary feats of Activity this evening, at the Court-House, for the last time in this Town. The Performance to begin precisely at Seven o'clock.
>
> Tickets may be had at Mr. Townsend's Lodging-House, and at the Place of Performance. Price for Ladies and Gentlemen, 1s 6d. Children, 9d. each. One Third Part of all Monies received, to be delivered to the Town Council, for the Benefit of the Poor and Distressed.
>
> 1st. He will stand on a Stage, stick two Pins in a Board, in Front of his Feet, throw his Head backwards between his Legs, and take up the two Pins, one with each Eye-Lid.
>
> 2d. He will lay down a small Snuff-Box in Front of his Feet, and will throw his Head backwards between his Legs, and put his Nose, two Great Toes, and Thumbs, all in the Snuff-Box together.
>
> 3d. He will stand on his Head on a Chair, with his Heels up, on the small Knob, and dance a Hornpipe.
>
> 4th. He will lay a Copper on his Foot, throw his Legs backward and forward over his Head several times, and never drop the Copper.
>
> 5th. He will lay his left Foot on his right Shoulder, and let a strong Man take him by the left Hand, and another Man take him by the right Leg, and lift him up from the Stage, when he will turn his Body round backward and forward, without his Hand or Leg turning in the Men's Hands.
>
> 6th. Dance a Hornpipe with his Feet on his Head.
>
> He, besides these, performs a Variety of Feats, too tedious to mention.
>
> If the Performance is not done agreeably to the above, the Money will be returned.—*Porter's Spirit*

MISS MARTINEAU ON EARLY RISING.

"I speak from experience here," says Miss Martineau. "For thirty years my business has lain in my study. The practice of early rising was, I am sure, the grand preservative of health during many years of hard work—the hours gained being given, not to book or pen, but to activity. I rose at six o'clock, summer and winter, and (after cold bathing) went out to walk in all weather. In the coldest season, on the rainiest morning, I never returned without being glad that I went. I need not detail the pleasures of the summer mornings. In winter there was either a fragment of gibbous moon, hanging over the mountain, or some star quivering in the river, or icicles beginning to shine in the dawn, or, at worst some break in the cloud, some moss on the wall, some gleam on the water, which I carried home in the shape of refreshment. I breakfasted at half-past seven, and had settled household business and was at my work by half-past eight, fortified for seven hours work without injury or fatigue."

An Irishman went to live in Scotland for a short time, but didn't like the country. "I was sick all the time I was there," said he, "and if I had lived there till this time, I'd been dead a year ago."

Cruel Sport.

On the downward trip of the steamer Young America, at one of the stopping places to "wood up," some five or six fine large hares that had escaped from the surrounding floods, and found refuge on a small Indian mound (then nearly covered), had sheltered themselves among the wood-piles on the mound. The approach of the steamer and its noise started the hares from their covert, and exposed them to the gaze of the passengers, who quickly raised a shout and made after them. It seemed to us an act of great cruelty to these harmless creatures, after having escaped the ruthless flood, by which all others of their species for miles round had perished, that they could not be permitted to live. But remonstrance was vain. Thoughtless and heartless men must have "sport," and although some ten men had to wade in water two or three feet deep to reach the mound, they could not forego the pleasure of the chase, and for half an hour it was vigorously carried on, upon a space of some acre and a half of land round two large wood-piles. Two of the hares made good their escape to a distant green spot, just out of water. Although they swam and jumped for dear life, three were soon captured, much to our regret, for it seemed cruel. Though sport to the men, it was death to the poor hares!

* * *

Heal the Sick!—In these times of floods, there is reason to fear that much sickness will arise therefrom; and that, by reason of exposure and of standing in water, rheumatism, and various other diseases, must result: it is, therefore, important, that those thus afflicted, should know where they can find relief, sure and certain, in the shortest space of time. To all thus afflicted, we can cordially recommend the Electropatic Cure of Dr. Josselyn, on Washington street, as one to which they should go; for the success which has attended his practice, has been of the most gratifying kind. We are permitted also to say, that the most liberal terms will be made, and all due consideration given to those who may have been heavy sufferers in the calamity which has fallen upon so many thousands. It is important that, in cases of sickness arising from exposure in these floods, early attention be given to the patient, so as to prevent long suffering. The cure of Dr. Josselyn is speedy and sure, and as such, we take pleasure in recommending sufferers to him.

On Saturday morning, between 2 and 3 o'clock, a fire broke out in the building known as "Sarsfield Hall," on the corner of Montgomery and Pacific streets, consuming that and the adjoining tenements. A furious storm of wind and rain was prevailing at the time, and the firemen had difficulty in getting water. The boarding house was filled with occupants, men, women and children, many of whom perished or were more or less injured by jumping from the balcony and windows. The charred bodies of four men, two women and two children were taken from amid the ruins. Others are still missing. The loss of property did not exceed $6000, but such destruction of life is fearful to contemplate.

Poverty Ridge, a portion of which lies in the southeast corner of the city, was on Saturday, the refuge of many people. Numerous families sought its protection from the overflow. All around was an ocean. Down to the upper and lower Stockton roads was one sheet of water, the race courses were covered, and the sea stretched toward the foot-hills almost to Patterson's, while the flood rushed down upon Camp Union and took it by storm, forcing the soldiers to seek more elevated quarters. The rich farming district of Brighton has suffered extremely—the inhabitants, in many instances, losing everything, and finding some difficulty in saving their lives.

The schooner Roscoe reports that the paper mill at Santa Cruz had been destroyed by the flood, and the boiler carried off to sea. The bay is literally covered with floating timber. The creek at Soquel has now a depth of twelve feet of water.

Editor Farmer: I notice in your paper the kind offer to publish the amount of Grape vines and the kind that farmers have for sale. I have 10,000 of the best quality of one year old Native Vines for sale, and 20,000 Native Cuttings, all of which I offer as cheap as any in the valley. Yours, S. B. Bright, Sonoma.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Planting and Cultivation of Bulbous Roots.

GROWING IN WATER.

THOSE who have had no experience in the cultivation of this fine class of plants, can easily become familiar with their culture by observing the following rules:

Hyacinths, Jonquils, and Narcissus sorts can be grown in glasses in the house easily. The best way is to fill the glass nearly full of water; then place over the water in the mouth of the glass cotton-wool that will just touch the water and convey the moisture to the bulb that will lay imbedded in the wool on the mouth of the glass. When first planted the glasses should be placed in a closet or a dark room, until the bulb starts in growth. When fully commenced, so as to throw out strong roots, the cotton-wool can be removed from the bottom of the bulb, so as to permit the roots to go to the water. The wool being around the sides of the bulb to absorb useless moisture and prevent the bulb from decay. Remove from the bulb decayed matter and have the wool at the sides of the bulb conveniently dry. The water in the glasses should be changed when it has lost its purity, or become slimy.

Remove all offsets (small bulbs) and leaves that are upon the sides of the bulb, and let all the power of the bulb be given to the main bulb. Where two or three spikes of flowers appear, see that the weakly ones be removed (cut out), so as to give strength and beauty to the principal ones. Even temperature is advantageous to successful growth, and pure air as important as to the human lungs, in order to perfect the beauty and fragrance of the blossoms. They must, if possible, neither be deprived of the light of the sun, nor exposed to its too fierce powers. When very large spikes of flowers are sent up, they should be supported in some way, else they will tip out of the glass and be destroyed. When the blooming is over, they should be allowed to dry down gradually; the force and juice of the leaves will then return to the bulb, to strengthen it for another year. When the leaves are all yellow and wilted, these bulbs should be laid in *dry sand*, and the next season *planted in the earth*, as they will never do well planted a second time in succession in water; the earth will recover them.

BULBS IN EARTH, IN POTS.

Hyacinths, Narcissus, Tulips, and all other bulbs can be grown with success in pots and boxes of earth, by following these rules:

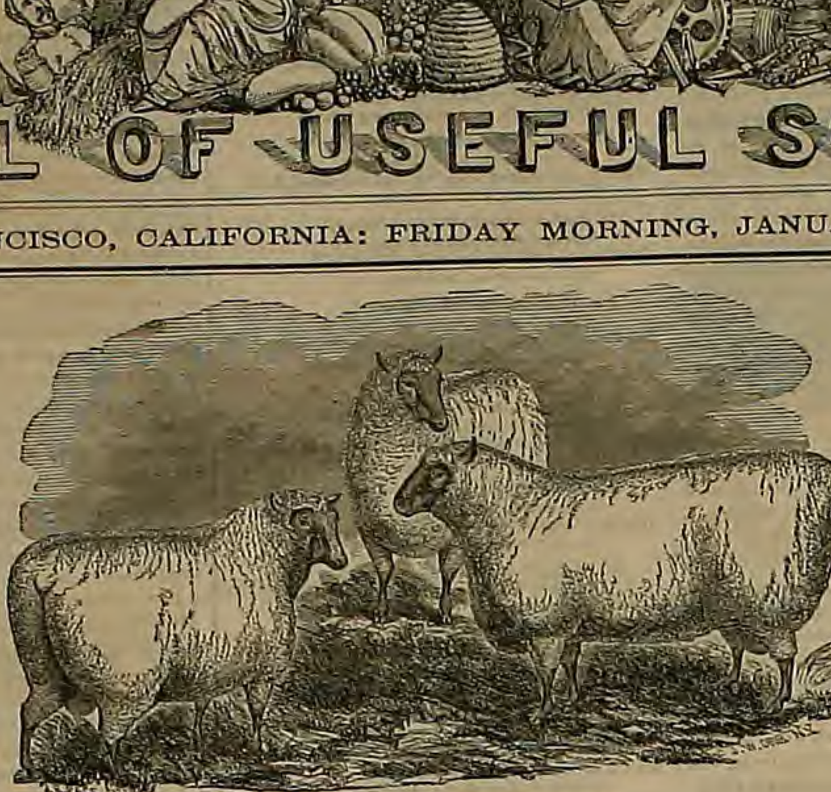
The great majority of Bulbous roots require good, rich earth, finely pulverized, but light and sandy. The best preparation is very old and decomposed manure, rich black loam, and sea sand, *one-third each*, and well mixed. In every pot or box there should be good drainage; for any water remaining round the roots, sours the earth and decays the roots. Good drainage is therefore essential to the success of the plants. The pots thus ready, the bulb should be planted so as to just have the crown of the bulb covered with earth. Care should be had not to have the earth wet or moistened until the bulb shows signs of life. The earth, however, should not be too dry when planted. Water should be given moderately when the plant starts. When the blooming season is over, the pots should be set away on their sides, so that the bulb can dry down, and after a while be then shook out of the pot or box, the little *side bulbs* taken off and saved for planting separately, and all put away in dry sand for another year.

PLANTED IN THE GARDEN.

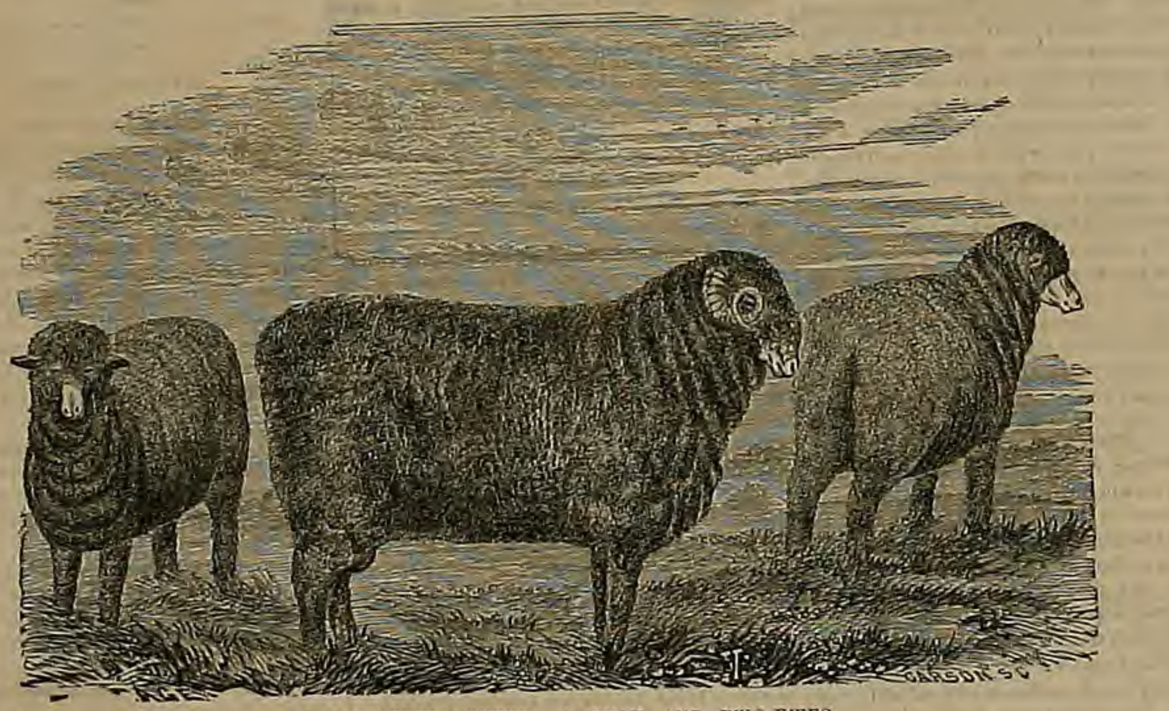
All bulbs planted in the open garden should have the earth of the same character as those in the pot; it should be *made earth*, made for the bulbs, as before described. When ready, then the the bulbs of each class can be planted in squares or figures, and according to colors, or in any design to suit the taste of the cultivator.

Tulips, Hyacinths, Lilies—these should form beds by themselves. A little study of the character of each, will do much to instruct the grower, and give him an insight into their place, position, and beauty. The Hyacinth grows from six to ten inches high; the Tulip eight or ten inches; the anemone and Ranunculus grow twelve to fifteen inches; the Lily from twelve inches to three feet high. A little care and attention to these beautiful flowers will inspire a love for them. All bulbs should be taken up in the *Autumn*, or when done flowering, and the offsets taken off, and the roots aid away in *dry* sand, as before stated.

The Japan Lilies are rare and beautiful, and should be grown in pots. The Tuberose is one of the most fragrant of bulbs, and, grown in large pots, will give its fragrance over a whole house. It grows, like the Lily, twelve inches to three feet high, and requires a neat and delicate stake. This whole tribe of Bulbous and tuberous plants are worthy more attention than they have been receiving, *and those who are now able to enjoy these rich gems of Flora* without hindering the *great claims* of humanity and benevolence that are paramount to all claims, next to wants and duties of Home, should enjoy these beautiful things of earth. Our columns show where they can be had.



SPECIMENS OF SOUTHDOWN SHEEP.



FRENCH-MERINO SHEEP; A BUCK AND TWO EWES.

◆

Secure Your Fences.

STOCKTON, Jan. 16th, 1862.

EDITOR FARMER: I see advertised in your valuable paper, a Patent Right for driving posts. As I have lost a large part of my fence, by the flood, I feel interested in some plan that will put posts in the ground a little tighter than can be done by the ordinary way. Will you please give a description of the machine, what its capacities are for performing the work, its cost, etc. A SUBSCRIBER.

The Patent Post-Driver, which is advertised by us, is one of the best inventions of the age—especially for this State, and low and wet land particularly. Had all the fences that have been carried away been set with this Post-Driver, we believe nine-tenths of them would have been standing firmly this day.

The Post-Driver alluded to by our correspondent is called "Hyde's Patent Post-Driver," and can be used on all lands, level or hilly. Posts can be driven rapidly, and so firmly, that no storm, wind, or flood would be likely to blow down or wash out; neither could cattle break them down. Abundant testimony of the excellence and economy of this implement can be shown; as more posts can be set in one day with this machine than with six or eight men in the ordinary way. All who feel a desire can see the model at our office, where terms can be made for the Right for counties, which are liberal.

◆

BEAUTIFUL STAR.—How glorious appeared the bright stars on Wednesday evening about eight o'clock. After so long an an absence they appeared more beautiful than ever. So it is with all our manifold blessings. Those that are ever with us we know not their full value until we lose or are deprived of them awhile.

Sheep and Wool.

WE present in the above cut noble French Merinos and fine specimens of Southdowns. The French Merino produces the finest fleeces of wool, while the Southdown produces a coarser kind. The fine quality is rich and cannot be used here at present, and the only way to secure its intrinsic value will be to ship it to New York or to England; while the Southdown fleece, as well as all coarse wools are now in great demand, and will be, so long as the war shall last. By the last accounts of sales of wools from New York the wools that have been selling here at 13 to 18 cents a pound, have realized there the handsome sum of 30 to 36 cents, thus netting shippers over one hundred per cent profit. (We only remind our wool growers of what we have always urged them to do, which, had it been done, would have secured them more than double the amount they realized.) The cross of the French and Spanish Merino upon the Southdown will make a splendid cross, and this will be the wool that in coming years will be in demand here, and abroad likewise, and we hope our sheep-growers will give heed to this suggestion.

◆

Home Manufactures in Marysville.

THIS city, although she has suffered considerably by the recent floods, and by a series of mercantile disasters, and also having a very large trade with the mountains entirely cut off, yet in spite of all these retarding influences Marysville may with reason be proud of her Home Manufactures.

Our recent visit was during the flood, and of course we could not have the opportunity of seeing many branches of this interest in operation, as many were partially or wholly suspended.

Prominently among the large establishments is that in the Foundry business, the large brick Foundry of Messrs. Booth & Co. At this establishment a large and successful business is carried on. Castings of every kind, even to some of the large and fine castings for steam engines, and extensive castings for quartz milling purposes, with all needed machinery and implements for agriculture. This Foundry is one of the most complete in the State.

Another very large establishment is that of the California Stage Company's workshops, where they manufacture and repair their coaches. Their buildings are extensive and complete, the President, Mr. Haworth, having great experience as an importer of coaches, knows well what is wanted for his Company, and he has found it for their interest to have an establishment of this kind, in order to forward the operations of the Company with success, the best of material and best workmen will of course turn out the best coaches.

Hunt & Co. are manufacturers of Plows, and have won an excellent name as Plow makers. They have a large and fine workshop.

Mr. Ellison has acquired a good name as a Plow maker, and his Gang-Plows are well known and valued in Yuba county.

Stoner & Co. have a Broom factory, and their excellent Brooms are known and well appreciated.

Swain & Co.'s Sash and Blind factory is quite a fine establishment, where Doors, Windows, Sashes, Mouldings, &c., are made so rapidly and well as almost seems miraculous, for a team goes up to one door with the lumber, and it does not require the team to wait long before from the other door the Window Sashes, &c., pass out completed!

Aubrey & Co. have also an excellent establishment of a like kind, where Doors, Sashes, Blinds, &c., are made to order in the best manner and quickest of time. These places are worth being looked into.

A new and valuable invention is in successful operation in Marysville now—the Sewing Machine for making Hydraulic Hose of the stoutest kind, and with *four seams*, so as to withstand the heaviest pressure. This invention is one of the most valuable kind for our miners. Mr. L. Howard was the inventor, and, having taken out letters patent, he is now offering Rights for counties, as will be seen by his advertisement in our columns, and samples of the Hose can be seen at our office.

Chase & Co. are manufacturing Cider and Cider Vinegar of a highly creditable quality, and thus supplying the home consumption.

Mr. E. Binet is making some of the finest Saddle-trees made in the State, he has several *new* and unique patterns which have attracted considerable public notice.

Flour Mills are of course "Home Manufactures," and they both kept their wheels going until the waters stopped them. They had steam engines instead of water-wheels, and of course the waters, jealous of the innovation, stopped the wheels. The Buckeye Mills, N. D. Starr, worked with a fine 30 horse-power engine, turns out 75 barrels superfine Flour every twelve hours. This mill is nearly out of Wheat, owing to the condition of the country around. They have 2000 sacks of Flour on hand, and most excellent too. The mills of Messrs. Williams & Finnie turn out about 100 barrels per day of superfine Flour, which bears a high repute. The floods came high up over the engines and machinery of both mills, and upon a portion of the grain and stock in the mills, doing considerable damage.

There are a goodly number of mechanics and manufacturers that we have not referred to, as the floods cut short our examinations. But Marysville is steadily prospering, and will soon show substantial advances in Home Manufactures, and citizens should always give to their own workmen the preference.

Hand Sewing a Prolific Cause of Consumption.

WHEELER & WILSON'S SEWING MACHINE A PREVENTIVE.

OF the many occupations calculated to act unfavorably upon the health and constitution, some of those allotted chiefly to woman, in the order of our domestic economy, are the most fatally injurious. Foremost among these, hand-sewing is the most deleterious to the continued healthy action of the vital forces in the human system.

The sad effects produced upon the delicate frame of women by a constant application to this most wearing and mindless occupation, are almost universally apparent in the premature wasting of the form, in the early blanching of the cheek, and dimming of the eye, which are but symptoms of the stealthy approach, through a long train of harrassing ailments, of that ever to be dreaded foe—Pulmonary consumption.

The terrible fate of the needle woman has been made immortal in a word-picture of matchless power, and infinite horror, "Hood's Song of the Shirt," to which the whole heart of humanity has responded with a conscious shudder.

Hand-sewing was the first bitter lesson of toil learned by the mother of mankind, after the curse pronounced in the garden; and it is a lesson that has followed women from that fatal hour to the present time, ever bringing an o'ertaxing and never ending burthen of weariness, care, and ill-health in its train.

For the first time in the world's history, a successful effort has been made, by the inventive ingenuity of man, to supply woman with the means by which she may throw off the galling fetters that from the first appear to have been stitched into the very tissues of her being, seaming her whole life with unending lines of care.

Our own country, and our own countrymen, have achieved the high honor of making the first application of the principles of mechanical science which has resulted in the perfection of the Sewing Machine, the most beneficient material ever bestowed upon woman.

All the combined benevolent efforts now being made to exalt woman's social destiny, would be dwarfed by comparison with the benefits which would accrue from the universal introduction of the Wheeler & Wilson's Sewing Machine into families.

To woman especially this beautiful labor and time saver comes as a low-voiced angel of mercy, hymning a glad song of amelioration, and whispering bright promises of improved health, higher culture and a more generous domestic happiness.

The immense saving in time is the great point of advantage. With the Wheeler & Wilson machine a person of ordinary skill does in an hour with ease and unqualified excellence, the work that would require an entire day by the tedious process of hand-sewing. Every young housekeeper should make it a point to understand, and to have, as a part of her bridal outfit, one of these beautiful machines. Let this be done, and the next generation will be infinitely more healthy and happy than the present one. It affords the best kind of mechanical aid to prevent the increase of pulmonary disease, and, with "Hasheesh," forms an effective mechanical and therapeutic means to control and drive out from among us, the very seeds of pulmonary disease.

This expression in favor of the Wheeler & Wilson Sewing Machine has the indorsement of the highest professional scientific and editorial authorities, including such journals as the New York Observer, The Christian Advocate and Journal, The Independent, The Evangelist, The Examiner, The Christian Inquirer, The Christian Intelligencer, The Ambassador, backed by Times and Tribune, and a host of other influential publications in the commercial metropolis of our Union.

◆

Sicily Lemons.

We saw, a few days since, a specimen of Lemons raised at Los Angeles. The seed of the genuine Sicily Lemon was planted there three years since, and these specimens were from the product the third year from planting; certainly a quick return. The lemons are of large size, say twice the size of a goose-egg, and somewhat of that shape, with the thick rough skin of the genuine Lemon.

We are informed that only one party has grown the trees, as yet. They seem to flourish finely, and the third year commenced to bear quite abundantly, the production being continuous, showing the fruit in all stages, from the blossom to the ripe fruit. These Lemon trees will doubtless be more extensively cultivated in the Los Angeles country, and we see no reason why they could not be successfully grown in the Sacramento and most other valleys in our State, and the production be remunerative, as Lemons heretofore have been a scarce article in this market. A portion of the product mentioned above, brought to this city, sold at ten dollars the hundred.

We may add that "Frank," the proprietor of "Frank's Saloon," near our office, is entitled to the first credit for the production of these lemons here. Some years ago, when engaged at the Bank Exchange, a small lot of the real Sicily Lemons were received there, the seeds of which Frank took pains to carefully preserve, and sent them by a friend to Los Angeles, where they were planted, with the result above stated.

◆

STOCK FOR THE MOUNTAINS. Now is the time to purchase all kinds of stock and take to high ground to increase and multiply. The feed is now getting good, every day better, and all kinds of stock are, and will be increasing in value. Investments now made in good stock will pay well. Purchasers and sellers can derive great benefit by referring to our columns, where they can learn *who* has stock for sale.

REMARKS OF R. R. SCOTT,

ON ROTATION OF CROPS, READ BEFORE THE PROGRESSIVE GARDENERS' SOCIETY.

There can be no more satisfactory proof adduced of the value of science in guiding the practical operator than the universal faith which cultivators have in the principle of a rotation or change of crops in the farm and garden. It is a system which prevails in nature, though regulated in a very different way from that in which the farmer carries it out, yet the result is the same. It is very clear that the true application of this system was not developed until chemical science and research had demonstrated certain laws which were found to prevail in the soil and in the plants which grow in it. Food had been produced for ages, it is true, before these discoveries were made, but not in such quantities as have been produced since, population having so rapidly increased as to render the old system entirely insufficient to meet the wants of the human family. It was doubtless the general opinion with the mass of the people who cultivated the ground in the earlier ages, that the soil or the earth was a homogeneous mass, designed to produce grains and plants for their use to an indefinite extent. As the surface of the earth became more thickly peopled, and the production of food became a matter of necessity with communities, a more correct knowledge of the nature of soils and crops was developed, until at length agriculture became the study of the most learned, and we accordingly find among what are termed heathen writers, very complete methods of farming. Little, however, approaching the accuracy of the present day is found, until a comparatively recent date, and the system of a regular rotation of crops is a modern improvement.

Like all other innovations, the idea of the necessity of changing the crops in regular rotation, from one portion of the farm to another during a series of years, was opposed on its first introduction. Among those who used their influence against it, was the well-known Jethro Tull, who wrote a treatise on Husbandry, about the year 1750. In the fourth edition of this work, published in 1762, which was designed to introduce an entirely new system of tillage, he opposes the idea which had been advocated by several cotemporaries, that a change of species on the soil was at all necessary. Had not his mind been wrapt in the idea that constant stirring of the surface without any application of manure is sufficient for the growth of the largest crops, he might have been led to look with more favor on so sound a system as the change of species, as he termed it, or rotation; but in order to give more plausibility to his own system, in which he no doubt conscientiously believed, as some have very recently advocated it with much earnestness, he thought it proper to oppose the theory of rotation, and set up in its stead three principles entirely at variance with it. These were, 1st. That plants of the most different nature feed on the same sort of food. 2. That there is no plant but must rob any other plant within its reach. 3. That a soil which is proper to one sort of vegetable once, is in respect of the sort of food it gives, proper to it always. The two first propositions are somewhat vague, but the third is in direct opposition to the best established principles which prevail in our day. Tull was a very close observer, and in practice his system was remarkably successful, and can still be made so by close application, as has been done at Lois Weedon, in England, by the Rev. Mr. Smith. Yet it could not stand the progress of so sound a principle as the rotation of crops.

As chemical science progressed and soils gradually exhibited a loss of fertile power by constant cropping, and that the application even of the old system of naked fallows failed to render it productive or remunerative to the husbandman—the idea that by cultivating dissimilar crops alternately, which, as had been ascertained by the chemist, took from the soil various elements in various proportions—the average fertility of the soil could be maintained. That by the restoration of special matters to certain crops, or, to state it more clearly, while we could not cultivate a crop of potatoes for years in succession on a certain soil, yet by cultivating in rotation oats, wheat, barley, or rye, turnips, cabbage, and other roots, grass and clover, peas, beans and other pulse, or any other distinct crop which might be requisite, potatoes might again be cultivated in time with much more benefit and certainty than had been done by the previously followed system, even by adopting the system of fallowing or allowing the land to remain bare for an entire season, so as to restore the lost elements to the soil by exposure to the atmosphere and regular tillage.

The system of fallows has been almost abandoned in the thickly peopled countries of Europe, as the loss of an entire season's crop was not found to be in accordance with the wants of the people and interests of the land owners. Agricultural chemistry has clearly demonstrated that what was secured by the naked fallow can be attained by the cultivation of a crop taking a different class of elements in quantity from the soil, and that the soil is in a better condition for a different class of crops than it would have been after the fallow. I shall not attempt to detail the specific data on which this practice is based, for which I value chemistry as much as any one, and believe a thorough acquaintance with its laws of the first importance; yet I am sorry to admit I do not possess that acquaintance with its details which would warrant me taking its name in vain. I may know enough of its principles to be able to appreciate their application, but the chemist alone can make their application clear to the unscientific. I believe that the soil contains a number of elements varying in quantity with the nature of the soil; that tribes of certain plants require these elements for their nutrition, and that the supply must be kept up. If from a certain soil we continue to remove a certain crop and fail to restore in equal quantity the matters removed thereby, it must be evident that in time the supply will run out. But if we so arrange our crops that what one may take out another will leave behind, and again another may restore, we can in a series of years secure the fertility of the soil by restoring one or two special ingredients in addition to the ordinary farm refuse. That plants are very various in their composition, chemistry has proved; and that soils are also various, is well known. Of the more important matters which compose the food of plants, such as potash, lime, magnesia, soda, alumina, silica, oxide of iron, oxide of manganese, sulphuric acid, phosphoric acid, and chlorine: to insure fertility, all soils should possess more or less. A few are required in very small quantity, such as the oxides of iron and manganese, and yet are indispensable. While of these some crops take up a large proportion of the lime, others take up potash, and others again silica; thus by guarding against the repetition of two lime or two potash crops in succession, we guard against the exhaustion of that element in the soil. The crops of the farm which mainly consist of three or four staples, are arranged with reference to this principle. The leading farm crops are corn, potatoes, and other root crops, such as turnips, parsnips, carrots, beets, etc., wheat, barley, rye and oats, with clover and grasses. Also to a less extent, peas, beans, and other leguminous plants; and as a summer crop, buckwheat, pumpkins, melons, and plants of that tribe are specially cultivated in certain districts.

Without entering into the details of rotations, I will remark that the nature of the rotation must be based on the various circumstances which surround the cultivator. The nature of the soil is of the first importance, for a certain soil will fail to produce good wheat while it might produce rye or barley. Clover wholly fails on many soils, and cannot be cultivated until special application of gypsum is made to restore the necessary elements. In order to enter upon a rotation in a newly cultivated soil, some means must be had to indicate the nature of the rotation to be followed. Analysis has been recommended for this purpose, and although, as has been frequently remarked, analysis of soils is but an uncertain test, yet it serves in this case to indicate the proper practice to a great extent. The nature of the vegetation found on the soil is a good practical test to the cultivator who understands the relations of certain plants to certain soils. Experience of course is the most reliable expositor, and this will give an infallible index to the proper rotation in a few years. Another point which is of no small importance, is the nature of the physical texture of the soil. This should also modify the rotation. The crop that opens up the surface by its culture should succeed the grain crop, which cannot be stirred; for this as well as other more important reasons, no two grain crops should follow in succession, nor any two root crops as a general principle. The nature of the market also regulates the rotation, as in the case of trucking, which is an exception to the ordinary rule.

◆

Wheat Straw—Its Value.

What farmer would willingly throw away $10 or $15 an acre in the value of a crop? Perhaps the difference in his country would not be so great; but in England, Mr. Mechi calculates that wheat straw feed to cattle is worth that much more per acre than if plowed in for manure. Here it is not so generally plowed direct from the thrasher, as it is trampled and water soaked in the cattle-yards. If cut up and mixed with meal or the bran of grain, it makes a very valuable food for cattle. The following is Mr. Mechi's method of feeding:

"He feeds each of his own cows daily 20 lbs fine cut straw, 8lbs hay, 5lbs rape cake, 2lbs bean meal, ¾lbs bran, ¾lbs meltcombs—all of these properly moistened in hot water, the straw requiring more than the rest—35lbs mangle, or Swedish turnips. The essential points are warmth and moisture, the cattle being well sheltered and duly cared for. The straw is a most nutritious food; 100lbs of it contain 72lbs of muscle, fat and heat-producing substances. The soluble fattening substances are equal ro 18½lbs of oil to every 100lbs.

◆

Hen Husbandry.—A correspondent writing to the Maine Farmer says: "I will give friend G the result of some of my experince with hens. In the first place, I have found that they will always eat any kind of corn or grain. I think it depends more on their having enough of it, than it does on the kind they have. We feed mostly with barley, oats and peas. We never cook the grain, although perhaps it would be better to do so. I think it is better to keep grain by them in the winter, and if you feed them in the summer they will pay well for it. We have kept 18 hens this year, and have sold 109 dozen of eggs for $25 67, besides using what eggs we wanted in the family. We have killed 60 hens and chickens, worth $10, and have 19 hens left. As for a hen's age, I can tell as well by their teeth as any one can, and that is nothing at all. I think it best not to keep them more than two years; for young ones will lay better than old ones. The time to come on the table, I am inclined to think, is when they are fat and you are hungry; and the time to go to market is when you have more than you want for your own use, and when they will bring a good price."

Fattening Turkeys.—A writer in the Germantown Telegraph furnishes that journal with the following statement:—Much has been published of late in your agricultural journals in relation to the alimentary properties of charcoal. It has been repeatedly asserted that domestic fowls may be fattened on it without any other food, and that too, in a shorter time than on the most nutrative grains. I made an experiment, and must say that the result surprised me, as I had always been rather skeptical. Four turkeys were confined in a pen and fed on meal, boiled potatoes and oats. Four others of the same brood were also confined in another pen, and fed daily on the same articles, but with one pint of finely pulverized charcoal mixed with meal and potatoes. They also had a plentiful supply of broken charcoal in their pen. The eight were killed on the same day, and there was a difference of one and a half pounds each in favor of the fowls which had been supplied with charcoal, they being much the fattest, and the meat greatly superior in point of tenderness and flavor.

THE AGONY.

There's a clangor of war on the border,
And the tramp of neighing steeds,
And the sun goes down amid battle clouds,
While many a warrior bleeds.

The crimson current is flowing
O'er fields of waving green:
The horse and his rider together lie prone
In the bloody battle scene.

The gallant hosts with banners,
That met in the morning light,
And fought like destroying demons all day,
Lie spent on the field at night.

Those banners are drooped and drabbled,
The deep-mouthed cannon, still;
And the sentinels pace their lonely rounds
At the camp on a neighboring hill.

The stars shine out in the heavens,
The winds pass by with a moan,
While from mangled heaps on that sanguined field
Riseth many a wailing groan.

In desolate homes will be mourning,
And eyes unwonted will weep;
Parents and children and widowed wives
Will a sorrowing vigil keep.

For the brave who fell a benison!
A wreath for the brave who live!
But for mothers and wives and sisters who weep,
What balm will their wounds relieve?

* * * * * * *

For what end these battling armies,
And why this deadly strife?
Why grapple thus neighbor with neighbor in hate,
And brother take brother's life?

Is war a play or a pastime?
Is life such a trifling thing
That men, created in God's bright image,
The boon away should fling?

Ah! beneath all this outward seeming
Of sectional hate and strife,
Lieth broad and deep in the national breast
A Principle dearer than life.

The Banner that waved in the morning,
And drooped o'er the slain at night,
Is the emblem of that which, in patriot hearts,
Ennobles this desperate fight.

That Banner is Liberty's beacon!
Its cause is the cause of Truth!
For the heritage won by our fathers of yore
We are battling thus without ruth!

For the cause of Earth's Poor we are fighting—
To preserve the Downtrodden a home;
And with arms in our hands, and pressed lips, we say:
If it come to the worst—let it come!

Shall the sun of our Nation be darkened?
Shall Truth in the streets lie slain?
No!—rather let thousands, in blood sodden heaps,
Lie stark on the battle plain!

J. L. W.

San Francisco, Dec. 23d, 1861.

◆

The Pioneer Spirit.

We clip the following from the Union. This is the right true pioneer spirit. It is this undying energy that has thus far saved many of our cities, and citizens, from despair. We say amen to it with all our heart, and would send forth the cheering words to Sacramento, to Marysville, Stockton, and to every city, village, valley and hamlet, and to every cottage and soul—cheer up. Be brave, for brave hearts are with you, and noble women are at work for you. Send over a knowledge of your wants to San Francisco's great heart, and they will be supplied.

THE PITILESS FLOODS.

Messrs. Editors: Cheer up brave hearts! 'Tis the force of recurrent storms that beats vigor and power into the leviathan oaks. 'Tis the fierce tornado which publishes the integrity of the iron-bound roots of the giant pines of Calaveras; and, as rebellion proclaims the value of loyalty, so does adversity, come when it will and where it may, develop temper and make resistless the nerve and muscular energy of human power. What are the merciless floods that are now inundating and terrifying the people throughout the valley, cities and towns of Washington Territory, of the States of Oregon, California and the mining precincts of Carson? Though very severe, they are yet wholesome lessons to the new coming and uninformed settlers whom God has appointed to reclaim these waste places, by protecting them from inundation and revealing them to the world as Sicilian fields of agriculture, as gardens of fruits and flowers more valuable than the famed apples of Hesperides or the canonized Flora of Mythology. To our people, naturally reckless and strong in that self-reliance which is fertile of expedients in emergency, a smaller chastisement would have been useless. To us as Sacramentans it comes as a finishing discipline to the many adversities to which we are indebted for the charitable record we have made in the past, and to the enduring, elastic and inextinguishable energy, enterprise and buoyancy with which we have written our history up to the present moment. Cheer up! Ere six months have told the stirring incidents of the first half-year of sixty-two, Sacramento will be in a better condition than she would have been in ten years without the admonition which a kind as well as gracious Providence is inflicting upon us. Our levees will be made broad causeways for business and pleasure, invulnerable to the aggressions of water. Our streets will be commenced in a process of elevation which shall make them when paved the most capacious and convenient thoroughfares in the world, and with drainage, good health and the business which our centrality affords us, we will be rich in the energy and contentment which are the best elements of wealth.

Pioneer.

◆

A Good Weeder.—A very useful little implement for weeding which might rest a good many aching backs, is simply a rusty table-knife, sharpened towards the point on both sides of the blade, about two inches of which is then bent up like a hook. Secure it by the handle to a strip of light pine of sufficient length to enable a man to use it as a weeder while standing erect. If our friends will try this simple weeder, they will find after slight practice, that they can weed about as clean and nearly as fast as with the hand. The weeds are removed by a scraping movement. In wet weather in will prove a preventive of rheumatism and cramp in the limbs. Let no one "poh" at this instrument because of its simplicity; if he has much bed sauce to weed, let him try it, and he may have reason to thank us.

Applying Sulphur to Grape-Vines.—M. Mercieul, of La Tour, St. Gelen, has forwarded to the French Academy of Science the result of a series of experiments with sulphur on grape-vines, in order to prevent the attacks of the vine parasite. He removed about a foot of soil from around the stems of the vine, but not going deeper than the filaments of the roots. A handful of sulphur was then sprinkled into this cavity, most of which was placed upon the stem. His vines which were treated in this manner remained perfectly healthy, while the others suffered severely. He recommends winter as the best season for applying the sulphur.

Educational.

Order of Studies.

We observe in several of our exchanges, says the Scientific American, the following paragraph:

The Cart Before the Horse.—*Mother to Teacher*—My daughter has finished her French, and Italian and music, and now she had better take up her English branches.

The extent to which this paragraph has been copied without comment shows that the community has bestowed very little thought upon the subject of the order in which children should take up their studies. This matter is not inferior in importance to any other subject whatever. As the mind is developed from infancy, it becomes, in successive periods, adapted to the various studies embraced in education, and the several studies should be presented in the order in which they are fitted to the degree of the mind's development. Early childhood is the period at which the faculties are best adapted for the learning of languages. A child from four to eight years of age will learn the French language in one quarter of the time in which any adult can learn it, and the child will learn it more perfectly than the adult can by any amount of study whatever. To master a foreign accent the organs of articulation must be trained while they are in the process of formation. It is as easy for a young child to learn the French pronunciation of *maintenant* as the English pronunciation of *now*, but we should like to see any adult American who could pronounce the French word in Paris without being detected as a foreigner.

It is not only the pronunciation that adapts the study of language to childhood, from the greater mobiliy of the organs, but the mental labor is just fitted to the power of a child's mind. In the conjugation of Latin verbs there is a nonsensical jingle that has the same charm for a child's ear as Mother Goose's melodies. If properly presented, a child will learn with as much ease and pleasure,

es vel esto
esto
este vel estote
sunto,

as it will

Hi, diddle, diddle,

or,

Dickery, dickery, dock.

There is no grasp of thought nor power of comprehension required in learning these conjugations. The intellectual effort employed is of a peurile character, and this very character makes the study peculiarly repulsive to persons of mature minds. We have known more than one man of middle age to attempt the study of the German language, and to recoil before the childish labor of learning the declensions and conjugations. If a parent intends that a child shall ever learn a foreign language, the best time for him to do it is in his early years.

◆

Agricultural Education.

Let Agriculture form an honorable portion of our general education—why should it not? Let Tull and Tusser range side by side with Homer and Virgil. Then would our nobility and gentry be independent of incompetent or dishonest stewards and land agents, and be able to appreciate those of a more worthy character. Agricultural education and apprenticeships for our young farmers are imperative.

How many a worthy person, retiring from the toils and turmoils of a busy city, to enjoy the tranquil peace of Agriculture, regrets the want of agricultural knowledge! Often are his hopes and intentions frustrated and his property diminished by interested or erroneous advice, of which, till too late, he cannot judge. When I see landlords making returns in rent (in my opinion an injudicious operation), I think how much better it would be to present their tenants with an agricultural library. Farmers, from the very nature of their occupation, and their isolated position, are seldom able to travel from country to country in search of facts; but how readily is a multitude of agricultural experiments and experience brought to their fireside by a selection of good and practical books! Some may say, "Oh, Farmers are too prejudiced to read." Experience has taught me to the contrary. Bring them the book—they may affect to despise it, but they will keenly, anxiously, and with sound sense, scrutinize all that concerns their pecuniary welfare. Reason tells us that the farmer, born, bred, and mixing with others of precisely the same way of acting and thinking as himself, cannot be expected to have so expanded a mind as a manufacturer or trader, who is daily in contact with strangers from every corner of the globe.

It is to be feared, too, that jealous landlords form to low an estimate of a farmer's character, and consider his success and elevation as degrading to them—as if his gains were their loss. Let us hope this feeling will give way to a better one, and that a farmer who follows the hounds, and dresses and acts respectably, will be considered quite as likely to farm well and make as good a member of society as one who imitates in every respect one of his laborers.—[Alderman Mechi.

◆

The Army of the Union.—The report of the Secretary of War shows that the army of the Union, organized to put down rebellion, amounts to the enormous number of volunteers for the war, 640,637; regulars, 20,334; whole number in the service of the Government, 660,971. Of this number, 568,383 are infantry; 59,398 are cavalry; 23,688 are artillery; 8,395 are sharpshooters, and 107 are classed as engineers.

A man in Paris, who recently committed suicide, left a note, in which he said he had all his life a passion for traveling, that led him into every country on the face of the globe, and finally into making a voyage of discovery into regions of which no geography had been written, and which hitherto were supposed to be the birthright of a set of fanatics.

Poetry is said to be the flower of literature; prose is the corn, potatoes and meat; satire is the aqua-fortis; wit is the spice and pepper; love letters are the honey and sugar; letters containing remittances are the apple-dumplings. [Send us the *Apple-Dumplings*. The floods have sent us all the rest.]

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 62 of whole Series; continued from Farmer of Jan. 17. 1862.

XII.—L.

The Indians of Lower California Coasts.

NOTA MISCELLANÆ IN LOWER CALIFORNIA.

THE DOMINICAN MISSIONS OF LOWER CALIFORNIA, FROM LATITUDE 29° TO THE SAN DIEGO FRONTIER, 1770-1798, FROM THE ACCOUNT OF A DOMINICAN.

LOWER California on both coasts contains great variety and abundance of fish and marine shells. "Los Indios de los missiones de Loretto, Comondu, Cadegomo, Guadelupe y mulege son asquerosos, falsos y de sados; Los de San Fernando y Rosario son humildes, pacificos y dociles; los de Santo Domingo y San Vicente son inquiltos, soberbros y revoltosos; y estos de San Miguel, entere quienes vivo y es la ultima frontiera de los Gentiles, tenis uno genio recis indocil, ultivos sobremanera, valfentes y guerreros, y en todo tiempo han dado que hacer a la tropa."

The Dominicans took the missions of Lower California in 1771.

The Indians of Vinatacot or Santo Rosario do not permit polygamy. Not one of the Nation of the Pericies was left in 1794 (1784?), from the effects of the venereal disease introduced amongst them. In some of the missions and pueblos where were thousands, there were not in many instances left 100 souls; in others of 600 or 700 not more than 30 were left.

In 1742 there died in the mission of San Jose del Cabo 500 Indians of a terrible disease similar to small pox. It lasted two years and a half, and desolated the missions of Santiago, Todas Santos, San Ignacio and others. It was cured with lemon juice and salt water baths. In 1748 came the serampion or measles, which killed a great many Indians in the Lower California missions. In 1768 another epidemic visited the missions south of Loretto, which took off hundreds of Indians with a disease of pimples similar to small pox.

In 1788 (?) the Pericues revolted, from revenge of having the disease, and apostacized from the faith, and killed some of the missionaries. In this year (1768?) died at San Jose the famous Mons. Chappe, who had come from France, with Spanish astronomers, to observe the transit of Venus. In 1781 with a company of Sonora emigrants came the small pox, which depopulated the missions. The Duchess of Gandia presented funds to establish the mission of Sad Francisco de Borgia which was founded by the Jesuits in 1757. To the east of this mission is the port of Los Angeles of the Gulf, where were received supplies from Loretto for the Northern missions—called now, or the lands near by, the Mission of Santa Maria de los Angeles de Kabu Juacama. Santa Maria was founded about 1769, in March, by the Franciscans (?). The Jesuits invested over $10,000 in money in a large hacienda near Guadalajarra called Arroyo Sarco, with the profits of which they assisted their California missions. The King afterwards from this hacienda gave $350 to "Cada uno de los procuradores de los missiones." The Franciscans of Guadalajara wished to occupy the old Jesuit mission, but those of San Fernando, in Mexico, had been before them in an application to the Viceroy De Croix, in 1768.

In 1774 the Dominicans of the college of Santiago, Mexico city, founded the mission of Santa Rosario de Vinatacot, on the Pacific coast. A great many Indians were found around that place. The King gave $1000 to found this mission.

In 1775 they founded the mission of Santo Domingo, 20 leagues north from Rosario.

1780.—Foundation of the mission of San Vincente Ferrer, 20 leagues from S. Domingo. This settlement was attacked by 20,000 (?) Indians, Yumas and others, and great injury resulted to the mission. The attack was avenged by Don Teodor Croix, Commandant of the Frontiers.

1781.—Great ravages of the small pox in the Lower California Missions.

In 1782 the mission of San Miguel de la Frontiera was founded.

In 1787 the entire missiones of Lower California numbered 17 missions, 24 Dominican missionaries, 1099 families, 3015 souls and 6 soldiers.

In 1746 occurred an eruption of the volcano de Virgines, near the bay of Mulexe.

The above facts are quoted in the "Viagero Universal," published at Madrid in 1799, in 47 small octavo volumes, see volume 26, doubtless drawn from the Dominican friars' work, published at Valencia in 1794.

NOTE.—Santo Thomas mission, below San Miguel about 30 miles, was founded about 1790. San Pedro Martyr was founded in the Sierra about 50 miles east of Santo Thomas in 1787, by Padre Cayetano Pallos. Santa Catalina de los Yumas was founded 18th May, 1797. It is situated not far from the head of the Gulf, in a valley lying west from the surrounding deserts of the Colorado, and was the last of the Dominican missions. It was burnt by the Yumas between 1827 and 1833. See the manuscript letters of the Catholic Fathers of California in the St. Mary's Library of San Francisco, and Patie's Travel in California and Mexico, Mexico 1832.

In 1786 Clavijero's work says there were 17 missions in Lower California. In December, 1796, there were 13 missions in Alta California which had 11,126 souls; they had, up to that time, baptised 21,653 Indians. These last facts are noted by the Mexican editor of the 1852 edition of Clavijero's California. The mission of San Fernando Villacata was founded by Padre Junipero in May, 1769, on his way to San Diego. It lies southeast of Rosario about 50 miles.—A. S. T.

For other accounts of the Lower California missions, see the Second Series of the Indianology of February and March, 1861.

XIII.—M.

The Indians of the Colorado and Gila Rivers, and those of the Gulf Shores.

THE SAN DIEGO COUNTY INDIANS.

The Indians within the boundaries of Santa Barbara and Los Angeles Counties seem to have had an infusion of some foreign blood, even at the time of Viscaino (1602) and his predecessors in coast discoveries. Many of the Indians of Santa Catalina Islands must have been of this class (the women and children with red cheeks and handsome light features), as mentioned by that navigator. The Indians of San Juan Capistrano and of San Luis Rey are also said to have been (very numerously at least) a fine handsome, light-yellow colored people. Some of these handsome Indians seem also to have had an infusion among the tribes living in the missions of San Buenaventura and Santa Barbara, up to the time of the secularization of the missions in 1833. This fact is corroborated by Father Palou's accounts of the foundation of the Southern missions, 1769-1784, also by observations of many old pioneers ante 1833. But many of the inland Indians as well as those of the neighboring coasts alluded to, were *black, black* Indians, and this characteristic (an old pioneer informs us) extended to those of San Luis Obispo mission, as well as at San Buenaventura. The Indians of these districts tattooed themselves with an ink made of ground charcoal and very likely the juices of certain plants, as well as probably with the ink of fish, such as various species of squid or jelly fish. The tattooing in this manner prevails among the Mohave and the San Joaquin tribes (both of the plains and the Sierra Nevada), and as it is always understood, among all the tribes of the Sacramento; indeed, there seems little doubt that it invariably prevailed among all the clans and nations of both the Californias. Another of their invariable arts and utensils was the use of arrow tips or heads made of flint, quartz, jasper, obsidian or volcanic glass, and such like substances. For utensils of domestic use, the bowls, mats, bottles, pans, baskets, etc., excellently made of grass, palm-leaves, bullrushes, bark of trees, and such like materials. These among the different tribes were of all shapes and sizes. The *rush canoe* seems to have been also of nearly universal use, and also that of burying or of burning their dead. The infinitude of dialects or languages was confounding and extraordinary, and noted by *all* the Spanish explorers and missionary fathers, from 1535 to 1833, and by the Americans and other strangers down to 1860. This fact has been noted as also universally the case throughout Mexico and Central America, the old Oregon territory and New Mexico, from the times of the Conquistadores to the present. The use of grass seeds, acorns, etc., for food, after being roasted, pounded and made into a porridge, mush or *atole*, also seems to have been universal. The practice of cutting the hair square over the forehead, from ear to ear, and the use of the hot air, Estufa, or Temescal, baths, are also universal in tribes, both the Californias, old Oregon, Utah and New Mexico, Sonora and in most parts of Mexico, and is found by American physicians to be a most invaluable remedy, though administered in a different shape. The cutting of the front hair does not extend to but few ocean tribes of the old Oregon.

WILD OATS.

The indigenous Oats (avena fatua of the botanists), which many writers mistakenly suppose is a grain run wild like that of mustard (which is well known to have been introduced, and is an exotic), was also a favorite food amongst them. This California indigenous oat covers hundreds of thousands of acres of hill and plain throughout the surrounding districts of the Bay of San Francisco, and forms one of the most singular features in the diversified scenery of California; for immense stretches of oat-prairies are often seen, without a single tree or bush to obstruct the vision. Its habitat extends from San Diego to the Upper Sacramento, and the mountains east and west, as also the San Joaquin plains and mountains.

The soils of these districts are formed of immensely thick beds of argillaceous loam, which is largely infused with soda and a silicious salt of alumina, easily soluble; when wet this clay soil is exceedingly tenacious and homogenous; when dry, very hard and firm, sufficiently so to wear smooth the hoofs of horses which are much used upon it. This is the true *adobé soil* of California.

NOT CANNIBALS.

In *no part* of the old Alta California of the Spaniards, or of Lower California, New Mexico, or of Oregon, or British America, or the Pacific countries north of them, has it ever been known that the tribes are cannibals or eaters of human flesh, or that they had the practice of human sacrifices in any of their ceremonies or feasts, or in any other way or shape as a religious expiatory; so far at least as we know to the year 1860.

There are certain exceptions to this rule among the tribes of the old Oregon and Vancouver island, but their filthy practices do not assimilate to those of the holocusts of the Aztec tribes of Mexico.

MIGRATION OF THE INDIADA—DYNAMIC CHANGES.

Some attempts have been lately made to prove an infusion of the Malay and the Japanese element into the Aztec and Toltec, or Mexican and Central American half-civilized kingdoms of the Indiada. Probably in the old ages of the Pacific world, when continents were more contiguous than they are now, the antecessors of the present Malayan and Mongolian races did in this manner make their way over to many parts of Pacific America, the communications and vestiges of which became effaced from the convulsions of nature breaking up these continents into groups of islands and sinking the intervening lands under the ocean. At any rate, the indications are, that the shores and lands of *all* Pacific Countries are of very recent elevations and depressions; for we may say of all of them with the Poet:

> "Earthquakes have raised to heaven the humble vale,
> And gulfs the mountain's mighty mass entombed;
> And where the ocean rolls, wide continents have bloomed."

THE RODENTIA ANIMALS.

One of the curses of the Agriculturist in California and other dry arid countries of Mexico and Pacific America, is the immense abundance of the burrowing *rodentia*; such as earth squirrels, of different species; and of moles, and rats, also of different species. In many districts, not a square yard of land is found without a family of these swarming vermin, which are exceedingly destructive and annoying to the cultivator. No wonder California is full of their enemies: hawks, coyotes, bears, wildcats, lions, and such carnivora; all small gods of the Indian.

* * *

SHIPMENT OF GRAIN.—It is now generally admitted that San Joaquin is the granary of the State, says the Republican. During the year 1861 there has been cultivated in the county 68,189 acres of wheat. The next highest is Contra Costa, 26,147; Santa Clara, 26,000; Alameda, 26,000. San Joaquin has cultivated 62,146 acres of barley. The next highest is Yolo, 28,000; Santa Clara, 20,000. San Joaquin has raised 1,022,889 bushels of wheat; Napa, 604,367; Alameda, 600,000; Santa Clara, 500,000. One firm in Stockton, Peters & Jackson, have made the following shipments of the crop of 1861: To San Francisco, 38,151 sacks of wheat, weighing 3,594,904 pounds; 18,474 sacks of barley, weight, 1,377,625 pounds; 320 sacks of rye, weight, 33,058 pounds. To Sacramento 34,756 sacks wheat, weight, 3,537,383 pounds; 29,404 sacks barley, weight, 2,574,687 pounds. Total, 121,114 bushels; weight, 11,436,657 pounds.

CARRYING AND USING THE WHIP.—There is more in the movements of the driver or manager of an ox team, and in carrying the whip, than most farmers think, says the Ohio Farmer. Oxen, however quick in their movements, or upright in their walk when in yoke, soon become dull, and get the practice of "shoving" or "hauling," in consesequence of the driver lagging along as is often the practice, going ahead of his team, and from time to time stepping back and whipping them. A driver of an ox team should walk directly opposite the yoke, walk straight, and carry his whip upright, as a soldier would his gun. Use a whip-stock with a short lash, and touch the cattle only with the lash, and never strike them on the nose or over the eyes.

NEW WAY OF BOILING FISH.—The addition of a few herbs and vegetables in the water gives a very nice flavor to the fish. Add, according to taste, a little sliced onion, thyme, bayleaf, winter savory, carrots, celery, cloves, mace, using whichever of these ingredients you can procure; it greatly improves skate, fresh haddock, gurnet, etc. Fresh water fish, which have no particular flavor, are preferable done thus, with the addition of a little vinegar. Choose whatever sauces you please for any of the above fish.

Delayed Papers.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the Farmer, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

◆

☞ Those who receive a number of the Farmer wit this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

◆

Look at this—High-landers, Pay Up.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Convention of Farmers.

We would suggest that the farmers of our State should have a *Public Convention* at as early a day as is possible, to take into consideration the *agricultural condition* of our State. And we would propose that the Convention be held during the week of the annual meeting of the State Agricultural Society. Say, have the Convention for this special purpose directly after the close of the Society's business, which would be probably the 31st of January. Will our farmers respond to this, and will the *Press* aid it. Great good can be done.

◆

Annual Meeting of the State Ag. Society.

It is in accordance with the present Constitution of the State Agricultural Society, that the annual meeting be held at Sacramento on Wednesday next, the 29th of January. The present condition of our State renders it utterly impossible for such a meeting as the interests of the Society and the cause demands, and it is to be hoped that those who meet will adjourn the meeting for four weeks at least, and thus give time for a united action of all.

◆

Our Present Number.—We call the attention of our friends to our present number. We have much that will be found of interest in this issue, or appertaining to the general wants of the people in their present condition.

We can refer with pleasure to the correspondence of our friends and the original matter from them as of pleasurable interest. Lines by J. L. W. are now opportune, and of much merit. We hope we can claim the interest of all our friends in behalf of our Journal, and ask their co-operation to extend its circulation.

Purchasers and Sellers of Stock.—The great losses of stock of all kinds by the flood will cause quite a demand for some kinds of stock, and in many cases parties who have met with heavy loss, may be desirous of closing out their stock. All who have stock of any kind for sale, or those who wish to purchase, can be greatly facilitated by calling at our office. Those who have stock for sale can send us their list, and those who wish to purchase can always know what are for sale.

The Quantity of Rain.—Up to Wednesday morning, 22d inst., over thirty-five inches of rain had fallen in this city this season, or since the 19th of November. This exceeds the usual average for the whole season (which is only about twenty inches), and we are likely to have much more, as the latter part of the season generally supplies the most rain. As the rainfall in the interior has been even much greater than here, it is no wonder that the hight of the floods has been unprecedented. According to the papers of Nevada and Sierra, there fell in those counties during November and December more than forty-one inches of rain; and so far during January enough to make the total fall about *seventy-two inches!* Can it be possible that the rainfall of ten weeks amounts to six feet?

Who Wants a Churn?—Persons who visit the city, and who wish a good churn, should call at our office and see the Jebb's Churn; it is the *Best in the State.* A few made for special trial are for sale at our office.

Plant Flax!—Plant Flax!—Cultivators should be sure to try to grow Flax. It can be made very profitable to them, and will lead to a grand result for our State.

Retrenchment! The Watchword.

The present calamity that has befallen our State will be found to be more severe than the evils and horrors of war, so far as regards the pecuniary loss to our State. And our State will suffer more heavily than even *Missouri*, with all the disastrous effects that have fallen upon her interests, varied as they are.

When the storms shall have passed and the work of repairing and recuperation shall commence, it will be found that our State has suffered to the amount of *one-third* of all the wealth of the people, and that the loss cannot be less than Fifty Millions, and if the waters shall remain any length of time, or the waters be increased by reason of continued storms, then the loss of property in bridges, mills, factories, machine shops, dwellings, stores, orchards, vineyards, gardens, live stock, and farming implements, may reach a much higher figure, as all the crops now in, and all the orchards and vineyards will be a total loss: Such a calamity must of necessity cause almost a famine in our State, and to avert this let every means in the power of every man, woman and child be extended to *save* what is *now in hand*, and let the work of *retrenchment* and *reform* begin in *every household* in our State.

The rich of to-day may find in the changes that must come, and in the losses that must be met, that they are no longer rich. Let them set a good example. Let men that have been dependent on friends rather than *work*, now go to work, for the "*poor are with us*," and they must be cared for. Reform must be the watchword everywhere—"they that will not work shall not eat"—this is good doctrine for "labor is honorable." "Now is the winter of discontent." It is indeed a winter of calamity and sorrow, and it behoves us all to be ready to meet it like men. There will be in our State within the next three months ten thousand homeless ones, and they must be provided for; therefore, all who are rich, all who are able to bear a part of this duty of caring for such, must be ready, and those who are now living like "drones in the hive"—the many in our cities that *can* do—must go to work and bear their part of this great responsibility that the present calamity has thrown upon us.

Reform can and must be had in every household in our State. Hundreds that keep servants can do now without them, thousands that live luxuriously can curtail their expenses. Luxuries must be resigned. Reforms must come, for the poor and the destitute are in our midst. The houseless and the homeless must be cared for, and we know not how soon war, famine, and pestilence, may be added to our present trials.

The heavy losses that have fallen upon all interests must seriously affect our mercantile interests. The immense losses of merchandise, the destruction of mills and other valuable property, must derange all the chanels of trade, and all must be prepared, for it will come.

Reform and retrenchment, then, must be the watch-word. Every dollar now saved will be equal to and worth ten dollars a few months hence, when the true condition of our State is known and felt. We are buoyed up now by the generous feeling of sympathy, and the hope of soon seeing a bright sun, clear weather, and the work of remodelling and replacement go on; but we have not, we do not, we cannot realize, the full extent of the blow that has fallen upon all the great industrial interests—the right arm of the State, the main source of all our wealth and prosperity.

To a wise economy, to a just appreciation of our condition as a State, to a right system of living and an earnest will to labor zealously to recover from our late calamities: This alone can save our State from the evils of universal bankruptcy that now threatens it.

◆

The Legislature Adjourned Again.

Better, far better, would it have been, if it was not convenient to legislate, to have adjourned to the call of the Governor, or to April or May, (if the whole people did not need their aid), and to have *refused their pay*, and not take the last dollar out of the Treasury, or have donated it to restore the once beautiful "City of the Plains." How much more like *true* legislators would this have been, than to have thus retreated from their duty, and neglected to show an interest for a people so widely and ruinously affected. What a spectacle does this act of our Legislature present to the world, of a people over a whole State suffering a wide-spread calamity, and the very guardians of that people (being then assembled) leaving their posts without giving them relief, and leaving this great work for spontaneous personal effort! As is the noble charity of San Francisco to the people of Sacramento without a parallel, so is the conduct of our Legislators in their neglect of the people during these times of distress and peril. And this, too, from those who have professed to be men of *retrenchment* and *reform*. We trust we have a Governor who holds a check-rein; and we shall put down the cost of adjournment to our State, loss of time, &c., at *one hundred thousand dollars.* A fair beginning for retrenchment and reform!

◆

Legislative Fencing—"Protect the Farmer."

Yes, by every principle of equity and justice, protect the farmer. Now that so sweeping a destruction has come upon the land-marks, and the protection of grain lands, orchards, vineyards, and farms, and the destruction of nearly all the fences of the State, it is very important that the Legislature should take prompt cognizance of the condition of the State and apply a remedy for the present exposed condition of the farming interest. We suppose all that will be needed is a law that shall compel stock owners to herd their cattle, and always to have herders with them, and to make owners of stock resposible for all damage committed by their stock and to give a *lien* upon the very stock that commits the damage for the injury done. This would make the thing sure and satisfactory. It is to be hoped that every moment of the time of our Legislators will be given to that kind of legislation that appertains to the real industry of the people. This will alone save the State from the ruin that is threatening it on all sides.

Heartless Speculation.

Raising the Price of Breadstuffs upon the Impoverished and Distressed!

There may be cases, and undoubtedly there are, where, in the interior towns, by reason of being cut off from all communication with the source of supply, the value of Breadstuffs is actually, really enhanced; but that there is *cause* here in our city, or Sacramento, Stockton or Marysville, for any material advance, we don't believe a word of it.

The rise originates with the *Speculators*, those who are even ready to *fatten* upon the *woes of others.*

That there is no cause for the present advance we are confident; for, from all the facts we have gathered, we believe we shall have on hand, when the new crops come in, from 400,000 to 500,000 bushels, with at least one month's supply of flour, equal to about 30,000 barrels. Believing this, we see no cause for the late rise, and we therefore pronounce it speculative, and cruelly so, when there is so much poverty and distress, and a certainty of a large increase to the numbers that must suffer.

One thing is certain: *Everybody* is not dependent upon *Wheat Flour.* Indian Meal, Rye Meal, Buckwheat, Peas, Beans, and a liberal supply of good wholesome vegetables, to which all can go (and they will be better for it), and be well supplied; these products must necessarily be in demand, and we shall be happy to know that consumers are at work to labor for a specific purpose, and that when flour advances beyond a certain figure, other products will take its place, and thus check what we believe to be an unnatural rise.

Let all who need Breadstuffs only buy as they shall need, "from hand to mouth," as a few weeks of the bright sun and the restoration of communication with the country, will show that we have a Surplus of Wheat and Flour!

Although the loss has been to some extent large among the farmers in warehouses and mills, yet from a review, we do not think it will exceed *Fifteen Hundred Tuns*, which would be about thirty thousand sacks. Supposing it shall reach *Fifty* or *One Hundred Thousand Sacks*, there will still be not far from *Three Hundred Thousand Sacks* left beyond a fair supply to carry us through. We do not believe that there is any need for this rise on Flour in our principal cities; it is only the result of a cruel speculation that should be checked at once. There is one way to check it. We have an abundance of Meal, Buckwheat, Rye, Beans, and other products that can take the place of Flour, for a while. A change in the demand will check fictitious prices, and show the *Hydra-Headed* scheme to add to the distress now already sufficiently heavy. We hope that every effort will be made by those who hold Wheat to meet the market, and put down error, for this cry of Short Stock of Breadstuffs will soon call *shipments here;* and this will injure our producers now, and operate upon their interests cruelly at the opening of the new harvest. Let Farmers look well to this fact. Their interest is to prevent any inducement abroad to ship Breadstuffs here.

◆

Swamp Lands.

The great "swamp-land enterprise" is pretty well *swamped*, and were any one disposed to lay a preëmption claim under the statute of overflowed lands, they might have a pretty good chance to locate on most any of our cities, or business places, or perhaps, could squat upon an orchard, vineyard, or a farm ready-made, save fencing. The late disastrous floods will make quite a change in the swamp and overflowed land business, and if our Legislature remain long in Session, some attention may be needed to this subject. As some quarter of a million of dollars has accumulated in the State's strong box (?) it would, in all reason, have been supposed that when so great a calamity has fallen upon the farmers as this flood, the fund (having been paid by them), would, as an act of justice, been set aside for their relief rather than have been used for any other purpose. We should think that the money paid in by men for overflowed land belonged to them, especially in a time of great distress, they having placed their money in the treasury. We trust this fund will be used for their relief.

◆

Plant! Plant!! Plant!!!

Let everybody that has an acre of good high loamy land, prepare to plant that land as soon as possible. The long continued rains will so delay all low lands, not now under water, to so late a period of the year that there is a probability that a great scarcity of many articles will be experienced in the spring. Hill sides should be used for peas, early turnips, beans, and many other vegetable crops. In addition to this, more than two millions of acres of wheat land mostly plowed and planted, will be lost to use this season. This deficiency can alone be made good by planting upon the hill-sides. There are hundreds and thousands of acres of red land, that has never seen a plow, that would yield 40 and 50 bushels per acre. Let all that can be used be immediately looked after, and at an early day let it be all prepared and planted. All the wheat that can possibly be raised will be wanted next year.

◆

New Music.—A sacred aspiration of though has been sent forth in a "Jubilee to God," by that eminent savan and composer, Gustave A. Scott.

The song or piece is called Grotjan—*Jubilate Deo,*" composed and dedicated to S. W. Grotjan, by Gustave A. Scott. This emanation is one of high order, and will be sought for by all lovers of sacred music. It is published by O. Ditson, of Boston, Mass., and is for sale by all music dealers on this coast. We are under obligations to the composer for copies of the valuable song.

◆

Dr. Lane on Physiology.—We have on our table a neat pamphlet on this science, being an Introductory Lecture, given by Dr. Lane before the class of the Medical College of the Pacific. The Lecture is one of rare merit, and has been published at the request of the students.

The hills around our city, present a fine green mantle, which, in the bright sunlight of yesterday, was pleasant to look upon.

Appeal from the State Agricultural Society.

We have received from the Secretary of the State Agricultural Society the following circular, showing the loss the Society has suffered from the floods, and appealing for its restoration:

Sacramento, Jan. 2d, 1862.

Dear Sir: By the recent flood in this city (several feet higher, where these rooms are located, than ever before known), the entire Cabinet and the most valuable portion of the Library of this Society were submerged, the former materially injured and the latter utterly ruined. The loss to our Society includes all our sets of the Transactions of kindred Societies, both European and American, public documents of the General Government, all our files of papers and periodicals, and most of our books of reference.

We address you this communication, hoping that you may be able to forward a set, or a portion of a set of Reports or Transactions; or a file of periodicals, or papers; or specimens in Natural History—Mineral, Animal or Vegetable—to aid in the speedy restoration of our well-begun work of collecting the Natural History of this coast, and furnishing our Agriculturists, Miners and Mechanics with such a Library as will at all times meet their wants.

Having saved a few copies of our Transactions for 1858-9-60, we shall be happy to reciprocate to the extent of our ability. Any contribution made or influence exerted in furtherance of this object will be highly appreciated by the Society. Immediate steps will be taken to prevent the possible recurrence of such a calamity. All parcels should be addressed to the Society, in care of the Secretary; and it is especially desirable that each one should be accompanied by the address of the contributor, and such facts as will be useful to the Society, and enable it to make due acknowledgement.

Hoping for an early response,

I remain, etc.

◆

Obituary.

A GOOD MAN GONE TO HIS REWARD.

Some two years and more since, this journal published several very valuable essays on Education. They were universally read and approved, and the sentiments and views were of the highest character. To a universal regret the writer's health failed him, and he left our State for his home in Illinois.

We have just read, with deep sorrow, the following record:

Died.—At Warren, Illiois, Nov. 14th, 1861, Jas. W. Wells, Esq., formerly of Sacramento, and a prominent Teacher in the Public Schools of that city.

We knew Mr. Wells, personally, whose acquantance and friendship we highly prized.

As a man, a scholar, a citizen, and a Christian, and in all the varied relations of life, he was conspicuous for all that made these relations noble. Mr. Wells has left uncompleted a work on California, which he was preparing for the press, which we hope may yet appear.

Mr. Wells was born in Virginia, Feb. 2d, 1824; consequently was 34 years of age.

Rarely has the cause of Education found a more faithful advocate, a more zealous laborer. It was to this work he gave the best energies of a well and truly cultivated mind, and a warm and devoted heart. As a proof of this we may say his too close application to that cause weakened his physical power, and has cut short his days in the very prime of life, and just as his light was beginning to shine in its fullness. But he goes to his reward, and his memory will be cherished and his name be honored, wherever the good and true have heard his voice, and felt the genial warmth of his noble friendship.

◆

Music under the Waters.—The floods at Sacramento and at other cities, and over the State, have probably destroyed at least two hundred pianos, besides numerous other valuable instruments, such as guitars, melodeons, accordeons, &c., together with a vast amount of music. That a portion of this will be replaced is very probable, and had this loss occurred by fire a larger portion would have undoubtedly been insured, consequently, would have been promptly replaced. But as there is no insurance against floods, the loss is total, and the calamity in many cases is so heavy as to preclude the possibility of replacement at present. Probably, however, one half of the property of this kind, thus lost, will be replaced within one year, and as we believe our readers are among those who suffer, and those who have a taste for music, we desire to tell them where they can replace their losses to a good advantage. We refer them to Rasche & Son, on Washington street, for pianos and musical instruments generally, and for music. Their stock of all kinds in this department, will enable them to serve their patrons liberally. We can also take pleasure in refering them to Messrs. Woodworth & Allovan, on Montgomery street, near Market, who are the sole Agents of the celebrated *Stoddard Piano*, of which they have a large supply.

This great loss to our State will induce a large shipment of pianos and music, and we presume the large music warehouse of Horace Waters & Co., of N. Y. city, of Boardman & Co., Albany, N. Y., and O. Ditson & Co., Boston, Mass., will receive from this State increased orders. Each of these houses being largely engaged in the California trade, and well known to our business men as highly honorable and reliable houses.

◆

Platt's Hall.—A visit to "Platt's Hall," will convince any one that our city may be called, in spite of much that is objectionable, a *city of great hearts.* What other city could show a better or nobler spirit. At least five hundred of our unfortunate people have been cared for, and the work goes nobly on. The stream of charity runs like a river. Every day gives new proof of the generosity of San Francisco, and indeed, of all parts of the State; the record of the donations do honor to mankind. We have not seen the sum total of the amount donated, both here and for Sacramento City, but it cannot be less than *one hundred thousand*, including money, food, and raiment. Every citizen can feel a throb of pride at such a work, and while there are hundreds and thousands whose names do not appear as donors, yet, they are also doing a noble work, receiving to their own houses and providing homes for the destitute, and aiding in various ways and doing good service by deeds of noble charity privately. Let the work go on till every sufferer is relieved, and the sun-light of hope shines in the heart again.

Loss of Stock by the Flood.

News of the wide spread disasters by the flood pour in upon us from every quarter. No part of our State seems to have been spared. While the banks of the rivers are overflowed, the valleys are also buried in the waters; no small streams now but has become like a roaring torrent; and in the hills and mountains the rains and snows have caused the mountains to move their sides and bury up the labor of years, and destroy the hopes of thousands. Our State, from one end to the other, has met with a calamity that years cannot make good. While the material property, of houses, merchandise, and produce, has been lost to the amount of millions (estimated at over 50 millions of dollars), the live stock of the State have been lost to a vast amount. It is impossible to arrive at any correct data, but it cannot fall short of one hundred thousand head of cattle, horses, sheep, and swine, and probably will reach a much higher number; for, besides those lost in the floods a large number have perished by miring in the hills and valleys, not flooded, and a large number will die of cold and hunger. All who have stock now, should do their best to shelter and feed them, and care for them to the best of their ability, as they are of double value to their owners.

◆

Removal of the Legislature.

Notwithstanding the continued rain of the past week, the waters had gradually receded from Sacramento, leaving the ground visible in the more elevated portion, and imparting a degree of hopefulness to the denizens of the Capital. Our legislators, after an interregnum of ten days, again began to arrive, preparatory to re-assembling, and the hotel keepers and others cleaned up their premises and nailed down their carpets, under the impression that they were safe from a further inundation. In the meantime, however, the temperature of the weather had moderated, and the warm rains in the mountains had commenced melting the snow which had been accumulating for some weeks past. On the morning of the 20th the water began to rise again, and continued to do so with variable rapidity during the succeeding twenty-four hours, until the whole city was for the third time under water, and "navigation" met with no impediment even in streets of the highest grade. Still, by the latest accounts we have, the water was not so high by about two feet as the *great* flood of January 10th and 11th. The Legislature assembled at the usual hour on the 21st, the members arriving at the Capitol in boats, probably in no very good humor, if we except the "Mark Tapleys" among them, who felt it their duty under the circumstances to be particularly "jolly." As soon as the Journal was read, the subject of removal came up, and occupied the greater portion of the day, the anti-removalists talking against time, in the vague hope that the weather would clear up and the flood recede, thus defeating the removalists by depriving them of their principal argument. The next day, however, after considerable tacking and manœuvering, our disgusted law-makers succeded in carrying an adjournment to San Francisco.

◆

California Steam Navigation Company.—In the calamities that are upon our State, it is gratifying to notice public companies doing nobly for the suffering poor. The California Navigation Company manifest a noble and generous spirit. They have given liberally, in many instances $1000 at a time. Besides this they have taken hundreds of passengers in every direction, free of charge. We have seen the honorable and kind regard paid to the suffering ones on board the Antelope, having been an eye witness many times, and the regard paid to their wants by Capt. Poole whose heart is ever alive to the claims of humanity. Mr. Watson, the Clerk, is ever regardful of the claims also of the poor and needy, and Mr. Graham, the Chief Steward, will long be remembered by many a delivered one whose hunger has been appeased. We hope every steamer on the rivers share alike in this noble work, and wish and hope that commanders of the steamers, clerks and stewards, might have the liberty to use their own judgment in case of need, for we are confident that every thing they did would redound to the honor and credit of the Company. During the flood the Steam Navigation Company have done a vast amount of good by special steamers and small boats sent to the relief of the suffering ones. Let all companies follow their liberal example.

◆

Californian's! Great Tea Drinkers.—There is probably no State in our Union where so great a variety of fine teas can be found as in this. Our proximity to China and Japan, and the increasing trade with these countries has given to our State the enormous number of thirty-six different kinds. We give them below, and simply remark that the *East India Tea Store*, on Washington Street, can furnish each or all of these varieties:—

Black Teas.

Basket Tea,
Extra Curious Oolong,
Superlative Chulan,
Flowery Pekoe,
Finest Congow,
Suepoy Tea,
Breakfast Souchong
English Breakfast,
Comet Oolong.
Finest Oolong,
Kokew Oolong,
Pearl Leaf Pekoe,
Gift Tea,
Kaskow Congow,
Lew Chew,
Company Souchong,
Finest Eng. Breakfast.

Mixed Teas

Howqua's Mixture,
Family Mixture.
Pekin mixture,
Mandarin Mixture.

Japanese Teas.

Japanese Young Hyson,
Japanese Hyson Skin.
Japanese Oolong.

Green Teas.

Old Hyson,
Golden Leaf Hyson,
Golden Chop Imperial,
Golden Chop Gunpowder,
Ex. Curious "
Finest Mogune Y. H.,
Superlative Hyson,
Finest Imperial,
Finest Gunpowder,
Ex. Curious Y. H.,
Finest Silver Leaf Y. H.
Finest Pearl Leaf Y. H.

◆

The weather last week in Contra Costa county was cold enough to form ice half an inch in thickness, and snow fell to the depth of six inches at the Mount Diablo coal mines.

The treasure shipped by the St. Louis on Tuesday, the 21st, amounted to $873,618 26. Of this amount $606,006 26 goes to New York; $253,612 00 to England; $14,000 to Panama. The steamer took but few passengers.

Plant Sugar Beet.—Had our stock raisers but planted a few acres of sugar beet the last year, as we urged them to do, thousands of their dairy stock that are now perishing with hunger could have been saved.

STATE SUMMARY.

The Continued Flood of 1862.

Our "State Summary" this week, as heretofore, can be but a record of the continued flood, and incidents connected therewith. As it was raining last week, so it has continued most of the time to the present, and whether it ever would "let up" was the anxious question on every hand. On Thursday morning, however, the sun made its appearance, seeming the brighter, and certainly the more welcome, for his protracted absence. We trust it may continue to "shine for all."

We mentioned last week that a cold storm was prevailing, wind northeast, which was probably snow in the mountains. So it was; but, as previously, the wind soon changed southerly, and the rain became warm enough to melt the snow, and cause another flood, the second of 1862, or more properly a continuation of the previous one. It used to be thought we could only have a rain storm with the wind from the south; but it has got so used to raining now that it seems to make no difference about the direction of the wind, which comes from *all* points of the compass, merely changing for variety (of wind), but still raining on. For several days (of course raining all the time) we have had the rain from precisely the summer or dry season quarter.

Well, as the rain has continued, so has the flood, only subsiding a few inches some days, and soon nearly recovering its former hight. The condition of Sacramento is an index to the state of the flood throughout the valleys. The Sacramento river had fallen two or three feet, the American still more, and the business portion of the city was out of water, when, near the close of last week, the American again commenced rising, from the effects of the warm rain, another inundation was anticipated, and preparations were made accordingly. The water, however, only came up to J and K streets, and soon receded; but with the continued rain, another rise occurred the first of this week, and by Tuesday, the day to which the Legislature had adjourned, J and K streets were once more navigable for boats of light draught, and the water six inches deep over the floor of the St. George Hotel. The high winds which prevailed a portion of the time have caused some additional damage to property exposed to the waves, and the destruction of much stock, but in the city the people seem to have got so used to being flooded as to regard it merely as an inconvenience.

The Sacramento Bee of Tsursday afternoon says that the streets were alive with boats, many of them containing ladies, who were tempted out by the fine weather. Owing to the break in the north levee, a very rapid current was passing through the upper part of the city. About 300 persons are inmates of the Agricultural Hall, largely increased at meal-time.

The steamer Gem, while going up the American river on Thursday, was drawn by the current into the break at Rabel's tannery, and swamped inside the city limits.

At Stockton last week, the water was higher than ever before, caused partly by the high wind and back water, but no great damage resulted. The reports from up river on Wednesday night by the boats, are that the water was again rapidly rising in Sacramento, the levee on the American at Rabel's tannery having given way, and it was expected the flood would be as great as any preceding. At Stockton also the water rose again on Wednesday, and reached as high a point as at any previous time.

The Howard Benevolent Society at Sacramento (assisted by the Relief Committee and citizens of this city) continues its active and noble labors. Besides the hundreds of persons taken care of at the Pavilion, stations have been established at various points, and provision made for the sufferers. Boats well manned and with supplies have been sent out in all directions over the valley, and many families and individuals have been rescued and taken up or down river by steamers; others in the county, where it was safe to remain, have been supplied with provisions.

The Folsom Telegraph says that more than a month will be required to repair the Railroad. The last break in it extends for seven or eight miles, and the Superintendent declares he will not again attempt to mend the road till he is satisfied that a lengthy season of fair weather has set in.

The Telegraph wires in the flooded valleys have in some cases been broken down by houses drifting against them. There has been no working of the Telegraph to Sacramento, we believe, for several weeks.

At Rio Vista, on the Sacramento, the large hotel and another building are the only houses that have not been carried off. The town is to be rebuilt about two miles further down the river, where it will be above the reach of floods.

Throughout the San Joaquin valley the loss to farmers and others has been very heavy. On the Stanislaus, from Knight's Ferry up, all the property on the bars has been swept away, and all the bridges, except that at Forman's, from Angels to Mokelumne Hill, have been destroyed. At Murphy's and Vallecito all mining property on the bars was carried off. At Abbey's Ferry not a vestige of a house was left. Hundreds of small farms and comfortable homes have been completely ruined.

The Cosumnes river was five or six feet higher than ever known before, and the loss of property was very heavy. Bridges, sluices, quartz-mills, tailings, cattle and hogs were swept off. Trees 60 feet in hight were uprooted, and carried down the stream end over end.

The loss of stock is estimated by the Stockton Independent as follows: Without counting the fine blood stock which is owned by farmers in this valley, and which is always carefully stabled and fed through the winter, we may estimate the loose and uncared for stock between the Merced and Cosumnes at not less than one hundred thousand head. Of all these, if this rain and flood continues for three days longer, there will probably be not a tenth left alive. Such wholesale destruction of stock is terrible and unprecedented on this continent. Coupled with the losses of farmers in grain, swine, horses, mules, agricultural implements, and generally the means of husbandry, it combines to threaten us with a famine, or at least to make us dependent on other countries for the necessaries of life.

The Red Bluff Independent says that R. H. Thomas, of Tehama county, will lose about 2000 head cattle this winter. The general average loss of stock raisers up the valley, where the herds are very large, is one-third of their entire stock, and some have estimated it as high as one-half.

It is confidently asserted that the Klamath, at the mouth of Salmon river, was 42 feet above the wire bridge. The bridge was 90 feet high. The river is narrow at this point, and the measurement was taken on trees above the bridge.

The Amador Ledger states that the whole of Ione valley was a lake, and that the flood had done great damage there. At Ione City the water was over two feet deep. Several buildings were swept off.

On the lower Tuolumne, from Lagrange downward, everything has been swept away. A great deal of the loose stock has been drowned.

In Yolo county, in the vicinity of Putah creek, the destruction of property by the late flood was immense. Houses and fences and stock were swept off in quantities.

Forlorn Hope, on the lower Merced, six miles below Snellings, is all gone. A gentleman from Mariposa, states that the loss in that county is immense. On the Merced the destruction is complete. Fremont's mill is damaged several thousand dollars. Snelling's Hotel is ruined, and as that was comparatively in a safe situation, the ruin in the surrounding country must have been universal.

Jacksonville, Tuolumne county, has been washed away. E. Deering, of the firm of Deering Brothers, lost his life. He wsa endeavoring to ride to his store to save his books, when his horse fell in the current, and he was washed off and drowned.

Colusa county is said to have suffered much less than other counties from the floods. The amount of stock lost is much less than was at first reported, it having been driven back to the hills. The Agricultural portion of the county has doubtless been much benefited by the overflow.

In Nevada county the damage to ditches and flumes will probably reach several hundred thousand dollars, caused principally by slides of earth upon the steep hillsides and the breaking away of dams. Numerous slides have occurred in every part of the county, in some places carrying down trees three or four feet in diameter.

The Marysville Express estimates the loss of human life during this flood at 62 persons; but we suppose this estimate will prove in the end to be far too low, and it evidently makes no account of the hundreds of Chinamen known to have perished. Intelligent Chinamen say the number of their countrymen lost in the December flood alone was about 500!

From other quarters come accounts of serious disasters, accompanied in some cases by loss of life. Washoe has been the scene of continued storms of snow and rain, and the cañons and flats have been flooded. All the lines of stages, except Wilson & Smith's, had been running sleighs, until stopped by the rise. The Pioneer line had a regular Overland sleigh, and Langton & Co. had been running a splendid sleigh, with six horses, to Carson City. Mills, bridges and roads have been swept away, and towns and families in the lowlands have been compelled to take to boats and move to higher ground. Carson river is reported to have been four feet higher on the 11th than ever before known. The water was 18 inches deep in the streets of Carson City. Two women and three men lost their lives there by the swamping of the boat in which they were crossing the river. Several lives were lost at Chinatown.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

Rebuild Your Fences.

The universal loss of Fences in our State will fall as a heavy blow upon our Farmers, and every opportunity and means for their being replaced at as little cost as possible, should be availed of at an early day.

We call the attention of all who desire to build Fences at a little cost to HYDE'S PATENT POST-DRIVER, for sale at this Office.

RIGHTS for Counties and for large Farms, can be purchased at the *Farmer Office*, on the most favorable terms. A liberal allowance to all who have suffered by the flood. Any information can be had by addressing Editor California Farmer. 16

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

FIVE
INGERSOLL'S
HAY AND WOOL PRESSES,
AMERICAN MANUFACTURE,
JUST RECEIVED—AND FOR SALE BY
16 MACONDRAY & CO.

Dr. E. C. Angell,
DENTIST,

IS PREPARED to supply Whole or Half Sets of Superior MINERAL TEETH manufactured in his own Laboratory, being modeled and carved for each individual case in such a manner as to secure the most perfect adaptation, and the complete restoration of the features. By the aid of machinery he is enabled to furnish SUPERIOR WORKMANSHIP at prices scarcely, if at all, higher than is charged for Artificial Teeth of the most ordinary and commonplace character. Samples he may seen at his office, and reference is permitted to numerous cases in which the work is doing excellent service.

His DENTIFRICE, known as—
ANGELL'S
Orris and Charcoal Tooth Soap,
Is not only grateful to the mouth, but is widely admitted to have no equal for cleansing the Teeth and promoting their soundness. A package that costs one dollar lasts twelve months if used daily. For sale by the principal Druggists.

DR. ANGELL Practices Dentistry in all its various branches, giving especial attention to the TEETH OF CHILDREN, preventing and correcting Irregularities. For Straightening Irregular Teeth, he has invented apparatus that renders the treatment of cases which have hitherto been considered beyond the reach of remedy, comparatively easy and rapid.

Difficult Cases in any department of Dental Surgery or Mechanical Dentistry, respectfully solicited.

"TO WAR!" "TO WAR!"

BY CARO.

[The following glowing lines were sent in, some *fifteen* years since, by a gifted friend; and in looking over our scrap-book, we find they are so appropriate now, we publish them. As they have never before appeared in print, we claim for our journal these stirring words.]

"To war! to war!" the wild blast caught
The sound with blood and anguish fraught,
And flung it up to Heaven on high,
Till stars fell trembling from the sky.

"To war! to war!" the forest heard
A million death-cries in that word,
And the proud trees bent low in fear,
As if God's hurricane were near.

"To war! to war!" the ocean-wave
Sank slowly down to form a grave,
Then lifted its broad arms to clasp
The victims rushing to its grasp.

"To war! to war!" meek woman heard
A death-knell ringing in that word,
And raised to Heaven her pale pure brow,
As if but *God* were left her now.

"To war! to war!" and brave men sprung,
As if no hopes around them clung;
And 'neath the drum and music's thrill,
Crushed down *God's* voice: "*Thou shalt not kill!*"

"To war! to war!" I challenge now,
Men of bold hearts and fearless brow;
WAR AGAINST WAR! till earth be calm,
Or Death's sword strikes thy spirit-arm.

[For the California Farmer.]

CHRISTMAS DAY.

ONCE more the sacred day,
That tells of hope, and heaven;
That gives the promise sweet,
Of mortal sins forgiven;
Dawns on the world in radiance bright,
Let man, rejoicing, hail its light.

Let anthems, loud and clear,
Proclaim the glorious theme,
Which first on Bethlehem's plains,
With bright and starry gleam,
Told, to the waiting shepherds there,
The birth of heaven's celestial heir.

That holy, glorious one,
Who came to seek and save;
Even God's precious son,
Who triumphed o'er the grave;
This day, for man, an offering given,
Opened a pathway bright to heaven.

Rejoice, oh, sin-sick soul!
The blood-bought peace is thine,
The sacrifice complete,
The offering divine;
Rejoicing, glorify your Lord,
Believing in his precious word.

HOME-VALLEY RANCH, Dec. 8th. AGNES.

[For the California Farmer.]

Sketches of Emigrant Life.—No. 1.

IN the spring of fifty-two, I found myself, in company with a vast concourse of persons, of all descriptions, embarked on an ox-wagon, bound for the then new, wonderful, and mysterious, Land of Gold. Our own particular company, consisted of about seventy-five persons, of whom, six were ladies, and seven children. We left St. Joseph's on the eighth of May, and entered at once on all the hardships of camp life, and we had no mild introduction to it, you may be sure. For the first four weeks, we had much rain, and the roads were consequently, bottomless. The drivers were mostly sons of the Emerald Isle, and had a remarkable tinge of the same hue, in their own composition. The cattle were for the most part, perfectly innocent of yoke, or labor, and as refractory as one would expect. We however progressed without any very great difficulty, until Saturday, the 15th of May, when we reached the big Nimehaw river. We found the stream much swollen by the late rains, and with our wild unbroken teams, the fording was no easy task, the drivers and many of the passengers being compelled to wade in the cold water up to their arms, to keep the cattle in the proper track, and prevent them from tipping the wagons over in the stream. After crossing, we camped in a fine fertile valley near the river; and here, for the first time, the yokes were entirely removed from the young cattle, and they were turned loose for a Sabbath of rest. Saturday had been cold, misty and dismal, and the night set in with a dense fog and raw atmosphere, that was more uncomfortable than a decided storm. On Sabbath morning we were awakened by the shocking and fearful announcement that we had cholera in our midst, one of the drivers having been pronounced incurable, by the Doctor of our company. The utmost consternation prevailed; fear and horror appeared in every face, and I think I was counted little short of insane, when I was seen hastening towards the tent where the sick man lay, to ascertain if anything could be done for his relief. I found him alone, his own brother even too much alarmed to try to do anything. He was cold, speechless, and seemingly insensible; but stimulants, and warm applications, with rubbing, so far restored him, that at one time he could speak to us, and we hoped to save him; and amid more favorable surroundings perhaps we could have done so; but here, we could only smooth the pathway for his departure, and at four o'clock, when the sun had come forth in splendor, and the raindrops sparkled on every bough, he left us, for a longer journey and a brighter land. On Monday, we prepared his last resting place, and with sad hearts, in which tenderness had taken the place of fear, they gently laid him for his final sleep, where the spring flowers were waving bright and fair, and wild birds sang his requiem. And so we left him, the survivors saddened, humbled, and more sensible that their only hope and trust was in Him, who could see us, in our weary march, as in the crowded city. May he rest in peace.

A Child's Gratitude.

Parents spend a life of toil in order to leave their children wealth, to secure them social position or other worldly advantages. I do not underrate the worth of these things. Had they not been valuable, there would not have been so many providential arrangements impelling men to seek them. I would only show that there is something of infinitely greater value, not only to the parent, but to be transmitted to the child. What does the child love to remember? I never heard a child express any gratification or pride that a parent had been too fond of accumulating money, though the child at that moment was enjoying the accumulation. But I have heard children, though their inheritance had been crippled and cut down by it, say, with a look of satisfaction on their features, that a parent had been too kind-hearted, too hospitable, too liberal and public-spirited, to be a prosperous man. A parent who leaves nothing but wealth, or similar social advantages to his children, is apt to be speedily forgotten. However it ought to be, parents are not particularly held in honor by children because of the worldly advantages they leave them. These are received as a matter of course. There is comparatively little gratitude for this. The heir of an empire hardly thanks him who bequeathed it. He more often endeavors, before his time, to thrust him from his throne.

But let a child be able to say: "My father was a just man, he was tender-hearted, he was useful in the community, and loved to do good in society; he was affectionate in his home; he was a helper to the young, the poor, the unfortunate; he was a man simple, liberal, upright, devout;" and the child's memory cleaves to that parent. He honors him, reveres him, treasures his name and his memory, thinks himself blest in having such a parent; and the older he grows, instead of forgetting, only reveres and honors and remembers him the more. Here is experience and affection setting in judgment on human attainments. It shows what is most worth the seeking.—[Eph. Peabody.

◆

Cured of Smoking.

A wild girl was Mattie Lee. I knew her when she was but fifteen; she was first in every frolic; a favorite with the master, yet the scholar who, oftener than any of the rest caused a shade to rest upon his brow. I knew her when a grown up young lady; she was first in every party of pleasure; a favorite with all the gentlemen, yet a coquette who, oftener than any other, caused a shade to fall upon their hearts. I knew her too when, a true-hearted woman, she gave her hand, with her heart in it, to Richard Forrest, the editor of one of our village papers. Now Richard was a fine fellow, but, like a good many other "nice young men," had one bad habit; he would smoke. This same habit annoyed my friend Mattie quite as much as it would have done most ladies, but she did not commence curing him of it as they would have done, with prayers and tears, entreating him for "the love he once bore her," to give up the "noisome weed;" not she. Mattie took a plan less threadbare, and it was somewhat in this plan.

They were boarding, and had a nice room, the second story front. On a certain evening, just before dark, Mattie busied herself with putting the room in perfect order,—placed every chair where it belonged, arranged the books on the table and the mantle ornaments in the most tasteful manner. After taking a careful survey of the room, and satisfying herself that everything was as it should be, she went to a bureau and took from one of its drawers a small package, neatly wrapped in tissue-paper; "some new jewel, probably," you will say, "with which she intends adorning herself to meet her lord." She carefully unrolled the paper and took from it a new, spotless tobacco-pipe; then opening, at one end, a little roll of carefully-sealed silver paper, she commenced stuffing the pipe with fine-cut tobacco. How strange her little white fingers looked diving into the hateful stuff! The pipe well filled, she laid it carefully on the table, placed a match beside it, and seated herself to await the coming of her "better half."

Soon she heard the street door open, and a well-known footstep in the hall below. Quickly lighting the match, she applied it to the sweet-scented herb in the pipe, re-seated herself, and when the husband entered, sat quietly by the stove, wreaths of blue smoke curling gracefully above her head, which was thrown back in that peculiar position of enjoyment which gentlemen usually assume while inhaling the weed.

Mr. F—— had opened the door with visions of Mattie's smiling face looking lovingly on him, floating through his mind. How different the picture that met his astonished gaze! On hearing the door open, Mattie looked up, and, seeing her husband, deliberately took the pipe from her mouth and wished him "good evening," as though nothing unusual had happened, then quietly resumed her smoking. Richard regarded her with a mixture of surprise and horror for a few moments, and then gave vent to his feelings in words:—

"Why, Martha, what am I to think? Have you suddenly lost your senses?"

"I do not see any very strong evidence of such being the case," answered the lady addressed; then as if comprehending the cause of his astonishment, she asked—"Is it possible, Richard, that you do not know of my habit of smoking? Did I—did none of our family ever tell you?"

It may be well here to state that my friend Mattie was not always as scrupulous in adhering to truth as she might have been; at least she did not think it very objectionable, under some circumstances, "to do evil that good might come."

Each particular hair of Richard's head seemed to stand on end, in contemplating the tale unfolded by that one word *habit*. The only outward manifestation he made of the state of his feelings, was an emphatic "Impossible!" accompanied by a look of pious horror.

"Why impossible, my dear? Had I acquired the habit lately, I should only have been treading in your footsteps, thereby showing my willingness to be guided, as a dutiful wife should be, by the inclinations of my husband, and a laudable desire to consult, in *all* things, his tastes; but I have no such commendable motives to offer. I was influenced wholly by a desire to please myself. I used to think before we were married, that I would give up the practice and never let you know that it had been; but since I have found how much it adds to your enjoyment, and you have told me so often how much your pleasures are hightened by being shared by me, I have almost concluded that it is my duty to continue it. How delightful it will be to sit together during the long winter evenings, and thus taste the delights of social intercourse. Come, sit down; I have a cigar in readiness for you; I prefer the old-fashioned pipe."

By this time Richard's brain was well-nigh stupefied.

"It cannot be possible that my wife would so degrade herself!" he at length exclaimed.

"Why, Richard, it seems to me you are making a great ado about a small matter. I do not think it so dreadful to enjoy a harmless, innocent pipe, here in my room occasionally, where no one can possibly know of it but yourself. Besides, if there is any degradation in the practice, as you hinted a moment ago, I am only coming down to a level with my husband. You expect me to love you, notwithstanding the habit; why not vice versa? And I care not what others think;" and Mattie now looked up in his face with such an expression of veneration for him and all his actions, that he almost laughed, annoyed as he felt.

"Come, Mattie," said he more pleasantly than he had yet spoken, "let us make an agreement. If you will leave off smoking, I will use but one cigar a day for a week, and then give it up entirely. What do you say?"

"I do not see why I should not have the same privilege as yourself," said Mattie, pretending to be offended. "It is probably quite as difficult for me to give up a long-established habit." Then, after a moment's consideration, she added:—"However, since I consider that proviso in your favor, an acknowledgment of the superiority of the strength of woman's will over that of the stronger sex, I will accede to your proposition."

If Richard ever smoked that "one cigar a day for a week," Mattie never knew of it. On that eventful night he had "seen himself as others saw him," and with the sight vanished for ever his love for smoking.

◆

Ten Reasons why every Farmer and Stock-Raiser Should take the California Farmer.

1st. EVERY Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily, to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefited* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by the constant access to a Home Journal.

6th. The CALIFORNIA FARMER has faithfully advocated the best interests of the Farmer and Stock-raiser for eight years, and is the ONLY AGRICULTURAL JOURNAL IN CALIFORNIA.

7th. The CALIFORNIA FARMER contains the most important information relative to their interests in every branch of Agricultural science.

8th. The CALIFORNIA FARMER contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The CALIFORNIA FARMER contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The CALIFORNIA FARMER is now the *only paper* on the Pacific Coast that is continued by its *original Editor and Proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all good men.

◆

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Literary Shrubbery.

THE RAIN.

Drip, drip, O Rain!
  From the sky-beclouded eaves;
Wail, wail, O Wind!
  That sweeps the withered leaves.

Moan, moan, O Sea!
  In the depth of thy secret caves;
Utter thine agony,
  With the roar of thy striving waves!

Sigh, sigh, O Heart!
  That vainly seekest rest;
Moan, moan, O Heart!
  By grief and care opprest.

For the drip of the falling rain,
  And the wail of the wind, shall cease;
The roar and strife of the waves
  Ere long shall be at peace.

Then fear not, O sad Heart!
  To let thy grief have way;
For the grief that hideth not,
  Shall the sooner pass away.
[Household Words.

GENUINE HEROISM.

How much we hear and read of the heroism of the ancients. At what age of the world's history did that noble spirit expire which enabled men sublimely to meet any destiny, and gaze alike on good or evil fortune with calmness and serenity? To "do right, though the heavens fall," was the uncalculating creed of those heroes. A few such there were, shining out like stars in the firmament of the social world; and human nature is not so corrupt but that such men there are now, and may be hereafter. The noblest sight under heaven, the most beautiful spectacle in a whole universe of beauty, would be that of one who would accept the monarch's crown and the homage of the world, or the martyr's rack and its consuming fire, indifferently, if the one were the reward and the other the consequence of single-minded perseverance in the path of duty. Such a man would leave his mark upon the world; the present would bow to him, the future would adore him. Great, self-denying, comprehensive, heroic souls of this order are rare. In common life, the true heroic man bears with equanimity the gains or the losses of fortune, rising above all reverses, and not exalted by any successes. Superior to all, he silently defies destiny, and overcomes fate by the strength of his simple manhood.

PAYMENT IN INSTALLMENTS.

Judge ——, a well known and highly respected Knickerbocker, on the shady side of fifty, a widower with five children, full of fun and frolic, ever ready for a joke—to give or take—was bantered one evening by a Miss of five and twenty for not taking another wife. She suggested that he was hale and hearty, and deserved a matrimonial helpmate. The Judge acknowledged the fact, admitted that he was convinced by the eloquence of his fair friend that he had been thus very remiss, and expressed contrition for the fault confessed, ending with offering himself to the lady, telling her she certainly could not reject him after pointing out to him his offense. The lady replied that she should be most happy to take the situation so uniquely advertised, and become bone of his bone, and flesh of his flesh, but there was a serious obstacle.

"Well," says the Judge, "name it. My profession is to surmount such impediments."

"Ah, Judge, this is beyond your powers. I have vowed, if ever I marry a widower, he must have *ten children!*"

"Ten children. Oh! that is nothing," says the Judge; "I'll give you five now, *and my notes on demand, in installments, for the balance.*"

THE MODERN VANDALS.

I remember that Adam Smith and Gibbon had told us that there would never again be a destruction of civilization by barbarians. The flood, they said, would no more return to cover the earth; and they seemed to reason justly, for they compared the immense strength of the civilized part with that which remained savage, and asked from whence were to come those Huns, and from whence were to come those Vandals, who were to destroy civilization. Alas! it did not occur to them that, in the very heart of great capitals, in the very neighborhood of splendid palaces, and churches, and theaters, and libraries, and museums, vice and ignorance, and misery might produce a race of Huns fiercer than those who marched under Attila, and Vandals more bent on destruction than those who followed Genseric.—[Macaulay.

SIGNS OF PROSPERITY.

When spades grow bright, and idle swords grow dull;
Where jails are empty, and where schools are full;
Where church-paths are with frequent feet outworn;
Law court-yards weedy, silent and forlorn;
Where doctors foot it, and where farmers ride;
Where age abounds, and youth is multiplied.
Where these signs are, they clearly indicate
A happy people and well-governed State.

Men may lose by being too communicative. The great laconic philosopher Shirk says: "Keep shady, and if you see a quarter on the ground put your foot on it."

The same iron ore furnishes the sword, the plowshare, the pruning-hook, the engraving tool, the spring of a watch, the chisel, the chain, the anchor, the compass, the cannon-ball, the sewing-machine, and the guillotine.

A lady asked her gardener why the weeds always outgrew and covered up the flowers. "Madam," answered he, "the soil is mother of the weeds, but only stepmother of the flowers."

After the battle of Waterloo, the editor of this biography happened to enter the Duke of Wellington's opera-box in Paris, on some business. The Duke was sitting alone in a dark corner of the box, the seats in front being filled with fashionable London men and women, who were with great volubility discussing the battle, and assigning all the honors to the cavalry. The Duke listened, and in a low voice said: "I have told them that the British infantry won the battle, and all our battles; but it has been intimated to me that I know nothing of the matter, and I expect soon to be told I was not there."—[*Memoirs of Sir Charles Napier.*

An old "revolutioner" says that of all the solemn hours he ever saw, that occupied in going home one dark night from the widow Bean's, after being told by her daughter Sally that he needn't come again, was the most solemn.

Smith O'Brien made a speech at Detroit, in which he said it gave him pain to find that many of the Irish who earned from one to two dollars a day, spent it all for whisky. He intimated that they would be better off in their native land earning a shilling a day, and where whisky was of better quality.

When Haddiz's wife kicked him out of bed one cold night, says he: "See here, now! you'd better not do that again; if you do, it might cause a coolness."

A philosopher who had married a vulgar but amiable girl, used to call her "Brown Sugar," because, he said, she was sweet but unrefined.

Ambition often puts men upon doing the meanest offices; so climbing is performed in the same posture as creeping.—[Swift.

East India Tea Store.
ESTABLISHED IN 1857.
631 Washington street,
Nearly opposite Maguire's Opera House.

GEO. M. SMITH & CO.
DEALERS EXCLUSIVELY IN
Choice Green and Black TEAS
Of Chinese and Japanese production;

MANUFACTURES BEST OF FAMILY SOAPS.
Near corner of Mason and Pacific streets.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N SWEZY, President, and CHAS. M. GORHAM, Secretary. The Committee was composed of H. HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,
For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
3-3m 119 First street.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL WARREN, Editor California Farmer, who will furnish all needed information.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks: and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.
To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING MACHINE.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Jan. 23.

Since our last report, there has been an active milling and speculative demand for Wheat, and prices have very materially advanced. At the present moment Wheat is selling from 2½ to 3 cents per pound. The long tedious storm has had the effect to stop our receipts from the country, and create alarm in the minds of some as to there being a short supply to last until another harvest. This has caused speculators to enter our market, and millers to become competitors. The price of flour has also advanced in proportion to wheat, as will be seen by our annexed report. Hay, Barley, and Oats, as well as Potatoes, have experienced a like advance, and for the same cause, as before stated. We feel confident that these advances are ill founded, and notwithstanding the alarm, there is plenty and a surplus to spare. An experience of years in this market, and having seen many like excitements, leads us to speak as we believe, and predict as rapid a fall as we have had an advance, so soon as we are favored with a spell of fair weather and traveling in the country gets passable. Our wharfs will groan again under their loads, and prices recede. There appears some uneasiness in the minds of many, about our farmers having time to plant. In some sections they will doubtless be delayed, and our harvest prove later than usual; but the ground being so thoroughly wet, would almost insure a crop were it planted as late as April. We have one case in view in 1861, where a party near Santa Rosa, who had planted his crop of Wheat at the usual time, but, from neglect, his seed became destroyed from too long soaking in vitriol solution and did not start. He commenced and replowed his ground and planted the 14th of April (this may be an exception for 1861), but, to our personal knowledge the crop was a splendid one, the yield large, and grain equal to any in that section of the State. We say this proves conclusively that late planting sometimes will answer. The Carrier Dove, for Queenstown, Ireland, took 40,658 sks. of Wheat, valued at $94,460,64. The Punjaub, for Liverpool, took 17,028 sks. of Wheat, 8604 ½-sks. Flour, 2050 sks. Barley, and a quantity of Wool, Tallow, and Salmon, valued at $58,688 93.

Our receipts for the past week have been unusually light, viz:—Wheat, 6015 sks.; Flour, 200½ sks.; Barley, 1700 sks.; Oats, 500 sks.; Salt, 1315 sks.; Potatoes, 3247, sks.; Hay, 80 tuns.

San Francisco Cattle Market.

Jan. 21.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

All the change we have to note for the past week is an advance in the price of Mutton. Prices of all other stock remains the same, but firm at our quotations, with a prospect of an advance on all kinds, as there can be no doubt that the destruction of stock throughout the country has been great; which together with the bad state of the roads will cause the supply to be limited for some time to come.

AVERAGE SLAUGHTERERS' PRICES.

OUR ENIGMAS.

We have received the following answers to our Enigmas, and are pleased to note the interest taken in them. Our limited space compels us to abbreviate Mattie's answer.

ANSWER TO ENIGMA NO. I.

The crowning glory of our Revolutionary fathers was the "Declaration of Independence."

Mattie.

ANSWER TO ENIGMA NO. II.

Mr. Editor: I'd freely wager a beaver hat,
That your "simple fellow" is a precious *Flat;*
Nor is it very difficult to tell,
The "instrument of music" is a *Shell;*
So, by the same ingenious art,
We find the "animal" is a *Hart;*
Then quickly comes the happy thought,
The bench across the boat 's the *Thwart;*
Without the slightest chance to fail,
I found your "mammal" was the *Whale;*
The place "not in the Atlas found,"
I knew must be fair *Eden's* ground;
A cruel punishment is that
Well known to sailors as the *Cat;*
Where'er the farmer sows his seeds,
Will always spring some useless *Weeds;*
But it is not the "carpenter" alone
Whose tools are sharpened with a *Hone;*
That which all covet, even more than health,
(And it's very convenient!) must surely be *Wealth;*
Your "species of tree," it is readily seen,
Is the stately *Larch,* with its crest ever green;
And pleasant to view, on some emerald knoll,
Is the motherly mare and her frolicsome *Foal;*
To learn that in England a grove is a *Shaw,*
Must surely on Webster have forced you to draw!
The laborer's evening is happy and blest,
When, the day's toiling over, he's taking his *Rest;*
We all know how useful a member's the *Head,*
Though with many the stomach finds favor instead;
That "part of an animal" is certainly *Flesh;*
And with *Crewel* a woman makes many a mesh.

Having solved your Enigma, I think I can bolt,
Nor fear you'll ungallantly dub me a *Dolt.*

Lizzie in a Rain Storm.

P. S. I omitted to give "the whole"—*Charles the Twelfth of Sweden.* L.

ENIGMA NO. 3.

My 5, 7, 8, 11, 1, 19, 11, 12, 9 is a pleasant mode of locomotion.

The 5, 7, 16, 9 is a crawling nuisance in a garden.

My 9, 22, 6, 10, 5, 7, 13, 4, 8, 17 is a favorite novel.

A ship in a storm is in danger of 7, 16, 2, 18, 15, 11, 12, 1.

Do not 7, 21, 1 on your way to 14, 19, 16, 2, 18, 15.

I never knew a boy who was fond of 23, 2, 16, 9, 5.

Touch your 14, 19, 11, 12, with your 15, 6, 8, 7, and your neck will 21, 14, 19, 6.

The 7, 21, 2, 14, 19 makes a pleasant 5, 15, 3, 23, 8.

The 15, 6, 12, 8, 1, 9 is a universal table luxury.

The 5, 11, 12, 1, 8, 22 is always welcome in the social circle.

Those who have 9, 17, 3, 20, 15, 21, 11, 2 would fain conceal or disguise it.

And the rythm, rhyme and sentiment of my whole has received the world's applause.

HAPPY WALTER.

Passengers on board one of the ferry-boats that are constantly plying between the opposite shores of the Mersey, may occasionally see, on warm, bright days, a poor crippled boy, whose limbs, withered and helpless, are still those of a child.

He wheels himself about on a small carriage, similar to that the boys use in play, and while the little boat threads its way among the ships of all nations that are anchored in the river, he adds not a little to the pleasure of the sail, by playing on his "concertina" airs that show no mean degree of musical skill. The few pennies that he always receives, but does not ask for, are never grudgingly bestowed, and are given no more in pay for music, than for the simple honesty that shines in the boy's blue eyes.

One so helpless, it would seem, could only be a burden to those who loved him—could certainly do nothing towards fulfilling the command—"Bear ye one another's burdens;" was it so? Was there no service of love for the lame boy? No work for him in the vineyard? The question was answered one day.

"Walter," said a gentleman who had often met him, "how is it when you cannot walk that your shoes get worn out?"

A blush came over the boy's pale face, but after hesitating a moment, he said:

"My mother has younger children, sir, and while she is out washing I amuse them by creeping about on the floor and playing with them."

"Poor boy!" said a lady standing near, not loud enough, as she thought, to be overheard, "what a life to lead! what has he in all the future to look forward to?"

The tear started in his eye, and the bright smile that chased it away, showed that he did hear her. As she passed by him to step on shore, he said in a low voice, but with a sad smile that went to her heart:

"I'm looking forward to having *wings* some day, lady!"

Happy Walter! Poor, crippled and dependent on charity, yet doing in his measure the Master's will, patiently waiting for the future, he shall by and by "mount up with wings as eagles, shall run and not be weary, shall walk and not faint."

MORE HORSE THAN JOE.

The Canadian French are a very simple, honest race, and generally quite poor. They are not very industrious, and consequently not in the most comfortable or thrifty condition; but one and all have a great ambition to own a horse. An old horse and some kind of a cart is esteemed as highly as a kingdom would be. Some time since one of these poor fellows succeeded in becoming the owner of an old horse. Hitching him up to a dilapidated cart, Joe (they are all called Joe, for short) started for the village, and meeting one of the principal citizens, hailed him, saying, as he pointed to his "team:"

"Mr. Noyes, I want you to give me some work."

"Well, Joe, what kind of work do you want?"

"O, I don't care," says Joe. "I want it to be a good deal of horse, and *not much Joe!*"

Alas! he is not the only one among us who prays that his task may be a good deal horse, and not much Joe!

In a large school there were two teachers by the name of Mill. One was bland and forbearing, seldom or never having recourse to the exercise of discipline in its roughest form. The other was firm, hasty and an upholder of the rights of the rod. The difference was soon noted by the boys, and the two were appropriately known as the *flour* Mill, and the *thrashing* Mill.

Swallows are in the habit of digging holes in the banks of the Mississippi river, and there making their nests. Sometimes (it is said) the banks cave in, leaving the holes sticking out some eight or ten feet!

Why is a cannon just fired, like a whipped school-boy? Because it is warm at the breech.

By Overland Telegraph.

Yesterday, despatches were published, down to the 18th inst., none having been received for several days previously.

Edward M. Stanton has been appointed and confirmed Secretary of War; and Cameron has been confirmed as Minister to Russia.

The expedition from Cairo into Secessiondom under General Grant is moving rapidly towards Columbus, via Mayfield, Ky., intending to attack by a flank movement. News of a battle may be expected shortly. The gunboats Lexington and Conestoga engaged the rebel batteries at Fort Henry, up the Tennessee River. The rebels evacuated, and the Federal troops, under General Smith, occupied the place. The Stars and Stripes are now floating over the Fort. This is the first Federal victory in Tennessee. Humphrey Marshall's rebel troops, being cornered by Colonel Garfield's forces, laid down their arms and disbanded. They burned everything they had except cannon. A grand Irish Division will be formed under Shields, with Meagher, Mulligan, Cass and Carrigan for Brigadiers. Several war vessels have started for the Gulf, under Com. Farragut. Port Royal letters say the rebel loss in the affair on Cooper's Island, on the first of January, was two hundred killed and wounded. News from Fort Leavenworth says that 4,000 Union Indians in the Cherokee country were attacked on the 6th inst., by a superior force of Texas Rangers. The Indians were compelled to retreat, and are now in Kansas. A Fort Monroe dispatch, of January 16th, says the remaining vessel of Burnside's Expedition left this afternoon. Gen. Wool sent notice to General Huger, at Norfolk, to remove the women and children from the city. It is supposed Burnside's Expedition intends to attack Norfolk. Prisoners of war are expected to-morrow to be exchanged and sent North. The rebel commissioners had arrived at Bermuda, whence they would proceed to England. The privateer Sumpter, after having burned three American vessels, had arrived at Cadiz, Spain.

News from Fort Pickens, Jan. 2d, says that the rebel batteries of Pensacola, having repeatedly fired on small vessels, Pickens opened on the rebel steamer Time, which was landing stores at the Navy Yard on the 1st. The rebel batteries responded, and the firing continued till evening. Picken's last shot set fire to Warrington. The conflagration continued all night. The place was still burning on the evening of the 2d, when the Rhode Island left. The fire was seen thirty-five miles at sea.

Gen. Sigel has started with an army from Rolla to scour Western Missouri. Sigel will probably be made a Major General.

In the Senate, the House bill permitting sailors and marines to mail letters without prepaying postage was passed. The House resolution declaring it to be the purpose of Congress to raise by taxation and customs a hundred and fifty million dollars annually, was adopted; Powell, of Kentucky, alone voting in the negative. In the House the Fortification Bill was passed. It provides for the repair and strengthening of fortifications on the lake frontier.

The Arabia, from Liverpool, Jan. 8th, passed Cape Race last night. She brings two batteries of artillery for Halifax. The news is unimportant.

Advices from Mexico, states that that country is making immense preparations to oppose the allied fleet. Over 100,000 men will be in the field soon.

◆

The Bearded Lady.—We stepped in this week to see the "Bearded Lady," at Tucker's Building. This specimen of humanity is one of great curiosity, as well as one of great interest physiologically. We can advise everybody to go and see this wonder, and to examine the son, quite a young lad, whose face, even at seven years of age, has a pair of whiskers, and whose back and arms are covered with heavy but soft black hair. The genius who makes music for visitors is also worth all the cost of the fee. He imitates perfectly every bird, and beautifully, too; and most admirably imitates the neighing of a horse, the cluck of a chicken, squealing of a pig—he is indeed a wonder. We advise all to embrace the opportunity to visit the "Bearded Lady," and the wonderful musician.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

FAMILY MARKETING.

Stall No. 1, Washington Market.

Families that desire the very best kinds of Market Fruits and Vegetables, in their various seasons, with all the choice selections, can be supplied with them FRESH every morning, by calling at

BUDDINGTON'S,
No. 1, Washington Market,

SUNSHINE.

Shine out, fair sun! The leaden sky
Hath long in humid gloom been spread,
And yearningly we look on high
For mingled blue and gold instead:
The watery wastes that loom around,
Chill hearts, and make homes desolate;
And shivering herds, and sodden ground,
Alike thy cheering beams await.

Beam forth, O light!—life-giving light!
When absent thou, how pine the flowers!
O sun! without thy presence bright,
What were this rain-drenched world of ours?
Well might the pagan Persian bend
Before thy chariot of flame,
Deem thee his omni-potent friend,
And call thee by a sacred name!

Shine out, fair sun! The sloping hills
An emerald hue already show,
And down their sides the vagrant rills
Go dancing to the plains below;
The starling and the chirping wren—
Long perching cold on dripping boughs—
Are shaking out their plumes again,
And twittering their amorous vows.

Shine out, fair sun! With gladdening beams
Enwrap the earth in golden sheen,
Wake thronging life in pregnant streams,
And tinct the springing grass with green;
Send forth the wanton insect world,
On wings of gorgeous tinselry;
Burst the seed-germs in husks enfurled,
And fill the groves with minstrelsy.

Great God! we bless Thee for the light,
The cheerful sunshine, soft and warm,
That banishes the sombre night,
And causes earth with life to swarm!
We bless Thee for the radiant Truth,
That fills with light the world of mind—
Anoints the inward eyes, forsooth,
And sheds its rays upon the blind!

J. L. W.

SAN FRANCISCO, Jan. 25, 1862.

[For the California Farmer.]

STAND BY THE FLAG.

BY FANNY GREEN.

Stand by the Flag, the dear old Flag,
That waved o'er Washington,
When Freemen Freedom's battles fought,
And glowing fields were won!
Our Country's Banner, hail with pride,
And let its folds float high and wide.

Strike for the Flag, the true old Flag,
That lit the way for Greene,
When the dark shade of Foemen fell
Upon the saddening scene;
'Tis Freedom's Flag, unsoiled and free,
Wrought from the robe of Liberty.

Stand by the Flag, the proud old Flag,
With muscle, nerve and steel;
And let the palpitating Earth
Your sovereign purpose feel;
March, with a round of three-times-three,
For the old Flag of Liberty!

Ascend the tallest mountain Pine,
And to its summit fix,
In the unshadowed face of Heaven,
The Flag of 'Seventy-Six;
Then rally round it, bold and free;
The Rocks shall blanch as soon as ye.

Strike for the Flag, the brave old Flag!
Strike deep, and strong, and true;
Bid Slavery pay to Freedom back
The heavy debt that's due;
Serve with your heart's blood, full and free,
Our Flag, the Flag of Liberty!

◆

The Butter Stamp.

When in Sacramento, during the flood, we found floating on the water near the Levee a *Butter Stamp*. It was one that had been evidently used on a farm or in a family. The impression is, strawberry leaves and two berries. We saved the stamp as a memento of the Flood, and as we examined it we thought, "What might be the history of that stamp?" "Where its home?" Who was its owner?" and "Where are they now?" Could these questions be answered they would undoubtedly be very interesting. We cannot but hope that *all is well with them*—that although the Butter Stamp has floated away, their Home is spared them, and their lives also, we trust.

Wide Awake for the "Hillsides."

We are glad to know of the energy already shown by many who have suffered by the late flood, who, fearing a continuance of high waters, or a repetition of them late in the season, have taken hold of the "hillsides" in earnest. Some that held tracts have begun their work. Some new purchases have been made, and many new contracts and plans have been entered into, in order to secure a crop for the coming season.

This is the "right spirit." Never say die. Every man, however severe has been his losses, let him but show the determination to *help himself*, and he will soon find brave and generous hearts and ready hands to *help him*. The old adage that "God never helps those who do not help themselves" will always prove true, for when a man gives up and says he can't get along, when he falters and loses faith in himself, then others lose faith in him also, and it is all over with him. It is that noble and undying energy in men that has made genuine Californians what they are—the unconquerable men of the age; therefore, we hope all who have met with severe losses will take courage and stand up bravely, stem the current, and soon they will find that the current is setting in their favor.

To the hillsides, then, let men look with the eye of faith. Plant orchards, plant vineyards, and plant grain fields—aye, gardens also, for the earth has been so richly and deeply refreshed that the soil will bring forth, some thirty, some sixty, and some an hundred fold. A prompt and energetic effort, now, on the part of leading men, will save millions to our State, and awaken those energis in some men that might to some degree be crippled, even to despairing. There never was a better time for influential men to set a good example.

There are many crops that can be planted with great confidence, this year, upon the hillsides, owing to the depth of moisture which has evidently fitted the soil for a large product. The finest quality of soil can be found on many of our hillsides, and the present flood upon the valleys will be the means of revealing to our cultivators many a hillside that shall prove a richer mine of wealth than the mines of Washoe or Cariboo.

◆

Letter from Stony Brook.

Deep or Shallow Plowing?—Reply to Mr. Morley—No "Cut and Cover"—Facts from Experience—Practice on Different Soils—Remedy for the Borer—The Storm at Stony Brook—Loss of Cattle, Etc.

STONY BROOK, Alameda county, Jan. 13th, 1862.

EDITOR FARMER: In Number 11, Dec. 20th, 1861, is a letter from Mr. Morley, with a comment on my letter, in Volume 16, Number 5, on Deep or Shallow Plowing, in a way that would lead some of your readers to suppose that I was in favor of a careless, slovenly way of preparing my ground and putting in the seed. He says "If a thing is worth doing at all, it is worth doing well." Grant it; but Mr. Morley seems to think it can't be done well except by deep plowing. Now, I can make as fine a surface by harrowing or rolling, on Shallow as he can on Deep Plowing. I think I explained the philosophy of it in the letter he refers to. I have nothing new of my own experience to offer at present.

Mr. Morley says, if I will take five acres of ground, plow "cut and cover," and that 1½, 2 to 2½ inches deep, and on the same kind of land take another five acres, which plow 4 to 8 inches deep, and sow the same time and same kind of seed, and then, if the result is the same, he will acknowledge that for the last forty years, he has entertained erroneous notions and labored under great mistakes. Mr. Morley need not wait a year for the result of the above five acres. I can give it right along: Mr. B. A. Thomas, living about two miles south of Alvarado, last winter plowed his land about 3 inches deep; his neighbor, Patterson, joining on the same piece, plowed his land 6 inches deep (and land better, if anything); both sowed Australia wheat, at about the same time. When it came harvest, Mr. Thomas got four sacks per acre more than Mr. Patterson. Mr. Thomas told me this himself, since I wrote the other letter; and I could find *many* more such instances if I should look after them, but it is not my business. Three years ago, if you had talked to Mr. Thomas in favor of Shallow Plowing, he would have laughed at you (as Mr. Morley does now). And to prove his sincerity in the new doctrine, he plows this winter as near 2 inches as he can guage his plow; not "cut and cover," but does it *well*—(Mr. Morley can't find in my letter that I *advocate* "cut and cover").

Now, Mr. Editor, facts are stubborn things, old practices in all those old States Mr. Morley speaks of the contrary, notwithstanding. I dare say I used to plow as deep as ever Mr. Morley did, but when I find I can raise more grain per acre with less expense of horse power and feed, I will let go old prejudices; and if any benefit is to be gained by a new discovery, I want my neighbors to know it; but this Shallow Plowing is no new discovery by me; it has, I believe, always been practiced in this country by the German farmers, and some few Americans. It won't do to say we must work our farms in California precisely as we did in York State and Michigan. The best wheat land there was generally clay loam with a stiff clay subsoil, that would neither let water down nor up, and the deeper it was plowed, say 15 inches, the better. Here (in Alameda county) it is different; any man who has dug post-holes will tell you that the ground within a few inches of the surface is the hardest. The subsoil in Stanislaus may be of a different and compact nature, that needs breaking up to let the roots penetrate. I am only speaking of Alameda county in general, and San Jose Valley in particular.

As to the Borer: I will just say to Mr. Morley, a friend of mine has recently come here from Michigan, and tells me that he and his neighbors in Eaton county use a pretty strong solution of tobacco, as a wash for their fruit trees, and they are not troubled with the Borer, nor any other insect, and the trees thrive full as well, if not better, than when washed with *lye:* try it!

Well, Mr. Editor, I think we have had as much rain this winter as we had the winter of 1852–53. Stony Brook run mad a few days, but cooled down after it stopped raining. There were a few slides from the hills, but no serious damage was done on the brook except the loss of some eight or ten head of cattle. In taking a view of the valley from the hills, I see a good portion of it under water. On account of roads and bridges, I can't say how soon you will get this letter.

Yours, ABRAHAM CLARK.

JANUARY 19th.—Well! this is getting pretty serious for the stock in the hills that have to pick their living. Many perish by the land slides, besides those that tumble down gulches and ravines, never to rise again. Some twenty-five or thirty are thus lost in this neighborhood. Some of them have gone down to the valley by way of the brook.

A. C.

◆

The Storm in Monterey County.

From the letter of a lady friend, dated San Juan, Jan. 20th, to our "better half," we make the following interesting extracts relating to the storm and flood in Monterey county, commending the promptness and attention of the fair correspondent:

As Col. Warren has requested particulars to be furnished him of the damage done by the flood in all parts of the State, I have thought I would communicate some items of what has fallen under our notice, together with such accounts as we have been able to hear, though, indeed, we are so shut out from intercourse with the rest of the world, that it is impossible to ascertain the amount of loss, or the true condition of the country.

We have had but two mails in the last twenty days from *any* place, and all communication is cut off, even with neighbors in our immediate vicinity. It may be many days before I shall be able to send this to you, as there is no telling how long it may be before we shall have a mail again; but I will write, and run the risk of getting a letter to you before it becomes stale. The rains have been almost incessant here since Christmas. All the rivers in this part of the country are impassable. The Pajaro is out of its banks, and all its bridges swept away. It has also caved in to a fearful extent, so that, in many instances, persons have been compelled to move their houses back; and some have been carried away. At one place, the Pajaro rose in a two-story house till within a foot of the second floor, though the house was raised four feet above ground. The out-buildings, corrals and fences were swept away, and two horses lost, which were confined in a stable. The loss and damage, in this instance, was estimated at $1000. All the farms in our vicinity have suffered considerable damage. This part of the valley is intersected by gulches, dry in summer, but through which the water is now rushing in a perfect torrent. The fences which cross these streams and stand along their banks, have all been swept away, and whole farms inundated by a sea of water. On the 16th of January, the water was at its highest point, and it was a day which we will not soon forget. About 11 o'clock it commenced raining, and continued without the slightest cessation for six hours. It was appalling to us, who had never before seen high water, to watch its steady progress, as it climbed from point to point. In front of the house it came rushing down from a cañon among the hills till it overflowed the whole yard, surrounding us on every side with a swiftly running stream—while, from the rear, the branch steadily rose, tearing away panel after panel of the fence, and sweeping off wood, rails and everything which opposed its progress. We watched it while it encroached upon a smoke-house which stood some distance above its bank. It rose till it completely encircled it, rushing and and foaming on like a mad creature. The house was so staunch and well-built, we hoped it would stand, but the pressure of the water was too great. It soon began to creak and sway around, till the timbers parted, the roof separating, and it fell with a crash into the waters, and floated off. The stream was now within a few inches of our dwelling, and still rising. Night was closing in, and the rain continued without intermission. We felt quite confident that the water would soon be in the house, and indeed, after seeing the smoke-house go, we were afraid the current might even be strong enough to carry off the house. At all events, we did not dare to trust ourselves in it, but, gathering up a few articles of necessity, moved off in a wagon to a neighbor's house, which was out of the reach of the water. Assistance was procured to move out everything that could be saved, in case the danger became imminent, but, thanks to a Merciful Providence, we were spared the necessity. The water, after having risen in the lower part of the house, stayed its progress, and our fears were relieved. In comparison with the actual suffering and destitution experienced by thousands during the floods in the State, our troubles, of course, are light—but our situation was certainly critical for a time, and our state of apprehension by no means pleasant. We learned next day, that many families in our neighborhood were surrounded in a like manner with ourselves, and were prepared for a retreat to the hills in case of peril.

◆

The Floods on the Tuolumne.

The following letter came to hand on the 25th, only fifteen days from the Tuolumne river.

LA GRANGE, Stanislaus county, Jan. 10th, 1862.

EDITOR FARMER: A few days since I sent you a few lines to let you know of the great flood, on the 27th of December, that was nearly up to those of 1852 and 1853.

On Sunday morning the storm commenced afresh, and, with the exception of Tuesday, we have had rain all the time, day and night, up to this hour, 8 P. M., and it still rains. For the last two days the streams have been high, and this day more so. This morning the people began to "git-up-and-git" out of the Tuolumne river bottoms.

From 9 until about 3 o'clock P. M., I was along the south bank of the river, and saw barns, houses, stacks of hay, fences, etc., sweeping down in the mighty current. Many are without house or home to night. The new and splendid brick barn belonging to Mr. Osborn, stood in four feet of water. The house of G. G. Dickenson was in a similar condition. At 3 o'clock P. M., the water was within a few inches of the windows of Mr. Dickenson's house. The family, Mr. and Mrs. Dickenson, Mrs. Peck and children, were on dry land, taking shelter at Mr. P. Delaney's. There were four men in the house who remained to remove things to the upper floor, and when I left there was no chance to get them off; and if the water does not soon abate, the house will probably go down. This night finds many without a home of their own, and many that have houses not yet gone down, cannot be reached; they had to abandon them early in the day, and flee to the hills or some kind of retreat, if they could reach one.

The house and barn of N. Banner went down with the current, a total loss. C. W. Salter is in a close place, if he has not taken to the hills. C. Pettibone has taken to the hills, and his house has probably gone before this—8 P. M; it was standing at 3 P. M. I can give you no adequate idea of the amount of distress which exists here. All descriptions of property have been lost, all the fences, or nearly so, have gone down with the tide of waters. Up to this hour I have heard of no loss of life. Many fields of grain will be ruined; barley and wheat in granaries has been wet. Several houses are now standing in the water, and far from land. Chickens are floating down on small pieces of drift. Men, women and children are seeking shelter at their neighbors—a dreary night to many. Bless God for high lands!

[You may get this by the first of May, and it may be a little sooner, as the whole country is a flood.]

JANUARY, 11th, 1862.

EDITOR FARMER: When I closed my letter at 8 P. M., on the 10th, the water had fallen from one to two feet. On the 11th, at 4 P. M., the waters began to rise once more, and at 10 A. M., they had gained their former stage, and rose eighteen inches higher. The house of Dr. Booth has gone, together with his chicken-house and barn, and also 200 to 300 fowls and turkeys. William and Joseph Dominicies and families are out on high bluffs. Both houses flooded. S. Wilcox's house is under water. Ackerman's garden and orchard are badly injured. G. W. Branch had to flee to the hills. J. Pickler is in the same condition. C. W. Salter, John Barham, David Hartman, C. Osborne, C. Pettibone, and G. G. Dickanson, are similarly situated, with all the effects that could be taken away. Thomas and Harry Rawes lost their houses, grain, and also one man.

C. Dallas, sons and hands, were water-bound for nearly two days in a large barn, some forty by sixty feet. This soon became too frail a ship—but having some good ship-carpenters on board, they set at work to make a boat, and on Saturday night nine persons were safely quartered on the high lands, barefooted, without pants, and almost in a state of starvation. Mr. Dallas has lost from nine to fourteen head of horses, one four-horse wagon, and new, one reaper and thrashing machine, and 150,000 pounds of barley.

I must now close, as I have an opportunity to send it to the post-office.

SUNDAY, 12th inst.—The waters are now falling fast. I will report as I hear more.

I. D. MORLEY.

The Manufacture of Sirup and Sugar.

COOK'S EVAPORATOR is the machine to which we call public attention as one of the desirable machines long wanted in California. This machine can be comprehended by a look at the cut in the advertisement. It is a most complete machine, portable, easy to be understood, works easily, does the work well and rapidly, and has been most highly approved, as is seen by the testimonials which we append. This Evaporator has received the gold medal of the United States Fair twice, and gold and silver medals from the following States when in competition with other machines, and born off the prizes:—at New York, twice in succession; at New Jersey; at Ohio twice; at Illinois, and Wisconsin, each State twice; at Pennsylvania, at Michigan, and at Missouri and Kentucky; and at numberless County Fairs it has always triumphed. We append a few notices of the Press and shall be happy to exhibit samples of the sirup and sugar which are now at our office. The machines can be ordered at any time. We can assure our readers that we look upon the introduction of this machine to our State as a very great acquisition, and we are most happy to say that the proprietors, upon learning of the disaster which has befallen our farmers by the late flood, promptly, at our suggestion, reduced the price of their machines thirty per cent from the rate they intended to establish. They will now come within the reach of all, so as to make it profitable to every one to grow the cane and make the sirup. The following are some of the notices alluded to:

We are acquainted with this machine, both by reputation and observation, and so far as we have observed it is the only one which attained general success last year, either at the Fairs or among the people. We have no partiality for one machine over another, and wish success to every effort made to develop the merits of the sorghum plant. [Ohio Farmer.

Its success is complete, and the sugar is fully equal to that of our sugar houses. It boils very rapidly, and no chemical agents are used. * * Its introduction has given a new impetus to the culture of the Sorghum, and it is now found that every farmer can devote his land more profitably to the cane than to any other crop. We are glad to find gentlemen of so much intelligence endeavoring to promote the manufacture of an article so indispensable in every family.—[Ohio Statesman.

Have been in New Orleans and other places South, but have never seen sirup equal to Sorghum made on Cook's Evaporator.—[ELI BARNES, in Rep. and Sentinel, (Ill.)

Actual veritable sugar may be made upon it. * * Had five per cent of the ground planted in corn last year been planted in Sorhum, the farmers' profit doubtless would have been greater.—[N. Y. Tribune.

Gave perfect satisfaction at the U. S. Fair at Cincinnati. We saw the proprietors receive scores of orders.—[National Agriculturist.

A great attraction was Cook's Evaporator. It manufactured half a barrel of sirup with marvellous rapidity and rare beauty.—[Cincinnati Enquirer.

Makes sugar of unusual whiteness and purity. [New England Farmer.

Of all Evaporators we have seen, the most satisfactory result are from Cook's—[Prairie Farmer.

◆

NOT SO BAD AFTER ALL.—Mr. Hamilton, of the Sonora road, informs the San Joaquin Republican, that there is not so bad a show for farmers as many would suppose. He has carefully examined his grain, which was put into the ground before the floods, and found it not injured in the slightest degree but on the contrary, doing well. The current passed over his place at a furious rate, the water having been from one to three feet deep at times. He lost three miles of fence. The grain of his neighbors is in equally good condition. There is no doubt that there is plenty of time for those to put grain in the ground who have had theirs injured, and that good crops can be realized.

THE NEW SUGAR EVAPORATOR.—With regard to this valuable machine, we would state that, instead of the present rocker as shown in the cut, a brick wall or furnace is to be built upon arches. Upon this the pan will rest, a small rocker only, in the center, giving the required motion as the pan rests on the furnace.

This plan has been adopted as being more economical of heat. The illustrations of the Evaporator and of a Mill for crushing the cane will soon appear in enlarged form, so as to further illustrate these inventions.

CULTURE OF MUSHROOMS.—An improved cultivation of mushrooms has attracted the attention of the French Academy of Sciences. A specimen group, weighing nine pounds, was lately exhibited, which had been grown in six days. The forcing beds are made by placing a layer of sand and gravel, nine inches thick, upon marshy soil; on the sand a layer of rubbish, four inches thick, and then a deposit of saltpeter, in the proportion of four grains to the square inch.

BOARDMAN'S CHALLENGE YEAST POWDERS.—A Baker of this city has used these Powders as an experiment, and has left with us an attestation of their excellence. A family on Mason street has also tried them, with complete satisfaction, and given assurance of their good quality. A housekeeper, on Silver street, a good cook, especially in making bread, sends her approval of the powders. We have also the approval of numerous families that have attested to their superior quality.

THE GREAT FLOOD OF 1862.

We make record below of some of the effects of the late flood (of about Jan. 10th) in various portions of the State.

The Sierras.—Mr. Thompson, mail carrier, between Murphy's and Genoa, has made the regular weekly trips through snow and rain, the entire season. He states that in five year's experience in the mountains of California, he has never known such a quantity of snow and rain to fall as has the present winter.

Mr. Ritchie resides at Holden's station, 35 miles east of the Big Tree Grove, on the road to Genoa. He left home on the 12th of January, and came to Murphy's. The second fall of snow commenced on the 22d of December; it continued without interruption until the 9th of January, (sixteen days), at which time it had accumulated to the depth of eighteen feet! This last day's fall measured *four and one-half feet* on the dead level. It commenced to rain, and for three days and nights, the water fell in torrents. Yet all this only settled the immense body of snow three feet, leaving 15 feet still on the ground when the rain ceased on the 12th. All the snow that had fallen as high up as the Big Trees, (three feet and a half) was taken away with the rains of the 9th, 10th, and 11th. This is the cause of the terribly high water in all our mountain streams.

All the bridges between Murphy's and the Big Tree Grove have been carried away; the road is also badly damaged by currents of water and land slides. It is estimated that over $2,000 will be required to repair it. Great damage has been done to the mining claims on Murphy's Flat, by the filling up of claims, and the destruction of flumes, etc. The deep cut made to drain the Flat, at an expense of one thousand dollars and years of labor, has been completely filled up with sediment, rocks and slum. The works of the Union Water Company have suffered to the amount of $10,000. The dam on Mill Creek, between Murphy's and the Big Tree Grove, has been swept away, together with three or four hundred feet of fluming at the same point.

At this point the Stanislaus raised seventy-two feet, and came within three feet of the high flume which here crosses the river. This rise was on the morning of the 10 January. The snow belt begins at a point nine miles east of the Big Trees, and deepens to fifteen at the summit. There has been no travel over this route, except the mail carrier, since the 22d December. Claims which had been opened over an area several hundred feet square and seventy-five feet deep have been filled up. It will cost many thousand dollars to restore them to a working condition. On all the streams around Murphy's and Angel's the mining interest has been prostrated. Land slides and torrents of water have, in every direction, destroyed and annihilated the roads; gardens, vineyards, orchards, farms, and all manner of farming property is a general waste. On the west side of Bear Mountain, in the immediate neighborhood of Copperopolis the country seems to have escaped the general wreck. But along the course of Littlejohn's Creek, some four miles west of Copperopolis, a good deal of damage has been sustained. The cattle on the foot-hills north and east of Knight's Ferry, are perishing from chill and starvation. East of Bear Mountain there are but few cattle, and they have fared comparatively well. By all accounts received from Calaveras we infer that that country has not less than $250,000 by the deluge.

Messrs. Brady & Green, on the Mokelumne, lost their mill and enough other property to aggregate $9,000; beside their own losses there were forty tuns of grain in the mill belonging to other parties, all of which was washed away and is a total loss. Mr. Athern lost his bridge valued at $8,000, grain, valued at $1,500, fourteen thousand feet of clear lumber, harnese, wool, and enough other property to aggregate $11,000. Mr. Montgomery, who lives next below Athearn's, lost 2,000 bushels of grain.

Fall of the Mammoth Tree.—On the 29th of December occurred an incident in the Big Tree Grove, which will create a sensation among voyageurs and curious travelers who have visited that place, wherever the news may reach them in the world: The mammoth tree of that marvelous forest, Hercules, fell. This tree was by great odds, the largest in the grove, having a leaning toward the southwest of about ten degrees. The rains and snows loosened and softened the earth about his roots so that they gave way to the immense weight and leverage pressing them upward, and Hercules, the mighty, who had braved the storms and rains of not less than twenty-five centuries, succumbed to the deluged of December, 1861.

Tehama County.—The Red Bluff Independent says:—The storm will probably continue until about the first of February, at which time, judging by the great storms of '49 and 53, it will hold up. There will be plenty time then for our farmers to put in their crops, as the ground will be so thoroughly soaked that one summer will not be able to dry it up and we expect full granaries next fall. Creditors should be indulgent, in fact they will be obliged to exercise indulgence. The people must have a chance to recuperate—and what is more, the people must learn to live more within themselves—the days of recklessness have passed.

The Beacon says: We learn from J. Logan, Esq., that the loss of cattle in the foot-hills has not been near so great as it has been on and near the Sacramento River. The grass in the foot hills, on the head waters of Thomes', Elder, and Red Bank Creeks, is two weeks in advance of the season in the valley. Stock is improving in that section. We further learn from Mr. Logan, that none of the above creeks have been past fording within the past ten days.

A gentleman writes from Johnson's Ranch, on Bear River, that the damages sustained by the flood in that section are very great. He says the farming lands are covered with sediment and sand, and many cattle have been lost. The Johnson's Ranch House, a building formerly occupied as a hotel, but recently as a private dwelling, was swept away.

Placer County—Loss of Life.—The Placer Herald of the 18th, reports a heavy slide at Deadwood, on the night of the 12th, by which Charles A. Fryer and Wm. Taylor were both killed. By the great freshet of the American river last week, several persons on Boston Bar were placed in a perilous condition by being surrounded by a torrent of water. The information being conveyed to Michigan Bluffs, on the 11th a boat was constructed and manned by Capt. Giles A. Buel (an old sea captain), Morris Flood and Samuel Jones, all citizens of the Bluff. The boat was swamped in a few moments, and the generous, brave-hearted swept away from the sight of their friends who stood upon the shore, but were unable to render them any assistance. The persons on the island were afterwards rescued.

Damage in Livermore Valley.—Mr. Street, who is connected with the Telegraph lines, on Saturday and Sunday last passed from Alvarado up through the county of Alameda and up the head waters of Alameda creek, which rises in the Diablo range near Livermore's Pass. He describes the deluge in all that region as being perfectly frightful. Thrashing machines, harrows, plows, and all sorts of farming utensils and every variety of moveable property had been swept away from the farms. Much of this was seen lodged high up in the branches of trees. An old Californian, born in that country and now sixty years of age, informed Mr. Street that the Alameda creek has been eight feet higher this flood than he has ever before seen it. The loss in stock between the San Joaquin and Diablo range on this route, is represented as very great, and still the waters keep at their highest mark.

Contra Costa County.—The Gazette says, that on the 11th inst., the whole valley was under water, and a fearful torrent was running through the streets at Pacheco. Over the raised side-walks it came, and into stores and dwellings heretofore thought to be far above the reach of any flood at all likely occur. The warehouses at the landing, containing large quantities of grain, and goods, of every description were overflowed to the depth of from 3 to 6 feet, and the damage thus caused falls with great severity upon our farmers, many of whom were hoping that through the enhanced prices of grain this season they would be relieved from the embarrassments produced by the unremunerative toil of previous years. The bridges have been swept away or rendered impassable from one end of Contra Costa to the other, and the cost to the country in replacing them will be no inconsiderable item. Fences have been destroyed and the materials carried off in immense quantities. Everything of a moveable kind exposed to the fury of the flood has disappeared. About 15,000 sacks of wheat were damaged in the warehouses, besides a large quantity of hay, and a lot of goods belonging to various persons.

Between Oakland and San Pablo the warehouse of Jacobs is said to have been carried away, and from 7,000 to 8,000 sacks of grain lost.

At Alamo the flood seems to have been more disastrous than in this valley, though of shorter duration. It came suddenly, and with scarce any warning, at about 3 o'clock in the morning. Many of the people fled as fast as possible, and took refuge in the Academy and in Wolfe's brick store.

Among other buildings a house occupied by Mr. Bradley was swept down the creek. The family of Mr. B. escaped with the loss of everything, not saving even a change of clothing or any article whatever. The district school-house was also carried away. Above and below Almo the whole valley was one sheet of water extending from hills to hills. Cattle, hogs, and poultry were borne off by the current. One bridge, with some 10 head of cattle on it, was carried off.

In one field, we have been informed, there can be found since the flood, almost any article of clothing or household furniture, or domestic utensils that one could wish for. It seems to have become a sort of common gathering place for whatever disappeared in the rush of the neighboring waters.

A Town Stopped Up.—The flourishing town of Pacheco, situated on the creek of that name, in Contra Costa county, has had its prospects nearly ruined by the floods. It was built on the creed of that name, and has grown into importance because of its excellent landing, affording facilities for shipping grain and other produce from the thriving agricultural region round about. The recent floods have washed so much sand and mud into the creek, from the surrounding country as to render the stream unnavigable even for small craft—hence Pacheco may be said to be stopped up.

Cattle Saved.—A large cattle raiser, from San Joaquin country, informs the Stockton Independent that most of his neighbors had saved nearly all their stock, which on the first rise of the river fled away to tee foot hills of the Diablo range, where pasture is already becoming good enough to sustain them, and where there is not the least danger from floods. He is of the opinion that only the weakest and poorest of the herds have perished, and thinks that on his side of the river the proportion of one in ten is a liberal allowance to make for loss. He says at present, from the excited state of the pubic mind, every statement is exaggerated, but as the waters subside it will be gradually manifested that not enough stock has perished to affect the prices of cattle and beef. The Independent adds: We only hope his opinions may be well founded, but it is to be feared that his section is an exception to the general rule.

Stockton, on the 23d, was flooded higher than ever. The water was over the highest grade in the city, varying in depth from twelve to eighteen inches. The flood was attributed to the back water from the river. In Wells, Fargo & Co.'s Express Office it was *nineteen and a-half inches* deep at noon. The Webber House, which escaped previous flooding, has from ten to twelve inches of water on the ground floor. All the business houses on El Dorado street, which escaped previous injury from the waters, had nearly a foot. Communication with the mountains was kept up entirely by water. Vessels were loading with provisions for Salt Spring Valley, Mokelumne Hill, and the other former mining localities. They make a straight wake of it "overland," and may more properly be called "prairie clippers."

The Stockton steamers take short cuts across the country, ignoring the river's channel. The distance saved may be judged from the fact that the run from the mouth was made in thirty minutes; the usual time is over an hour. Woodbridge on Tuesday, 21st, was all under water. The loose stock in all the country along the Mokelumne from the foot-hills downward are perishing from weakness, chill and starvation. It is said fully one-half of what was scattered over that country before the flood, is now dead, and the remainder is dying very fast.

Freighting Across the Plains.—A Stockton paper says: A few days ago Mr. Houche took a lot of groceries in a boat up to the nearest point on the foot-hills of the Mokelumne, to supply Poverty Bar. Since then the water has overspread the plains to a still greater depth and extent, and now boats are coming into town from Campo Seco and from Salt Spring Valley. The merchants here are, in consequence of these favorable circumstance,s preparing to freight a supply of necessary provisions and groceries up those points in boats, whence they can be taken to the towns of Calaveras, in which there is a great scarcity of these articles. Some portions of the year it is difficult to obtain a drink of water in sections of country over which boats now pass as above stated.

A man named Hensley, living on the Sacramento river, saved 12,000 pounds of honey, in the hive, that was drifting down on the flood.

Insurance on Farm Animals.

In response to an article on this subject, says the American Agriculturist, Mr. John S. Williams, of Bucks county, Pa., writes us that in that county alone, there are at least four associations which insure animals against death by disease or accident. Part of these societies have been in operation for some ten years past, and have been found to answer to an admirable purpose. Mr. W. sends us the constitution and by-laws of the "Lahaska Insurance Company," the head quarters of which are at Doylestown, Pa. The Company is a mutual one, insuring buildings, personal property, and animals against fire and also the "Lives of Domestic Animals from Disease or Accident." The following extract relates to losses of animals by death:

"In case of the death by disease or accident of any animal insured in the Life Department, the owner shall give immediate notice in writing to the Secretary; if the Secretary shall deem it necessary to make an investigation, he shall attend to it himself, or notify one or more of the Directors or Surveyors, whose duty it shall be to attend thereto, and examine into the facts of the case and report the same without delay to the Board of Directors or the Executive Committee. If all is right the whole insurance will be paid. This being a *life* insurance, no animal will be paid for until it is dead; but when an animal becomes injured by disease or accident so that there is no probability of its living, or has become entirely worthless and is likely to remain so, or has some very dangerous contagious disease, the insured may report the case to the Secretary, who may appoint an Investigating Committee (as hereinbefore specified), and said Committee shall have discretionary power in such cases, and if they shall be entirely satisfied, they may direct to slay the animal, and the Company will pay the insurance.

The following are the annual rates of insurance on each one hundred dollars of valuation, against death by disease or accident:

No. 1.—On Horses, Mules, and Cattle, ordinary risk....	$1 50
No. 2.—On Stud Hores or Jacks..........................	$2 00
No. 3.—On Stage Horses..................................	$2 00
No. 4.—On Livery Horses..................................	$2 00
No. 5.—On Drove Horses within 6 mos. after coming in..	$2 00
No. 6.—On Canal Horses, or Mules.......................	$2 50

One per cent additional for risk against Foaling or Castrating.

We give the above to show what is doing in other States. Why not have such a Company here?

◆

Hard Times on Sheep Raisers.—The Knight's Landing News says: During the months of January and February the greater portion of the sheep in this State drop their lambs. This, from the experience of our sheep-raisers during the past five years, has proved to be the best time for lambs to come—in consequence of the storm during these seasons invariably coming in December, and leaving an interval of fine weather between that and March, when we generally have our spring storms. But this year being out of the usual course, four-fifths of the lambs dropped during these storms never get up.

The ewes are thin and chilled with the cold rains, and the animal heat of the offspring is not sufficient to enable it to overcome the excess of wet and cold now prevailing. This is more to be regretted on account of the improved breeds of the lambs now coming to any crop heretofore raised in this State.

Try the Experiment.—The following is vouched for by a gentleman who says he knows it's "all right." Early in the season, take a few large turnips and cut out the hearts of them to form a sort of cup. Fill the cavities with earth and plant two or three tomato seeds in each. When the seeds have well sprouted, pull up all but the healthiest plant in each turnip, and let those that remain stand where they will have the benefit of the sun, the plant will grow very thrifty—the decaying turnips furnish it food. When the weather becomes sufficiently warm, set the turnips in a well-prepared soil, not less than three feet apart, make lath frames to keep the vines from the ground, and keep the soil well hilled up around them, and you will have a crop that will astonish the natives. The advantage consists in getting the plants started early without setting them back by transplanting.

Loss in San Mateo.—The San Jose Mercury is informed that within three miles of Searsville no less than six sawmills have been swept away. Mr. Simon Knight's house, about two miles from the fomer place, was destroyed by a slide from the mountain, and one of his children killed. Mr. Knight heard the coming avalanche, and with his wife caught up two of his children and barely escaped with their lives. Thi third child, a boy five or six years of age, jumped from the chamber window and started to run, when he was crushed and buried by the earth. Every bridge between Santa Clara and Pescadero has been swept away.

"Floating Islands" of the San Joaquin.—They appear to be made up of entwined tules and sediment, and are evidently tied by roots that grow upon them, sinking through the bottom soil. These rise and fall with the water, and are swayed to and fro with pressure. They are now rised to their fullest extent, about one foot below the surface of the water. Upon such islands a few cattle have gained a footing, where they must necessarily starve, unless the water soon falls.

For the Howard Benevolent Society of Sacramento: A Relief Committe of ladies at Petaluma—Mrs. Thomas Gilbert, Mrs. J. B. Southard, Mrs. E. M. Matthews, Mrs. C. M. Baxter, Mrs. B. F. Cooper and Mrs. N. O. Stafford—sent four hundred and eighty-four dollars in coin, one thousand pounds of flour, and three cases of garments, a most welcome and timely donation. The Howards appreciated it highly, as an evidence of the cordial sympathy of the ladies and residents of so remote a place.

A large number of active working members of the San Francisco Relief Committee visited the Hall lately, and several ladies, who were shown all that pertained to the operations of the Society. It needs actual inspection for any one to fully understand the work done, and the labor yet to be performed.

Persons from Oregon say the damage by the storms to the roads in that State, has not been near so great as in California. The mail route could be traveled very well but for the loss of bridges, and for these, ferries will soon be substituted.

THE LEGEND OF EASTER EGGS.

BY FITZ JAMES O'BRIEN.

"Dearest papa," says my boy to me,
As he merrily climbs on his mother's knee,
"Why are those eggs that you see me hold,
Colored so finely with blue and gold?
And what is the wonderful bird that lays
Such beautiful eggs upon Easter days?"

You have heard, my boy, of the man who died,
Crowned with keen thorns and crucified;
And how Joseph the wealthy—whom God reward—
Cared for the corpse of his martyred Lord,
And piously tombed it within the rock,
And closed the gate with a mighty block.

Now close by the tomb a fair tree grew,
With pendulous leaves and blossoms of blue;
And deep in the green tree's shadowy breast
A beautiful singing bird sat on her nest,
Which was bordered with mosses like malachite,
And held four eggs of an ivory white.

Now when the bird from her dim recess
Beheld the Lord in his burial dress,
And looked on the Heavenly face so pale,
And the dear feet pierced by the cruel nail,
Her heart nigh broke with a sudden pang,
And out of the depths of her sorrow she sang.

All night long till the moon was up
She sat and sang in her moss-wreathed cup,
A song of sorrow as wild and shrill
As the homeless wind when it roams the hill,
So full of tears, so loud and long,
That the grief of the word seemed turned to song.

But soon there came through the weeping night
A glimmering angel clothed in white;
And he rolled the stone from the tomb away,
Where the Lord of the Earth and the Heavens lay;
And Christ arose in the cavern's gloom,
And in living luster came from the tomb.

Now the bird that sat in the heart of the tree
Beheld this celestial mystery,
And its heart was filled with a sweet delight,
And it poured a song on the throbbing night;
Notes climbed notes, till higher, higher,
They shot to heaven like spears of fire.

When the glittering white-robed angel heard
The sorrowing song of the grieving bird,
And heard the following chant of mirth
That hailed Christ risen again on earth,
He said, "Sweet bird, be forever blest,
Thyself, thy eggs, and thy moss-wreathed nest."

And ever, my child, since that blessed night,
When death bowed down to the Lord of Light,
The eggs of that sweet bird change their hue,
And burn with red, and gold, and blue—
Reminding mankind in their simple way
Of the holy marvel of Easter day.

◆

Truant Bees—Cross Breeds.

Mr. M. Quinby, while at the office of the American Agriculturists recently, related a circumstance showing the distance to which bees wander from the hive. Last year he procured some of the Italian Bees. A bee-keeper situated two a half miles distant, informed Mr. Quinby that he had the Italian variety also, without buying it. Mr. Quinby examined the hives and found several well-marked specimens showing a decided mixture of the Italian blood. Susbequently another bee-keeper, at about the same distance in another direction found a cross of the Italian variety had been effected in one of his hives. The Italian drone and the queen of the common species had met, and the progeny was of course a hybrid of the two. The question remains, was it the queen or the drone that made such an extended excursion—or did they meet half way. And further: How far distant must any variety be kept from all others, to absolutely prevent mixing?

Apiaries and Hives.—The best position for an apiary is one fronting on the south-east. It should be so placed that the flight of the bees is not obstructed, though this is not absolutely necessary, as they will always manage to find their hives. It is better to locate an apiary in the valley than on high ground, that when the bees are returning heavily laden they may be saved from a toilsome upward flight. Yet they may be properly placed in the upper story or even in the roof of the house situated in a valley, because the bees, when returning, rise high enough in the air to clear any trees or other high objects in their course, and descend only when they arrive in the immediate neighborhood of their hives. But it is not proper to place thus stocks intended for natural swarming; because the swarms are then apt to alight in places difficult of access, and are also more prone to make their escape to the woods. I have, however, often placed the swarms, after hiving, in a garret, and they labored there with remarkable industry.

The Bees at War.—A great battle of bees recently occurred at Conneat, Ohio. Ezra Dipple had seventy swarms, about equally divided on the east and west sides of his house. On the 17th they went to war, those on the west side of the house being arrayed in battle against those on the other side. They filled the air, covering a space of more than one acre of ground, and fought desperately for three hours—not for "spoils," but for conquest; and while at war no living thing could exist in the vicinity. They stung a large flock of Shanghai chickens, nearly all of which died, and persons passing along the roadside were obliged to make haste to avoid their stings. Quiet was not restored until nightfall. Two young swarms were entirely destroyed, and the slain literally covered the ground. Neither party was victorious, and they only ceased from utter prostration. The cause of this bitter outbreak among creatures so redolent of sweetness is quite unaccountable.

Instantaneous Photograph.—Amongst the most notable photographs figuring in the present French Exhibition, are some remarkable instantaneous pictures by Messrs. Ferrier and Soulier. They are described by the Moniteur de la Photographie as the most perfect things of the kind ever produced; and from their subjects necessarily involve the conditions of complete instantanety to obtain any degree of success. They consists chiefly of views of one of the most crowded Parisian thoroughfares, the Bouvelard de Sebastopol. Not one of a thousand figures of all kinds, foot-passengers and vehicles passing in all directions, shows the slightest sign of movement or imperfect definition. Figures standing in the shadows of porticoes are all perfectly rendered, although the exposure was but the imperceptible fraction of a second. It would seem as though these specimens possessed the highest degree of perfection of which the photographic art is capable.

A severe earthquake was felt all over the Sandwich Island group on December 5th. No material damage was sustained, but the inhabitants had a big fright.

$1,000 Reward!

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 70 of whole Series; continued from Farmer of Jan. 24, 1862.

XIII.—M.

The Indians of the Colorado and Gila Rivers and those of the Gulf Shores.

SHELL MONEY.

THE use of the "Wampum," "Pook," "Pongwa," "Ponga," or strings of pieces of different hard shells bored with a hole in the middle, used for money and highly prized as ornaments (sometimes they were made of entire thick pyramidal sea-shells seldom exceeding half an inch long, as in some parts of Lower California and the North-west, similar to Africa and Oriental "Cowries"), extended from Cape San Lucas throughout the Californias and the Old Oregon, and seem also to have made their way extensively among the tribes of the present Utah and New Mexico. The gold miners and diggers of the Sierra Nevada have often turned up this shell-money and entire small shells at great depths below the surface of the ground. This Indian money and stone arrow-heads are often found in the cemeteries of the Mississippi Valley Indians.

The light yellow and sometimes even nearly white tribes with red cheeks, are well known to have extended, and even largely exist now (1860) in parts along the coasts of Vancouver Island and British Pacific America, The Puget Sound Indians use a small shell entire from Vancouver Island and found in deep water, for their money.

LANGUAGES.

The great and multifarious differences of languages and dialects prevail in the countries of all the Northwest Pacific Coasts above California, as obtains throughout the Indiada of Mexico and California. But the North American Indian type, race, blood, characteristic and feature, is the Indian, aborigini or autocthon from Panama to Sitka—from Costa Rica to Hudson's Bay—they are only modified in aspects by nature, circumstances, climate, altitude, and proximity to lakes or salt water; but they are Indian, and no more or no less than American Indian.

SANTA BARBARA.—EDIBLE MOLLUSCA.

Near the town of Santa Barbara, for some ten miles north on the Pacific Coasts, exist hollows and basins of overflowed lands, surrounded by excellent fresh water from the hills. These lands are known as the *Positos*, *Goleta* and *Patera*, and formerly must have been inhabited by numerous populations of Indians, as the quantity of shells of small clams, oysters, muscles, and other kinds of shell-fish, left on the site of their old camps near fresh-water springs, is astonishing, and shows a long residence of Indians in the vicinity. They consist of small radiated *Pectens*, and *Crassatellas*, which are [very similar to] oysters, rare or cooked; they are much less abundant now than formerly, and are all found near the site of the old rancheries.

IMMENSE CAVES OF CALIFORNIA.

Caves of gypsum and other calcareous formations exist in the Sierra Nevada, in the Coast Mountains, in the Santa Barbara islands, and also of other geological formations of both Californias, as sandstone, etc. Indian figures in red color are found in these latter formations in the Carmelo Mountains and elsewhere, and also in Lower California, and probably will be found among the Santa Barbara Islands and the Southern Coast ranges. Painted rocks are found in the Tulare termination of the Estrella Valley not far east of the Mission of San Miguel in San Luis Obispo county. Doubtless human fossil or ancient Indian bodies will be found hereafter in these caves. The Indian skulls *with double rows of teeth* are said to have been found not only abundantly on San Clemente Island caves, but also often still on the neighboring Island of San Miguel, the San Bernardo or Juan Rodriguez of Cabrillo.

OBSIDIAN OR NATURAL GLASS, etc.

Obsidian and all species of silicated stones and rocks are *exceedingly abundant* in all portions of the Californias, Arizona, New Mexico, and Utah, as well as of Mexico, and their application and uses were suggestive to the Indians for various and useful purposes, as knives, razors, swords, masks, etc, etc.

Messrs. Hale, Dana, and others, in the Philology of Wilkes American Expedition of 1840–42, collected eighteen vocabularies of the Oregon and California Indian, about one-half of which belong to our State, and extending as far down as San Juan Capistrano, which latter is estimated by Gallatin to be a kindred tongue to that of the Shoshones of the Great Basin of Utah. Dr. Coulter of the University of Dublin, an excellent naturalist, who was in this State and Sonora in 1830–33, published in the London Geographical Society's Journal, Vocabularies of the Indians of San Diego, Pimas of the Gila, Santa Barbara, San Luis Obispo, and San Antonio. All of these with many vocabularies of the Utah and New Mexican tribes, may be found in the Second volume of the Transactions of the New York Ethnological Society, 1848, pp. 600, in the extended notes of the late Albert Gallatin, formerly Secretary of War under Jackson.

ALBERT GALLATIN'S NOTES—ANTE 1848.

The first volume of the same Transactions, pp. 491, 1845, will also be found to contain the voluminous, acute, and learned disquisitions and collations of this celebrated and truly distinguished Indianologist of the semi-civilized tribes of Mexico and Central America. Gallatin was one of the first of American citizens in character, position, talents and education, and who, moreover, was the architect of his own fortunes, pecuniary and political, and unlike the most of American men of letters, died in wealth, dignity, and honors. How few of the rich men of the world devote their means and time to the acquisition of knowledge. The poor scrubs of laborious, unrewarded, unpensioned scribes, do the great portion of the world's work, to whom the roads of wealth and retirement are as close shut as a bankers money-chest.

THE MOHAVES AND COLORADO INDIANS OF THE RAILROAD VOLUMES.

Dr. Thos. Antisell of Lt. Parks' Railroad Exploring party (7 vol. 1856) says: "The Indians who travel along these trails and live in the mountains, sixty miles down the Mohave river, are the Cucompners (the Coganos?), *not* speaking the same tongue as the Mohaves or Payutes, nor apparently so advanced in civilization as those tribes—lizards, rabbits, and roots, constituting their chief fare." Their neighbors, according to other accounts, are the Mohaves between Virgin and Mohave rivers. These Indians mostly live between the Virgin and Mohave rivers, to where the Mohave river joins the Colorado river. The Tejuas are neighbors on the east bank of the Colorado below the Little Colorado; the Yumas and their affilees the Cuchanos, Cojanos, and Cocopas, below the Mohaves on the Colorado, east and west to its junction near the gulf. The Iumbucanis and Chemeguabes live on the lower Grand and Green rivers, opposite the Mohaves, where these rivers empty from the east into the Colorado. The Cosninas live between the Lower Grand and Chiquito Colorado rivers, which fall from the east into the Colorado. The Moquis (half-civilized) live on the middle and upper waters of the San Juan river (line of 36°), which empties into the Chiquito Colorado, and are not further neighbors than about 70 miles from the Cosninas. The Coyoteros, the Garroteros, and Apache Tontos, live east, and south and east, of the Tejuas, on the head waters of the streams emptying from the north into Williams fork and the Gila. The Yampais and Yabipais are eastern neighbors of the Mohaves, and southern neighbors of the Cosninas, and neighbors to the Gansteros, Coyoteros, and Apaches Tontos. The Yamayas live between the Mohaves and the Payutes of the Southwestern jointures and vicinities of the Sierra Nevada connections of the Great Basin, east of Tejon Pass ranges. The Gilenos are also said to be a tribe inhabiting portions of the upper Gila and the branches falling into it from the north.

The Geography, Philology, and Ethnology of all these tribes are still but superficially known to scientific or public men. The best accounts of them may be found in the volume of Lt. Whipple and Prof. Blake, in the Fifth Volume of the Railroad Reports; and in Lieut. N. Michler's of Emory's Mexican Boundary Survey, 1854 to 1858. The papers of Whipple, on the line of 36°, are particularly valuable and well illustrated, and much more lengthy than those of Michler, which however relate mostly to the Lower Colorado Indians. These tribes it seems all partake of the California characteristics and arts, and use flint arrow-heads, baskets of rushes; some burn the dead, others bury them; use hot-air baths; cutting of the fore-head hair, etc. Some of the Colorado Indians (the Yumas and Mohaves) are men of great stature, fine features, and remarkably well made, sprightly, and even bellicose and enterprising.

To get a proper idea of the great and recent physical changes of the country within three hundred miles from each point of the compass from the head of the California Gulf, the Indianologist cannot be without the careful and well noted scientific notes of Prof. Blake in the Fifth Vol. and Dr. Antisell in the Seventh Vol. of the Railroad Reports, and in the First Vol. of Emory's Survey. The whole country designated will be found, according to these observers, to be of a most peculiar *sui generis* character, and indicating every probability of its having undergone wonderful alterations of surface in elevationss and depressions, *even probably within the last four hundred years.* Within the compass of these notes, the review of this branch of the Indianology is merely suggestive; observation and higher speculation must be left to future explorers, as also *the few students* of the world, who hid in their libraries and closets in the great European Capitals, may compare, collate, digest, and unravel, the tangled thread of the North American Ante and Post Columbia. In the future ages of the world these men will be not only more numerous, but more wealthy, better informed, and more venerated and respected by the new nations who will handle the thousands of millions of gold and silver of California and her family of States, the mineral deposits of which are but merely scratched in our days. The immense stimulus which has been communicated to the study of the Indianology by the discovery of Gold in California in 1848, and the accumulated observations of numerous careful, observing, and scientific travelers between the Mississippi River and the Pacific Coasts, and throughout Mexico and Central America, is of itself sufficient to employ the student in its collation and elimination, for many long years to come.

◆

Sketches of Emigrant Life, No. 2.

ON the morning of the nineteenth of May, we had left our camp and traveled about two hours, when, seeing a gentleman advance, from an encampment by the roadside, and present his hand to my husband, I supposed we were about to encounter an acquaintance, which had already become an agreeable event. I soon found out my mistake; it was a stranger, but to those of the Mystic Tie a brother in distress. In the Eastern States, I had always contended that the human heart contained sufficient charity to render extraneous bonds of union and brotherhood a matter of supererogation; but what I here witnessed destroyed all my fine theory, and left me thankful that Orders existed which created other claims than those of mere humanity. The man who came to us was a farmer from one of the Western States, who, with a fine family of growing children, and two or three hired men, was seeking a home on the shores of the great Pacific. They were well equipped, and had been getting on finely, until a few days before, when fever and measles broke out among them. Now all were down, save the father, and he so ill as to be unable to aid the rest, to any great extent. In the night, before our approach, the eldest son had died, and was lying unburied in his tent; and not one of all their company could help to make a grave. The father told us that three times that morning he had accosted trains, and asked their aid in performing the last sad office for the loved one; but they had passed him by, unheeded and unhelped, until he was almost in despair, when the sight of the three links on our wagon cover, gave him new hope. Ten of our company acknowledged the claims of brotherhood, and, of course, remained to minister to their wants. After laying the child in the grave, the wants and prospects of the family were discussed, and they were found so disheartened as to have determined on returning to their old home; but there was none of them able to take care of the team, so a well person was found, who was tired of the trip and willing, for a consideration, to help them on their way back. Those of our company, who remained to perform these offices, were detained some five or six hours, and only overtook the company when we stopped in the afternoon; but the consciousness of having alleviated the distress of a human being was a sufficient reward for hunger and weariness. Nor was this the only instance in which the benefits of the various Orders came under our notice, on this trying journey, as we had ourselves cause to bless them for their kindness, ere long, when sickness came to us—but it would take too much time to record them all; their reward will be eternal, for One hath said, "Inasmuch as ye did it unto the least of these My children, ye did it unto Me."

AGNES.

◆

PUTRID SORE THROAT AND ITS CURE.—An "Ex-M. D." communicates the following to the Call, that mothers may reap its benefit: Putrid sore throat is always prevalent here during the spring season, and as it now begins to prevail, this cure may surely lull their fears. Apply poultices of lobelia (Indian tobacco) to the neck and upper part of the chest; make a wash for the throat of lobelia tea (not too strong), a pint; dissolve in it a lump of alum the size of a hickory nut, sweeten with loaf-sugar a little; wash the throat with this often. Care should be had that not too much runs into the stomach, as it produces vomiting. Lessen its use as the child recovers. This recipe is almost infallible. What it cost before this was known, the useless toys in many a household tell; and to-day its virtue is acknowledged by many a happy mother.

The ACADEMY will be open EVERY EVENING, from 7 until 11 o'clock.

Having every accommodation for the purpose, MR. JOHNSON will Train, Break, Bit, and Gait, Horses; or give instructions in the same.

Ladies and Gentlemen whose duties will not allow them to attend during the day, can receive instructions at night. 19

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................JAN. 31, 1862.

☞ We have engaged Mr. B. F. Bunnels as carrier of the Farmer in this city, and our patrons will hereafter be served by him.

Delayed Papers.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the Farmer, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

☞ Those who receive a number of the Farmer wit this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,
Publisher California Farmer, San Francisco.

NEW PRODUCTIONS.

With a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public nterest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Look at this—High-landers, Pay Up.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent. together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

The Lama and Alpaca Goats.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

TO CORRESPONDENTS AND READERS.

We feel confident that we shall please our patrons with the present number of the Farmer. The original poetry and various letters, with the mass of news, will afford interest to all. We return our grateful thanks to those who generously furnish good thought to our world-wide readers. Several valuable letters are unavoidably deferred.

Books Received from Washington.—We are indebted to Hon. M. S. Latham for many valuable documents for which we return our grateful thanks. Among the lot received were a complete set of the Acts and Resolutions passed at the 1st session of the Thirty-first Congress, also a pamphlet containing the different addresses delivered on the death of the Hon. Stephen A. Douglas, together with the reported bill to increase the duties on imports.

The Flood at San Jose.—An interesting letter from L. Prevost, Esq., of San Jose, which we regret we must defer till next week, informs us that this section of our State has not suffered very much, that the heavy rains will prove very beneficial. He says that almond trees were in blossom on the 27th, while severe frosts would very probably destroy them.

Farmers Letters.—We call attention to the letters from our correspondents on the Stanislaus and at Stony Brook, and hope the farmers in every section will enter into the discussion of various matters appertaining to farms, and also send us the accounts of the floods in their several neighborhoods. Both subjects will be of service to all.

State Agricultural Society.—The Annual Meeting of the Society, as we have announced, was to have been held on the 29th. But twenty members were present, no business could be transacted, and the meeting adjourned to the 23d of April.

Sorghum Saccharatum—Chinese Sugar-cane.

GOOD NEWS FOR FLOODED LANDS.

The calamities of the flood would necessarily fall heavily upon many of our farmers who have valley lands that are now overflowed, and that are likely to remain so until it is too late to plant, unless some plan could be devised to show them some crop that could be raised, and with profit too, even at a late period in the spring. From all appearances we are to have a long and tedious winter, and late and continued storms, and from the evidences now before us, the accumulated snows in the mountains must of necessity make a backward spring, continuing the flood on our river banks to a very late period. It therefore demands of the cultivators of our bottom lands a good share of thoughtfulness and wisdom, as well as practical and enduring energy, to think what is best for them to do under these trying circumstances. Much of the bottom lands that have been already planted with grain have been flooded, and the seed of course, destroyed by the long continuance of the flood, and the deposits of sand and other substances deposited thereon. This, and the lateness of the waters abating will prevent the planting of thousands of acres of grain land that must lay idle unless some other crop can be substituted at a late day. The "Sorghum," or Chinese Sugar-Cane, must be this crop. On the lands thus overflowed, the peculiar character of the deposite being gravelly or sandy substances will, when plowed after the the flood subsides, and the warm season commences, mix with the rich and alluvial bottoms and make the very soil for the sugar-cane. For several years the Sorghum has been grown and more or less of it has been successfully converted into sirup, which has found a ready sale at one dollar per gallon, although up to the present time there never has been the right kind of mills or machinery for the evaporation of the sirups or for the making of the sugar.

We published in this Journal some three or four years since, the account of the success of L. A. Gould, Esq., of Santa Clara, in making sirup from the Sorghum, and although his machinery was simply of his own designing, yet the sirup made was of the most superior character. We have never seen or tasted any before or since that was better. We also visited Napa last Autumn, and saw the manufacturing of sirups by R. E. Wood, Esq. A common wooden crusher and an iron boiler were used, and yet, a superior sirup was made, selling readily for one dollar per gallon.

The Sorghum will yield very largely in weight to the acre upon any land that will grow corn. Mr. Gould estimated his crop at twenty tuns of cane per acre, and from careful estimates three hundred gallons of sirup can be made from one acre. Beside the sirup made, there is a large amount of the cane (suckers and unripe stalks), that will serve as feed for dairy stock; the cattle and swine will also eat the cane after it has passed the mill. The amount of feed thus secured for stock might be estimated fully equal in value to the cost of plowing and planting and the seed, and probably more, leaving as a safe estimate two hundred dollars net to the acre, allowing one third of the sirup as the cost of manufacturing. Thus our flooded lands can yet be made available to the farmer the present year.

If, as in former years, our farmers ask where they can get pure and reliable seed or machinery for carrying on this work, we can here refer them to the advertising columns of this Journal. We are most happy now to inform them that Parties have just arrived from Ohio with the requisite machinery for the manufacture of the sirup and sugar, and we call especial attention to their advertisement, and to our editorial in another column, which will give them the desired information. No farmer need be afraid that he cannot find a market for the sugar cane if he raises it, or for the sirup if he should manufacture it, for the parties who have arrived came prepared to make contracts to buy the cane or to furnish the machinery, and when it shall be fully realized that we import more than a million gallons of sirup every year, all fears will vanish on this score. We hope a thousand acres of Sorghum will be planted the present year for sirup alone, and if five thousand were planted it would not be too much. The seed of Sorghum is also valuable for feed, and will probably be worth the cost of making the sirup, thus giving a larger nett profit per acre.

A Voice from Nature—Lyric o the Winds.

We are pleased to learn that Mrs. Fanny Green will read a Poem on Sunday next, at 2 p. m., in the Methodist church, on Pine street, near Montgomery, entitled the "Lyric of the Winds." The known ability of this lady, as a beautiful writer, both of Prose and Poetry, is sufficient to insure her a large audience.

Mrs. Green has delivered many valuable Lectures upon the Influence of Woman, and has written much that reflects highly to her credit as a woman desiring the greatest good of her sex.

We are happy to lay before our readers a truly patriotic and beautiful effusion from her pen, which we know will be accepted by every lover of our Union and the glorious Banner of the nation; the same spirit of love to our Flag and to our country is breathed through all her inspirations, and we feel that the Poem on *Sunday*, appropriate now, when the winds are speaking so loudly, will well repay all who shall go to hear her.

Seats free. A contribution, however, will be taken up at its close, to defray the expenses of the house, fires, &c.

Replacing Lost Furniture. As many families have lost largely during the late floods, and more or less furniture has been lost and damaged, we know they will be glad to know where they can replace that furniture at the least cost, and secure good furniture at the most reasonable rates. To all such persons we can recommend them to the large furniture warehouse of Messrs. Selling Marx & Co., on Washington street. They are receiving immense invoices of new goods of all kinds, and we know of their liberality to the unfortunate rececently, and take pleasure to recommend all to go to this house to purchase furniture.

Continued Storms.

The stormy weather continues, and even increases in its force, adding new terrors to its menaces. To the storm clouds of rain and the deluge of waters, there have been added the lightning's flash and the thunder's peal. The Storm King has not yet passed from us.

On Tuesday night snow, hail and rain fell in our city, and reports come to us that snow and hail storms have been universal over a large portion of our State (not including the sunny Southern part). Ice formed in our streets on Sunday last, and it remained all day, and even on Monday and since it has has remained all day unmelted. On Monday night ice formed in this city *two inches thick* in many places, in tubs, pails and pans exposed in the yards; and, what is more strange to old Californians, the waters in our bay, near the shore, were in many places frozen over. This, we think, is the *first time* such an event has occurred, at least in the history of old 49ers. The streets were white with snow during all the night, and even until 9 a. m. the snow and ice beneath the feet giving back the old fashioned crackling noise of a stern New England winter.

The simple recital of such an event is not all. There comes with it a sense of cold and chill upon the heart, when it is remembered that to the many who are now exposed in the flooded districts this severe weather adds greatly to previous calamity. The knowledge of this fact must prompt all to a renewal of the godlike deeds of charity which have illuminated the history of the Flood of 1862.

"Once have I spoken; yea, twice and thrice; yet my people will not hear me." The Sacred Writings are prophetic in regard to the present history of the Floods in California—in 49 and 50, in 52 and 53, and now in 61 and 62; and if these admonitions do not warn the people, and teach them lessons of wisdom in regard to our winters, then "Nature's text-book" is of no avail, and the evil consequences must be upon the heads of those who will not be admonished.

The warning Voice is now speaking from the very mountain tops. Their whitened peaks stand out like hoary headed counsellors, telling us that we have as yet had but the *beginnings* of the Flood. In all our past experience, it has always been the coming of the melting snows, and we appeal to all who shall read these remarks—are we not now experiencing a series of storms such as make even the Redmen of the forest in the towering Sierra Nevada pause and lift up their hands and say the "Great Spirit" is talking?

"Will not my people, my chosen people, hear me?" The voices of nature are uttering their loudest warning? The mountains leap from their craggy hights and come down, saying, Beware! The lofty pines, that have stood the shock of a hundred blasts, bow before the Storm King, and kiss the earth. That *mighty monarch of the forest*, old *Hercules*, whose topmost branches have felt the fierce scorching of three thousand summer suns, and whose wide-stretched limbs have laughed at old Boreas, and defied his power, has now bowed his head, folded his arms, and laid down quietly upon Mother Earth. These are voices that *Humans* must hear. Even now the valleys among our mountains, that contain thousands of acres and a hundred lakes must, with the return of the warm spring sun send down their gathered waters, the snows and frozen waters will come, and sweep the mountain sides, and raise our rivers, and speak in such a voice as we have never yet heard. We repeat our belief that *we have not yet seen the highest waters*, for the mountain torrents will yet send us their springtime floods, and the forest and mountains will bow before their fury. We give only the views that are taught us by a careful study of nature, and a knowledge of the power and capacity of the lofty Sierras, whose vast extent and immense resources we are conversant with, having traveled over the highest peaks and seen, and sailed the lakes upon their very crowning tops. We would avert calamity were it in our power, and pray that we have seen the worst; but with the truths before us, we cannot refrain from an opinion based on the facts we have given.

The Legislature appears now to be in good working order, at the Merchants' Exchange building on Battery street, in this city. A resolution to remove the offices of State officials to this city was defeated, except the Governor's. A bill has been introduced to exempt farmers from fencing their lands, which will doubtless pass. A proposition has been made to issue $10,000,000 in State bonds at 10 per cent interest, and to appoint commissioners to loan these bonds to sufferers by the flood, at 12 per cent, the difference between the two rates to pay the expenses. A feasible and common sense plan, and a very desirable one. The Legislature has shown its loyalty by voting to assume the collection of the federal tax. Another aid comes to the relief of the flooded, and all the people, in the shape of the "Retrenchment Bill" proposed by Hon. Wm. C. T. Fay. Here again is true legislation. Our people over the whole State are suffering, and will suffer, a heavy pecuniary loss by the late floods, and the loss of property in various ways. It is not only the residents in the flooded districts that are loosers. Large interests in mining companies or farms and stock ranches are held in our cities, by means of part ownership, mortgages, and shares, that will thus very directly be affected, and the time has come when reform and retrenchment must be put into practice in every department of State and individual economy.

Oil and Water.—The Herald and Mirror, daily newspapers of this city, have been merged into one, and will hereafter be known as the Daily Herald and Mirror. The Mirror was formerly the mouthpiece of Northern radicalism, and the Herald was strongly suspected of having, beneath its surface of loyalty, an underlying stratum of secession sympathy. But, *presto!* the acid and the alkali are brought together, and the result is a *neuter*—neither one thing nor the other!

Grease the Wheel.—Save the strength of your Horses and your Cattle, by keeping your wheels well greased. This would be true economy as well as true humanity, for it saves the wear and tear of both wagon and carriage as well as the strength of the animals.

Smith's Garden, Sacramento.

"High towers, fair temples, goodly theaters,
Strong walls, rich porches, princely palaces,
Fine streets, brave houses, sacred sepulchers,
Sure gates, Sweet Gardens, stately galleries,
All these (oh Pity!)"—by ruthless floods are swept away;
All these, the fairest, mightiest, dearest,
To Ruin a prey!

These fine gardens at Sacramento have been placed in the front rank of the Gardens and Nurseries of our State for many years, and most deservedly so, for no man has done more by large expenditures and liberal outlays to advance the cause of Horticulture than the proprietor of these fine Gardens.

As these Gardens have thus ever occupied the front rank, for extent, for excellence, and for beauty, in the days of sunshine, so they have now occupied the front rank in the floods and storms. Situated as they have been on the American river, these beautiful grounds have been the scene where that river in its maddest and most raging fury seemed to delight in pouring out its wrath, where it could make the greatest havoc.

To all who have visited Smith's Gardens, and enjoyed the pleasure of a ramble in their pleasant walks, and beneath the trees bending with rich and delicious fruits, and enjoyed the courtesy and hospitality of the proprietor and his family, can form some idea of the extent and power of the flood, when we say that the waters rose over the entire levee on the river bank, so as to stand two feet in the parlor of Mr. Smith's house, forming a heavy waterfall over the banks for the distance of a mile and a half, and sending its sweeping floods in all their power over Orchard, Nursery, Vineyard and Garden, regardless of their beauty and glory moving conservatories from their foundations, and laying waste much that was once beautiful. The Wine Cellar, too, was invaded, and the "juice of the vine" would have been borne off by the cask, had not the doorways barred their egress.

It were no easy task to paint the track of the furious tide that swept over these grounds. Sad, sad as is the scene that meets the view of what was once so beautiful, yet—

"What fate imposes, men must needs abide;
It boots not to resist both wind and tide."

And now that fate has been sporting with our friend Smith in his beautiful Home Spot, *yet all is not lost*, though deeply buried beneath the muddy wave; and beautiful flowers may be hidden and the works of years may have been lost—yet that courage and energy which made that once wild spot so beautiful, can again make it "blossom with the rose"—for that taste and skill, that genius and energy that has once built, can *rebuild*; and we believe, knowing as we do the energy of the Proprietor, that when the fragrant breath of "rosy May" shall come to us, the walks in Smith's Gardens will assume their wonted beauty, and the trees scatter again their tinted blossoms, for we think we hear the mental resolve of the Proprietor saying—"Let come what will, I mean to bear it out, and either live with glorious victory, or die with fame, renowned for chivalry. He is not worthy of the honeycomb that shuns the hive because the bees sting!"

That's the right spirit! And now we hope that all the friends of Horticulture over this State that desire to encourage *good works*, let them send a good generous order for Fruit Trees, Grapevines, Shade Trees, etc., to *Smith's Gardens*—for amid these trials we can assure our readers that they can have their orders filled faithfully. Send therefore generous orders, and send the *Cash*. This will insure the success of what you purchase, and give almost a certain promise, too, of a noble harvest from every tree and vine purchased: for the motive that prompts to a *good deed* will bring a blessing in many ways, for now is the time to encourage our Nurserymen, who are thus afflicted by the storms.

A Cheering Voice from the Granite Hills.—We copy the following from that ably conducted paper, the New Hampshire Journal of Agriculture, published at Manchester, N. H.:

"California Farmer.—To any one who can afford it, it is a treat to look over this enterprising sheet. The development of that vast region in its agricultural resources is more wonderful than its gold and silver. Its producing capabilities are destined at no great distant day to revolutionize the great producing trade of the world. In corn, wine, wool and cattle, the progress is immense. Perhaps no better index of this can be found than in this agricultural paper, which has now entered on its 16th volume.

An Oregon Enterprise.—The falls of the Willamette river, in Oregon, make the transportation of grain from a large portion of the best agricultural region of the State so expensive that the farmers, except a few who live in the level country below the falls, do not pretend to raise grain for shipment. It is proposed to remove this obstacle in the way of agricultural prosperity, by expending $120,000 to build a system of locks, enabling boats to pass the falls with their cargoes, and so reducing greatly the cost of land and river carriage.

Cost of Supporting a Regiment of Soldiers—*Quantity of Baggage and Stores that move with a Regiment.*—We learn from good authority that the average cost of supporting a regiment of soldiers in camp will average $30 a month each—so that every regiment now camped in our State costs Uncle Sam $30,000 a month, calling each regiment 1000 men. When moving it requires 500 *tuns* carriage, and to our Southern border the cost from camping ground here will average $65 per tun, making $32,000 for moving. Such is the cost of our wars.

The Collins Line of—?—Not steamers, kind reader, but Collins line of customers to their Hat Store, in Tucker's Buildings. The fine hats now finishing by this firm are the Collins line of "Beavers," and we wish to keep a line of customers constantly going to Collins & Co.'s Hat Store.

Patent Office Reports.—If ever the Overland coaches bring the back mails, we shall have a fine lot of Patent Office Reports for our Patrons and readers, which we shall take pleasure in distributing.

Dentistry.

Probably no one part of the human frame causes more anxiety to us poor humans than the teeth, and none that requires more care, none more important, and yet, none more neglected. The teeth masticate our food. Upon its proper mastication depends the tone of the stomach, and the consequent health of the body, for food that is imperfectly masticated and sent to the stomach to have work done there that should be done by the teeth, causes dyspepsia, and a host of other ailments that follow in its train. Neglected teeth soon decay. Besides being unsightly and painful, they soon affect the breath and thus again poison the vital part of life. Neglected teeth will soon open the way to a host of ills that "flesh is heir to," and cut short the years of one's life more than an exposure to cholera and war. These are truths, but there is one other evil that we have not yet mentioned. A good set of teeth is a prominent feature of manly and womanly beauty. A pretty face in a woman, but a bad set of teeth, and the charm is gone. This is always the case with woman, and it is greatly so in man. A good set of teeth preserves the fullness of the features, and thus practically preserves the roundness of the human face the distinctive marks of the face divine, whereas the loss of teeth causes the cheeks to fall in and to resemble and look old, even in middle life. The preservation, then, of the teeth is of vital moment, for in doing this, health and freedom from pain are secured, and life and beauty preserved and prolonged.

Among the many who profess to be *Dentists*, there are but a very few who are real true artists, or who make their profession a study, so as to seek out the laws of nature and work in harmony with nature, and when nature needs aid then be prepared to co-operate wisely. We have recently found a *true artist* in Dentistry, and if our readers will only follow our advice and visit the place to which we direct them as advertised in our columns, they will find if they are in any way afflicted that this artist will be indeed an "Angell," of relief to them.

We only speak now of the facts as appertaining to the teeth, and hereafter we shall present some items relative to the great advantages and excellencies of the system adopted by the artist to whom we allude.

The Right Spirit.—Messrs. Stockton & Coover, whose fine Mills, on the North Fork of the American river, were carried away by the flood, have made arrangements for re-building a splendid mill of stone, sixty feet square and four stories high. This is the true California grit!

The steamer Cortez arrived from Victoria and Astoria, on Monday, and reports that she was unable to reach Portland, either on her way up or on her way down, on account of ice in the Columbia river. The steamer Brother Jonathan, with 600 tuns of freight on board, is frozen in, 8 miles below St. Helens, near the center of the river, contiguous to shoals, and great fears are entertained for her, when the ice shall break up, the danger being that cakes of ice will float down upon her, and driving her against the shoals, cause her to be wrecked. She was frozen in on the 15th. Mr. Haskell represents the weather to be severer than ever known before. When he sailed from Astoria, it was snowing and sleeting with prodigious rapidity.

CALIFORNIA LEGISLATURE, 1862.

THE SENATE.

Senators Hold Over.—Alameda and Santa Clara—A. L. Rhodes, R.

Butte and Plumas—Richard Irwin, U. D.

Calaveras—P. A. Gallagher, U. D.

El Dorado—A. St. Clair Denver, O. Harvey, U. D.

Mariposa, Merced, Buena Vista and Tulare—S. A. Merritt, S.

Nevada—William Watt, U. D.

Placer—Phil. W. Thomas, U. D.

San Francisco—James McM Shafter, R.

Sacramento—E. H. Heacock, R.

San Joaquin and Contra Costa—F. M. Warmcastle, S.

Sonoma, Marin and Mendocino—John H. Hill, U. D.

Tuolumne and Stanislaus—C. V. Williamson, S.

Yuba and Sutter—William H. Parks, U. D.

Yuba—C. E. DeLong, U. D.

Recapitulation.—Republicans, 3; Union Democrats, 9; Secessionists, 3. Total, 15.

Senators Elect.—First District—San Diego and San Bernardino, J. C. Bogart, S.

Second District—Los Angeles—J. R. Vineyard, S.

Third District—Santa Barbara and San Luis Obispo, R. Pacheco, U. D.

Fourth District—Tulare and Fresno—Thomas Baker, S.

Sixth District—Santa Cruz and Monterey—O. K. Porter, R.

Eighth District—San Francisco and San Mateo—B. W. Hathaway, R. San Francisco—Sam Soule, R. F. Perkins, and J. A. Banks, to supply vacancy, Reps.

Ninth District—Alameda—A. M. Crane, R.

Eleventh District—San Joaquin—C. H. Chamberlain, R.

Twelfth District—Tuolumne and Mono—L. Quint, U. D.

Thirteenth District—Calaveras—William T. Lewis, U. D.

Fourteenth District—Amador—R. Burnell, U. D.

Sixteenth District—Sacramento—A. B. Nixon, R.

Seventeenth District—Solano and Yolo—O. B. Powers, R.

Eighteenth District—Napa, Lake and Mendocino—William Holden, S.

Twentieth District—Placer—W. D. Harriman, R.

Twenty-first District—Nevada—Joseph Kutz, R.

Twenty-second District—Sierra—W. Kimball, R., to supply vacancy.

Twenty-fourth District—Butte—R. C. Gaskell, R.

Twenty-fifth District—Tehama and Colusa—J. G. Doll, U. D.

Twenty-sixth District—Shasta and Trinity—Benjamin Shurtliff, U. D.

Twenty-seventh District—Humboldt, Klamath and Del Norte, W. Van Dyke, U. D.

Twenty-eighth District—Siskiyou—Geo. B. Oulton, R.

Recapitulation.—Republicans, 14; Union Democrats, 7; Secessionists, 4. Total, 25.

ASSEMBLY.

Alameda—S. B. Bell, J. M. Moore, Reps.

Joint Convention.—Republicans, 55; Union Democrats, 48; Secessionists, 17. Total, 120.

STATE SUMMARY.

At Stockton, at 3 P. M., on the 27th, the waters of the San Joaquin fell two feet from the wharf level.

The water of the river at Sacramento on Tuesday fell to twenty-one feet above low-water mark. The weather continued cold.

A farmer tells the Napa Echo that he is feeding chaff to some of his horses during this time of scarcity of out-of-door food, and finds it answers well.

Recently, at Hog's Dry Diggings, near Pilot Hill, Placer county, two boys washed out a nugget of pure gold worth $400.

An almond tree, growing in a garden at Stockton, recently blossomed in the most luxuriant manner; this was before the cold snap.

On Tuesday morning, the 28th inst., a branch of the Napa river, which has been running a current of five miles an hour, froze over so that cattle crossed over on the ice.

On Saturday, January 11th, the waters of the Mokelumne river, at the Big Bar Bridge, were forty-four feet above low water mark, and in about eighteen hours they fell at least thirty feet.

It appears probable that the loss of cattle has been much exaggerated. The Stockton Argus thinks the loss but little exceeded the number that would have died of starvation in the ordinary winter course, owing to their owners' improvidence.

The Forest Hill Courier has information that a most bloody and savage fight occurred at Grass Valley, some day last week, between Cornish and Irishmen, and that about thirty men were killed! The fight is said to have originated about the ownership of a minng claim.

The freshet which visited Placerville last Monday night, the 21st inst., is described as being very severe and disastrous. A portion of Main street was flooded, the foot bride at Bedford Avenue was destroyed, and much damage done to stores. Much injury to property in Upper Placerville was also occasioned.

From Los Angeles, the steamer brings intelligence that the rain had been excessive there as elsewhere, and the county had been flooded. Several vineyards were injured by the overflow of the Los Angeles river, and some adobe houses melted down; but the Los Angeles papers put the damage in their vicinity at only $25,000. In the country some of the ranchos were flooded; the roads were generally impassable, and the mails had been stopped for a week or two. The steamer now takes the mails up and down. Reports at Los Angeles are that the town of Visalia had suffered greatly from the flood; also that much property had been destroyed in San Bernardino county.

The weather chronicle for the past week is mixed, as usual. Fair weather commenced on Thursday of last week, inaugurating the coldest "snap" ever recollected in this State. Monday morning ice was about three-quarters of an inch thick in pools of water about town, and an injunction was put upon some of the Bensley water pipes, by their freezing up. The thermometer was supposed to mark about 25°. Monday night was a brief shower, which was snow on the surrounding hills, and on Tuesday night we had an actual snow storm in San Francisco. Wednesday was a little rain through the day, and most of the night it poured down in a style it has got used to. But yesterday (Thursday) it faired again, and very pleasant it was. The cold has been severe, and considerable snow has fallen in the Interior. At Marysville, on the 27th, as we learn by private letters, the thermometer marked 32° at 2 P. M., and at San Jose it showed the same at 11 A. M, of the same day. On Monday morning, the snow was seven inches deep at Columbia; several inches of snow had fallen at Marysville, Sacramento, and other places in the valley, this week up to Wednesday: and at Napa to the depth of six inches. So the weather is still on the extremes. At the Sulphur Springs, near Santa Barbara, a large land slide occurred on the 17th. Three men were sleeping in a tent near the scene; of whom Henry Miller was killed, Cromford badly injured, the third escaping unhurt. Snow was fifteen feet deep on the summit of the Sierra Nevadas, on the 27th, and so soft that travel was impeded. The Overland Mail is for the present embargoed.

◆

BY OVERLAND TELEGRAPH.

Dispatches have been received that a battle was fought on Saturday, the 19th inst., at Somerset, Ky., between 8,000 Federal troops under General Thomas, and 10,000 rebels under Zollicoffer. The rebels attacked General Thomas in his encampment, at Well's Cross Roads, but were repulsed, and hotly pursued by General Thomas to their encampment at Mills Springs, 26 miles from Thomas's position, where they crossed the Cumberland. Our forces followed up close to the enemy's entrenchments, on the north bank of the river, and lay in front of them all night, expecting to storm them in the morning; but during the night the enemy managed to go across the river in barges and boats. They left everything behind, including artillery, ammunition, horses, tents, quartermaster's commissary and medical stores; sixteen cannon, and 1400 mules and horses were captured. The Federal troops took possession of the enemy's entrenchments early on Monday morning. On the battle field, after the rebels had fled, 200 dead and wounded rebels were picked up; among them was Baillie Peyton, Jr. Gen. Zollicoffer was found mortally wounded in a wagon. The entire rebel loss was 275 killed. The entire Federal loss was 39 killed, and 150 wounded. General Thomas crossed the Cumberland river in pursuit of the rebels.

Kentucky and Cumberland Gap are now open for our troops to march into East Tennessee.

Heavy rains prevailed in Ohio. At Cincinnati, on the 20th, the river was *fifty-one feet* above low water mark, and was rising at the rate of three inches per hour. There was five feet of water on the first floor of the buildings fronting the river.

Secretary Stanton is busily engaged in reorganizing the War Department. He is determined to clear the War Office of all rubbish. A bill passed the House creating two Assistant Secretaries of war.

The news of the surrender of Mason and Slidell was received with much satisfaction in England. The money barometer was favorably affected, and consuls advanced 1½ per cent.

◆

Judge Shipman has delivered two interesting opinions in the United States District Court—one awarding $17,000 salvage to Tillman, the colored man, who, after killing three white men at sea, brought the schooner Waring to New York to her owners; the other declaring that ship owners are liable for cargo destroyed by rats.

Col. Haraszthy, whilst on his European tour, collected one thousand four hundred varieties of grape-vines, which will in a year or two be distributed throughout the State. Selected by an excellent judge of vines, they must prove valuable.

Horticultural Discussion.

At a recent meeting of the Brooklyn Horticultural Society, various subjects of interest were fully discussed.

Keeping Bulbs Through the Winter.—Mr. Fuller said: Place Gladiolas in a dry warm place, at a temperature from 70 to 90 degrees of heat. Dahlias require a cool dry place—temperature 45°. Mr. Burgess knew a large Dahlia grower who kept his tubers under the stage of his green-house with good success.

Pruning Grape-Vines.—Some of the members said spring-pruned vines produced more fruit than those cut in the fall; the opinions of those present differed on this point. All agreed that grape cuttings should be taken off in the fall; if left on until spring they seldom take root when planted.

Orchard House, Etc.—Mr. Chamberlain, of Newport, R. I., exhibited some fine specimens of trees and plants grown in wire baskets—filled with moss. A pine apple, also a peach tree, a basket of strawberries in bearing; also, fine plants and flowers, running vines, etc. These awakened much admiration and interest. The method of growing, etc., will form the subject of a future paper.

Propogating Plants by Cuttings.—Mr. Fuller spoke at some length upon this subject. To insure success, he said, cuttings should be made in the fall; they should be tied in bundles and buried in sand until spring. The lower end, he said, should be cut off at a right angle instead of obliquely—a method preferred by many nurserymen. The great secret in propagating successfully from cuttings, is to 1st, procure ripe wood; 2d, prepare in the fall; 3d, pack the earth tightly around the lower eye of the cutting when placed in the ground.

Root-Pruning.—Mr. Mead advocated shortening-in the roots of a tree or vine, so that manuring and mulching may be more effectually performed. He also spoke of the practicability of propagating annuals by cuttings instead of from seed.

Mr. Bridgeman, 878 Broadway, who is a successful florist, said that propagating Peytunias and Verbenas from cuttings was very simple. The latter could be grown in a cold bed, but Peytunias required bottom heat. Cuttings of annuals would succeed better when placed around the outer edge, instead of the center of a flower-pot.

Mr. Bridgeman said it was preferable to use bottom heat with all *bedding* plants. A great deal of complaint from purchasers arose from the fact that the soil was poorly prepared. Florists, as well as agriculturists, insist that the soil should be deeply disintegrated to produce the best results.

Our limited space prevents us from giving a fuller report of this meeting—which was, as usual, fully and enthusiastically attended. We cannot refrain from congratulating the officers and others, upon the present and promised success of their untiring efforts in rendering the Brooklyn Horticultural Society valuable to the public.—[P. T. Q. in Working Farmer.

◆

A Mottled Crow.—For some weeks back a crow with white wings, has been fequently seen in this vicinity (Ukiah), and a good many efforts have been made to capture him. He was finally bagged one day this week by a sportsman of this place. It is a freak of nature not often indulged in, and we have heard of no one hereabout who has ever before seen such a thing. The crow is black as any of its species, with the exception of the wing feathers, which are as pure a white. He has been sent to San Francisco for preservation.—[Mendocino Herald.

Good for Old Maids.—Miss Mary P. Townsend, late of Boston, deceased, left by will $60,000, "the income of which is to be applied to the support of those females who, in legal phraseology, are called 'spinsters,' or single women." She says, in her testament, that she belongs to the sisterhood, and is in duty bound, as she has the means, to procure them a shelter from the "world's dread laugh." $60,000 will do it for a large number, for a great many homes with husband *attached*, could be bought for that amount.

Sin, not 'till it has left, will duly sinful seem:
A man must waken first, ere he can tell his dream.

MAGNETIC PHYSICIAN.

Citizens—Friends:

M. MINER, from Washington, D. C., comes to you endowed with that remarkable power of Sympathetic Clairvoyance, which enables her to discover the Causes of Disease, and apply the Remedy.

Diseases which evade all other modes of Examination, and yield to no other System of Treatment, are clearly revealed to the Sympathetic Clairvoyant and easily brought under control; while Diseases, in all their forms, physical and mental, chronic and acute, are alike subject to its power, relying, as it does, on Nature's great remedial agents: Water, Air, and Magnetism.

Mothers and CHILDREN treated with great success.

Room No. 10, Union Block, cor Market and Kearny streets. *Office Hours*—From 12 M. to 3 P.M. 17-6t

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

The Question Solved.

COOK'S
Improved Portable
SUGAR EVAPORATOR
FOR MAKING
SORGHUM AND MAPLE SUGAR.

ALL DOUBTS ARE DISPELLED! THAT CHINESE SUGAR-CANE YIELDS
TRUE CANE-SUGAR
Is a Settled Question.

The difficulties in securing its Granulation have been entirely overcome by the invention of

Cook's Evaporator.

By its peculiar arrangement it throws off all scum and feculencies, and secures a deposit of a kind of wax, which would otherwise prevent granulation, and WHICH HAS YET BEEN REMOVED BY NO OTHER PROCESS. Thus in this machine are combined all the requisites for Defecating without Chemicals, and evaporating with an unparalleled rapidity.

Attention is called to the following Claims of this Valuable Invention:

1st. It so liberates the sirop from its gummy and glucose matters that crystallization may readily be secured

2d. It will make more and better sirup in a day than any other evaporator

3d. Being made of sheet metal it is more sensitive to heat than cast iron, and can suddenly be brought to a very high heat without cracking, a danger to which cast iron Evaporators are greatly subject

4th. It consumes less fuel by one-half than any other Evaporator.

5th. It is the only one in which great heat can be applied to shallow bodies of juice without danger of scorching; hence its greater rapidity of evaporation and more certainty of success.

6th. It is more convenient for use than any other style; is always ready for work without calling upon all the neighborhood mechanics, and causing great delays when you are in the greatest haste.

7th. It thus combines in an eminent degree all those essential requisites of sugar machinery, viz: speed, superiority of work, convenience, and economy.

The Undersigned hold the PATENT RIGHT for the entire Pacific Coast and are now ready to take orders for this justly celebrated EVAPORATOR. Its merits are so well established that it need only be seen to be appreciated.

We will furnish Evaporators adapted to brick arches at the following prices, Liberally Reduced to meet the state of the times and to promote the successful manufacture of Home Products:

No. 3—Copper Pan, 45 by 90 inches......$100
No. 4— do do 45 by 100 do 125
No. 5— do do 45 by 144 do 150

Two Skimmers, one Door, and one Grates accompany each Pan.

Copper Pans are used for this Evaporator, on account of their great durability and cleanliness.

☞ For any further information and for Pamphlets containing full directions for the Culture and the Manufacture of Sorghum; also for testimonials of its successful Manufacture by this Evaporator in the hands of Farmers of the different States; and for Orders for the Machines, address the undersigned.

CAROTHERS & BATES,
Box 306 P. O. San Francisco.

N. B—A MODEL of this Evaporator, and Samples of Sirup and Sugar made with it, can be seen, and important information had, at California Farmer Office, where Orders can also be left. 17

STANFORD BROTHERS,
19 California street, near Front,

Dr. E. C. Angell,
DENTIST,

IS PREPARED to supply Whole or Half Sets of Superior MINERAL TEETH manufactured in his own Laboratory, being modeled and carved for each individual case in such a manner as to secure the most perfect adaptation, and the complete restoration of the features. By the aid of machinery he is enabled to furnish SUPERIOR WORKMANSHIP at prices scarcely, if at all, higher than is charged for Artificial Teeth of the most ordinary and commonplace character. Samples be may seen at his office, and reference is permitted to numerous cases in which the work is doing excellent service.

His DENTIFRICE, known as—
ANGELL'S
Orris and Charcoal Tooth Soap,
is not only grateful to the mouth, but is widely admitted to have no equal for cleansing the Teeth and promoting their soundness. A package that costs one dollar lasts twelve months if used daily. For sale by the principal Druggists.

DR. ANGELL Practices Dentistry in all its various branches, giving especial attention to the TEETH OF CHILDREN, preventing and correcting irregularities. For Straightening Irregular Teeth, he has invented apparatus that renders the treatment of cases which have hitherto been considered beyond the reach of remedy, comparatively easy and rapid.

Difficult Cases in any department of Dental Surgery or Mechanical Dentistry, respectfully solicited.

Home Miscellany.

OVER THE SEAS.

[The following lines display a deep and generous love of home scenes, and early childhood hours, such as should always be cherished as among the sweetest remembrances of life. We hope to hear often from C. F. R.]

Do you e'r think of us over the seas
Brothers and sisters dear,
When the home wind stirs the linden trees
That sing beside the door?
Think of the sandals, tattered and torn,
Of sore and weary feet
That tread the desert hill bruised and worn
Walking the stony street?

Think of the wanderer out in the gloom,
Care if his heart grows cold
As he weaves the threads of fortune's loom
In this city so noted for gold?
Do you think of the bruised and broken hearts
Aching for distant homes,
Of the heaving sigh and the tear that starts
When retrospection comes?

The weary feet, though they be bruised and sore,
Shall find the pathway still
That leads through the fields to the old home door,
The mill-stone at the sill:
They shall come again with familiar tread
When summer days are still,
In dreams revisit the old path that led
Athwart the schoolday hill.

San Francisco, Jan. 10th, 1862. C. F. R.

THE HAND UPON THE LATCH.

A YOUNG WIFE'S SONG.

My cottage home is filled with light
The long, long summer day,
But, ah! I dearer love the night,
And hail the sinking ray.
For eve restores me one whose smile
Doth more than morning's match—
And life afresh seems dawing while
His hand is on the latch!

When Autumn fields are thick with sheaves,
And shadows earlier fall,
And grapes grow purple 'neath the eaves,
Along our trellised wall—
I dreaming sit—the sleepy bird
Faint twitters in the thatch—
To wake to joy, when soft is heard
His hand upon the latch!

In the short winter afternoon
I throw my work aside,
And through the lattice, while the moon
Shines mistily and wide,
On the dim upland paths I peer
In vain his form to catch—
I startle with delight, and hear
His hand upon the latch!

Yes; I am his in storm and shine;
For me he toils all day;
And his true heart I know is mine
Both near and far away.
And when he leaves our garden gate
At morn his steps I watch—
Then patiently till eve await
His hand upon the latch.

SOMETHING TO LIVE FOR.

BY VIRGINIA. F. TOWNSEND.

"Agnes!" called Mrs. Matilda Grayson, from the foot of the staircase, to her niece—"Agnes! Company!"

The information communicated in this laconic fashion, reached the young lady, who sat reading by a chamber window. It was evidently not very gratifying to her. She rose up, laid her book upon the table with a sigh, and there was a dissatisfied, irritated look, on her face, which made it almost sour.

She loosened her hair before the mirror, and shook it back of her head, in a listless sort of way, which showed a general inward discordance and defection. Yet, it was beautiful dark hair, and its weight was heavy, as she lifted it in her small hands. Agnes Maltby was twenty-four, and she had resided for the last two years with her aunt, who was her mother's only sister.

Agnes was an orphan, and her aunt was her nearest living relative. Mrs. Grayson was a bustling, managing, ambitious woman, with two daughters near Agnes' age—proud, affected, silly girls, with not half the good sense of their mother.

Mr. Grayson was president of the bank in Peytonville—a pompous, good-natured, money-loving man, who left the sole management of his domestic concerns to his wife, of whose administrative powers in that direction he had a justly high appreciation.

Agnes was wholly unlike any of her relations. She had a rarely endowed, sensitive, susceptible nature, with the temperament which usually accompanies such mental organization.

Of course, her relatives could not understand her. They were coarser grained, and never walked in the finer country of her spirit.

Agnes' father was a man of fine-spun theories, a scholar, and a dreamer; but he had little practical thrift or shrewdness, and his fortune slipped through his fingers, and he died a poor man, leaving his wife and daughter dependent upon their relatives.

Mrs. Maltby did not long survive her husband. But Agnes inherited the strength and force of her character from her mother, who had combined with these qualities a rare sweetness and gentleness of disposition.

The girl was not happy with her relatives. They thought themselves very kind and generous towards her; but their instincts were selfish, and they constantly galled and fretted the proud spirit which they could never comprehend.

Mrs. Grayson never respected her niece's individuality. Because she gave Agnes a home, and dressed her as well as she did her own daughters, she felt that her niece's time and entire self were at her disposal.

Agnes had rare conversational gifts, and Mrs. Grayson was fond of society, and ambitious to sustain a reputation for hospitality. She had a large circle of acquaintances, and it devolved upon Agnes to entertain these, with the assistance of her aunt and cousins. Nothing could have been more repugnant to the girl's tastes and feelings.

To interchange common-places with strangers, to sit still and listen for hours to the gossip and frivolous talk, which floated like bubbles along the deep currents of her life, was slow torture to Agnes. But her aunt had no sympathy with her niece's tastes and feelings, and she buried them in her own heart.

Her cousins thought her a little peculiar—a little inclined to moods and strange fancies, such as getting by herself in a dark evening, and reading the sky, and listening to the winds; but, as these peculiarities gave them no trouble, and as "Cousin Agnes" was on the whole kind and amiable, they liked her well enough.

The young girl stood at the window, and looked out, after she was dressed. It was a bleak, cheerless day, late in November. The sky had a wearied, hopeless look, as though it had turned its face from the summer, and caught a glimpse of December, and drawn a vail of gray brown clouds over her face at the sight.

The face of Agnes Maltby, standing at the window, reflected the expression of the sky. It was a fair, pale face, but one of those which needed the warmth and light of the heart to unlock it, to give it life and interest; and it had neither of these now.

The girl turned away from the window, and walked up and down the room hastily. "I've got to go through with another of these long farces," she said, and a look of pain, that almost amounted to anguish, crossed her face. "How I detest them! Every day they grow more repugnant, and every day I have to put on my company smile, and go down into the parlor, and go through with the same weary routine of ceremony and brainless talk with silly, fashionable people, who haven't one sensible idea in their heads or in their hearts. I am sick unto death of this life. I won't stand it much longer!" and now a flash of determination went over her face.

"You'd better earn your daily bread by the toil of your two small, white hands, Agnes Maltby, than go on at this rate;" and she lifted them up, and looked at them with a bitter smile. "It's time for you to put an end to all this in some way. Set about it with all the soul there is in you, and battle with the world for your independence. Don't mind what your proud, foolish relatives, will say. You can teach school—at least, the common English branches, and Latin and German; and that will pay your way, and your time and your liberty will be at the command of no living soul!"

"Agnes!—Agnes!" There was a little impatience in the call, as it came up the stairs a second time.

"I *will* do it," she said, and the set of her lips indorsed her words; then Agnes Maltby put on her "company face," and went down stairs. There was quite an unusual advent of visitors that morning. Several of the "first families" in Pentonville had called, and two of these had brought with them relatives from New York; so there were more than a dozen eyes turned towards Agnes as she entered the room, in a warm, brown, merino dress, which suited her style and complexion.

The young city ladies were showily dressed, and a good deal after the pattern of Helen and Harriet Grayson, who, radiant in new blue and purple morning wrappers, were smiling and chatting with their guests. Among the latter, were a couple of gentlemen, whom Agnes hardly observed as she bowed to them. One of them was an elderly, well-preserved, rather pompous gentleman—a man whose whole air and manner indicated great self-complacency, and his bearing plainly showed that he regarded himself for one or several reasons as a person of weight and importance, whose opinion on any matter was entitled to much respect and consideration. The other was a young man, somewhere about thirty, with a thoughtful, intelligent face, and a bearing which suited the face—quiet, observant, gentlemanly.

As I said, Agnes was too much preoccupied with her own thoughts to give either of the gentlemen more than a passing thought. She took the seat which her aunt made for her on the sofa, betwixt a lady from New York, and the wife of a judge in Pentonville, and tried to mingle in the small side-eddies of conversation which flowed through the room. But Agnes was in what her cousins would have called one of her "moods" that morning. Her aunt was vexed that on so important an occasion her niece should be so dull and reticent, for she was proud of her intelligence and conversational gifts.

At last, however, Agnes' face brightened; for a beautiful boy of three years, a son of one of the strangers, seemed suddenly attracted towards her. He came across the room, and laid his head with a sweet, shy grace, in her lap. The young girl's hand nestled at once amongst the bright clusters of curls which crowned the boy's head.

"What made you come to me, darling?"

"Because I thought I should like you."

And, looking at the two smiles, you would have been puzzled to tell which was the sweeter, the young lady's, or the child's.

Agnes lifted the boy on her lap, and was soon engaged in conversation with him. He was an intelligent, affectionate little creature, and it was surprising how well they got on together. But, in the midst of the conversation, the child espied a small, curly-haired lap-dog, which ran across the opposite side of the room, and laid himself down to sleep under a chair in the corner. With a shriek of delight, the boy bounded from Agnes' lap, and rushed after the dog, which he succeeded in securing. He grasped the animal tightly around the neck by both of his white, round arms, and tottled towards Agnes.

It was a ludicrous spectacle. The four legs of the frightened quadruped strung out in the air, like a struggling swimmer's, as he vainly tried to relieve himself from his most uncomforable position; and, as the child's grasp tightened about his neck, the animal was in evident danger of strangulation.

Agnes' sense of the ludicrous was keen, and she laughed outright at this spectacle. It was a laugh that it would have done you good to hear—so sweet, and childlike, and full of glee; a laugh that came right up from the deep, bright well-springs of her nature.

Both of the gentlemen heard it, and turned and looked at her. Her face was not the face which she had brought into the room an hour before; the warm lights were in it: the bright flush upon the pale cheeks, and on the daintily curved and sweetly parted mouth. She saw nobody but the little boy then, as he panted up to her, and laid the dog on her knee, with a crow of triumph, and she reached out her arms to him in playful eagerness.

"What a sweet face! I will know more of that girl!" thought the two gentleman. Half an hour later, the sun put aside the gray brown clouds of the November day with one sweep, and looked out, and blessed the earth.

"Oh, Aunt Tilly, isn't *that* delightful? The year has got some smiles left for us yet!" exclaimed Agnes, half forgetting herself in a glow of enthusiasm, as the light broke into the room.

Theodore Reid, the younger of the two gentlemen, caught the remark, for he was standing near Mrs. Grayson at the moment.

He turned, and spoke to Agnes: "Do you always have such welcomes as these for the year's smiles?" he asked.

"Yes; I think they grow dearer to me as they grow fewer, just as the last smile of dying faces do;" and Agnes' thoughts went to her father and her mother.

"Yes," answered Theodore Reid, lowering his voice, for he knew he was quite beyond the depth of the others. "I suppose that amongst all life's good gifts, that we take each day, as though they were our right, we only know how to prize the few which are leaving us."

"Life's good gifts!" and a little doubt, and a little shade of bitterness, was interfused with Agnes' smile now. "Do you really think that life has anything worth living for, Mr. Reid?"

"Do I think it has?" asked the young man, looking into her face with a glance and a smile which had many and solemn meanings. "It is a great and unspeakable gift, Miss Maltby, and it is full, to all of us, of deep and tragic experiences and duties, neither of which we can put aside; and then, these few years are so short, and in them so much is to be done for ourselves and for others—for you know for what life was given us, and what the living should be. It is a great, solemn, awful fact, looked at from any right stand point."

"I believe I am very wicked," said Agnes, simply, her face full of solemnity.

"I believe we are all that," answered Theodore Reid; and looking up, Agnes met his smile, and it reassured her heart.

"I shouldn't have asked you the question that I did," continued the girl, "if I made anything out of my life, but I do not. I seem to be hemmed in on all sides. If I had any work to do, I should grow stronger and better; but *this* living, I think sometimes it is worse than dying."

"You should get away from it then, by all means," responded the young man.

"That is what I am most eager to do; but there are obstacles before me not easy to surmount. My friends will be greatly opposed to my leaving them, and I have no one to assist me to get away."

"Miss Maltby," said Theodore Reid, "we are strangers to each other, and it must seem presumption in me to offer you my services; but if in any wise, at any time, they can be of use to you, you may command them freely."

Agnes Maltby lifted up her face, and looked into the young man's. There was something touching and childlike in the earnest, searching gaze which went into his eyes, for there was something of childlike simplicity and faith in the nature of the young girl.

The young man bore the gaze unflinchingly, and Agnes was evidently satisfied, for after a long-drawn sigh she said, "You are so kind Mr. Reid, that I do not know how to find words to thank you. I have no plans for the future; but if I could find my way into some seminary, where I could teach for a small salary, and be sole mistress of my own time and thoughts, I should be happier than I have been for years."

"I do not think it would be very difficult to find such a position, if you are willing to trust me with the search."

The sweet hazel eyes grew dark under their tears. "You would be opening the gates to the prisoner," answered Agnes.

"Mr. Reid," called Harriet Grayson, at this moment, "won't you come over here, and tell us which of these engravings you consider the finer?"

Agnes was so absorbed with her own thoughts that she did not observe a moment later that the chair Mr. Reed had vacated by her side was occupied by the elderly gentlemen, with whom she had only exchanged a bow on her entrance into the parlor.

Mr. Stevens tried to make himself very agreeable to his young hostess for the next half hour, and he succeeded in some degree, for he was jovial, witty, and prided himself on his gallantry to ladies; but there was a repellant self-consciousness about the man, for he never lost sight of the fact that he was worth five hundred thousand dollars. But Agnes was in a happy mood now, and she laughed at the gentleman's jests; and the roses grew wide in her cheeks, and the lights flashed in and out of her hazel eye; and the ladies gradually drew near the young girl, and, unconsciously to herself, Agnes became the life of the company.

"My dear," said Mrs. Grayson to her niece, as the family sat at their late dinner that day, for they grafted city fashions on their country life, "I think Mr. Stevens enjoyed his visit this morning, as he informed me that he should repeat it at the earliest opportunity. He is a brother of Dr. Morgan's wife, and very rich; and he has been a widower for the last six years."

"That explains his attentions in a certain quarter this morning," subjoined Helen Grayson, as she slipped her napkin into its ring, and smiled, and glanced significantly towards her cousin.

Agnes Maltby had plenty of faults, but she had that natural delicacy, that fine graining of soul, which made jesting of this kind, exceedingly coarse and repugnant to her feelings.

But her cousins were not malicious, only thoughtless and good-natured in their jests.

"I declare, papa," interposed Harriet Grayson, picking an almond from its shell, "Helen and I must be very amiable to stand such a putting in the shade, as we had this morning."

"There was Agnes monopolizing the society of the young gentleman as well as the old, and all we could do was to sit still and see it. Imagine our feelings!"

"But what did he say that made you put on so solemn a face, Agnes?" inquired the elder of the sisters.

"Positively Mr. Reid looked just like a parson in the pulpit, while he was talking to you, and you—dear me—I could think of nothing but a school girl who hadn't recited her lesson, and was feeling very penitent over the schoolmaster's lecture."

They all laughed at this—all excepting Agnes, and the jest jarred painfully on her feelings.

"Who is this Mr. Reid, Agnes?" said the President of the Bank of Pentonville, leaning back in his chair, after indulging in a most liberal dinner.

Harriett, his youngest daughter, answered. "He's a young lawyer, papa, a nephew of Mrs. Adams, the minister's wife. His father failed a short time before his death, and the young man had to struggle through college as he could—they say he's very talented in his profession."

"I think," added the elder sister, "that Mr. Reid's agreeable, and fine looking, but somehow—I never feel at ease with him."

"No wonder!" thought Agnes; but she kept silent.

"And now, girls, I want you to go, and call on the Tracys, this afternoon. They've been in the neighborhood a whole week, and it won't do to neglect them longer," said Mrs. Grayson, in her prompt, decided way, as they rose from the table.

Agnes' thoughts went with greedy longings to her book up stairs. What would she not give for one hour of quiet communing with herself.

"Aunt Matilda!" she pleaded, "let the girls go alone. I want to stay at home this afternoon."

"Don't now, Agnes," interposed Harriet. "We want you along, and it will look much better for each to call."

"You'd better go, my dear," said Mrs. Grayson. "The walk will do you good, and you've nothing to do at home."

"Another wasted day! It shall not always be like this," muttered Agner to herself, as she went up stairs.

[TO BE CONTINUED.]

A Patriotic Father.—The Rev. Dr. Alexander Jones, rector of St. Peter's Church at Perth Amboy, N. J., is a native of Charleston, S. C., and was for many years the pastor of an Episcopal Church in Virginia. He has six sons born in the South, who are all serving in the rebel army of the Potomac. Dr. Jones himself, however, notwithstanding the treason of his children, is a most devoted and thorough going Union man. He read from his pulpit the recent circular of President Lincoln and Lieut. Gen. Scott, asking the loyal women of the country to exert themselves in behalf of the army hospitals, and after commending the work to his congregation, said, with marked emphasis, that it was peculiarly incumbent on him who had so many sons fighting to destroy the best and noblest government the world ever saw, to do what he could to support that Government and to atone for the wrong done by his children. In conclusion, the reverend doctor, lifting up his hand and voice, exclaimed with energy and feeling: "May the Star Spangled Banner float in triumph over every portion of this land, even though"—he adds, in a lower tone—"*it shall float over the field where my six sons are lying.*" In view of all the circumstances, we think it would be hard to find a higher expression of patriotism than this.—*Newark Advertiser.*

The present conflict may perpetuate our Union, and its institutions, but says an old maid who has her eye a little sideways on matrimony, "the curse of this war is that it will make so many widows, who will be fierce to get married, and know so well how to do it, that modest old maids will stand no chance at all!"

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is *so* low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

Another Herd of Noble Stock for Sale
We can offer to those who want the best kind of Stock, the following:
A Full-Blood Devon Bull; pedigree perfect.
Several Calves, Full-Blood, and crous of same.
Several extra fine Dairy Cows; ver superior.
A noble Draft Stallion, sired by a high-blood Engl Stallion, from a Vermont Morgan Mare.
Several Mares and Colts of high grades.
All the above will be sold at a bargain. Inquire of Farmer.

Literary Shrubbery.

MI MUCHACHITA.

Pink orchards spread on either side;
A strip of beach behind us;
A gentle horse that wouldn't shy;
A little maiden—O my eye!
And not a soul to mind us!

A picture! All the saints befriend
That self-same *muchachita!*
Her eyes were dark, her voice was sweet—
And she'd the daintiest little feet!
You'll know her—if you meet her!

I took her hand. I wonder why?
Her very silence chid me:
Her drooping eyelids made eclipse
Of two bright orbs, the pouting lips;
She wouldn't!—but why did she?

O, golden time of life for both!
It stretches far behind us;
But oft I see that little maid,
That horse and chaise, that lonely glade,
With not a soul to mind us.

And when I dream of things like these,
And life, when life was sweeter,
I cannot think that Mrs. Snow
(She weighs 200 pounds or so!)
Was once *mi muchachita!*

Australian Life.—Take any day of Australian life. You come home after a hard, dusty day's work, and you long for a quiet evening with your wife and children, such as you could get once in old England. When you sit down to dinner, which your wife has had to cook, and your children to prepare for, you see the partner of your domestic joys with a face (from flea and muskito bites) like a bottle of prize strawberries at Chiswick, a pleasant object to contemplate of an evening. During your dinner you are tormented with flies and bitten by fleas; your very slice of roast mutton on your plate, before you have time to dispose of it, is blown by the yellow bottle full of live maggots. You push your plate away sick and disgusted. You pour out and drink half your pale ale, and in a moment your glass is crammed with ten thousand debauched flies, who die in drunken happiness.

You call in your children; they come, looking squalid, pale and jaded; no rosy cheeks here. You help your wife to put away the things, and then sit down with flies, fleas, and your own pleasant reflections. You may have made a very fortunate speculation; but it takes a vast amount of money to compensate you for so much domestic misery. When you retire to bed it will be only a second torture of fleas and other vermin, and you will pass a restless, feverish, sleepless night; your children will cry and call for mamma half the night long, and you will get up to another day of speculation, gain or loss, a jaded wife, tired children, and thorough discomfort.

Hence it is not just of those people who write books for the purpose of inducing emigration to Australia, to give an estimate only of the milk and honey the country offers. A great quantity of the household milk is sour, and much of its honey but gall and bitterness.

Modern Chivalry.—A modest young lady living in Madison avenue, on her way home one evening, was accosted by a rude fellow who became very insulting. Her screams brought a genteel-looking young man to her assistance, and the vagabond ran away. Seeing her overcome with terror, the young man volunteered to accompany her home, an offer which she gladly accepted. When they arrived there she thanked him for the great service he had rendered her, said she would never forget it, and only regretted she knew of no way to reward him. He listened attentively, bowed, and said: "It's no great matter—if you'll hand me a quarter we'll call it square."

John G. Saxe, in making a speech at a flag-raising at Albany, proposed three cheers for the young men at East Albany, through whose liberality the flag had been procured. As the cheers were about to be given, the chairman of the occasion amended the proposition of Mr. Saxe, so as include the young ladies. After the cheers had been given, Saxe rose and gave as an apology for the omission, that he supposed "the young men" *embraced* "the young ladies."

Too Sharp for Him.—A very supercilious and haughty Virginian, named Vinton, had a pass to enter the Federal lines; and meeting a Zouave picket, handed the pass to his slave, probably deeming himself too good for the contact. The Zouave read the pass, and told the darkey to go on. Vinton attempted to follow, but was stopped by a bayonet.

"But that's my pass!" he exclaimed angrily.

"Can't help it," says the Zouave; "it says, 'pass bearer,' and bearer has passed."

"I will call Sam back, and take it. Here, Sam!"

"Won't do," said the picket. "That pass is to Alexandria, not to Fairfax. The nigger's got to have another one before he can return."

So the discomfited Virginian was forced to turn back.

"Farmer's Boy" advertises in a Kentucky paper for a wife. He says:

He wants to know if she can milk,
And make his bread and butter,
And go to meeting without silk,
To make a show and splutter.

He'd like to know if it would hurt
Her hands to take up stitches,
Or sew the buttons on his shirt,
Or make a pair of breeches.

Sometimes, in musing upon genius in its simpler manifestations, it seems as if the great art of human culture consisted chiefly in preserving the glow and freshness of the heart.

An absurd blunder is related in Tom Moore's Diary about John Kemble. He was performing one night at some country theater one of his favorite parts, and was interrupted from time to time by the squalling of a child in one of the galleries, until at length, angered by this rival performance, Kemble walked with solemn steps to the front of the stage, and addressing the audience in his most tragic tone, said: "Ladies and gentlemen, unless the *play* is stopped, the child cannot possibly go on."

If you cannot inspire a woman with love of you, fill her above the brim with love of herself, and all that runs over will be yours.

Fair Retort.—"Good news, Behloul," said the Grand Vizier to a wit of Bassora; "the Caliph has appointed you governor of all the apes and asses in his dominions!"

"Prepare, then," replied Behloul, "to obey my commands!"

A man was recently fined, in England, for cheating himself. He was charged with using a steelyard that was incorrect. It turned out that the inaccuracy of the steelyard, which was one used for weighing the coals from the pits, defrauded the man himself; but the Sheriff was compelled to fine him.

We never know a great character, says Channing, until something congenial to it has grown up within ourselves.

It is said that there are more paupers than voters in England.

A man tried the other day to purchase a hen that would lay a brick.

East India Tea Store.

MANUFACTURES BEST OF FAMILY SOAPS.

Near corner of Mason and Pacific streets.

PATENT

HYDRAULIC HOSE

MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, Grain and Feed Bags, Garden Hose, &c;

And I have the Society's DIPLOMA, signed by G. N Swezy, President, and Chas. M. Gorham, Secretary. The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
119 First street.

3-3m

1000 Acres of Land,

120 COWS,

AND

A Good Milk and Dairy Business,

For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms — say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL. WARREN, Editor California Farmer, who will furnish all needed information.

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,

Between Montgomery and Kearny streets,

SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only bestudied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,
310 Washington street.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamenal when no in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

9 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

THE CATARACT Washing Machine AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.

Wringing is Done Five Times As Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

BAILEY'S PATENT COMBINED WASHING AND WRINGING MACHINE.

Patented April 6th, 1859; and March 27th, 1860;

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Jan. 30.

We have to note a decline in prices of all kinds of produce, since our last weekly report. The spasmodic speculation has subsided, and produce of all kinds is getting back to old prices, although at present quotations the producer, in our opinion, is being liberally paid. As we predicated, a few days of fair weather supplied our market liberally from the abundant resources in the interior. Wheat, that one week since, sold at 2¾ to 3 cts., is now saleable from 2¼ to 2½ cts., the latter being an extreme figure. Potatoes, in particular, have suffered the heaviest decline, and being a substitute in a measure for flour, this has had its effect. Hay is quotable, cargo price, from $18 to $22 50; $25 to $30 are jobbing prices. Corn, Rye and Buckwheat, in consequence of scarcity, maintain their several prices. We know of one instance where a speculator, or operator, bought a large parcel of wheat, thinking to make a profit on it; but the prices having fallen so rapidly, the load bears heavily on his shoulders, and he has offered the same at cost, or less, without effecting sales. This proves that big prices do not pay to speculate on. Barley and Oats are in demand, and saleable at quotation prices. Our views in regard to Barley and Oats are, that an advance is probable. The prices of these two grains have ruled so low that many farmers have not used the same care that they did with wheat. The result was that a large amount has been lost, and we think the demand will suffice to predicate an advance.

Our receipts for the few fair days, of produce, have been large for this season of the year, both from around the Bay and coastwise, as will be seen. There is at the present but one buyer in the market for shipment, and prices being above his limits, he can scarcely be considered a competitor of our millers. There is at present a large amount of available tonnage in our market, awaiting charter, and should Wheat, Flour and Barley, decline to a shipping point, large amounts will be exported before another harvest.

The receipts of Produce for the past week, from around the bay, have been as follows: Wheat, 17,169 sks; Barley, 12,859 sks; Potatoes, 3500 sks; Flour, qr sks, 3652; Oats, 1966 sks; Hay, 183 tons; Beans, 300 sks; Corn Meal, 200 sks; Corn, 100 sks.

San Francisco Cattle Market.

Jan. 30.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

Since our last issue Beef has advanced one cent per pound for first quality American, and perhaps for an extra article a small advance on our quotations might be realized. Fat Hogs on foot have also advanced, and meet with ready sales at our quotations. Mutton has declined very materially, which would seem to indicate that the destruction of sheep has not been as large as was supposed.

AVERAGE SLAUGHTERERS' PRICES.

ANSWER TO ENIGMA NO. 3.

Gray's Elegy in a Churchyard.

ENIGMA NO. 4.

I am composed of 19 letters:
My 2, 14, 15, 7, 4, 16 is an artificial angling bait.
My 12, 4, 14, 18, 16, 9, an ancient Roman priest.
My 6, 3, 9, 16, 14, 1, 6, 4, 16, an excellent fruit.
My 15, 11, 15, 7, 4, 16, a shell-fish.
My 10, 3, 17, 16, 11, 9, a Scripture name.
My 7, 2, 14, 9, a Persian governor.
My 15, 11, 19, 10, 18, a province of Africa.
My 7, 3, 10, 10, 6, 2, 5, 4, 8, 1, a celebrated Indian warrior.
My 17, 11, 4, 6, 2, 8, 19, a fish.
My 7, 14, 4, 16, a garden vegetable.
My 12, 14, 9, 17, 14, 19, 10, 18, a merry gathering.
My whole was a king in ancient times, and father of a greater than himself.

HUNTING TIGERS IN COCHIN-CHINA.

Many of the Malays obtain their livelihood by tiger catching, the skin of this animal being valuable. They use a novel mode of ensnaring the savage beasts. Two Malays generally go in company, and travel over many parts of the country. Those who follow this business regularly have chops, or permits, from the Quong of Saigon, allowing them to build a hut for their use in any place they see fit. The hut is built on the top of four bamboos, from fifteen to twenty feet high; and, as the tiger cannot climb these, the two men can remain in it and watch their snares in safety. The snares consist of large leaves, or sometimes pieces of paper about six inches square, covered on one side with a substance of the same nature as bird-lime, and containing a poison, the smallest particle of which getting into the animal's eyes causes instant and total blindness. These are laid about thickly, with the bird-lime side upwards, in the track of a tiger; and as surely as the animal puts his paw upon one of the treacherous leaves, he becomes a victim; for, finding it sticks to his foot, he shakes it, by which means other leaves adhere to it. He then probably rubs his paw over his head, in the attempt to rid himself of these leafy incumbrances, but they stick to his head and face. He then rolls himself on the ground, and thus becomes fairly covered; and, while scratching and rubbing himself to get free, some of the poisonous bird-lime gets into his eyes and blinds him. He growls and roars in agony, and this is the signal for his captors to come and dispatch him. The Malays then skin the animal, and take away parts of his body that may be valuable. They leave the carcass well strewn with more leaves, as a bait for other tigers. They ensnare other animals, and birds also, in the same manner.

THE STRENGTH OF A KIND WORD.

How strong is a kind word! It will do what the harsh word, or even a blow cannot do. It will subdue the stubborn will, relax the frown, and work wonders. Even the dog, the cat or the horse, though they do not know what you say, can tell when you speak a kind word to them.

A man was one day driving a cart along the street. The horse was drawing a heavy load, and did not turn as the man wished him to do. The man was in an ill-temper, and beat the horse. The horse reared and plunged, but he either did not or would not go the right way. Another man, who was with the cart, went up to the horse and patted him on the neck, and called him kindly by his name. The horse turned his head, and fixed his large eyes on the man, as though he would say: "I will do anything for *you*, because you are kind to me;" and bending his broad chest against the load he turned the cart down the lane, and trotted on briskly, as though the load was a plaything.

A little girl, after being out some time, trying to ensnare the little fishes in a neighboring stream, with a crooked pin and a thread-line, came running into the house, out of breath with excitement, and exclaimed:

"O, mother, I got it!"

"Got what, my child?"

"Why, I got the fish."

"But I do not see any fish."

"Why, mother," answered the little angler, her voice suddenly changing to mournfulness, "I got it, but *it un-bit and dro!*"

HOW TO KISS.

First grasp with haste around the waist, and hug her tight to thee; and then she'll say: "Do go away! now won't you let me be?" Then, oh! what bliss! Ah never miss so good a chance as that! but make a dash, as quick as flash, and—Harriet, hold my hat!

An editor in Michigan, talking of corn, says he has a couple of ears fifteen inches long. Some people are remarkable for the length of their ears!

An Irish soldier called out to a companion:

"Hollo, Pat! I have taken a prisoner."

"Bring him along, then; bring him along!"

"He won't come."

"Then come yourself."

"He won't let me!"

A subscriber to a moral reform paper called at the postoffice the other day, and inquired if the "Friend of Virtue" had come.

"No," replied the postmaster, "there has been no such person here for a long time."

"Is anybody waiting on you?" said a polite dry goods clerk to a pretty girl from the country.

"Yes, sir," said the blushing damsel, "that's my feller outside. He wouldn't come in."

Why is a bachelor like a saddle-belt? Because he is a Sir *single*.

Which is the longest letter in the alphabet? The letter O, because it has no end.

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

BUSINESS NOTICES.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

A Farmer's Mill in High Water.—While the roads are impassable and where the flouring mills are swept away, Farmers should immediately procure the Union Farm and Plantation Mill, now offered by Greene, Heath & Allen. This will answer all the purposes of a Flouring Mill for a whole neighborhood. These are the Mills for the times. See advertisement.

An Experienced Man, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the Farmer Office.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

Rebuild Your Fences.

The universal loss of Fences in our State will fall as a heavy blow upon our Farmers, and every opportunity and means for their being replaced at as little cost as possible, should be availed of at an early day.

We call the attention of all who desire to build Fences at a little cost to HYDE'S PATENT POST-DRIVER, for sale at this Office.

RIGHTS for Counties and for large Farms, can be purchased at the *Farmer Office*, on the most favorable terms. A liberal allowance to all who have suffered by the flood. Any information can be had by addressing Editor California Farmer. 16

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,

THE VINE AND WINE IN EUROPE.

LETTER NUMBER EIGHT.

From Our Regular Correspondent.

Visit to the "Clos de Vougeot,"

Its Antiquity—Master of the Cave—Tank-Room—Ancient Wine-Presses—Old Casks—Wine Cellars, Etc.

Paris, December 1, 1861.

Editor Farmer: In a previous letter, I described to you my visit to Johannisberg; in this one I have the intention of describing the one I made to the *Clos de Vougeot*, which, as you know, produces one of the most esteemed Wines of Burgundy.

In the forementioned letter, I expressed the fear that my description would seem pretentious after the one made by my father in his Report to the Legislature; this letter carries with it the same apprehension. However, there may be some of your readers who have not the opportunity of reading my father's Report, and if so, it is to them my letter is addressed:

Taking the cars at Dijon, we duly arrived at the small village of Vougeot. Once at the village we were soon indicated the *Clos*, which consists of 50 *hectares* of land (125 acres), the whole surrounded by a stone wall, from 12 to 18 inches thick, and about 7 feet high.

This wall, with the Monastery, whose building still exists, was built by the Monks of the Order of *Citeaux*, about the year 1037.

Immediately on entering, I was struck by the better appearance of the vines, and the evident care that was bestowed upon them.

Approaching the forlorn looking old building we rang and entered. After a few words with a surly looking fellow, in the inner yard, we were ushered into the presence of Mr. Roux, Master of the Cave. He seems to be about forty years of age; is rather stout about the stomach, tall, and possesses quite a cordial and intelligent look. The gentleman, learning that our desire was to visit the premises, consented with politeness. After a short conversation on different topics, Mr. Roux led us to the Tank-Room. This immence apartment consists of four parts, each of which is at right angles with two others. The space contained within these four parts forms a rectangular yard, serving for various purposes. In each corner of the Tank-Room is an immense unwieldy Wine-Press, whose large beam-levers are more than 30 feet long. These Presses were constructed in the year 1117, by the Monks, 60 years after the foundation of the Monastery. They are too heavy, take too much room, and are too unwieldy for our modern taste; but let us treat them with respect, and look upon them with awe, for it is from under their heavy pressure that has rolled all the distinguished Wine of the *Clos de Vougeot*.

Mr. Roux assures us that since their foundation up to this day, they were the only Presses ever used on the *Clos*.

On entering the Tank-Room, I was immediately struck by the fine array of Fermenting Tanks placed with such order, one beside the other, and reaching round the whole four parts of the Room. For a person having a taste for such things, this sight would be most beautiful. There was a place for everything, and everything was in its place. The entire capacity of the Tanks in this Room is 425 barrels.

We next went to a small room near the entrance of the ancient Monastery, where we were shown several large hogsheads, empty since eight years, but which the Master of the Cave guaranteed us to be as clear of all mould or rot, as if new.

We next went to the Bottle-Room, which is opposite, and of about the same dimensions. It is here that the wine is kept when once put in bottles. Our polite guide conducted us from here to the large cellars, where my admiration was called forth by the order, care, and cleanliness, and the tasty arrangement of the hogsheads. The floor, composed of a deep bed of sand, could not be neater nor more level, and was totally without moisture. There were two cellars. The larger can contain 1200 barrels, and the smaller 600, being a total of 1800 barrels.

The first cellar we entered was the smaller. The barrels and casks of ordinary size, were in the middle, while the large hogsheads, holding from 11 to 13 barrels, were on the outside, thus leaving an alley between themselves and the barrels. The first cellar contained two alleys, the second, three. Here, as well as everywhere else on the premises, everything was in the greatest order—everything was in its place. The only disorder was that of our foot prints on the clean sand, for, in our admiration of so much care and taste, we went, came, and returned, only to recommence again.

The large hogsheads presented a beautiful appearance by their regular order and splendid condition. Most of them were no less than three hundred years old, and some had even seen four centuries! They are all painted with a wine-colored paint. They are made of wood brought from Germany.

All these cellars, or, rather rooms, are on the ground floor, and it astonished me much on entering, to find them so cool. The manner in which this low temperature is maintained, is, by having double doors and placing between them a bundle of straw, dry of course. Straw, as every one knows, is a bad conductor of heat. Besides this, the windows are kept closely shut and blinded.

After remarking many more things worthy of note, and obtaining much valuable information from Mr. Roux, we retired, highly satisfied with the result of our visit. The knowledge relating to the treatment of wines on the *Clos*, which Mr. Roux gave me, I send with my letter, hoping that it may be of use to my fellow citizens.

Truly, yours, Arpad Haraszthy.

[This description of the Treatment of Wines was received with this letter, and will be published in our next.]

◆

Valuable Fruits for Planting.

Now, as soon as old Sol will shine upon us a little, and give us some of his kindly rays, the earth will wake to life again, and buds and blossoms will make the very air fragrant with their perfumed breath.

There are several kinds of fruits that have proved so successful, we can urge their cultivation to a great extent, and though classed among the *small* fruits, they are so prolific, so nutritious, and so palatable, they should be in every garden.

1st. *The Lawton Blackberry.*— Among all the choice fruits, there never has been a better table fruits known than this, in its fresh state, as a preserve, for a jelly or a jam, used as a tart, or for a pie, and again for a wine, the Lawton has no rivals; for productiveness it never has been equaled, as we have testimony to prove that *one single vine* has produced half a bushel of fruit in one season—thirty-two quarts to a vine! can this be beaten?

2d. *The Cherry Currant.*—This splendid fruit should also be found in every garden. It is an abundant bearer, a large and beautiful fruit, superior to any other currant known; and as a table fruit, for jellies, jams, &c., always ranks among the best.

3d. *The Raspberry.*—This delicious fruit, by many considered as reaching the very acme of the epicure for a desert fruit, is one of our abundant bearers, and in our State long continued in its season. This fruit is also unsurpassed for preserves, jellies and jams.

4th. *The Gooseberry.*—This fruit has been too much neglected, yet is the *ne plus ultra* of the *tart* fruits; and when good varieties are selected, it is one of the rare fruits for the desert, yet more particularly a choice one for culinary purposes. To the cultivators of these choice plants, we refer them to another column for the manner of planting and cultivating the same.

The Dairy of California.

The splendid group of noble bovines here presented, we hope, will attract more than ordinary attention. With a country like California, unparalleled in the luxuriance of her valleys and hillsides, and the means of presenting a perfection of food all the year round, with sires and dams of the purest and noblest blood, and of the best species, by means of which all the highest aims can be attained; yet, with all these attainable means within our reach, California, to-day, is far, very far, behind what she ought to be with the power which has been given her. There is but little excuse for any dairyman to be milking a poor, half-fed Spanish or American cow, that yields but two, four or six quarts a day, when there is at his command a class of stock that will yield him ten, twelve, sixteen, twenty, or twenty-four quarts a day. Neither is there any excuse for allowing his stock to run dry one-half of the year because the native grasses dry out (demanding only their natural period of rest), in the summer season, when, by a judicious system of cultivation, rotation of feed crops, roots, grasses, &c., a perpetual green food can be secured to the stock, and a perpetual stream of rich milk flow into the dairy house, and a perpetual stream of gold into the pockets of the dairymen of our State.

Why is it necessary for California to import butter by the thousands of barrels a month, and that butter sell for forty cents a pound, and for our dairymen to see cows sell at $10, $8, and even as low as $5 each? Such occurrences show a kind of management that looks "out of joint," for we know of good dairymen that have informed us that if insured 25 cents a pound the year round they would ask no better business. The amount of butter imported by steamers at a large cost is now increasing, and this is very much to the discredit of our State, for we have all the means within ourselves to make, not only all the butter and cheese we need for home consumption, but we could make for exportation to the Islands and elsewhere. There is not a shadow of excuse in allowing the importation of butter, and that butter taking 40 cents a pound from our citizens, when we can make butter here for 25 cents even better and fresher; it is a reflection upon our whole industry.

What will change the present erroneous system is the introduction upon the dairy-farm of improved stock. Sell one hundred cows of common kinds that give four and six quarts, and buy thirty that will give three times that quantity. Cultivate the earth, and sow grasses, grain-fodder, root crops, and shelter stall-fed cows in the hot months, and thus preserve their health, their flesh, and also continue their milk. Such plans as these will show wisdom and economy and shrewd management. And when such are pursued, as they can be, then, and not till then, will the importation of butter cease, and the hundreds of thousands of dollars now sent abroad for butter, be turned into the pockets of our dairymen.

◆

Loss of Stock by Cold Weather.

The late severe cold weather has destroyed a large amount of cattle, sheep, and swine. We have information from all sections, of quantities of stock that has perished by the cold, and the late floods, and as the short fed stock were poorly prepared to stand the severe cold weather they have perished by the hundreds of thousands. Sheep have also perished in lambing, by reason of the severe weather following the exposure to the flood, and swine also. Horses, also, have perished. It is to be hoped that the trials and losses of the year will teach lessons of wisdom, and induce stock owners to be merciful to their stock, provide them with shelter for the wet season, and raise food for winter feed, such as root crops, and the saving of fodder that for years has been burned. It will be recollected that for years this journal has urged measures, that, had they have been adopted, would have saved tens of thousands of our stock. Hereafter we believe our people will adopt these very measures, and thus be saved from further loss.

◆

Sorghum Culture in Ohio.

In the December Number of the Ohio Valley Farmer we find the proceedings of the Cincinnati Horticultural Society, which proceedings relate mainly to Sorgum culture and sirup manufacture. We extract the most important portions of it:

John H. Gerald stated that the cultivation of the Sorghum cane was on the increase: was in fact becoming common, and thousands of gallons of the molasses were added to the product annually, in this country; that its cultivation was rapidly extending through the Northern States, and would soon render the North independent of Southern molasses.

The subject for discussion being Sorghum sugar, a communication was read from Mr. Havilah Mansfield, of Lexington, Ohio, accompanying six samples, just made by him, with Cook's Evaporator, exhibiting the Sorghum in all its stages of manufacture subsequent to the expression of the juice. No. 1 was a very thick pale sirup, of the consistency of honey, and ready to be granulated. In taste and color this was equal to the finest golden sirup of Cuba. This juice was expressed from the butts of the ripe cane, which had stood a few days in shock on the field. No. 2 was a pale amber sirup, thinner than No. 1, and about the consistency of New Orleans molasses, but of lighter color, and free from the alcoholic taste of the New Orleans molasses. This was made from ripe cane, and treated with lime. No. 3 was granulated sugar, but undrained; this was of light color, and pleasant flavor, but retaining a slight taste of vegetable acid, would probably disappear after drainage. This was taken by Mr. Mansfield from that portion of No. 1 which he had set apart for sugar, and had crystalized forty-eight hours after being poured into the bottle. This sirup (some twenty-five gallons) Mr. M. said would yield about seventh-tenths of its weight in sugar. The drainage would take about thirty days. No. 4 was a beautiful sugar, dry and coarsely granulated, of light color, and equal in every respect to the best New Orleans sugar. This was made from the juice of the Sorghum in September. No 5 was a sample of a portion of No. 1, heated to 240 deg. Fahr, a point to which the books say the sirup must be raised to make sugar, and which Mr. Mansfield says is proved by this experiment to be an error. The result was "taffy" of a dark color. No. 6 was the same as No. 1.

Mr. Mansfield's letter adds:

"My deductions from my experiments this fall are, that Sorghum sugar may be made readily and surely, but the following are the grand requisites:

1st. Ripe, or very nearly ripe, cane.

2. Thorough skimming at a low heat—say 130 deg. Fahr.

3d. Rapid evaporation. The importance of this cannot be too highly appreciated.

4th. Unremitted skimming.

5th. A thorough removal of a white gum from the sirup. I have found nothing will remove this except Cook's Evaporator.

6th. Keep on skimming.

7th. At about 230 deg. Fahr. remove the sirup from the Evaporator, and,

8th. Keep it in a warm place, in shallow vessels, stirring it occasionally. A temperature of 80 to 90 deg. is required. The sirup must never be allowed to chill.

The cane should be cut up and shocked, allowing it to season in the shock a few days, as you would wheat. Band the shock around the top, instead of the middle."

Dr. Whipple stated that when carbonate of lime was used in excess, the vegetable acids were got rid of, but the color of the sirup was darkened.

Mr. Gill, of Columbus, stated that, among other thing, in Ohio alone two and a half millions of gallons of Sorghum sirup were made in 1860, and that in 1861, five times as much ground was planted; but the cane having suffered with drought the amount of sirup would be less in proportion —probably three times the amount of 1860—say upwards of seven millions of gallons. But this sirup will be superior to that of 1860, from the improved methods of manufacture. The average price of the product of 1860 was 45 cents, but that of 1861 will average 55 cents per gallon. This yields a handsome profit, and will stimulate farmers to grow the cane. At the Fairs of Deleware, Newark, Coshocton, and Wheeling, the sirup made on exhibition readily sold for $1 00 per gallon. Grocery merchants have offered 50 and 55 cents this year, expecting to retail at 80 cents. One man sold 25 barrels at 55 cents. My expectation is that in 1862 the cultivation will be quintupled.

The premium crop was 450 gallons to the acre, of good molasses. I know of a dozen cases of 350 gallons per acre. The average is about 200, though in some cases not more than 50. A gentleman last year planted 50 acres, averaging 75 gallons per acre. Some soils run a large quantity of juice; soils vary greatly in this respect. But neither the quantity of juice produced, nor the density of the juice as tested by the saccharometer, is any sure indication of the quantity of molasses yielded; showing that the density is owing to other matters beside saccharine. Last year many specimens showed a deposit of mucous matter; this year it is not so, as yet.

There is no difficulty in keeping Sorghum sirup. We this year took a premium on some samples two years old. The best soil for Sorghum is good rich upland, clayey loam, with sand in it. The rich black soil of the Ohio prairies is not so favorable. The cane is heavy, but the product not so remunerative in sugar. Bisulphite (not bisulphate) of lime, helps to prevent the fermentation of the sirup.

◆

WORK FOR THE SEASON.

Prepare for the Vineyards.

Now is the time to prepare the land for vineyards. The sunshine that now beams upon us will soon fit the earth for the plow, and the plow will prepare for the vine. Plant the best vines only.

Hops.

This production should be raised in our valleys, as they can be raised with great success and with profit, too, and save a large amount of gold from being sent abroad. California hops are brighter, sweeter, stronger, and better than any hops that can be produced abroad, for our climate is peculiarly fitted for their growth. All along the foothills the soil is rich, and just the place for hopyards.

Broomcorn.

Land for the broomcorn should be plowed deep and fine. If fine, long, clear broom is wanted, let the earth be tilled finely, and this will secure the kind of broom.

Sugar-Cane.

Farmers will see that they now have the machinery for making sirup and sugar, not only from the *Sorghum* but from *Sugar-Beet*. Let no time be lost in planting both these products. They will also do well as feed for all kinds of stock.

Planting and Cultivating Preserving Fruits.

The cultivation of all kinds of trees, plants and vines, is too little understood, or if known, this important work is greatly sleighted. So we find it wherever we travel, the most of the work is but half-done

The *Lawton Blackberry*, of which we have spoken in another place, should have a deep, rich alluvial soil, well and finely prepared. The plants should be set *eight feet* apart, each way, and staked strongly, and if carefully pruned each sprig will produce a crop beyond belief.

The *Currant* should be grown carefully in a *tree form*, with well formed head. Soil deep and rich, light and porous, plants set three feet apart.

The *Gooseberry*. Plant in same soil as Currant, and grow same way. They should be pruned with open heads, so as to give them air and save them from mildew.

The *Raspberry* should also have a good, deep, and rich soil, and the plants set *three in a hill* one foot apart in a triangle, and the hills *six feet apart*.

If a very dry and hot season occurs, a mulching of the roots with fine old decomposed manure is advantageous, and this can receive two pails of water or soap-suds two or three times in a season. These four fruits should be in every good collection, and every family will enjoy better health that have these fruits supplied to them liberally.

Grapes and Wine.

[We continue the remarks of Dr. Grant, before the Brooklyn Horticultural Society, a portion of which were published in the Farmer of Jan. 3d. They are somewhat lengthy, but, says the Horticulturist from which we copy, their interest will fully repay perusal.]

In our discussion of the first question, perhaps the fourth also, incidentally, by its intimate relation to the first, has been sufficiently considered to need no further examination. It is as follows: "Can the native grape be profitably grown for wine-making?"

But the question directs our attention to a field very extensive, and too interesting to suffer us to pass it by without a word of special notice. We shall see that the answer to this will be yea or nay, according to the management of the vineyard. As the native vine (Catawba, for instance) is grown by one man, we shall find it not merely profitable, but largely remunerative. If we state his annual net profit at five hundred dollars per acre of Catawba vineyard for a succession of years, taking the seasons good and bad (to him, by-the-way, they have never been very bad), we shall only state what we know has in numerous instances actually taken place. Within sight of these productive vineyards are others upon land as good, and as favorably situated, but badly managed, whose profits have been measured by a minus quantity. In this the vineyard does not differ from any other business which requires manly care. It may be said of the vine, however, with more exactness of truth than of any other subject of culture, that as is its management, so is its return to the husbandman.

The vine is not a being of accident, but, like humanity itself, a creature of circumstances; and if these are favorable, the produce is excellent and abundant. And it is in the vintner's power, as it is his province, with extremely rare exceptions, to *make* the circumstances favorable. The vine that is trained up in health to full development, and is still continued under good management, has very great power to withstand the trying changes of the seasons, and ability to bring at least a large portion of its crop to maturity in those the most unfavorable. Its care and management are not intricate and difficult, nor are the operations of the vineyard matters of speculation or doubtful propriety, or of uncertain result. They are such as patient, well-informed industry, that feels it a privilege and high honor to co-work with the Almighty Father, will find much pleasure in giving at the right time and season, but such as impatient indolence fails of bestowing at the right time and season, and so comes short of the reward.

In one of the most noted vine regions of this country, there is a committee of distinguished vineyardists appointed to visit the vineyards from time to time during the season, to note their management and condition, and at the end of the season to report the results of their observations. The chairman of that committee, to illustrate his own views of the importance of good management and care, said in my hearing, that if the particulars of the treatment of a vineyard were given to him, he could from the account alone give the result almost as well as by personal inspection: so intimately are management and success connected.

Now the management of the vine must not be regarded as difficult in any one of its operations, but, like the good man's life, it is a *patient continuance in well-doing throughout*; and under these conditions, which are well ascertained, and easily intelligible to any one who, unbiased by preconceived theories, is willing to observe, under the clear light of long-established facts, we may say, without fear of contradiction, that the vineyard affords a more remunerative pecuniary return than can by any other branch of culture be drawn from the bosom of our blessed mother earth.

There are other and even more important considerations rising up and clustering around this one of profit, which must form the base, but upon which we can not now dwell, that have in all ages constituted the calling of the vineyardist the most dignified and elevating of all industrial pursuits, and a good vineyard as the most desirable of possessions.

I have instanced Catawba vineyards, because I desired to give, not evidence merely, but actual demonstration by history, of a long succession of years. Some most instructive cases of rise from poverty to wealth and high consideration by means of Catawba vineyards I could relate if time would permit.

The Catawba for wine-making is suited to only a limited range of climate; and although good in quality, it is far from being best; and those very persons who, by the thorough management of their Catawba vineyards, have furnished largely our means of demonstration, have also, by their careful observations and experiments during a series of years, demonstrated the surpassing value of our new varieties, which are perfectly suited to a very wide range of climate. The question must receive an emphatic affirmative answer.

Question 3d.—What is the comparative value of the native and foreign grape as objects of culture for profit?

This question fitly leads, for even a most cursory view of it will lay open to our sight the great importance of the subject commercially since the advent of the new varieties of grapes, which are working a revolution, not the least in importance of those which characterize our age.

If I rightly apprehend the import of the question, a comparison is intended between the culture of foreign varieties under glass for table use, and the cultivation of our native kinds in the open air.

Without violence, the subject may be so enlarged as to make comparison of the prospective value of the investment for the production of foreign grapes for the table, and of the native grapes for the table and for wine. But, restricted to the cultivation of grapes for the table, the parallel may be more easily drawn, and the main points of the case more clearly set forth to our immediate observation. We shall be able to place the conditions and circumstances of both by the side of each other for strict comparison, so that if we treat the subject fairly, we need not fear to fail of arriving at a just conclusion.

To avoid unnecessary complication, we shall consider the foreign grapes to be grown without artificial heat.

If this question had been under consideration ten years ago, the case would have presented a widely different aspect from the present. Our best natives then had too little resemblance to the foreign kinds to permit them to be brought into general comparison, but now we have kinds which, if they blush at all, can only blush with pride at the high rank which they are able to hold by the side of the best of any country, and particularly for wine. For it was for this purpose that we had almost banished the hope of getting anything of eminent excellence, and so long had we earnestly looked in vain, that we had begun to call that wine which does not deserve the name.

But to our immediate subject. We can not bring the subject before our sight clearly without the use of some figures, but will avoid their use as far as can be done safely. And we may remark at the beginning, that there is so much that is attractive and deeply interesting pertaining to the vinery, that it is not a little difficult to make a rigid calculation of the cost that shall enable us to know its economical value.

To those who have the taste and ability to enjoy the vinery as a luxury for cultivation and diversion, as well as for its magnificent productions, it has a real value not to be estimated in dollars and dimes, and consequently can not be placed to account of its commercial value, which we are now seeking to learn.

A house one hundred feet long and twenty-one feet wide will afford accommodation for one hundred and twenty vines. These, under the best of care, may be expected to produce about fifteen pounds each. Much more than this weight is often obtained in a particular season, but not in a succession of seasons.

An average of the actual product will fall below this, but the best management may fairly hope for this amount. I have named twice as many vines as are generally given to a house of this size, for without this number and by the ordinary method of training, I do not believe more than two-thirds of the crop named can be obtained during a succession of ten years.

This structure alone, if built as cheaply as possible, consistent with full efficiency and due regard to durability, may be made for six hundred dollars, apparatus for watering not included.

[The doctor's figures are too low here. A substantial, *durable* house, one hundred by twenty-one feet, can not be built for this sum. A very cheap house is always in the end a very dear one, the cost of keeping it in repair being out of all proportion to its estimated value.—Ed.]

To occupy this ground fully with Delaware vines to the best advantage in exact system they should be planted in four rows, which would contain in all one hundred and forty-eight vines, as follows: The first to stand one foot in advance of the fence, containing fifty vines two feet apart, trained in full Thomery plan; the second, eight feet from the first, containing forty vines two and a half feet apart, in three-fourths Thomery plan; the third, six feet from the last, containing twenty-five vines, in half Thomery plan; and the fourth four feet from the third, containing thirty-three vines, according to the most approved vineyard plan, containing thirty-three vines. The hight of the trellises will be about nine feet for the first, seven for the second, five for the third, and three for the shoots upon the arms of the fourth.

The first may be expected to produce seven hundred pounds, or fourteen pounds per vine; the second five hundred pounds, or twelve and a half pounds to the vine; the third four hundred pounds, making sixteen pounds to the vine, and the fourth two hundred pounds, being about six pounds to the vine, making eighteen hundred pounds in all, which is truly a large amount, but still a very low estimate, and considerably within a safe calculation.

We have supposed the cost of border to be the same in each case, and so we shall continue it in our calculation; but, in fact, our border for the natives would cost twenty-five per cent less than the border for the vinery. For the natives the fence and trellis would be required for training and protection, which the vinery would furnish in itself. This would be less expensive than the watering apparatus, including cistern and tanks; but to avoid, as far as possible, estimates in figures, which are difficult to keep in mind, we will balance each with the other.

Cholic in Horses.

An officer of the United States Navy states that he has found eighteen drops of croton oil, from his own experience, to be a sovereign cure for cholic in horses.

A correspondent of the Farmer and Planter writes:

One pint of salt dissoved in warm water will cure a horse of cholic. I have tried it twenty years without a failure.

Another remedy mentioned by a correspondent of the Northwestern Farmer is the following:

Take a bed quilt, wet it thoroughly in cold water, wrap it around the horse, and as it gets hot pour on cold water. I have known the lives of horses saved in this way, when the veterinary surgeon said they could not live many minutes, and in fifteen or twenty minutes would be up and eating, and sure to get well.

* * *

Winter Apple Crop.—The Folsom Telegraph says: O. C. Lewis, of this place, has in his garden several trees, which are now producing apples. The fruit is about the size of walnuts, and appear healthy. The trees are young, and bore a small crop last summer.

The Petaluma Journal adds: This reminds us that we have also in our garden a tree upon which there are about a dozen apples, ranging in size from a walnut upwards. The tree was planted late last season (in April or May), and during the month of November blossomed for the first time. The weather being mild, the fruit set, and has now attained to the size given above.

Illinois Plantation Sirup.

In the Farmers' Advocate, of December 14th, last, we find an article under the above heading, giving some important information in regard to quality and value of Sirup from the Chinese Sugar-cane, which we copy for the benefit of our farmers. The Advocate is published at Chicago, Illinois. It says:

"We are tired of the word Sorghum, because it is unpleasant to speak, unpleasant to the ear, and very inexpressive. So we have adopted the above name for what will hereafter become as well known to the world as New Orleans sugar now is.

"We are happy to announce to our readers that the Illinois Sirup has gained a reputation and value, the past week, which it never possessed heretofore. The Messrs. Hunter, at what was formerly Belcher's Sugar Refinery, have been experimenting of late with our Illinois-manufactured molasses, and the result is a complete success. From a poor sample, they have made Sirup fine enough to grace the table of a king. That green, unpleasant taste is all removed, and a Golden Sirup is the result, that is superior in flavor, taste, and color, to Belcher's Golden Sirup. Its flavor is much like the maple molasses, rich and pleasant, and when once tasted, leaves a desire to taste again.

"The refiners say it is superior to their own make of Golden Sirup. The loss in refining is ten per cent. The Messrs. Hunter propose to pay from 30 to 35 cents per gallon for the raw Sirup, according to quality, or refine it for parties at ten cents per gallon, or return 75 gallons of refined for 100 of the raw Sirup. This gives the production of the Chinese Sugar-cane at once a market value, and its importance to the West can hardly be told. It will supersede all other Sirups in the market in a few years, and we shall also furnish it for Eastern States with Sirups of better quality than can be made from the product of the Southern cane field. But this is not all; we are going to make our own sugar, and plenty to spare. The Messrs. Hunter have in their employ Mr. B. N. Bender, a first-class chemist, who is experimenting and analyzing, to fully ascertain the percentage of sugar it contains. They feel confident of their final success in manufacturing from the Illinois Sirup a good merchantable article of Sugar. This result once obtained, and it places the entire North perfectly independent of Secessia for the supply of Sugar and Molasses. It has been demonstrated over and over again that it can be made to pay well at from thirty to thirty-five cents per gallon. We shall send out to those that we know to be interested in the manufacture, samples of the Sirup, kindly furnished us by the Messrs. Hunter, nicely put up in small bottles. These samples were refined from a very inferior article, about as poor as any made, black and dirty.

"We are anxious to obtain about 200 barrels of good Sirup for the refinery, and will obtain the highest price for any that may be consigned to us. Heretofore we have discouraged parties from sending the Sirup to this market, because it has been very difficult to sell it at any price. That difficulty is now removed, and we say to all, send in your molasses. From the first we have been sanguine of its success, and have labored, since we assumed the chair Editorial, to spread abroad all the information on the subject that we could obtain from the various portions of the West where it is cultivated."

A Plea for the Goat.

Allow me to call the attention of the readers of the American Agriculturist to the just claims of a domestic animal whose valuable qualities, in my opinion, have been too generally passed by in favor of other and more costly occupants of the farm yard—I allude to the Goat.

In the most ancient of histories we invariably find goats mentioned in conjunction with sheep, as constituting the chief wealth of the Patriarchs, and we read of their flesh being frequently offered to guests as a choice morsel, and occupying a prominent place at "high festivals."

In these modern times it is also certain that large flocks are raised in many countries of Europe and Asia. Is there any peculiarity of soil or climate on this Continent to prevent our doing so also? Would not the possession of this animal, by a cottager or poor man, who has neither the facility nor means to keep a cow, be a great acquisition?

I have one which yields two quarts of milk daily, far richer in cream than that of the cow—no mean addition, I think, to the scanty supply of food for the young family of a laboring man.

Its flesh is sweet and wholesome, and although it cannot compete with the sheep in the value of its outer clothing, yet I believe its hair is used to some extent in manufactures, and its skin in the shape of leather, is far superior to that of the sheep, and brings a much higher price.

It is hardy in constitution, and by no means dainty in its food, thankfully receiving anything you may offer, and nothing comes amiss. It will quietly suffer itself to be tied to a stake and feed by the roadside. It is, when treated kindly, gentle in disposition, and dearly loves to romp with the children. It will live on land of no value in an agricultural view, and will courageously face and beat off the fiercest dog; and there is a tradition that when kept around a stable, it banishes therefrom many of the diseases incidental to the horse.

As a friend to the goat, I see all merit, and no demerit; can anything be shown and proved against it—or has it been neglected hitherto like another favorite of mine, the Ass, solely on account of its unpretending modesty, its patient docility, and low obscurity?

Kicking Cows.

Cows sometime move their feet from impatience or restlessness, and sometimes kick for the same reason. Any invariable and prompt infliction of a short quick punishment will soon cure them. They dislike to have their teats jerked, and if, whenever they kick or step, this infliction always invariably follows, they will soon cease. It is of the utmost importance that it always be uniformly severe, not irregular, and never but once performed for each repetition of the fault.

THE OLD WOODEN PLOW.

A STAFFORDSHIRE DITTY.

Up by the Blake More o'Morridge long time ago,
There lived an old chap, wi' an old wig o' tow,
His name was Tom Morris, and I'll tell you how
He made a discourse on an old wooden plow.
Gee ho Dobbin; gee ho Dobbin! gee ho Dobbin!
[Gee up and gee ho!

'Twas the tenth of October, and tho' oats were just ripe,
On the settle he sat, and smoked his long pipe,
And he thought a long time about this thing and that,
And said "Tommy! sit down, and I'll tell thee what's what."
Gee ho Dobbin! &c.

"These are terrible times, lad, prithee come nigh,
And I'll gie thee a wrinkle or two ere I die;
I can't stand it much longer, it shortens my breath,
These new-fangled notions will soon be my death.
Gee ho Dobbin! &c.

"They're going too fast lad, I tell thee, a deal;
There's Lord Talbot, o'Ing'stre; and Ralph Sheyd o' Keel;
And Sandon, and Buller, and Main'ring and Bill—
Lord, the stuff they've been taking, it makes me quite ill.
Gee ho Dobbin! &c.

"With their bones and their acid; their drills and guhanner;
Thy grandfather, Tom, niver farmed 'i that manner;
He'd a stared hard enough, if he'd heard what they say
About boiling o' oilcake, and chopping o' hay.
Gee ho Dobbin! &c.

"Then soughing's a thing as in course they mun alter,
So they go a mon's depth for to get at th' top water—
And they scoop out the dirt wi' a thing like a spoon,
And for tiles! they'll be using o' bacca pipes soon.
Gee ho Dobbin! &c.

"Then they prate o' their carrots and mangels, and sich—
As if carrots and mangels would mak' a mon rich;
Of hoeing o' turnips, and clearing of yallows—
Stuff and nonsense! and growing o' wheat without fallows.
[Gee ho Dobbin! &c.

"It makes me to loff! without fallows indeed!
Why, I think they mun ha' a soft place in their head,
But what dun ye think they've been doing just now?
Why, they've got up a loff at an old wooden plow.
Gee ho Dobbin! &c.

"Aye! an old wooden plow—and they say to be sure,
As the wide-awake farmer mun use 'em no more;
They mun a' be of iron, and wood there's no trade for—
Why, what do th' fools thinken as ash trees was made for?
Gee ho Dobbin! &c.

"Talk o' plows made o' iron! why, th' next thing they'll do,
As sure as you live, they'll be painting 'm blue;
Then they've two tits a breast, as they call a 'ge ho'—
They may call long enough, but they never can go.
Gee ho Dobbin! &c.

"No! gie me a good wooden plow as is strong,
And a good pair o' big wheels to help it along,
And four long tailed tits and a mon and a lad,
And a good steady place, and it shanner be bad.
Gee ho Dobbin! &c.

"But Tommy, my lad, niver heed what they say,
But get thee on still 'i thy father's old way;
They'll bring all their hogs to fine markets just now.
But stick while thee liv'st to thy old wooden plow."
Gee ho Dobbin! &c.

Hints on Transplanting.

From the well got up and extensive catalogue of Mr. S. Thompson's Suscol Nurseries, we copy the following practical directions, being as directly applicable as anything we might write on the subject.

Before planting, the ground should be plowed and worked as if being prepared for a grain crop; after which, large and deep holes should be dug for the reception of the trees, so as to admit every root freely without bending by coming in contact with the walls of the holes.

The hole should then be partly filled with the surface soil, finely pulverized, and the tree placed in it an inch or two deeper than it had originally stood in the nursery—the roots spread with the fingers carefully about the hole, taking care to give them a gradual descent from their crown to their points; and then fill up all the interstices with fine surface soil. As strong winds blow more or less in all localities during the summer season, and almost always in the same direction, a stake should be driven into the ground on the windward side of the tree, immediately after planting, and the tree tied to it so as to hold it firmly in its place until the roots are fairly fixed and have fastened themselves in their new home.

In no case should the earth (unless a sandy loam) be tramped upon the roots, as it will cause the ground to bake on the roots and about the trunks of the trees, and be dry and hard in midsummer, when it should be free, loose, and moist.

After the trees are planted and staked, and the winter rains are mostly over, the ground should be again plowed as deep as possible with an ordinary plow, to be followed with a subsoil plow that will loosen the ground up to the edge of the holes, eighteen or twenty inches deep, and after this let the orchard be kept perfectly clean of weeds and grass, so that the trees may appropriate all the moisture and substance in the soil to themselves.

We could also recommend planting as early in the season as possible after sufficient rain has fallen to put the ground in good working condition. By adopting this plan, the subsequent rains tend to settle the earth well about the roots, and the trees become firmly established in the ground before the warm suns usual in Febauary start the sap and cause the tree to throw out its young fibers. If not done before the sap starts, the tree will be more or less injured by removal, or if left till late in the spring and removed it will grow but very little during the first summer, while by early planting the tree scarcely feels the effect of its removal; and some kinds, especially the peach, will most likely mature their fruit the first season after planting.

The trees should be headed back after transplanting, and subsequently kept low. This treatment we consider all that is necessary to secure any one having grounds of sufficient fertility to produce grasses or grains, a thrifty orchard.

In planting *Dwarf Trees, Pears in particular*, the point of union between the bud, and stock, must be *at least* two inches under ground,—if thus planted, the bud in many instances will throw out roots for itself, making it no longer dependent upon the stock.

* * *

Distribution of Seeds.—We hope soon to be able to announce to our subscribers the largest and best distribution of seeds we have ever had. We are preparing for all our subscribers a liberal lot, and shall endeavor to scatter in the pathway of all as many of the useful and beautiful as is possible, and free of cost. Those who are not yet subscribers to the Farmer had better become so at an early moment, and thus secure their share of this distribution.

$1,000 Reward!
JOHN C. BELL,
Nos. 634 and 636 Clay street,
WILL GIVE THE ABOVE REWARD TO ANY person that will prove to him that they can purchase
OIL CLOTHS,
CARPETS,
PAPER HANGINGS AND BORDERS,
MATS AND MATTING,
Rugs for Christmas Presents,
GILT CORNERS AND POLES,
Damasks and Window-shades, and House-Furnishing Goods of every Description,
Cheaper than we will sell for CASH for the next
TEN DAYS!

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 71 of whole Series; continued from Farmer of Jan. 31, 1862.

XIII.—M.

The Indians of the Colorado and Gila Rivers and those of the Gulf Shores.

THE COLORADO AND GILA INDIANS OF EMORY'S SURVEY, 1846—1857.

LT. Michler (1854, who only confirms Kino's and all accounts previous to the Jesuits, of Sonora, and Lower California), in his explorations connected with Col. Emory's Survey of the Sonora-and-Arizona Mexican Boundary, makes the following notes on the Yuma Indians and their affilees of the Colorado country. As we have before mentioned in these Indianology Notes, the entire basin or Valley of the Colorado, from the bases of the Eastern Mountain Ranges to the base (desert) of the California Mountains (see Blake, Antisell, and others, as well as Indian traditions of 150 years past), indicate that this great extent of country has been elevated since the discovery of California or shortly before, as shown (as seems to us) by the presence of numerous brackish and fresh-water Mollusca and water-lines of great freshness, and leaving even a residue of brackish-water plants (Algea). We have not yet had the satisfaction of reading the report of Lieut. Ives' Colorado Exploring Expedition of 1858–59, but the field traversed must have yielded large results to the Indianologist.

Near Fort Yuma—Its Former History, etc.

Michler says: "In the report of Major Heintzelman of July 1853, he states, that Fort Yuma is on the site of a Presidio established about seventy years ago by the Spaniards. Padre Pedro Garces came out here with a San Gabriel Indian, and reported this a favorable position for a Mission. The next year he and Padre Kino [a mistake of about eighty years, as Kino died in 1710; Garces was killed by the Yuma Indians about 1782.—A. S. T.], came out with troops and established a Mission at the junction, and Jose Maria' Ortegas, son of Don Francisco Ortegas, Captain and Commandante of the expedition of the discovery of Alta California, founded the Presidio. [Neither Michler nor Heintzelman state their authority here; probably it is from the Chronicles of the Franciscan College of Santa Cruz of Queretaro, 2 vols. 1790–99 folio, printed at Mexico, and which contains extended accounts of the Journeys of Fathers Escalante, Dominiguez Garces, Font, and other Missionary Friars of the College in Alta California, New Mexico and the Northern States of Mexico, and bearing particularly on the Indianology of these countries, a scarce but very valuable work.—A. S. T.] The position is described between the Sierras of San Pedro and San Pablo. The Yuma hills (of quartzose sand and gravel) opposite the Fort are interesting from the beautiful specimens of quartz found among them, among which were fortification and moss agates, chalcedony, jasper, and opals, and various fine pieces of petrefactions of mesquite, cottonwood, and indigenous plants, and one of palm wood." Michler relates many particulars of the Volcanic (Plutonic) rock formations, recent earthquakes, etc. etc, of the vicinity of the Post and the Gila, which are exceedingly curious and suggestive. He is traversing the lands described by Padre Kino from 1696 to 1709, and the Jesuit and Franciscan Friars up to 1800, including those of Lt. Hardy of the British Navy (1825–27), Dr. Coulter (1831–37), John Patie of Missouri (1827–30), all of which valuable works are not to be had in California, and since the epoch of 1848 found to be of a character of exceeding value to all students for the objects of comparison.

Aspects of the Fort-Yuma Country.

Michler continues: "Standing on the top of the Sierra Prieta (not far from Fort Yuma), you have a magnificent panorama of the high peaks, rugged sides, and angular outlines, of the mountain ranges which encircle you. From this point looking westward and *following the points of the compass* round towards the north, your eye first rests upon *Avie—Quah-la—Altwa* (*Avie* signifying mountain in the Indian [Yuma] tongue, and known as the Pilot Knob of the emigrants; a little further on, Avie-arena-hampan, connecting with the low ranges of white sandhills already spoken of; then Avie-qui-a-sa viño; to the northwest a light and dark range named Avie-qui-a-sa and Avie-haz-e-ons; afterwards Avie Sout-ma-moura; all isolated ridges. Ranging across the north is Avie Mil-li-ket, its highest peak called by the Americans 'Chimney Peak,' and by the old Jesuits 'San Pablo.' The Indian name (of the Milliket) is in honor of a wise and learned chief, who became a deity after his death. He occupies a large cavern in the mountains, the entrance to which is guarded by a *raccoon*, a pet during his stay upon the earth; the path which leads from the cave to the river bank is said to be distinctly marked by his foot-prints. [There are several traditions among the California tribes in different sections of the country, of the footprints of men and animals in the rocks, which are suggestive to the geologist as really made by them while the formations were in a plastic state. There is one *of a snake* impressed in the white quartz formations which abound in the vicinity of the road from the Merced river to the town of Mariposa—this I saw myself in 1851—its length was about two feet. Quartz in all melted shapes and heaps abounds in the most singular forms, among the outcrops of foliated slate in the Gold ranges of these and other parts of California. A.S.T.]

Earthquakes.

"He seems to enjoy long intervals of sleep and when aroused from his slumbers by the wickedness of his worshipers, he is believed to change his position and the act of rolling over causes the rumbling earthquakes which are *frequently felt throughout this section of country*. During the last shock experienced there (1851–1853), it is reported that a large piece of the peak of Milliket, solid rock as it is, was broken off and rolled into the plain beneath. The Indians, considering it a part of their religious duty, make regular visits to the spot, like Mahomedans to the shrine of Mahomet.

Grand Prospect.

"To the east of Milliket is another remarkable peak called Piechie, the allegorical allusion scarcely bearing mention; the two are almost in juxtaposition. Avie-Milliket is quite an extended range, and is about twenty-five miles north of Fort Yuma. To the northeast and about forty-five miles distant is Avie Tokava or Dome Mountain, or Sierra de San Pedro, a solid rock many feet in hight, and resembling the dome of a cathedral. Some god is supposed to inhabit this range. Near it is a second peak called the 'Broken Dome.' To the east and south are Cone Mountain of the Santa Isabel range and the Sierra de la Gila—Antelope Peak is the principle one of the latter. To the southeast mountain after mountain rises up; to the south those of Lower California are plainly visible, *so high that snow envelops their tops*. [Michler is writing from Nov. 1853 to March 1854; the Jesuits and Franciscans have mentioned these snow-peaks, and they were found by Patie in 1828–29, not far from the Mission of Santa Catalina, neighboring on the desert; they have also been seen by California newspaper scribes, 1849–1860, but never explored.] When the southwest winds blow they are more chilly than those from the north, bearing along with them the cold air of the snow-clad peaks. From a distance these mountain ranges look rugged in the extreme, although here and there, as you watch the play of the sun, you see reflected back perpendicular walls of smooth white rock. The atmosphere is so clear that you are able to see at long distances.

Atmosphere—Mirage.

"In the morning a beautiful sight is afforded by the Mirage; it has the effect apparently of raising the mountains and bringing them more plainly to view, and many are the fantastic and peculiar shapes that are represented." [This mirage is well known in *all parts* of California, in *hot dry days*, generally, but on the scale of the African and Asiatic deserts, it is seen in perfection in the basins of the Colorado and Mohave, as well as those other Oriental features of sand-storms of pulverulent impalpable powder, and which are as dangerous and violent as those of the ancient countries, and which no doubt have greatly assisted to bury up remains of the Indiada as in the ancient cities of the Mediterranean countries.—A. S. T.] Michler then turns from this barren view and surveys the extensive green river-bottoms of the Colorado, covered with cottonwood, willow, mesquite, etc, and thickets of arrow and greasewood.

River Bottoms.

"The bottom or river-bank lands of the Colorado and Gila are *below high-water mark*, and subject to [immense] overflows. The soil is a mixture of sand and clay; a few varieties of grass are very scatteringly distributed. [Others say there are fine fertile open lands, admirably fitted for pasture, and the cultivation of frijoles, cotton, maize, etc, of which cotton there is an indigenous variety, from which is named a large alluvial island called Algodones (cotton), so named by the Jesuits, ante 1758.—A. S. T.] The distance from Fort Yuma to the mouth of the Colorado is about 160 miles. The whole of the country strongly resembles the Rio Bravo del Norte or Rio Grande, in its vegetation of all kinds, though that of the Rio Grande is more fertile."

Volcanic Phenomena.

"To add to the interest of this section of our country, it is subject to earthquakes by which it *is sometimes depressed and sometimes elevated.* Of one of these in November 1852, Major Heintzelman says: The low ground was full of cracks, from many of which gushed forth sulphurous waters, mud and sand. At the time great changes were made in the bed of the river. The earthquake appears to have been occasioned by an accumulation of gases and steams in the caverns of the earth. The elasticity of these forced an escape through a pond 45 miles below; on the desert between the river and coast mountains the repeated escapes causing rumbling and shocks. It is an old orifice that has been closed several years, so that the first effort occasioned the most violent explosion. The steam rose in a beautiful snowy jet more than a hundred feet in the air, and spread, appearing above the tops of the mountains *like a white cloud* and gradually disappeared—the repetitions of these were on a smaller scale. The water of the pond above three months after was 118°; in a smaller one 135°; in the mouth of a gas-mudhole 170°, and crystals of sulphur and other volcanic products were found.

Climate.

"The climate of this region in the winter months is generally mild, although the changes in temperature are very great, ranging from 30° to 90°, i. e. noon and early morning—the days uncomfortably warm, and the nights (early mornings) *intensely cold*—at early dawn fires were necessary. Owing to the clearness of the skies the radiation is extremely rapid, and ice forms quickly. At our return in August we found the glass in the shade 116° to 120°; the heat commences in May, and becomes almost unendurable in June to September. In this belt of country rain seldom falls, and then generally in December to March. In Sonora rains fall in June to September.

Simoons or Sand-storms.

"Instead of storms of wind and rain during the winter months, they have those of dust and sand, principally from the northwest, seeming like mist and formed of pulverized sand and dust. You can watch them in their progress as they approach for hours beforehand, and when they reach you the dust penetrates into every crevice, the finest silk not being impervious to it: they last generally a day, sometimes three days. [The overland mail is often troubled with these dust-storms or simoons.—T.] The gusts of wind which produce this unpleasant effect in winter, are in *summer like the simoons* of the Sahara—they sweep over and scorch the land, burning like the hot blasts of a furnace." [They often bury whole districts of land with the sand and powder, as in Africa and Asia.]

◆

PRIDE OF WEALTH.—A prudent and well-disposed member of the Society of Friends once gave the following friendly advice:

"John," said he, "I hear thou art going to be married."

"Yes," replied John, "I am."

"Well," rejoined the man of drab, "I have one little piece of advice to give thee, and that is, never marry to a woman worth more than thou art. When I married my wife, I was worth fifty shillings and she was worth sixty-two; and whenever any difference has occurred between us since, she has always thrown up the odd shillings."

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................FEB. 7, 1862.

☞We have engaged Mr. B. F. Runnels as carrier of the Farmer in this city, and our patrons will hereafter be served by him.

Delayed Papers.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the Farmer, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

☞Those who receive a number of the Farmer wit this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

NEW PRODUCTIONS.

With a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public nterest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Look at this—High-landers, Pay Up.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

The Lama and Alpaca Goats.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Marin County—No. 1.

This county seems to be the one wholly exempted from the sweeping calamities of the flood. It is one of the richest and most fertile and best sheltered counties of the State, and yet, but very little known over the State, save by its history as connected with the State Prison and Lime Point, and we hardly know in what way to call proper attention to it save by sketching, though briefly, its resources and its capabilities. That it has been wofully neglected by those in power, we know, for it has little or no postal facilities, no public roads or bridges of any account, and although the county is free of debt, it is also free of all public buildings and public improvements. With almost unlimited means of wealth, the income of the county is only $20,000, when it should be $100,000. For this, the people are to blame, for the people elect their managers! or rulers!

We have spent some days on a visit to this county (its county seat and immediate vicinity), and shall continue our visit to some of the principal points, and shall in future numbers give our readers a sketch of what we have seen and what we shall see, beginning at the county seat, thence among the stock ranches, dairymen, and the beautiful hills and slopes, that we hope ere long to see divided up into prosperous farms of 50, 100, and 200 acres, but are now held as tracts of thousands, thus hindering the progress of the country.

Plant Cranberries.

It is to be hoped that those who have good meadow land will not let this spring pass without an effort to plant cranberry vines. They will yield great profit.

Our next number will contain interesting and valuable communications and articles which we have been obliged to defer.

The Skies are Brightening.

San Francisco, the great central mart of the Pacific, like a ship after the lulling of a gale, shows signs of "righting" from the effects of the late severe storms and floods, which had greatly checked the tide of business. A walk upon her busy wharfs will serve to cheer the hearts of the despondent, and revive the drooping spirits that have been depressed and dampened by the unusually long continued rains of December and January. February opens finely, and the bright sunshine is starting the streams of commerce that flow in upon us from every quarter of the civilized world. The cheerful yo-heave-ho! of the seamen, as they haul the freighted ships alongside the docks, in anticipation of a pleasant run on shore, at the close of long and stormy voyages from distant lands; the steaming and puffing of tugs, towing other huge vessels out to sea through the perils of the Golden Gate; the white-winged small craft that skim over the water in successful emulation of the garbage-eating gulls, going out and coming in upon their coastwise errands, laden with produce, lumber, hides and fuel; the steamers departing amid bustle and noise, with full freights for the interior, and for our northern and southern commercial dependencies; the hurrying to and fro of drays, carts, cabs, and express-wagons; the merchants cyphering over their immense heaps of grain, potatoes, etc.; the jobbers and small dealers eagerly chaffering over the quarter of a cent on the pound: All this varied activity presents a scene of business animation that is cheering to contemplate, and is vividly suggestive of the vast resources of our city and State.

The country, far and wide, has suffered to an unprecedented extent by the terrible inundation with which we have been visited—though the loss, so heavy in individual cases, is even now generally estimated to be less in the aggregate than the benefit that will result. But from all directions come the tidings of preparation for renewed efforts to conquer fortune, and promises of more complete success than ever in enterprises of energy and industry. The floods have swept off mills, and bridges, and dams, and whole towns in several instances; but with an elasticity peculiar to Californians, the people are already laying their plans to erect finer mills, higher bridges, stronger dams, and more substantial towns! Hundreds who thought themselves ruined, are beginning to see their way clear to further exertion, with abundant promise of success. Our State has self-recuperative elements within her borders to an eminent degree. The re-building and restoration of the many valuable works destroyed by the deluge will call into active service mechanics, engineers, artisans, and workmen of all classes; capital will flow plentifully from its hiding places into channels where a good per centage of profit may be realized, as naturally as water seeks its level; farm produce will be in great demand, at highly remunerative prices, owing to the quantities that have been destroyed; the mines will yield more richly than they have for several years past, from the fact that hundreds of worked out placers have been rendered by the upheavals and washings of the floods almost as rich as they were originally; and commerce will have extraordinary calls for its supplies. In short, a prosperous year awaits the hopeful and energetic of every branch of productive industry in the State. None but the non-producers need despond, and they had better conclude at once to pull off their coats, and go to work at something useful to the community. So mote it be!

Legislation.

In regard to the proposition to issue the bonds of the State for ten millions of dollars bearing ten per cent interest, and to have a special board under the cognizance of the Legislature to loan these bonds to sufferers by the flood at one per cent, to which we alluded last week, we say let this plan be carried out to the letter and spirit, and let a special committee of from seven to thirteen (a quorum of five or seven to do business) of the best men of the different sections of the State be appointed by the Governor who shall arrange this law, this committee to be called the "State Relief and Loan Commissioners," and let it be men who shall feel that to have the honor of giving this kind of relief in behalf of the State to the most deserving of the sufferers, is reward enough. Let the committee do their duty without pay. If the plan is to make a committee to act as bankers under a good salary, then we don't think the State will save itself with two per cent. We should fear that by past experience, the result would be that the State would suffer more than the people, pecuniarily: No, let this work of helping the people be done without cost, then it will be a noble aid and worthy a bright page in our history.

We say amen with all our hearts. We say raise ten or twenty millions and it will do more to secure this State from the threatened ruin that is impending, than all other kind of legislation that can be conceived of. It is also imperatively necessary that the law in regard to fencing should be changed, for the benefit of our farmers who have lost all their fences in the flooded districts, as it will be their only salvation for the present season. Will the Legislature act promptly?

The bill concerning Agricultural Societies which allows such associations to borrow on mortgage $5,000, has been passed; the existing law limits the amount to $1,000.

P. S.—Just as we were going to press, we received an article from the well known practical cultivator and pioneer, L. Prevost, Esq., of San Jose, strongly urging prompt action on the part of the Legislature in changing the present law in regard to fencing, and presenting some weighty arguments for such action. We are obliged to defer the communication till our next issue.

Snow in Marin County.—"Tamalpais," or the high peak (2500 feet above the sea), is now (3d) covered with snow down to nearly its base, and has remained so for about a week. All the high hills of the county are also white with snow, and the entire county presents the aspect of "New England" about Thanksgiving time.

Large Ranches Retard Progress.

In traveling over the State, we find a very great feeling against large ranches, or grants, as injurious to the settlement and improvement of the counties wherein they are located. By large ranches, we mean the large grants that comprise land by leagues. These large tracts are generally assessed at a low rate and do not pay an equal rate of the taxes of the county, and occupying miles along the public roads they prevent improvement of every kind, retard the building of bridges, improvement of roads, building school-houses, and all the various marks of a prosperous place.

The large tracts thus retained in a body leave the entire district wherever they are situated almost a wilderness, being used only for a stock ranch, unfenced and uncared for if they are used at all, and as long as they thus remain the settlement or increase of population in that district must be retarded, whereas, if the owners of these large tracts would throw them into the market at a fair rate, lands in many counties that are now only valued at two or three dollars an acre, in tracts of ten, twenty, thirty, and even fifty thousand acres, would, if cut up into farms of from fifty to three hundred acres each, be of more than double the income and value to the owner, and soon, by improvement, would be valued and taxed at six, ten and fifteen dollars an acre, and give a large increase to the income of the country, and at the same time quickly add to the population, the business and the prosperity of each county. These facts are so self-evident that it is the first duty of every well wisher to the prosperity of his country to use his best influence to induce owners of these large tracts to throw them into the market.

There is a general complaint that there are no farming lands for sale, and specially the land at the foot-hills and mountain ranges. This is the kind of land now wanted, and now is the time for owners of large tracts to throw them into the market. We have been forcibly impressed with these truths while in the county of Marin, a county rich by nature, possessing great natural advantages, and now when every other county is more or less afflicted, Marin county is unharmed by the flood. Yet, Marin is not so far advanced in the cultivation of her soil, nor so well populated, nor is she possessed of manufactures like other counties (if we except the State Prison), and the reason is, large tracts of land, Spanish grants, many yet unsettled, prevent the county from increasing her population or her wealth; and although this county stands free of debt, yet her income is only about $20,000 per annumn, whereas if a better state of things prevailed it would be $100,000. This question of the influence of large grants upon the prosperity of the country is a question that should receive the attention of all our citizens, and especially the very owners of the tracts. They are more pecuniarily interested than any one else, and they can greatly benefit themselves and the community by wise action, now.

Our Early History.

[We take the following reference to this subject from the Daily Herald, of this city.]

The people of California are much indebted to a few men who have with remarkable zeal and great assiduity devoted themselves to the task of putting in permanent and reliable form its early history. The late Edmund Randolph, a gentleman alike distinguished for the purity of his character as for the great talents he possessed, in 1860 delivered an address before the Society of Pioneers in this city, in which he presented to the American inhabitants a condensed and brilliant epitome of the history of this State from its first occupation by the Spaniards to the time it became a part of our Union. Mr. Randolph's work (for it must be called such) contained much interesting matter before unknown, and discovered by his industry and researches.

Another gentleman, Mr. A. S. Taylor, a resident of Santa Barbara and an old and valued contributor to the columns of the Herald, is also entitled to regard for his unwearied and successful efforts to preserve the records of the State while under Spanish dominion. More than any other man has he applied himself to the study of its history, and translating from the first writers who gave their experience in and impressions of the country. In addition to his valuable labors in this field, he has recently compiled a catalogue of works concerning California, from 1830 to 1861, which will include nearly every book published on North Pacific America. We are sure that when it is published it will prove most useful to lawyers' libraries, in both the United States and Europe. Mr. Taylor has also prepared a translation of Cabrillo's discovery of California, results procured from the archives of Spain. It contains many facts not heretofore known, and of great interest to the people who have adopted this country as their home.

We cannot be otherwise than pleased in noticing the labors of such men as Mr. Taylor. He proceeds unostentatiously but effectively in the work of rescuing from obscurity, early events in this State. His writings so far would constitute a respectable history; and with the works now promised, will leave little or nothing to be accomplished by others in the sphere of California historical study and compilation.

The Marin County Journal.—This Journal, edited and published by Jerome A. Barney, Esq., is a creditable paper for a county so curtailed of postal facilities, several of the post offices having been abolished, much to the injury of the citizens, and also curtailing means of information.

The Journal is a sprightly and good paper, containing much interesting matter, and citizens of the county should give it a generous support; this is the way to make a good paper.

We must return our cordial thanks to our contemporary for a kind and courteous attention, and generous efforts on his part to extend the circulation of our paper. Such disinterestedness, and freedom of all jealousy deserves our sincere and grateful thanks. We wish our neighbor and friend unbounded success.

Dead Stock.—In our traveling recently in Marin county, over the hills and through the cañons, we met with cattle and hogs that had perished by the late storms, and on the Point San Pedro, and all along shore, we saw dead stock that had drifted from above. At San Pedro a large, noble Durham bull, resembling the "Duke of Northumberland." Who has lost such an animal?

The Season of 1862.

This is said to be the most severe season of snows and rains known in California and the Northwest Coasts since 1824–25.

The rains set in in Oregon very heavy about the first of December, 1861—[We think the accounts state that the rains commenced as early as the first of November; they commenced about the tenth of November in California.—Ed. C. F.]—which occasioned great floods and immense distress in that country and in Washington. On the ninth to the eleventh of December, the flood of rain and melted snow inundated Sacramento and other towns of the Sacramento Valley, causing immense loss of stock and all farm property.

This storm did not reach Santa Barbara county till the fourteenth of the month, when it continued, heavily raining till about the eighteenth.

The second storm of rain commenced in the Sacramento Valley about the 21st, but did not reach Santa Barbara till the 23d, when it poured down a continous shower until the twenty-first day of January, 1862, with the exception of about thirty hours interval. This storm caused not only a second and disastrous inundation of the Sacramento Valley, but also throughout the San Joaquin plains, and extended all over the Southern counties to San Diego. In the county of Santa Barbara it tore up the roads and gulches, and widened immensely all the banks of the streams, making immense holes, erosions, and ruts everywhere, so that the mail stages not only ceased running for six weeks, but roads were rendered for many days impassable for horses.

These immense rain-storms seem to return in California about every twenty-five or twenty-seven years, with intervals at every ten years' lapse of a kind of half as heavy storms as the lapses of twenty-five years. In the winter of 1848–49 occurred very heavy rains and snow; in 1852 also; in 1842 they were heavy. About 1832–33 they were also very heavy; but in 1824–25 (the four months of winter) it more than doubled the rains of any previous lapse of ten years.

In 1812 is said to have occurred another very wet winter, but this did not equal the winter of 1802–03, which is said to have equaled that of 1824–25. It was noted that the Indians about Marysville retired to the highlands some days before the heavy storms of December, 1861, and warned the settlers there would be a great overflow.

The new account of Cabrillo's Voyage of 1542–43, recently obtained from the Spanish archives, makes particular mention of the heavy rains and snows of the season of from the first of December 1542 (old style, or eleven days less, *i. e.*, the nineteenth of November) to the first of March, 1543, in which Cabrillo was in imminent danger of losing his crew and barks. He mentions particularly the mountains of Monterey Bay being covered with snow, and that in the Santa Barbara Channel off Point Concepcion or Galera, he experienced great tempests from all points of the compass, and on the twelfth or February, 1543, a great deal of snow and cold. It has only snowed on the low sea-lands of Santa Barbara county once since 1825, that is, early in 1849, which was also the time when the snow covered all the ground around Monterey town, and of course all the highlands, for two or three weeks.

These rain-storms or clouds of the North Pacific Coast, cover an immense superficial surface of the earth. A great rain-cloud, with revolving wind, or a true Cyclon, visited all the Northwest Pacific Coasts, on the morning of the first of January, 1855, extending not only to the Sandwich Islands, but, by the East Indian papers, as far as Bombay, where it effected immense destruction. It thus covered eleven thousand miles of longitude of the earth's suface, and was the first of the kind recorded in the annals of history, as no periodical record existed throughout this belt before 1855.

A. S. T.

San Rafail.—This is the county seat of Marin county—a perfect beauty spot in nature—we mean its natural location, sheltered completely from all chilling and strong winds. It contains only about 200 souls, yet capable of giving riches to 2000. It is one of the prettiest spots for a summer residence in our State, yet, sadly neglected in the proper cultivation of the rich soil, or in the proper attention to making the homesteads beautiful. All the vegetables, even, that are used in this place are brought from San Francisco. This is a reproach to a place susceptible of a high cultivation. The citizens must look to this if they desire to make it, what it can be made, the garden spot of our State. We shall give items in our future numbers of what has been done and is doing.

Herding Sheep and Goats.—A bill has been introduced into the Legislature, designed to confine sheep herding to the lands of their owners. The grazing land in many of the large counties is rendered worthless for cattle, by the pasturing of large herds of sheep upon it. Cattle will not graze upon pastures that have been overrun by sheep and goats.

Royal Insurance Company's Almanac.—This useful volume has been laid on our table by the Agents of the Company in this city, Messrs. Alsop & Co. It is elegantly gotten up, and contains many valuable tables of reference, and a deal of interesting historical matter. Among the tables we notice a schedule of the British tariff, and a list of the members of the House of Commons.

Public Documents.—We are under obligations to our Congressmen for valuable documents. To Senator M. S. Latham, for Patent Office Report (Agriculture) for 1860, and to Representative A. A. Sargent for same; also, to former, for Official Army Register for September, 1861, and Report on Commerce and Navigation for 1860.

The Protestant Orphan Asylum Society celebrated its Eleventh Anniversary on Tuesday, at Music Hall, when reports were read; there was singing by the children, and an address by Rev. Starr King. The liberal amount of $659 was contributed on the occasion.

Santa Clara Valley—The Floods, Etc.

San Jose, January 27th, 1862.

Editor Farmer: As your object is to make known every fact pertaining to Agriculture, so as to promote its interests, I think you will receive with pleasure a few observations on the rains and flood in our valley. As I live on the banks of the river, I am well posted to appreciate and judge of them.

When we hear of nothing every day but disasters, loss of life and stock, and all kinds of property in Oregon, and in every part of this State, Sacramento in particular, we must consider ourselves in paradise, in San Jose, where we have nothing of that kind worth mentioning. It is true that we had snow in the surrounding mountains, and rain by torrents, for a long time, and the rivers were very high at five different times; but San Jose is so situated that it cannot be overflowed, or even injured by the flood; and as it is now, I consider it as a blessing for the whole valley, for it destroyed the gophers, squirrels, and thousands of vermin that were destroying our trees and crops generally. Also, we were suffering from the dryness of the soil, as we had not rain enough for many years to saturate it sufficiently. Now, we have it well saturated, and we must expect the most abundant crops of everything, more so than we have had for ten years, during this coming summer.

The only damage I know of, is the washing away of a small portion of the new turnpike, between our place and Alviso; but this could not be otherwise under the present circumstances; for this turnpike was not quite finished, and they were still working at it, when the rain came down so hard. Then it was easy for the waters to wash the loose dirt, more especially as it was very sandy at that point. But I hear that the company intend to erect a good bridge over that place, and it is anticipated that such an accident will never occur again, and our communications with the steamer at Alviso, for San Francisco, will never again be cut off. But, notwithstanding this accident, it is a remarkable fact that, with the exception of one or two trips, the steamer has been regularly carrying passengers between San Jose and San Francisco. Some other damage that I know of, because it is right below me, is, that our city bridge, which has also been newly made, had some of the loose dirt washed away, and some portion of fences down, but not lost. But what is all that, if we compare it to the good done? And, now, if we also compare ourselves with others in various portions of the State, we must thank the Great Master above for having placed us in the very best spot, and where we may enjoy, generally, good health.

Now we will have nothing more to wish for in our locality, when the Rail Road, now in progress, shall be fully completed. The Company has promised to push it forward rapidly, and I trust they will do it. Now, during these floods, is the time for them to be on the ground and judge for themselves of the state of things. In doing so, they would avoid great accidents and expenses for the future; and they would be able to ascertain which ot their surveys is the best; in fact, they ought to explore and visit the whole line, and they will learn by that how to work, so to have no accident in the future, arising from like floods. This would avoid great difficulties for the Company and the public at large.

If we reflect a moment as to why we have merely nothing to fear from the flood in our valley, every reasoning man can understand it, in comparing localities with each other. For instance, in Sacramento and other places in this State, in ordinary times, I am told that they are *below* the level of the waters, when here, in San Jose, we are *above*, and our valley being so level, the waters have not a strong current, and can spread without raising very high. For my part, as you know, I live on the river bank, and have a bridge; nothing has suffered, and I have nothing lost. My artesian wells have raised considerably; I never before saw them giving so much water as they do now, and they are still raising every day.

For five days last week, and also yesterday, we had no rain, and we were expecting that the ground would allow us to go to work again this week, but we had a change last night, and found the mountains covered with snow, as I never saw them before during the twelve years I have been living in this valley. The snow is still falling all this morning; we had also hail here in the city.

Everything begins to grow here. I have almond trees in full blossom; but the temperature is now too cold to expect any fruit from these early blossoms. The thermometer is down to 32°, and it is now 11 o'clock A. M. We have had frost for a few nights. In conclusion, we must hope that, generally speaking, the good crops all over the State will compensate partly for the losses; but, alas! this will not give back life to those who have lost it. God be with them. Yours, truly,

L. Prevost.

Flood at Wheeler & Wilson's Depot.—Outside—outside, reader—was the flood of waters. Owing to the stopping up of the drains, the waters filled the streets around the deepot of H. C. Hayden, Esq., Agent of Wheeler & Wilson. The only injury we heard of was a little hindrance to the crowd of customers pouring into their office, to purchase the new and handsome patterns of Sewing Machines.

The election for officers of the Savings and Loan Society was held on Tuesday evening last, and the result was a gratifying proof of confidence entertained by the depositors in the former managers, and for which we think they have the most sufficient grounds. For President, E. W. Burr was elected by a large majority. John P. Buckley was elected Vice President. The Trustees elected are: Benj. D. Dean, Herman Michels, Henry Haussman, Robert Turner, John Archbald, Charles Pace, B. O. Devoe, C. O. Gerberding, J. Hyde.

The steamer from Panama brings news from Mexico, that a battle had been fought between the Spanish and Mexican troops near Vera Cruz, in which the former were badly beaten.

STATE SUMMARY.

At La Porte the snow averages three feet in depth, and the sleighing is excellent.

It is said that Dan Showalter and party are employed daily at Fort Yuma, by Maj. Rigg, with shovel, pick, and spade, in throwing up earthworks.

The fear of a want of provisions in the mountains has subsided. The fine weather of late has permitted interior transportation to be resumed in part, and supplies to be generally distributed.

At Sacramento, the Committee appointed for the purpose have framed a plan for conducting the affairs of that city. It proposes the appointment of a Mayor and four Aldermen—the Mayor to hold office three years, two of the Aldermen two years, and two of them four years.

At Visalia the flood is reported to have been very disastrous: twenty-six brick buildings destroyed, and water averaging over four feet deep. "Many women had to wade, carrying their children, for two miles, to a place that was not overflowed."

The Telegraph between this city and Sacramento was finally put in working order on Wednesday, and messages were sent through for the first time in several weeks. The difficulties in repairing the line may be conceived, when it is stated that at some points the wires were actually *sailed over* by the operators, in examining the line! The line across the continent is now in good working order.

Captain Weber, of Stockton, who has lived in the valley twenty-five years, says, in 1852 the water was higher than he ever saw it previously. Old hunters in the Sacramento and San Joaquin valleys confirm the statement and add that for fifteen years previous to Capt. Weber's arrival also, the floods were not so high as in 1852. The Sacramento Bee thinks it "safe to say that not in the past hundred years has the water been higher or even as high in this portion of the valley as it was in the present winter."

The only crossing at Marysville on the Feather river is now the free bridge, which is standing in good condition, and has been made passable, as we learn from the Appeal, by having the earth, gullied out by freshets, filled in again. To prevent any such stoppage again, the company is now about to lengthen the bridge at each end, by adding thirty feet at the Yuba City end and fifty feet at the Marysville end, driving piles and framing bents thereon, so that no future freshet can possibly endanger the bridge or impede the travel over it, so long as it will be possible for teams to reach it.

Farmers were preparing to sow, and many plows that we know of would have been going Monday, says the Bee, both in Sacramento and in Yolo, but for the rain of Sunday night, which of necessity will throw them back a few days longer. There is a determination on the part of those having land above water to sow all the wheat they can, fence or no fence, relying on the Legislature to protect by law their crops from destruction by live stock. The spirit of the country is even buoyant under this disaster; and a few months of fine weather will, in a great degree, wipe out the loss, or the remembrance thereof.

The weather has been mostly fair during the past week. Saturday morning last was quite cool, though not so cold as the previous Tuesday, when by some records in the city the thermometer marked 22°. Sunday was rainy (where is the proverb that we always have pleasant Sundays)? and most of the night it poured steadily. On Monday the weather cleared up warm (though the mountains round the Bay were white with snow), and as this is not the usual routine of our late winter weather, we may conclude that routine has been broken in upon, and look for good weather now. Yesterday was very fine and mild, and renewed animation is apparent everywhere. May such bright skies continue gladden the hearts of our cultivators. Considerable snow fell on Sunday at Nevada, Placerville, Auburn, Camptonville, and other points in the foothills and mountains.

Snow Storms.—Oroville was visited on Tuesday night, 28th ult., by a snow storm which continued almost without interruption until Thursday morning, when there were between three and four inches on the ground. The Butte Democrat styles it the severest snow storm in the valley since 1849. In Nevada at the same time there was a heavy fall of snow, lying over a foot deep in the city and in the upper portion of the county falling to the depth of two feet. The snow has since been slowly melting. In Placerville, on the morning of the 27th, three inches of snow were discovered on the ground by the earliest risers, the day being raw and cold. In the foot-hills the snow lies generally from two inches to a foot. On Friday, a party of twenty or thirty couples got up a sleighing excursion, and had a good time.

Shoes for the Poor.—Amid the numerous plans which the unfortunate are constantly devising, to "make both ends meet," that of "shoes for the family" and cheap clothing is an item of importance; and now that the weather is so severe, and health is most undermined by *wet and cold feet*, we wish to inform all who wish shoes for the children or the family, that at No 720 Montgomery street they can find them and a great lot of clothing at less than *half* the ordinary prices—good shoes for 50 cents, and everything in proportion. We give this information freely for the thousands, of little means, in hope of doing a deal of good to them.

The Loss of Stock by the Flood.

We desire to prepare a Record of the Loss of Stock of all kinds by the Flood of 1861. We therefore ask of those who have met with such losses to furnish us with a list of each kind, and their value, so that we may register the same.

We also desire to make a record of all the losses experienced by the Farmers and Ranchmen of our State, and shall be greatly obliged if they will give us as many particulars as shall be considered by them worthy of record. We deem such facts of great importance for future use.

MAGNETIC PHYSICIAN.

Citizens—Friends:

M. MINER, from Washington, D. C., comes to you endowed with that remarkable power of **Sympathetic Clairvoyance**, which enables her to discover the Causes of Disease, and apply the Remedy.

Diseases which evade all other modes of Examination, and yield to no other System of Treatment, are clearly revealed to the Sympathetic Clairvoyant and easily brought under control; while Diseases, in all their forms, physical and mental, chronic and acute, are alike subject to its power, relying, as it does, on Nature's great remedial agents: Water, Air, and Magnetism.

Mothers and CHILDREN treated with great success.

Room No. 10, Union Block, cor Market and Kearny streets. *Office Hours*—From 12 m. to 3 p.m. 17 6t

BY OVERLAND TELEGRAPH.

Dispatches were published yesterday up to Feb. 4th, the telegraph working now quite regularly.

The news from Europe is of a checkered character There are plenty of rumors unfavorable to continuance of peace between the United States and England, as well as France and Spain; yet it is reported at Washington, on the 2d inst., that, notwithstanding the tone of some foreign journals on the stone blockade, a dispatch received at the State Department asserts that there is complete restoration of good feeling in England, France and other Continental States. Private letters from Bishop Hughes and Thurlow Weed to Secretary Seward, give very hopeful views of our relations with England and France. Advices from England to 24th of Jan. give the following: The Paris correspondent of the London Post says, It is not true that the French Government has taken steps to bring about a reconciliation between the North and South. Mr. Massey, a Member of Parliament, delivered a speech to his constituents, advocating that the European Powers should interfere between North and South, by recognizing the Confederate States, and breaking up the blockade, which attracted some attention. The London Times, in an editorial upon it, says: Let France interfere if she likes; England's policy is to suffer a little longer, and let events work themselves out. It will not be long—it may, indeed, be doubted whether our interference would not rather retard than hasten the opening of the ports. Let us, then, pursue an honest policy by standing quietly aloof." The Manchester Guardian argues in the same strain.

In Congress—The House Committee on Territories have under consideration a bill to regulate and govern rebellious States as Territories. It is now asserted there are not ten Republican members in the House prepared to advocate an immediate and unconditional emancipation of slaves. All hope of this sort of legislation is now abandoned, and the Administration programme of preserving the Union and Constitution, and enforcing the laws is said to be omnipotent in the House. The bill ordering the names of pensioners who sympathize with the rebels to be struck from the roll, has passed both Houses. The Senate in Executive Session, Feb. 3d, confirmed between four and five hundred appointments and promotions. General Denver has been confirmed General of Division in the Army of the Potomac. Andrew J. Butler, of California, was rejected as Commissary of Subsistence. Secretary Chase, in a letter to the Committee, says that the general provisions of the bill seemed well adapted to the necessities of the Treasury; that the legal tender proviso was doubtless well considered by the Committee, and their reflections had conducted him to the same conclusion. He felt great fears as to making anything but gold and silver legal tenders, but among so many expenditures and bank suspensions the provision is now indispensable. He suggested an amendment providing against counterfeiting, and detailed the manner in which the notes should be executed. The Secretary addressed a note to Spalding, saying immediate action was very important.

Latest.—Dispatches from Washington of the 5th, say Senator Bright was expelled from the Senate on that day. The result was received with satisfaction. A majority of Senators are opposed to the Treasury Note Legal Tender Bill.

As evidences of an onward movement, orders have been issued from Washington to Commanders of the Federal Forces in Virginia, to have all baggage, except those which may be absolutely necessary on a march, safely stored; also, it has been ordered that all convalescents shall be sent from the Military Hospital as soon as possible, that beds and wards may be ready for the use of those who may need them. Government has resolved to place all Rebel privateersmen captured by Federal vessels, on the footing of regular prisoners of war.

Ericsson's famous Floating Battery was launched in New York harbor on the 30th ult, and will be prepared for service in one week.

Fort Pulaski is now thoroughly invested and can be taken whenever Gen. Sherman chooses to attack.

News from Richmond confirms the statement that Beauregard had moved with 15,000 men, and that Jeff Davis was to take command in person of the Manassus army.

The New Orleans Delta says a steamer ran the blockade in Texas. Jan, 14th, with 1000 bales of cotton. The Governor of Louisiana has vetoed the bill to loan cotton planters seven millions of State Treasury notes.

General Halleck has ordered several companies of the Fourth Missouri Regiment to hard labor on the Cairo fortifications for their mutinous conduct. Officers of said companies will be discharged and mustered out of service for not enforcing order and military discipline. Gen. Hunter has issued such orders as effectually puts a stop to the much-talked of Jim Lane expedition. Gen. Halleck has agreed upon a system for the exchange of prisoners with Price, but excludes from its provisions all persons charged with violation of the law of war, such as spies, bridge-burners, marauders, etc., who will be held for trial.

The Burnside Expedition was delayed by contractors' frauds. Orders have gone forward to compel parties who sold or chartered improper vessels to the War Department for the Expedition, to return the amount received or go to prison.

The Northern Light arrived at New York, Feb. 4, and brings reports that the Pirate Sumpter was cruising near St Domingo. The Panama Railroad steamer Columbus was lost at Point Remedios. It had a cargo valued at a million and a half, mostly English goods. Her passengers are on the Northern Light. The Northern Light brings five hundred and seventy bales of cotton from Acapulco.

At New York, Jan. 31, the 7 3-10 Treasury Notes were in good demand at 98. It is supposed the Secretary has concluded not to issue any more to contractors at present.

FRESH GARDEN SEEDS.

☞ **The undersigned are the Sole Agents of** DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,
11tf Pacific Fruit Market San Francisco.

GARDENER WANTED.

A GOOD FRUIT AND VEGETABLE GARDENER can find a place for a year, at moderate wages, in a neighboring county.
18 Inquire at the Farmer Office.

NEW SEEDS FOR THE SEASON.

NOW IS THE TIME FOR FARMERS TO SUPPLY themselves with Seeds of New Products that will give variety to their crops and put money in their pockets. A superior quality of

FLAX-SEED,
FRENCH SUGAR-BEET, and
CHINESE SUGAR-CANE,

Can be obtained at very low rates, at the Farmer Office. All who possibly can, should at least give some of the new products a trial. 18

The Question Solved.

COOK'S
Improved Portable
SUGAR EVAPORATOR
FOR MAKING
SORGHUM AND MAPLE SUGAR.

ALL DOUBTS ARE DISPELLED! THAT CHINESE SUGAR-CANE YIELDS
TRUE CANE-SUGAR
Is a Settled Question.

The difficulties in securing its Granulation have been entirely overcome by the invention of

Cook's Evaporator.

By its peculiar arrangement it throws off all scum and feculencies, and secures a deposit of a kind of wax, which would otherwise prevent granulation, and WHICH HAS YET BEEN REMOVED BY NO OTHER PROCESS. Thus in this machine are combined all the requisites for Defecating without Chemicals, and evaporating with an unparalleled rapidity.

Attention is called to the following Claims of this Valuable Invention:

1st. It so liberates the sirup from its gummy and glucose matters that crystallization may readily be secured

2d. It will make more and better sirup in a day than any other evaporator.

3d. Being made of sheet metal it is more sensitive to heat than cast iron, and can suddenly be brought to a very high heat without cracking, a danger to which cast iron Evaporators are greatly subject.

4th. It consumes less fuel by one-half than any other Evaporator.

5th. It is the only one in which great heat can be applied to shallow bodies of juice without danger of scorching; hence its greater rapidity of evaporation and more certainty of success.

6th. It is more convenient for use than any other style; is always ready for work without calling upon all the neighborhood mechanics, and causing great delays when you are in the greatest haste.

7th. It thus combines in an eminent degree all those essential requisites of sugar machinery, viz: speed, superiority of work, convenience, and economy.

The Undersigned hold the PATENT RIGHT for the entire Pacific Coast and are now ready to take orders for this justly celebrated EVAPORATOR. Its merits are so well established that it need only be seen to be appreciated.

We will furnish Evaporators adapted to brick arches at the following prices, Liberally Reduced to meet the state of the times and to promote the successful manufacture of Home Products:

No. 3—Copper Pan,	45 by 90 inches	......	$100
No. 4— do	do 45 by 100 do	......	125
No. 5— do	do 45 by 144 do	......	150

Two Skimmers, one Door, and one Grates accompany each Pan.

Copper Pans are used for this Evaporator, on account of their great durability and cleanliness.

☞ For any further information and for Pamphlets containing full directions for the Culture and the Manufacture of Sorghum; also for testimonials of its successful Manufacture by this Evaporator in the hands of Farmers of the different States; and for Orders for the Machines, address the undersigned.

CAROTHERS & BATES,
Box 306 P. O. San Francisco.

N. B.—A MODEL of this Evaporator, and Samples of Sirup and Sugar made with it, can be seen, and important information had, at California Farmer Office, where Orders can also be left. 17

STANFORD BROTHERS,
19 California street, near Front,

Dr. E. C. Angell,
DENTIST,

IS PREPARED to supply Whole or Half Sets of Superior MINERAL TEETH manufactured in his own Laboratory, being modeled and carved for each individual case in such a manner as to secure the most perfect adaptation, and the complete restoration of the features. By the aid of machinery he is enabled to furnish SUPERIOR WORKMANSHIP at prices scarcely, if at all, higher than is charged for Artificial Teeth of the most ordinary and commonplace character. Samples be may seen at his office, and reference is permitted to numerous cases in which the work is doing excellent service.

His DENTIFRICE, known as—

ANGELL'S
Orris and Charcoal Tooth Soap,

Is not only grateful to the mouth, but is widely admitted to have no equal for cleansing the Teeth and promoting their soundness. A package that costs one dollar lasts twelve months if used daily. For sale by the principal Druggists.

DR. ANGELL Practices Dentistry in all its various branches, giving especial attention to the TEETH OF CHILDREN, preventing and correcting irregularities. For **Straightening Irregular Teeth**, he has invented apparatus that renders the treatment of cases which have hitherto been considered beyond the reach of remedy, comparatively easy and rapid.

Difficult Cases in any department of Dental Surgery or Mechanical Dentistry, respectfully solicited.

Home Miscellany.

LITTLE FLORENCE.

BY DAVID RAESIDE.

Little Florence, fond and free,
Playing by the apple tree,
Laughing on her mother's knee—

Sunbeams slanting on her hair,
Flowing wreaths of flowerets fair
Dangling from her in the air.

Fast and faster go her feet,
Where the grass and sunshine meet.
Joyful Florence! Life is sweet.

Little Florence, mild and weak,
Trouble looking from her cheek,
Scarcely can she move or speak—

Looks out to the falling rain.
All a mother's cares are vain;
Pillows may not ease her pain.

Gladness has a flitting will.
How came she to taste of ill?
Joy is evanescent still.

Little Florence, weak and worn,
Like a faint star left forlorn,
Trembling on the point of morn.

Angel forms are in the air,
Flitting on the golden stair,
Bearing up a mother's prayer.

Little Florence, cold and dead,
Green grass growing overhead,
Waiting for thy wonted tread.

Lying by the apple tree,
Sunshine comes to look for thee—
Comes to crown thy wonted glee.

And thy mother leaves her home—
Comes here, where she used to come.
Silent Florence! Death is dumb.

Little Florence, clothed in white,
Looking back upon the night,
Standing in the shadeless light.

Walking up the golden street,
Sitting at the Saviour's feet,
Where the pure and holy meet.

Shadows stood on yonder shore,
Waiting for thee heretofore;
They shall wait for thee no more.

Thou didst pass them o'er the flood—
Left them standing where they stood.
Angel Florence! God is good.

[Chambers' Journal.

SOMETHING TO LIVE FOR.

BY VIRGINIA. F. TOWNSEND.

[CONCLUDED.]

A month had passed. There had come little change to the life of Agnes Maltby. She had been tied to her aunt's guests as much as before. Of a l these she had enjoyed the society of the rich widower, Mr. Stevens, the best, for his conversation was at least on a higher level than the endless gossip of her fashionable acquaintances; and he understood the worldly, and some phases of human nature, and exerted himself to please the tastes of the young girl.

Agnes felt very grateful to him, because he was kind and polite to her, and relieved somewhat the tedium of the hours which she had passed in her aunt's parlor, but her thoughts never went beyond this. Her cousins' frequent jests on the matter, of course annoyed her, at the time, but that was all.

"Agnes, my dear," said Mrs. Grayson, entering her niece's chamber one morning, with a look of pleased mystery on her face, which expression was repeated by that of her two daughters, who followed her, "I have some gratifying news to communicate to you."

The three ladies sat down, so did Agnes, her fair young face full of surprise.

"Mr. Stevens had an interview last evening with your uncle, and desired his permission to ask you to be his wife."

"Oh, Aunt Matilda!" cried Agnes, and she buried her face in her hands, and shook from head to foot.

"It's a great catch!" exclaimed Helen Grayson. "You can have a magnificent house, and keep your own carriage, and live in splendid style. You ought to thank your stars, Agnes Maltby!"

"So you had," added the other young lady. "Papa says that Mr. Stevens is worth half a million. Think of that. Can't you astonish the world one of these days!"

Agnes Maltby rose up and walked across the room. The blood burned bright in her cheeks. "It has come so very sudden," she said. "And—and, this man must be thirty years older than I am."

"What's that when he's so rich, and can give you such a position?" exclaimed both of the cousins, and they looked at Agnes with a new respect, seeing in her the prospective Mrs. Gerald Stevens.

"But I do not love this man. I have never thought of him as my husband."

"You are young, Agnes, and it is quite natural you should be taken by suprise," answered Mrs. Grayson, with a mixture of patronage and complacency.

"Oh, Aunt Matilda!" suddenly broke out the orphan girl, "you were my mother's only sister, and she gave me to you on her death-bed. I am young and inexperienced, and alone in the world, and all this has come so suddenly that I am bewildered. Take for a moment the place of the sister whose heart has laid under the summer grasses so many winters! Tell me what I shall do?"

This pitiful appeal went down through the deep worldliness of Mrs. Grayson's nature, and reached her heart. For a moment she forgot all the advantages of wealth and position which Mr. Stevens' proposal afforded her niece.

"My dear child!" she said, "I will not urge the matter upon you. If it was either of my own daughters, I would not hesitate to give her to a man of Mr. Stevens' character and position. But you shall have the whole day to decide, and gratified as we shall all be to learn that you have accepted the offer which you have received—still it shall come of your own free choice, not of our urging."

And, kissing her niece warmly, Mrs. Grayson left the room, and her daughters followed her, and for once were silent.

Poor Agnes! It was a long, slow day to her. How she longed for some friend in that great crisis of her youth. An easy and pleasant road was suddenly opened to her out of the weariness and trials of her present life; and her heart had never known the beauty and tenderness of a true love to teach her how coldly it throbbed towards the man who now sought her hand. She longed for rest and a home of her own; and something of pride and vanity stirred in her heart, as she thought of the sumptuous surroundings which awaited her as the lady wife of the rich New Yorker.

Mr. Stevens was, it is true, she reasoned, not all the man after her young dreams and hopes, but then life had been altogether a disappointment to her. He was a pleasant, agreeable gentleman, and if she was his wife she would try to make him very happy, she should always feel so grateful to him.

Late in the afternoon of that day, Agnes Maltby went out alone for a rapid walk. There had been a slight snow that morning, for the year had fallen into December now, and the earth lay with cold, hushed pulses under the white flannel of winter. Agnes walked very rapidly, for there was a strange pain and restlessness at her heart. She chose a by-road which led out of the town, to the woods, and on turning into a lane which branched off from the road, she came suddenly upon Theodore Reid.

The young man seemed greatly surprised to discover her. Agnes had not seen him since the morning interview she had with him a month before, and the girl was glad to meet him now.

"Are you fond of such long walks on winter days?" asked the young lawyer, for Agnes was nearly three miles from her home.

"Not usually; but—but I was troubled and restless, and wanted to walk fast and breathe free."

"I understand the feeling. I had some business to transact for a client of mine not far from Pentonville, and so I thought I would run over and tell you that I had not been unmindful of my promise all this time. Miss Agnes, I think I have found a school for you."

Her face brightened up with interest.

"You *have*, Mr. Reid?"

"Yes; it is a small, pleasant family school, whose Principal is a friend and classmate of mine. Your salary will not be large, but your duties will not be arduous."

There was doubt in the face of Agnes Maltby—doubt, dashed with pain.

Theodore Reid bent down and searched her with his deep, bright eyes.

"What is it?" he asked.

Agnes was a young girl, and a very impulsive one. It certainly was imprudent, but she had no friend whose counsel she could seek, and she stood sorely in need of one.

There was something in Theodore Reid's calm, sincere manner, which drew out her faith and trust, and as they walked over the thin crust of snow, which frosted the by-road, she told him all that had been in her heart that day.

There was a deep, long silence after she concluded. The frightened girl wondered at her own boldness, as she heard the quick throbs of her heart.

At last the young lawyer spoke. "Miss Maltby, you say that you respect and esteem Mr. Stevens; but if he were a poor man, without friends, wealth, position to offer you—would you marry him this day, with a heart which so loved that you would be willing to make almost any sacrifice or endure almost any privation for his sake, and the joy of being with him?"

"No, I do not love him so," answered Agnes, speaking from her heart with her lips, for the light grew clearer to her.

"Then never marry him."

That night, Agnes gave her answer to her uncle and aunt, in a few strong, brief sentences.

"I do not love Mr. Stevens, and if I married him it would be for his money, and for the position which he would give me. If my dead mother were to rise out of her grave this night, she would say to me, 'My child, do not commit this sin!' and neither will I."

The relatives were evidently disappointed, but her earnestness impressed them. They did not attempt to make her, only her cousins said:

"Oh, Agnes you will get over this romance some time."

"Hush, children," interposed Mrs. Grayson. "I said that we would not urge her."

During the next three weeks Mr. Reid was in Pentonville several times, and he never left without seeing Agnes, and every time he came she felt stronger and better.

He had told her that the situation which he had secured for her would not be vacated until the following month, and knowing the opposition which her project must meet with from her relatives, Agnes had refrained from communicating it to them.

One afternoon, Mr. Reid called, early in the new year. The family had gone out to pass the day, and Agnes had been excused, having taken a severe cold.

"You look pale," said the gentleman, as he took her hand, when she entered the parlor.

"I had forgotten that I was sick," she said, with the smile that touched her whole face with light. "It is so good to be alone."

He seated her in the easy chair, and then they had one of their long, pleasant, grave talks, alone together.

And in some pause Agnes said, "You haven't spoken a word about the school. I must get well for that, you know."

Theodore Reid looked on the young face upturned to him, and it moved him with a strange tenderness. He was a strong, self-sustained man; one who had long disciplined his impulses, and was not easily hurried into any rash act. Moreover, he had often declared that he would never propose to any woman until a year's intimate acquaintance had assured him that they were fitted for each other by congenial tastes and sympathies, and by the same great aims and purposes in life.

But it is a settled fact that people frequently do just what they say they will not, and so did Theodore Reid. He took the small hands of Agnes Maltby in his, and he said to her,

"Miss Agnes, If I were to ask you just the same questions regarding myself, which I did a month ago respecting Mr. Stevens, would you answer me as you did him?"

She did not answer; she wrenched her hands out of his, and buried her burning face in them.

"Tell me," he said, softly.

After a while her low answer came—

"I do not think that I should."

"Then, Agnes, come to my school—take no teacher but me."

"I had better be your pupil," said she.

"Well, have it so, then. We will teach each other in the sweet harmony of a true union, how to live truly and righteously the life which God has given us."

"You have something to live for now, Agnes?" bending down his head until the short, bright locks brushed her burning cheeks.

Very softly the answer came to him, and above the lips which spoke, the loving eyes were dark with sweet and grateful tears, "Something to live for, thank God!"

Making Others Happy.—Have you made one happy heart to-day? How calmly you seek your pillow! how sweetly sleep! In all this world there is nothing so sweet as giving comfort to the distressed, as getting a sun ray into the gloomy heart. Children of sorrow meet us wherever we turn; there is not a moment that tears are not shed and sighs uttered, yet how many of these sighs are caused by our own thoughtlessness; how many a daughter wrings the very soul of a fond mother by acts of unkindness and ingratitude. How many husbands, by one little word make a whole day of sad hours and unkind thoughts. How many wives, by recrimination, estrange and embitter loving hearts. How many brothers and sisters meet but to vex each other, making wounds that no human power can heal. Ah! if each one worked upon this maxim day by day—"Strive to make some heart happy," jealously, revenge, madness, hate, with their kindred evil associates, would forever leave the earth.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30

(Each Copy to be mailed separately, if so desired).

For three Copies	10
" six "	20
" single Copy	4

A Grand Opportunity for a Home.

For sale in one of the Interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an Immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

Several extra fine Dairy Cows; very superior.
A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.
Several Mares and Colts of high grades.
All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Literary Shrubbery.

LOVE IN A RAILROAD CAR.

A few weeks ago, a young German couple, only a few days married, got into the cars. They had been spending the evening at a beer garden, and had both apparently been indulging rather extensively. Be that as it may, however, they were oblivious to all the world, and seating themselves in the car, entered at once upon those endearments which, in all classes, of society, are the life of love.

"Ah, mine Gertrude!" exclaimed the young husband, grasping the hands of the bride, "Ah, mine Gertrude! you bes the betterest voman vot I knows!"

"Oh, Hans, mine sweet Hans! I love mine Hans better as not'in!" was the response of the fair one, as she threw her arms around her husband's neck, and covered his face over with kisses.

Hans instantly gathered her in his arms, placed her lovingly on his lap, and hugging as tightly as two lovers need want to hug, they gave themselves up to the most extravagant caresses.

The car was full of passengers, including ladies, and though all were diverted, even to boisterous laughter, that made no difference with the lovers. They continued to hug and and to kiss, and to make the most extravagant declarations of love. No one enjoyed the scene more than the conductor, and it was a matter of regret to him that in his fare-collecting round, he had to disturb the scene. He approached the lovers hesitatingly, and finding that Hans did not observe him, he uttered the usual salutation:

"Fare, sir."

"Ah, mine Gertrude!" was the response, accompanied by a sounding buss.

"I will take your fare, sir," persisted the conductor, almost bursting with suppressed laughter.

"An' I love mine Gertrude, mine little fat Gertrude!" exclaimed the infatuated husband, as if in a blissful dream.

The conductor saw at once that he would be compelled to resort to forcible measures, so taking Hans by the shoulder, he gave him a gentle shake, and renewed his application for the fare. At that moment Gertrude's face was snug away in close proximity to Hans' neckcloth, and both were squeezing each other to the full power of their muscular force. When shaken, Hans lifted his head, as if just awakened from sleep, and then seemed to realize the fact that he was still in world of care and sorrow.

"Vat you vants, eh?" he asked sharply of the conductor.

"Your fare—ten cents."

"Oh, yes, I pays him for mine Gertrude. Sets up a pit, mine Gertrude, vhile I gets der money."

The young wife released her hold reluctantly, taking and giving a kiss, however, as she raised her head. Hans soon found, and handed over the dime, then once more drew his Gertrude to his bosom, and held her there until the end of the journey. Never were lovers in a greater state of bliss than they were while riding in the car, and as an old bachelor, who was a fellow passenger, remarked: "Earth will prove heaven to them, *if their love only lasts.*"

General Bounce's Views on Marriage.—"Marriage, Charley," said the general, oracularly, with a solemn shake of the head, "is like that empty decanter. It comes in sparkling and blushing, like sunrise on a May morning. What? You draw the cork, and the first glass is heaven upon earth—that's the honeymoon; then you fill another—same flavor, but not quite equal to the first. Never mind, try again; so you keep sipping and sipping, to analyze, if you can, the real taste of the beverage, and before you can satisfy yourself you come to the end of the battle; then, sir, when you get to the bottom, you can see through it, and you find how empty it is!"

Farewell to Greece.—Bayard Taylor, in a letter from Athens, thus bids tender farewell to the land of classical memories:

Let me not lose the pensive sweetness and sadness of Athens. The sun is rapidly sinking in the clear saffron light beyond the pass of Daphne, and a purple flush plays along the sides of Hymettus. Before me rises the Acropolis with its crowns of beauty; Parthenon, on whose snowy front the sunsets of two thousand years have left their stain. In the distance is the musical Ægean, dancing with the whispering waves to fill the rock-hewn sarcophagus of Themistocles. Plato's olives send a silver shimmer through the dusk that is creeping over the Attic Plain. Many an evening have I contemplated this illustrious landscape, but it never was as lovely as now, when I look upon it for the last time. Every melodious wave in the long outline of immortal mountains—every sacred marble in the august piles of ruin—every blooded anemone on the banks of the Ilissus, and every asphodel that blossoms on the hill of Collonus—I know them and they know me. Not as a curious stranger do I leave Athens; not as a traveler, eager for new scenes; but with the regret of one who knows and loves the sacred soil, to whom it has been a sanctuary and a home.

A proud parson and his man riding over a common, saw a shepherd tending his flock, and having a new coat on, the parson asked him in a haughty tone, who gave him that coat.

"The same," said the shepherd, "that clothed you—the parish."

The parson, nettled at this, rode on a little way, murmuring, and then bade his man go back and ask the shepherd if he would come and live with him, for he wanted a fool. The man going accordingly to the shepherd, delivered his master's message, and concluded, as he was ordered, that his master wanted a fool.

"Are you going away, then?" said the shepherd.

"No," answered the other.

"Then you may tell your master," returned the shepherd, "that his living cannot support three of us."

In Paris, when dealers in precious stones purchase rubies, they behead a live pigeon, so that the blood of the bird shall fall on a sheet of white paper, alongside the gem, as a test of its color; the blood of a pigeon being a standard of color and transparency.

A lady writes from Pike's Peak, that for three months she has not been in a house, sat in a chair, or seen a woman. She sleeps in a wet bed, wears damp clothing all the time, and finally writes these experiences upon a board in her lap, sitting on the ground.

"Mr. Van Buren," said a defeated client, "is there any client so low and mean, or any case so nasty, that you won't undertake to defend him in it?"

"I don't know," said John, pausing to put away another oyster; then bending down, and confidentially drawling out his reply in the little man's ear; "what have you been doing?"

A very diffident young gentleman, in one of his experiences, waiting on a maiden home in the evening, desired her not to mention it, as it might cause remark.

"Don't be afraid of my telling it," said the lady; "I feel as much ashamed of it as you do!"

Great talkers use their faculties as spendthrifts their cash, bestowing on all objects alike.

The pebbles in our path weary us and make us foot-sore more than the rocks.

East India Tea Store.

ESTABLISHED IN 1857.

631 Washington street,

Nearly opposite Maguire's Opera House.

GEO. M. SMITH & CO.

MANUFACTURES BEST OF FAMILY SOAPS.

Near corner of Mason and Pacific streets.

PATENT

HYDRAULIC HOSE

MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N Swezy, President, and Chas. M. Gorham, Secretary. The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
119 First street.

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks—and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only bestudied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT

SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when so in use.

No. 4. The Mecnanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

9 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT

COMBINED

WASHING AND WRINGING MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT

Washing Machine

AND WRINGER.

Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Feb. 6.

Since our last weekly report, our markets for produce have shown a firmness unexpected, and prices have ruled steady, with an advance in some kinds of grain. Our Milling demand for wheat has been fully equal to the supplies or receipts, enabling sellers to dictate prices. The demand for Barley has much improved, and liberal sales have been effected at a marked advance in prices. Our brewers' stock is light, and they being extensive consumers, have entered our market and are buying freely; this, with the belief that large quantities of Barley have been lost, has had the effect to improve and sustain prices. We have to note one new feature in our Barley market by the arrival of a large amount from Sacramento, and without an explanation this would seem strange, and contradict our assertion that Sacramento, or the North, were soon to become heavy buyers. The following is the cause of the large arrivals from our sister city: Some of the Sacramento grain merchants, having removed to San Francisco and engaged in business here, they, for security, are bringing their stocks here, but assure us, as soon as trade opens they intend to reship not only their own but will be buyers of a large amount to supply the Northern demand. We are also informed, from a reliable source, that purchases of mules to a large extent have been effected in Mexico, and that, at the present, droves of these animals are now en route to California, to enter in the freighting to Washoe and the new mines in British Possessions. California stocks of grain will be required to feed them; this, we argue, proves favorable for our feed grains. From the different sources we have of gaining information, we feel confident that the present prices of Wheat and Flour are unfavorable, and believe a decline in both is positive at no distant day. The quantity of Wheat now in the State may safely be estimated at one million and a quarter sacks. We have the authority of one well posted, that there is now in the store-houses of Salinas, Pajaro, and Santa Cruz, over one hundred thousand sacks of wheat, and a larger amount still on the ranches of farmers in that section of the State. Those, who have Wheat that they can market, and do not improve the present prices, are, in our opinion, speculating at a high price, and will have cause to regret it.

Our receipts of Produce, for the past week, have been as follows: Wheat, 10,254 sks; Barley, 6609 sks; Oats, 2508 sks; Hay, 179 tons; Salt, 1300 sks; Potatoes, 502 sks; Flour, 2308 qr sks; Shorts, 27 sks; Bran, 475 sks; Beans, 634 sks; Corn Meal, 460 sks.

We note the sailing of the ship Haze, for New York, with an assorted cargo, among which was 5614 sks Barley, 468 pkgs Furs, 5144 Hides, 25 bales Sarsparilla, 633 blds whalebone, and 244 bales of wool.

San Francisco Cattle Market.

Feb. 6.

Reported for the California Farmer, by W. J. Whiting, corner of Sutter and Sansome streets (Stock Corral).

It is impossible at the present time to tell whether our late destructive flood will have any material effect on prices of stock, throughout the State at large. That there has been a great loss of Stock is quite certain; but as San Francisco is a market for principally fat Stock for our home supply, and not for the generality of Farm Stock, we cannot as yet tell what the effect will be in different sections of our State, nor do we think a correct statement can be given until the flood has entirely subsided and business resumed its original channel. In this connection, we should be pleased to hear from Stockmen from all the different portions of the State, stating the principal loss of the different kinds of Stock in their vicinity, and what they think the effect will be to them.

We have no change to note since our last issue, with the exception of Mutton, which has again declined. It may be said, although the prices of other Stock remain the same, that there is a downward tendency in price for all kinds of Stock except first quality of American Beef. We quote:

AVERAGE SLAUGHTERERS' PRICES.

Beef—American, first quality 4c to 9c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ₱ lb.

Veal—first quality, 7c@8c.

Hogs—Stock Hogs 1½ to 2c; fat Hogs on foot —@ 4c; Dressed 7c@8c.

Mutton—dressed, 3c@8c, according to quality.

Milch Cows—1st quality $25@$60; 2d quality $15@$25.

Youth's Budget.

CHRISTMAS EVE.

What are the children thinking of,
To-night, by the farmer's fire?
What are the children talking of
By the beautiful, blazing fire?
There are little bits of boys and girls,
And girls and boys not so very little,
Some half undressed in cap and gown,
Sitting, standing and tumbling down,
Frizzle heads, smooth heads, and heads of curls,
And some in boots, who can whistle and whittle,
All together there in a heap,
Big enough all to be asleep:
Little tall children, little short children,
Rosy children, plump as a berry,
Wide-awake children, ever so merry.
What is the cause of the clatter they keep,
To-night, by the farmer's fire,
By the beautiful, blazing fire?

I know what the children are thinking of
By the fireside's ruddy glow,
And I know what the children are talking of
As well as I want to know;
For I've been a little bit of a girl,
At night by a farm-house fire,
With sisters and brothers, oh, ever so many,
As wide-awake and as noisy as any;
Have joined, myself, in the noisy play,
By the beautiful, blazing fire,
When counting the days to that golden date,
For the coming of Christmas we scarce could wait,
Oh, that Christmas day! that blessed day!
How could we wait? Yet we did wait;
And so must you, my little friend.
But come it will, you may depend,
And the fair, white snow of the world below,
Why children, it will be a Christmas snow!
Such icicles hanging from all the eaves,
Such frost-work trellised on all the leaves,
Such drifts, such piles, so dazzling white,
And God has made it in just one night!

Oh I know as well as if I were with you there
How you will laugh and how you will shout,
When you wake in the morning and first look out;
And how you will laugh, and how you will shout,
When you go down stairs and first find out
How the gifts you have dreamed of have come to your share;
As you empty your stocking of goodies and toys,
And take down your dolls, books, pictures and slates,
Your caps, mittens, knives, whistles, trumpets and skates,
Just the happiest girls, and the merriest boys—
As you think, and I think—that ever were born,
To live by the light of a farmer's fire,
By the great red blaze of the farm-house fire,
By the beautiful fire of a Christmas morn.

ANSWER TO ENIGMA NO. 4.

Philip, King of Macedon.

ENIGMA NO. 5.

I am composed of 27 letters—the name of a useful book on a farm.

My 14, 8, 12, 7, 19, 14 is a field vegetable.
My 10, 23, 9, 3, 11, 14, a pleasant color.
My 17, 22, 18, 25, 14, 13, 2, a grandee.
My 22, 7, 20, 17, a disagreeable complaint.
My 17, 15, 24, 13, 8, a portion of house-building material.
My 20, 2, 9, 7, 11, 16, a notorious filibuster.
My 13, 19, 3, 14, 6, what boys are generally fond of.
My 17, 19, 13, 13, 14, 5, 26, a peddler of provisions.
My 13, 25, 14, 25, 18, 25, 27, a pompous festival.
My 6, 21, 25, 9, 1, 23, 3, 7, a flowering plant.
My 14, 5, 24, 18, 11, 26, a man of trouble.
My 13, 26, 5, 11, 24, 13, 25, 13, 8, a useful fruit.
My 20, 3, 23, 1, 12, a piece of money.
My 14, 19, 4, 7, 23, 9, an ancient Roman officer.
My 6, 21, 8, 11, 9, a farm animal.
My 4, 17, 11, 8, 10, 5, an agricultural production.

THE DOG NOBLE AND THE EMPTY HOLE

The first summer we spent in Lennox, we had with us a very intelligent dog, named Noble. He was learned in many things, and by his dog lore excited the undying admiration of the children. But, having on one occasion seen a red squirrel run into a hole in a stone wall, Noble could not be persuaded he was not there for evermore!

Several red squirrels lived close to the house and had become familiar, but not tame. They kept up a regular romp with Noble. They would come down from the maple trees with provoking coolness; they would run along the fence almost within reach; they would cock their tails and sail across the road to the barn; and yet there was such a well-timed calculation under all this apparent rashness, that Noble invariably arrived at the critical spot just as the squirrel left it.

On one occasion, however, Noble was so close upon his red-backed friend that, unable to reach the tree, Bunny dodged into a hole in the wall, ran through the chinks, emerged at a little distance, and sprang into the branches. The intense enthusiasm of the dog at that hole can hardly be described. He filled it full of barking. He pawed and scratched as if undermining a bastion. Standing off at a little distance, he would pierce the hole with a gaze as intense and fixed as if he were trying magnetism on it. Then, with tail extended, and every hair thereon electrified, he would rush at the empty hole with a prodigious onslaught.

This imaginary squirrel haunted Noble night and day. The very squirrel himself would run up before the dog's face into the tree, and crouched in a crotch, would sit silently watching the whole process with great relish. But Noble's conviction that that hole had a squirrel in it, continued unshaken for six weeks. When all other occupations failed, this hole remained to him. When there were no more chickens to harry, no pigs to bite, no cattle to chase, no children to romp with, no expeditions to make with the grown folks, and when he had slept all that his dog skin would hold, he would walk out of the yard, yawn and stretch himself, and then look wistfully at the hole, as if thinking to himself, "Well, as there is nothing else to do, I may as well try that hole again!" and go at it with unflagging zeal.

Sometimes we thought he really believed there was a squirrel there. But at other times he apparently had an inkling of the ridiculousness of his conduct, for he would drop his tail, and walk towards us with his tongue out and his eyes a little aslant, seeming to say, "My dear sir, you don't understand a dog's feelings. I should of course much prefer a squirrel, but if I can't have that, an empty hole is better than nothing. I imagine how I would catch him if he *was* there. Besides, people who pass by don't know the facts. They think I have really got something. It is needful to keep up my reputation for sagacity. And, to tell the truth, I have looked into that hole so long that I have half persuaded myself that there is a squirrel there, or will be, if I keep on."

Well, every dog will have his day, and every dog must have his way. No doubt if we were to bring back Noble now, after two summers absence, he would make straight for the hole in the wall, with as much as zeal as ever.—[H. W. Beecher.

A fellow in an oblivious state took up his lodgings on the sidewalk. He woke next morning, and straightening himself up, looked at the ground on which he had made his couch. "Well," he said, "if I had a pick-ax, I would make up my bed!"

"Do you enjoy good health?"

"Yes," was the reply, "Who doesn't?"

The only ones who "enjoy bad health" are the doctors.

BUSINESS NOTICES.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

A Farmer's Mill in High Water.—While the roads are impassable and where the flouring mills are swept away, Farmers should immediately procure the Union Farm and Plantation Mill, now offered by Greene, Heath & Allen. This will answer all the purposes of a Flouring Mill for a whole neighborhood. These are the Mills for the times. See advertisement.

An Experienced Man, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the Farmer Office.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

Rebuild Your Fences.

The universal loss of Fences in our State will fall as a heavy blow upon our Farmers, and every opportunity and means for their being replaced at as little cost as possible, should be availed of at an early day.

We call the attention of all who desire to build Fences at a little cost to HYDE'S PATENT POST-DRIVER, for sale at this Office.

RIGHTS for Counties and for large Farms, can be purchased at the *Farmer Office*, on the most favorable terms. A liberal allowance to all who have suffered by the flood. Any information can be had by addressing Editor California Farmer. 16

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

Collegiate Institute,
BENICIA.

FOR MALES ONLY.

THE NEXT SESSION OF THE INSTITUTE, THE FOURTEENTH,

Will Open on the 12th of January.

Pupils are requested to come on the 10th or 11th.

TERMS: Board and Tuition in the studies belonging to either the English or Classical Course, per month........$31 00

Washing, " " 4 00

The rooms are ready furnished. No Entrance Fee is charged.

Persons wishing more particular information in regard to terms, range of studies taught, &c, will please request a Circular from the Principal,

12-1m C. J. FLATT.

University of the Pacific.

THE NEXT SESSION WILL COMMENCE January 16, 1862.

THE PREPARATORY DEPARTMENT of this Institution having been in operation Ten Years, the Collegiate Seven, the Medical Three, and its Female Collegiate Institute Eight, it is not necessary to commend it to public notice. For information concerning Course of Study, &c, apply to

E. BANNISTER, President, Santa Clara.

Female Collegiate Institute,

AT SANTA CLARA.

THIS INSTITUTE, though under the supervision of the University Trustees, is exclusively a Young Ladies' Seminary in all its arrangements. The next Session will begin Jan. 16, 1862. For information respecting Course of Study, Government, expenses, &c, apply as above, to E. BANNISTER.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XVI. SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 14, 1862. NUMBER 19.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor.

PUBLISHED EVERY FRIDAY MORNING.
BY J. K. PHILLIPS & CO
Office—No. 728 *Montgomery street (up stairs), near Jackson*
SAN FRANCISCO.

Terms.—By mail, for one year, $4; for six months, 2 50. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or $5 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

[For the California Farmer.]

THE SUNNY SIDE.

Walk upon the sunny side;
Shun the ague-breeding shade,
Where the noisome gases hide
And the atmosphere pervade.
Like the bee of busy wings,
Honey suck in sunny hours,
Leaving unto meaner things
All the poison of the flowers.

Sweetest is the peach whose cheek
Oft is kissed by solar rays,
And the violet, so meek,
Sweetest where the sunlight plays;
On the sunny south hillsides
Grapes of finest flavor grow,
And where summer longest bides
Wines of rarest virtue flow.

Walk upon the sunny side,
As you journey on your way;
Choose the good you find supplied—
Eat the manna of to-day.
Vainly you provide for ills—
What you dread may never be;
You cannot look beyond the hills!
How should you, then, the Future see?

Like the bird of rosy breast,
Swaying on some topmost limb,
Caroling with swelling chest—
Sing thou, too, a thankful hymn.
Like him, sing between the showers,
Let your spirit aye be glad;
Life's made up of such short hours
That 'tis folly to be sad.

Lightly treat the ills of life,
Take the fairest view of things;
Mingle not in useless strife,
Round which nought but sorrow clings:
When the storm is violent—
Like a vessel in a bay,
Lie at anchor till 'tis spent,
Then pursue thy peaceful way.

Mope not, like the birds of night
In their fastnesses of shade,
Hiding from the genial light
Which the blessed God hath made.
Earth's harmonious symphony
Chides the misanthropic moan;
Life is full of poetry—
Choose not, then, the prose alone!

San Francisco, Feb. 14, 1862.

THE VINE AND WINE IN EUROPE.

LETTER NUMBER TEN.

From Our Regular Correspondent.

Wine-Making on the Clos de Vougeot.

Paris, December 1, 1861.

Editor Farmer: The only kind of grape in the whole vineyard is the *Black Pineau*. The grapes, after being gathered, are brought to the Tank-Room and thrown upon the boards of the presses. There, under the immediate inspection of the Master of the Cave, they are crushed by men, wearing on their feet large boots, or wooden shoes. The crushed grapes, with the whole of their juice, are then thrown into the fermenting tanks; the whole is left to ferment.

The mass becomes heated, and the carbonic acid frees itself abundantly, while the ferment converts the sugar of the grapes into alcohol. To use a technical expression, the *must boils*. The carbonic acid, in its efforts to escape, throws up the skins, seeds, etc., which, in the end, form a crust on the surface, called *hat of the vintage*. When the fermentation is almost imperceptible, the men are sent into the tanks to trample down the skins, etc.

This curious and rather unclean custom is universal in France. In good years this is only done once, while in bad ones it must be repeated many times before it becomes effective. Last year, for example, 1860, on the eighth day the wine did not ferment any more than when crushed. To make it ferment, men had to be sent into the tanks three times a day until the twelfth day!

Generally, the wine ferments in twelve hours, but in bad years it takes several days to get it into action. When the palate recognizes that the sirop of sugar has disappeared and made place to a wine *taste*, the wine is drawn off. Those who have not experience enough to judge by the palate, must make use of the *Œnomèter*. They must, however, to avoid errors, take the degree at three different depths, add them together, and divide their sum by three. This is what mathematicians call *taking the mean*. Even with this precaution one is often led astray. The best judge, after all, is the palate.

The Master of the Cave assures me that he degustates his wine, while fermenting, at least twenty times a day.

The wine is drawn off into barrels, almost new, that is, barrels having been used only from six weeks up to six months, at the utmost. They are not sulphured before receiving the wine; they are rinsed out twice, with warm water only. Those barrels alone, that are not intended for immediate use, are sulphured. If they are to remain unemployed for three months, a sulphur match, as long as a finger, is burnt on the interior; for three months longer, the match is reduced one-half, etc.

The wine once drawn off is left in the same barrel until the month of March, so as to give it time to depose its residue matter. The first eight days after drawing off into barrels, the barrel is refilled every day, then every two days, and so on. After the first six months it is filled only once every three weeks, or once every six weeks, according to the wine.

Some wines lose much; others less. In the month of March the wine is drawn off into a second barrel, where it is left until six weeks afterwards. This time expired, the wine is cleared by putting into it the *white* of six eggs. They must be well beaten before used. Eight days after this operation, the wine is clear; it is then drawn off into a third barrel, where it remains until the month of November, when it is again drawn off.

The first year the wine is drawn off three times; the second year, twice; the third and succeeding years, one.

Eight days before the drawing off into bottles, the wine is once more cleared with the white of eggs, as above mentioned. Once in bottles, it is ready for consumption.

In transferring the wine from one barrel into another, the *Burgundy bellows* are made use of. This instrument consists of a pair of large bellows, whose end is at right angles with its tube, and fits exactly to the bung-hole of the barrel to be emptied. The cask which is to receive the wine is on a level with the other, or a little below it; a hose joins the faucets of the two barrels; by means of the bellows, air is compressed into the full barrel, whi h, pressing on the wine, forces it into the empty one. When a hissing noise is heard the air escapes by the faucet, and the operation is finished. The manner in which the wine is put into the bottles, and then into heaps, is exactly the same as that which I have already had the pleasure of describing to you.

Truly, yours, Arpad Haraszthy.

REPORT ON VINE CULTURE.

BY COL. HARASZTHY, COMMISSIONER.

To the Honorable the Senate and Assembly of the State of California:

In accordance with a joint resolution of the Assembly, adopted March 2d, 1861, and concurred in by the Senate, April 1st, 1861, authorizing and requesting His Excellency the Governor to appoint a Commission to report to the next Legislature, upon the ways and means best adapted to promote the improvement and culture of the grapevine in California, I have the honor to report as follows:

Having been appointed by His Excellency the Governor, J. G. Downey, upon said commission, I first considered the best mode of fulfilling the duties imposed by the above resolution.

It became evident to me that the objects of the Legislature would be best secured by an examination of the different varieties of grapes, and the various modes of making wine in the vine-growing countries of Europe, and I communicated this view to the Governor, and offered my services to proceed to Europe, if he should think it desirable. He approved my suggestion, and sactioned the enterprise, and I at once proceeded on my journey.

On my way I stopped at Washington, and was supplied by the Hon. Wm. H. Seward, Secretary of State of the United States, with a circular letter, directing the diplomatic agents of the United States in Europe, to afford me such assistance as lay in their power, in this important mission.

On my arrival in France, I opened a correspondence with the different Imperial, Agricultural, and Horticultural Societies, requesting them to furnish such information and letters of introduction as would facilitate my object. They responded with cheerfulness, and I was received with distinction, and afforded every opportunity for obtaining the information I required—in fact I met with general courtesy wherever I went.

I visited various parts of France, the Netherlands, Holland, Rheimish Prussia, Bavaria, Nassau, Baden, Switzerland, Spain, Italy and England.

Various examinations confirmed my previous convictions, that California is superior in all the conditions of soil, climate, and other natural advantages, to the most favored wine-producing districts of Europe, and that it actually has yielded considerably more per acre. All this State wants to produce a noble and generous wine is the varieties of grapes from which the most celebrated wines are made, and the same care and science in its manufacture. This conclusion is the result of a thorough investigation, and frequent consultation with many eminent men in Europe, who assured me that the quality of the grapes grown was in a great measure the quality of the wine—a fact proved by many scientific experiments, showing that even in the least favored localities, where common wines were ordinarily made, the most costly wines had been produced by planting the best varieties of grapes.

Having provided myself with analyses of the soil of California from various localities, it was not difficult to obtain a correct estimate of its average capacity as a wine-producing State. From all the information that I have been able to get, our climate and soil are greatly in our favor.

In view of these facts and the purposes of my mission, I determined to make arrangements to purchase a quantity of vines, and also to examine every celebrated wine-making establishment within my tour, so as to learn and describe the newest and best methods of making wine. I did not limit my observation and study to the manufactories alone, but procured the reports of scientific committees appointed by different governments to investigate the subject, by means of different practical experiments, continued through a series of years. I also obtained the proceedings of the Congress assembled by order of the Government of France, for the purpose of comparison and consultation, and which was composed of most scientific chemists and practical wine-makers. I availed myself of the reports of similar assemblies, held annually in Germany, and of the newest and best works in various languages, written by able men, who had spent their lives in the business of vine-culture and wine-making.

It is proper to remark here that the countries through which I traveled possessed a lucrative trade by making raisins, drying figs and prunes, raising almonds, cultivating mulberry trees for the sustenance of silk-worms, and above all, producing sugar, at enormous profit, from the sorgho, imphee, and sugar-beet. I therefore thought it advisable to add to the more strict duties of my mission, an investigation into these branches of industry, and to procure the best and newest works concerning them.

I was gratified to find that of all the countries through which I passed, not one possessed the same advantages that are to be found in California, and I am satisfied that even if the separate advantages of these countries could be combined in one, it would still be surpassed by this State when its now dormant resources shall be developed.

California can produce as noble and generous a wine as any in Europe; more in quantity to the acre, and without repeated failures through frosts, summer rains, hail-stones, or other causes.

The quantity of raisins, currants, figs, almonds, olives and prunes, which we could raise, would surprise the most sanguine of our people. The mulberry, and the silk-worm, would occupy and give support to many industrious females, who have now no remunerative employment in the rural districts; would aid the small farmer to educate a growing family, and would add largely to the wealth and revenue of the State.

In my opinion, no country can surpass this in raising the sugar-beet, sorgho, and imphee. There is no part of the world except, perhaps, Africa, which can produce the same quantity of these commodities to the acre. The present mode of making sugar from these products is so simple that every farmer, at an expense of $30 for machinery, can manufacture enough for his own use, and have a considerable overplus each year for the market. The capitalist, too, may safely invest his money in this lucrative business, and enrich himself as well as our State.

The countries I visited in which these products are cultivated and manufactured, derive from them a considerable revenue, as their statistics show, and there is no substantial obstacle to prevent the agriculturists of California from engaging in all the enterprises I have mentioned. The high price of labor here is more than counterbalanced by the greater value of land, and the enormous taxes on those productions in Europe. The development of these branches of industry would not only add to the wealth of the State, but it would also lead to a large immigration from Europe.

Many conversant with the business, have not hitherto migrated to California, because they had no hope of suitable employment. Capitalists, ignorant of the resources of the State, have not considered the advantages they possess for investment. Manufacturers who have grown wealthy in the older countries, having sons or junior partners, would gladly open branch houses here, as soon as it was known that they could purchase an adequate supply of the raw material in this State. But it would be impossible to enumerate the benefits which this State would derive from such an increased application of her agricultural capacity; residents of California who have visited our plantations, vineyards, and farms, and who have attended our District and County Fairs, may be able to appreciate these just anticipations.

European Governments, well knowing the importance of agriculture and horticulture, appropriate large sums every year in various ways, for the encouragement of these most important branches of their wealth. Agents are sent to all parts of the world, to collect information, to report on new inventions, and ameliorations, and to purchase new varieties of vines, trees, seeds, etc. Botanical or experimental gardens are kept where the plants, vines, or fruit trees are propagated, and then sold to the people at cost price, or given free of charge to each community, according to population, for distribution among its landholders. Scientific and practical men are employed at high salaries, as officers of agriculture and horticulture, whose duty it is to make experiments in all the various branches.

The magnificent agricultural and horticultural schools, with their experimental gardens, cost hundreds of thousands of dollars per annum; and their statesmen frankly confess that money could not be more profitably expended.

It can also be shown by statistics that those States which have expended most money in the encouragement of these departments of industry, are now the wealthiest and most powerful, and their people the least in want.

I would respectfully recommend that a law be passed, appropriating money for the purchase of land for a propagating and experimental garden; and also creating the office of Director, to supervise the garden; also, the appropriat on of a sum to purchase, from year to year, seeds, vines, etc., and for other necessary expenses in maintaining said garden.

In this connection, I would respectfully draw your attention to the fact that by late treaties with Japan and China, an opportunity is presented to us to penetrate into those countries which have been secluded for centuries. It is well known that many fruits and plants are raised there which might be of great advantage, if introduced into this State.

A thorough examination of those countries would probably bring to light some products which have not been thought of here. To leave such inquiries to private enterprise would be a tardy mode of realizing the object. I doubt if half a century would accomplish by private means what might speedily be attained by official investigation.

No private individual, however wealthy, would have the same facilities to investigate and procure seeds and plants as an agent authorized by his Government. This is the case in civilized Europe—how much more necessary is such a prestige in semi-civilized countries.

The passage of a law for the above purpose may be opposed on the ground that we have a National Garden at Washington, but it is too well known that the few seeds and shrubs we receive from there are too often dry and useless. California ought to propagate only such vines, fruits, seeds, etc., as are congenial to her soil and climate, and in large quantities, so that our citizens can be promptly supplied. The Patent Office represents too varied interests, climates and soils, to do us much good here. One might as well say that California needs no Governor, Legislature, or Judiciary, as our public affairs might be administered from Washington; and, in fact, it would be easier to govern us from Washington, than for the Patent Office to supply what we want for the speedy development of our agricultural and horticultural resources.

In my travels I endeavored to induce capitalists to come amongst us and establish business places; to purchase the grapes from the small producers, as in Europe; and to erect manufactories for making wine, and extracting sugar from sorgho, beet-root, and imhpee. I also urged the formation of a joint stock company, with a capital of $1,000,000, for the planting of vines, olives, almonds, mulberries, etc., in the southern part of the State. The prospect for the consummation of these enterprises is favorable, especially if the apprehensions of a foreign war should subside.

Wherever there was an opportunity to get an article about California and its immense resources in an influential newspaper, I embraced it, and many German journals heralded our advantages by publishing the letters your Commissioner had written to their officials.

Permit me to say here, that in no way can the object of rapidly populating our State be more effectually accomplished than by authorized agents traveling in Europe, not for the direct purpose of inducing emigration, but of noting the progress of agricultural and manufacturing pursuits. These agents would come in contact with all classes of persons; questions would be eagerly asked and opportunities be thus afforded to publish the advantages California possesses.

Coming from an official source, the information would be credited, newspapers would refer to it, and with the aid of our State Agricultural Society's reports (which I was fortunate enough to possess) these authorized statements would be authenticated by the enumerated premiums, and descriptions from Visiting Committees. It excited surprise that a State so young, and so isolated, should have such wealth of agriculture and horticulture as I proved, and this surprise amongst Europeans is not so wonderful, as California was there known principally for its gold. Even our Eastern brethren were astonished when I showed, from our reports, the extraordinary productiveness of our soil and the salubrity of our climate.

The appropriations made by the Legislature for the printing of the proceedings of the "State Agricultural Society," have and will continue to bring back many times their amount. It would be well to distribute these evidences of our resources in such a manner as would reach more directly the people in the East, and in Europe. Books sent by other Agricultural Societies generally fail to reach the public, being mostly retained in their libraries, but if they were sent to the editors of prominent newspapers, they would receive a much wider circulation.

I have purchased in different parts of Europe 100,000 vines, embracing about 1400 varieties, small lots of choice almonds, olives, oranges, lemons, figs, pomegranites, Italian chestnuts—enough to propagate from by grafts.

The majority of the grape-vines I have engaged I have seen bearing. From those countries which I was unable to visit, I ordered through our Consuls (to whom I remitted the necessary funds) such products as I thought necessary, and I have no doubt they will be forwarded in time, to be dispatched from Havre with the others.

My contracts were made in all places in presence of the United States Consuls, leaving the money with him, to be paid when the vines were delivered, and instructing the Consuls to send them so as to arrive in Havre, on or a few days before the 1st of December, 1861. A gardener whom I employed will attend to their proper shipment, take charge of them on the voyage, and repack them in New York, where arrangements have been made with Wells, Fargo & Co., for their future transportation to San Francisco, under the care and supervision of the gardener.

All necessary precaution has been taken, and I am confident they will arrive in the best order. They are expected to arrive in San Francisco by the steamer due on the 25th January, 1862. As I do not know the exact freight and expenses, I am not able to state the exact amount of cost and charges to your honorable body, but will do so as soon as possible.

It may not be irrelevant here to mention the fact, that in California, as well as in the Eastern States, the public mistrust the purity of California-made wines in the hands of merchants. Whether merchants do or do not adulterate the wine, such doubts injure its character, and restrict its sale greatly. Therefore, to insure confidence, and prevent such adulterations, I would respectfully submit whether it might not be a wise policy to pass an Act appointing a general agent for the State, who should reside in San Francisco, and to whom the wine producers could send their wines to be sold; the agent to sell the wine at the prices fixed by the manufacturer, with the proprietor's label on the bottle, or, if in barrels, with his name attached thereto. This agent, so appointed, to receive from the owners of all wines or brandies sold a commission, to be fixed by law, and not to exceed the commissions usually received by the merchants, the agent to defray the expense of office and cellar out of the commissions he may receive. The law creating said office might also impose heavy fines and confiscation of the liquor belonging to any individual who should send for sale adulterated articles. Such an office would be no burden to the State, nor to the wine growers, as it would be optional with them to send their wines to this office or dispose of them in any other way. Every producer, however, would find it to his advantage to avail himself of this medium, as he would meet a ready sale, and pay no more than the regular commissions, while he would aid in preventing frauds, and thus create confidence in the genuineness of our wines. The agent would have to be strictly impartial. All the samples should be indifferently exposed and accessible to purchasers, who could select the wines best suited to their tastes. The agent should be required to give ample bonds for the faithful and impartial performance of this duty, and for the prompt payment of all receipts on account of sales.

This plan would, I believe, restore confidence and be at least a check upon poisoning our people, by our own productions. His Excellency the Governor, requested me to propagate the vines expected to arrive here from Europe, at Sonoma, and hold them and the increase subject to the future disposition of the Legislature.

I have the honor to annex to this report, a condensed statement, which will show the contents of a work which I propose to publish, and which will contain a full account of what I personally observed and inspected in Europe, with extracts from foreign works, reports of committees, eminent writers, practical vintners, farmers, horticulturists, manufacturers, &c. This work will consist of about 800 printed pages, with several hundred illustrations, well executed, representing maps, implements for wine making, for pruning and training vines, for drying raisins, currants, figs, prunes and fruit of all descriptions, apparatus for making sugar from sorgho, imphee and beet root; and for draining and redeeming overflowed and barren lands.

As soon as this work is completed, which will be, I think, before the adjournment of the Legislature, I will furnish a printed copy to each branch of your honorable body.

Not having been able since my recent return, to learn anything of my colleagues, and their labors, I respectfully submit this as my report.

I have the honor to be with distinguished respect, Your obd't servant,

A. Haraszthy,
Commissioner on the Improvement and
Growth of the Grape-Vine in California.

The above report, with accompanying documents, were referred in the Senate to Joint Committee on Printing.

Prune your Trees Now.

Not only your trees, but your vines and shrubs of all kinds. We are so amused oftentimes at the great fear people have lest a branch of a tree or vine should be curtailed of its length. They say they want their trees to grow rapidly and strong. They are anxious to see the blossoms and the fruit, and they urge on the growth, often forcing it unnaturally, and never even prune off the weak, sickly, or overgrown wood that consumes the strength and vitality of the trees, without ever giving back blossoms or fruit.

"Every branch that beareth not fruit I cut away, and every branch that beareth fruit I purge [prune] that it bear more fruit." These are the words of sacred writings, but there are no words that convey so clear and true teaching in regard to the culture of trees, vines, plants and flowers.

Any one conversant with the orchard or vineyard, must know that there can be no permanent health or beauty, or no great results in blossom or fruit, without the regular annual pruning system, and a good close pruning too.

We are often pained to see in our city even, as well as in all places, a great neglect in the care of the home garden spot, trees, vines, shrubs and plants become choked up, matted together, and thus become unsightly as well as diseased, when by a wise use of the knife, and the amputating system, beauty would take the place of deformity, and the whole vision gladdened with flowers and fruit instead of a barranness of both.

Garden fruit trees should now be pruned close, the trees washed and cleaned with soap suds, this will remove moss and kill insects under the bark. Grape vines and roses and all creepers should be thinned out and tied up strongly. Dwarf roses headed back close and flowering shrubs thinned of weak branches and unsightly parts. This done spread the surface with good rich manures, dig deep and fine, rake smoothly, and the reward for all their labor will be more than paid an hundred fold.

Sorghum Sirup for Rollers.—We have been making four sets of rollers for our presses, and have used the Sorghum Sirup instead of the imported article. The experiment has convinced us that it will make better rollers than anything else. They are tougher, smoother, and far more elastic than any we have ever made.—[Napa Reporter.

Large numbers of rebel troops are reported in Arizona, with the design of attacking Fort Yuma.

Cactæ.

The following essay on the Cactæ by Frederic Palmer, of New York, in the Horticulturist, will be read with interest, as it shows the great number of varieties of this curious but very interesting plant. It will be seen, also, that one species from our State leads off at a very handsome price. We have been through the conservatories of Verschaffelt, at Ghent, and seen his collection of plants, and also seen all the principal growers of rare plants at Belgium, Paris, and London; this, however, was in 1847. A very great addition has been added to each since. The writer says:

Will you allow an old subscriber, a true lover of Cactæ, and not an unsuccessful cultivator of these plants, a corner in your valuable columns, for a few remarks called forth by an article on "Cactæ" in your number of September?

The writer of that article says, that "Cactæ have no distinct difference of petal, wood, bark, or leaf; that they have *no* leaves, the entire substance of the plant being a mass of matter, which may be called a branch, or frond, but *never* a leaf." Now, although in many instances these plants are not as perfectly constituted, with regard to wood, bark, and leaf, as an *oak* or an *elm*, yet very many of them *have* leaves just as apparent and just as perfect in every respect as either of these trees. Take one whole section of the "Pereskiæ," for instance—those with flat leaves, such as P. aculeata, P. Bleo, P. Grandiflora, P. zinniæflora, etc., etc., in what do their leaves differ from those of a "camellia" or a "laurel?" They have, moreover, both perfect wood and bark, and so have many "Opuntiæ," which is most conspicuous in O. Braziliense, and in all the tribe when old.

Another section of "Pereskiæ," and most "Opuntiæ," have deciduous leaves, "cylindrical" to be sure, but so are also those of Grevillia, Sedum, Mesembryanthemum, and many other plants. Besides, in a botanical sense, the shape of the leaf is of no consequence; it is an organ in which the sap is elaborated through that organ's surface, by contact with the air, as necessary to the life of the plant as lungs to an animal, and therefore must exist in some shape or other, or the plant can not live.

The subject has not been very much studied, but it is supposed by many botanists, among others by Labouret (who has written a very excellent hand-book of Cactæ), that the "tuberculæ," or "mammæ," play the part of leaves in such of these plants as lack them in a more conspicuous shape. With regard to "petals," I must own I never saw a Cactus flower without them, and they appear to me to have as "distinct a difference" from the other parts of the plant as the petal of a rose, a "petunia," or a "mesembryanthemum." The fact that a frond, or a "piece of a frond," will readily root and form a perfect plant, is by no means peculiar to "Cactæ," or even to succulents in general; your readers need not be told what a vast number of plants are usually propagated in this way. The common "scarlet Geranium," for instance, will readily root a piece of young green shoot, let it be taken from the "side" or any where else, so that it have at least *one eye* above ground; and so must a piece of Cactus, or it will not grow; in both these cases you have a piece of succulent matter which differs in no respect, and *an eye* containing an embryo plant. The Geranium will also strike upside-downward, but in this case, as also in that of the Cactus, the growth is retarded.

I agree with the writer that Cactæ require, more than any other plants, a season of rest; but I should be sorry to subject any valuable specimens to a "total abstinence from water for twelve months, even at a temperature of 80° Fahr." The fact is, that most of these plants show a tendency to vegetate towards spring, sooner or later, according to the mildness of the weather without, and this tendency must be fostered by artificial heat and consequent judicious watering and ventilation, or *all pushing flower-buds will turn to wood*, *i. e.*, branches or fronds, in Opuntiæ and Cerei, offsets in Echinopsi, Echinocacti, and Mammillari.*

The cultivation of Cactæ in collections has very much increased of late throughout the Continent and in Great Britain.

In Paris, the kinds which bloom so easily, and are so readily propagated, as C. speciosissimus and its hybrids, Echinopsis Eyrisii and others, Echinocactus Ottonis, and sundry Phyllocacti the Epiphylli, may be had in the flower-markets for from 5 to 25 sous each.

Many kinds are expensive. Echinocactus Californicus never sells under $4 to $5, as a mere offset, $20 when rooted, and a couple of inches in diameter; E. C. Texensis, $5 to $15; Cerei, from 25 cents to $25. Of C. Uncinatus there are only four or five specimens in Europe; they sold, without roots, $20 each this summer. Young Leuchtembergiæ and Anhalonium bring $4 each, when they are to be had at all. Of Pelecyphora there is but one specimen in Paris, purchased at $25, and one or two at Ghent. Of the different Discocacti, not one single specimen exists in Europe. Melocacti do not do well in France, when imported as adults, with their "cehalium" ready formed; they have hitherto died off; there are plenty of European seedlings, however, in the trade, which may prove more hardy, but as yet they are very young, and have many winters' trial to undergo before they show their "cephalium," and are fit to take their place as specimens of flowering plants. On the subject of Melocacti, I can not conceive how the writer above alluded to can have managed to "hybridize" these plants. The flowers are so minute, so hidden under the wool and spines of the "cephalium," that it seems to me next to impossible to impregnate them artificially. If there is no mistake, his seedlings will be welcome in European Collections, where, I have no doubt, they would meet with a ready sale. I, for one, would be glad to purchase a few of them.

I may add, in a general way, that an amateur on the Continent will be able to form a collection of

100	distinct kinds of an average of	15 sous each.
200	" " " "	3 francs "
300	" " " "	5 " "
400	" " " "	10 " "
500	" " " "	10 " "
600	" " " "	10 " "

The last will include all the tribes, genera, and species known and described, but of course a vast number of mere varieties and hybrids, and can not be got together without a good deal of trouble. At this figure most rare kinds will only be young specimens, as *some* of these (as large plants) will fetch 1,000 francs each. The finest collection is that of the late Prince de Salm Dyck, near Bonn, on the Rhine.

There are many dealers exclusively devoted to the propagation and sale of "succulents" in every capital on the Continent, and one or two in London. They all seem to drive a thriving business. Agaveas and Yuccas are at present much in vogue; rare kinds of the former bring very high prices. Verschaffelt, of Ghent, exhibited in Paris, at the last show of the Imperial Society, a few days since, two new kinds, A. Verschaffeltii and another not yet named, offsets of which he quotes at 100 francs each. I lately saw, at a dealer's in Havre some splendid specimens of Yucca aloefolia variegata, for which he gets about 300 francs each; Y. quadricolor of same size would bring at least 1,000 francs.

Versailles, France, 26th Sept. 1861.

---

* For further particulars on the subject of cultivation, see divers articles of the writer's, signed with the pseudo-name A. B. C., in the *Horticultural Cabinet*, London, and *Horticulteur Francais*, Paris.

Grapes and Wine.

[Below we continue from our last number, the interesting remarks of Dr. Grant on Grapes and Wine]:

In our calculation injustice has probably been done to the natives in the estimate of the crop. As the result of ten years' careful observation, I must avow the belief that the open border, with the proper attention, will produce, for ten consecutive years, as great a weight of perfect fruit as the vinery. But we will proceed as we have begun, in the proportion of one-third less; and we will also concede the same proportion in the value of the fruit.

For the foreign grapes, 1800 pounds at 35 cents per pound, the sum would be $630; or, in round numbers, $600. For 1200 pounds of the natives, at 20 cents per pound, the amount would be $240. This gross sum, compared with the $600 from the vinery, is unquestionably small. But we shall soon see that the cost is also small, and that not merely the relative profit, but the absolute profit from the border, is as great as that from the vinery.

At the end of the third year the cost of the vinery will not be over-estimated at $1000; even $1200 may probably be too little. As a large part of this is perishable and in need of frequent expensive repairs, such as painting, etc, less than 20 per cent will not equal the value of the same at lawful interest. This will amount to $200, and the cost for attendance cannot be much less. We shall not have more than $200 net after all expenditures are deducted.

On the other hand, our border, at the same time, will not stand us in more than $350, and the cost for attendance will not exceed $25; so that for the vine in the open air the annual expenditure, including interest, will scarcely exceed fifty dollars; thus leaving nearly, or quite, $200 net profit for our twentieth part of an acre under high culture.

As we have, throughout the comparison, been very liberal to the vinery and rigorous with the the border, we will still do so, and allow $65 for expenditure, which still leaves all that we dare take as net earnings of the border.

It must be remarked in passing, that no one who has compared the fruit of the Delaware with other kinds, native or foreign, and enjoyed its excellence, will be able to conceive of its bringing less in market than the best Black Hamburghs. Objection is made to its size, but not by those who are conversant with the elegance of its translucent berries and fine compact bunches, whose beauty needs not the unseemly marring to which the Hamburghs must be subjected before presentation to be enjoyed. The same objection has been made to the Seckel Pear, and yet its surpassing merit still commands the highest price.

The comparison between the cultivation of grapes under glass and in open air, has been made upon the same extent of ground for a three-fold purpose, which will soon appear in the examination of the other questions.

Let us now see what the cost of the vinery will do invested in one acre of vineyard. It is just the amount that, under favorable circumstances, will bring to productiveness at the end of the third year one acre of Deleware vineyard, purchase of vines and all expenditure, except cost of ground, included.

If good vines have been chosen, and every operation has been well performed, at the end of the third season the vines will be carrying an average of four pounds each of perfect bunches of grapes, or four tuns to the acre. This is about one-third the quantity that Deleware vines are generally suffered to bear at this age, and is much below what may be borne with safety.

We need go no further with this calculation. Beheld at a distance, it makes the profit of the vinery in the foreground appear quite diminutive, when we consider that the attendance of the vineyard of one acre will cost less than that of the vinery of one hundred feet, and that the crops are produced with a certainty to which the vinery can put forth no claim.

If the price of the grapes is estimated at a low value for wine—ten cents per pound—the amount will be eight hundred dollars. But until the lovers of good fruit are supplied who have no vines of their own, good Deleware grapes will not be sold at a price that will net less than twenty cents per pound, nor within a few years at a price so low as that. This will give sixteen hundred dollars, less expenses, which will all be less than two hundred dollars.

I think we may safely arrive at the conclusion, that, with such varieties as we now have, the cultivation of the native hardy grapes offers much better profits than the cold vinery. And it may further be announced, without fear of contradiction by any one who has taken care to be well informed on the subject, that grape culture is not only inaugurated in this country, but is far advanced in the sure way of progress that shall make it here, as it has ever been in *all* vine-growing countries, "*The grand culture.*" All branches of culture are deeply interesting to the man of contemplation and feeling, but in different degrees; and the vine not only includes the interest of all except that of the Florist, but excels them all in its reflex action in cultivating the mind, the sentiments, and the heart.

The vine alone could be fitly chosen to illustrate the vital Union of Deity with humanity, and the husbandman of the vine justly feels the high recognition of the excellence of his calling by the most tender comparison ever expressed in language being drawn from his own relation to the vine.

[to be continued.]

The late Rains and Overflows.

The remarks of Dr. Logan in connection with his Report on the "Meteorology of Sacramento" for the month of January, published in the Union, are very interesting, as referring to the late floods. He says:

Again we have to record the most extraordinary meteorological occurrences, with their resultant effects, ever experienced since the American occupation of the country—putting to fault some of our theories and calculations. During the entire month, all the great valleys of the State have been more or less inundated in consequence of continuous rains, which have amounted here in one month, to 15.036 inches more than three-fourths of our average annual supply. On the 10th, the water rose in this city twenty inches higher than the flood of the 9th of December last, reaching the level of the river, which had attained the unprecedented hight of twenty-four feet above low-water mark. This is satisfactory evidence that, copious as the rains have been here, they have been still more so at the sources of our rivers, and doubtless have there measured three or four times as much as at this locality. A reliable communication from W. A. Begoll of Nevada informs us that at a given period we had only about two-fifths of the quantity which fell in that locality, and which, from the 26th of December to the 12th of January inclusive, amounted to nearly twenty-six inches. Doubtless in some other parts of our steep and rugged mountain chains, which are the great condensers of the vapor borne from the tropics by the south-east trade-winds, the precipitation has been still more copious; but we are not prepared to credit all the accounts that reach us of the most marvelous pluvial deposits, exceeding that of the tropics in our hemisphere, which is estimated at 115 inches for the whole year. In England the amount of rain that falls in the mountainous districts is only a little more than double that of the less elevated portion of the country; and the effect of the Alps is, that while the annual amount of rain in the valley of the middle Rhine, and on the plateau of Bavaria, is only 21 inches, in Berne and Tegernsee, at the foot of the Alps, the rain is nearly double, or 43 inches. Thus, although the amount of precipitation varies greatly in different localities, even in the same latitude, still the mean annual fall in the North Temperate zone is but 37 inches, and we do not think it can much exceed double this quantity in any part of our State.

No person who has not investigated the subject can form an adequate idea of the immense quantity of water a single inch of rain over a large area produces. It has been calculated that one inch, falling over a surface of 1000 square miles, would, in being drained off by a river two hundred yards wide, with a current of four miles an hour, raise said river eight feet and keep it at that hight for twenty-four hours. Now, when we consider that the Sacramento drains about 30,000 square miles before reaching the city, we find no difficulty in accounting for its late overflows without accrediting all the exaggerated accounts we read of rain admeasurements. In this connection we would remark that the Mississippi drains 1,226,600 square miles of territory, and yet two-thirds of all the real estate capital of Louisiana lies below high-water mark. Now the regimen of that river shows that the levees have lowered its level, and by concentration of its waters vastly increased the discharging capacity of its channel—so much so as to induce a general settlement of all the alluvion of the Mississippi, even where the water marks are several feet high. Reasoning from analogy, therefore, it is readily perceived that, great as may appear the amount of water to be drained by the Sacramento, it is altogether insignificant when compared to that of the Mississippi, and that it is quite practicable to provide a sufficient channel for its discharge as well as for that of its tributary, the American, by a judicious system of levees.

Among the meteorological eccentricities of the month, at variance with our theories and past experience, we have to record the occurrence, on two different periods, of heavy continuous rains for twenty-four hours, with a northerly wind. Heretofore, a striking peculiarity of the rains of California has been their irregularity, falling almost invariably in showers with southerly gusts of wind and seldom continuing with any uniformity. But on these occasions the rain was steady and settled, measuring in the first instance, on the 6th, 2.690 inches, and in the second, on the 16th, 8.150 inches. Besides this unusual phenomenon, we also have to note the heaviest snow-storm ever experienced here, and which lasted about eighteen hours. On the morning of the 29th, the earth was found covered with a white mantle to the depth of about an inch and a half, and it continued snowing more or less all day. When melted, the whole measured in the rain gauge 0.250 inches, which is equivalent to about three inches of snow. Since this the weather has remained fair and very cold, as shown by the thermometrograph, and we trust it will prove the breaking up of the long term of warm southerly winds and rains which, acting on the mountain snows, have produced such overwhelming diluvial effects. In fact, we have experienced no cold weather prior to the 27th, and hence may reasonably calculate upon a cold and late Spring, with a more gradual melting of the snows above us. Throughout all the storms of the month, the baromet r has ranged lower than it has ever done before at this period of the year. On the afternoon of the 17th it fell to the minimum stated (29.394), which is the lowest reading ever made with our Smithsonian instrument. These extraordinary depressions of the mercurial column were attended alike with high winds as well as rain. The most violent of these storms was experienced on the evening of the 19th, after a steady declension of the mercury for thirty-six hours. As the gale did not last long here, and did not prove as violent as we had reason to anticipate from the low range of the mercury, it is probable that only the outer edge of the great gyratory movement of the atmosphere reached us. We learn that at San Francisco the barometer ranged, all through the month, two-tenths higher than here.

The extraordinary meteorological occurrences of the month have not been peculiar to this State. Our intelligence from Oregon represents a similar state of things there, and it is probable that Washington Territory and the entire Pacific coast, for a great distance up and down this continent, has been visited in like manner.

Our observations have as yet been of too short duration to enable us to approximate to any conclusion as to our weather cycles. A long series are required to be combined and analyzed, in such a manner that general laws may be separated from accidental disturbances, before a truth can be extracted or a fact established. Such a season as the present may not occur but once in a quarter or half a century. On the western coast of Europe a theory has been advanced that the culminating points of bad winters occur every twenty or twenty-two years. Our stormiest winters may run in short and long cycles. At all events, the laws which govern them can be read as intelligibly here as elsewhere, and in due time we trust that the progressive science of meteorology will enable us to obtain results from our observations that may admit of a theory in regard to them which will afford some warning of such a season as we are now experiencing.

Dutch Cattle in Massachusetts.

Mr. W. W. Chenery, of Belmont, has made another importation of Dutch cattle. We saw them on the 7th, says the Boston Cultivator, as they were removed from the ship Fairfield, at Battery wharf. They consisted of a yearling bull, and four two-year-old heifers, all in good condition. The passage was short, having occupied only thirty-one days from Rotterdam. They are what are called the "best nord Dutch blood." The correspondent adds, "'a solid peasant' was employed to purchase them, and they were carefully selected, of excellent skin and hair, 'and are breake out hands by offer of money,'" *i. e.*, only obtained by exorbitant prices. In bringing them to the port for importation, "they were not allowed to come in contact with any cattle on the way to the port where they were shipped." They are large, thrifty-looking animals, the heifers weighing over 900 pounds a piece after arriving at Mr. C.'s farm, and are, evidently, of the best bred stock of the Dutch cattle. Mr. Chenery remarked, that he regards them as combining all the good qualities of the Ayrshires and the Shorthorns. It may now be said of the enterprising proprietor of the "Highland Stock Farm," that "Richard's himself again."

Mr. Chenery took every precaution in this importation, necessary to guard against disease, besides instructing his agent to purchase none but the best blood of the Dutch cattle. He has shown us certificates and declarations from Burgomasters, Magistrates, Secretary of the Dutch Agricultural Society, and J. F. W. Korndorfier, first-class Veterinarian of the Kingdom of Holland, all duly signed and sealed, setting forth the fine and sanitary condition of the animals. Not only were the specific animals after minute examination pronounced healthful, but reference is had also in the certificates and declarations, to the present and past condition of the herd where they were selected and whence they came.

Speaking of the "Dutch Short-horned race," as Mr. Flint, in his "Milch Cows and Dairy Farming," calls the Dutch cattle imported by Mr. Chenery, he says, "It has been bred with special reference to dairy qualities, and is especially adapted to supply the wants of the dairy farmer." Again, he says, "the Dutch cattle are, in general, renowned for their dairy qualities; but especially so are the cows of North Holland, which give a large quantity, and also a very good quality" [of milk]. It is for these qualities so strongly certified to by Mr. Flint, together with others which Mr. C. enumerates, that commend this breed of cattle to him as being superior to all others in his estimation.

THE CRUSE THAT FAILETH NOT.

"It is more blessed to give than to receive."

Is thy cruse of comfort wasting? rise and share it with another,
And through all the years of famine, it shall serve thee and thy brother:
Love divine will fill thy storehouse, or thy handful still renew;
Scanty fare for one will often make a royal feast for two.

For the heart grows rich in giving; all its wealth is living grain;
Seeds, which mildew in the garner, scattered, fill with gold the plain.
Is thy burden hard and heavy? Do thy steps drag wearily?
Help to bear thy brother's burden; God will bear both it and thee.

Numb and weary on the mountains, wouldst thou sleep amidst the snow?
Chafe that frozen form beside thee, and together both shall glow.
Art thou stricken in life's battle; many wounded round thee moan;
Lavish on their wounds thy balsams, and that balm shall heal thine own.

Is the heart a well left empty? None but God its void can fill;
Nothing but a ceaseless fountain can its ceaseless longing still.
Is the heart a living power? Self-entwined, its strength sinks low;
It can only live in loving, and by serving love will grow.

$1,000 Reward!

JOHN C. BELL,
Nos. 634 and 636 Clay street,
WILL GIVE THE ABOVE REWARD TO ANY person that will prove to him that they can purchase
OIL CLOTHS,
CARPETS,
PAPER HANGINGS AND BORDERS,
MATS AND MATTING,
Rugs for Christmas Presents,
GILT CORNERS AND POLES,
Damasks and Window-shades, and House-Furnishing Goods of every Description,
Cheaper than we will sell for CASH for the next
TEN DAYS!

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA

THIRD SERIES.

No. 76 of whole Series; continued from Farmer of Feb. 7, 1862.

XIII.—M.

The Indians of the Colorado and Gila Rivers and those of the Gulf Shores.

THE COLORADO AND GILA INDIANS OF EMORY'S SURVEY, 1846—1857.

The Indians near Fort Yuma.

MICHLER says: "There are many Indian tribes scattered throughout this part of California. The Diegenos (or those formerly belonging to the Missions of San Luis Rey and San Diego): The women are beautifully developed and superbly formed, their bodies as straight as an arrow; their features however are coarse and uninviting, their persons filthy and their actions still more disgusting—their degradation and corruption only exceeded by that of the abandoned wandering white population." [The men are large and stupid, similar in color to the Colorado tribes of which in every probability they are a branch offset. Don Thomas and Antonio Garras were Captains among these tribes, and were fine-looking men and held their rancherias in great subjection. These Diegenos (or native name Comeyas) live in considerable numbers at Agua Calientes, San Pasqual, Santa Ysabel, San Felipe, etc.]

The Yumas Tribes.

"From about sixty miles *above* Fort Yuma (to the Gulf) live the Yumas and their affilees the Cuchanos and Cocopahs, the latter tribe living within the Mexican boundary. These Cocopahs, with the Maricopahs who live with the Pimos on the Gila, originally formed one tribe, and they speak one language—the Maricopahs having been separated in tribe quarrels, strifes and hot wars, and now living peaceably with the agricultural Pimos.

Their Wars, Etc.

"The Yumas and Cocopahs are said to be very treacherous races [every account gives them this character.—T.]; they conquer not by fair and honorable contest, but by craft and cunning and midnight attack; they steal upon their enemies under cover of the night, and beat out the brains of their unsuspecting foes with clubs; or under the garb of friendship and peace, invite each other to feasts, and suddenly fall upon and kill their guests, or taking advantage of the absence of the warriors, massacre the remaining men, old women and small children, and carry off as prisoners the more youthful women and large children: all their war expeditions are on foot, they possessing but few horses. Their hunting as well as war weapons are bows and arrows, clubs and knives. I have not seen a gun or rifle of any kind among them. The bow is made of willow; the arrows are of reed, part of the shaft of arrow-wood, the point handsomely tipped with a head of agate, jasper, etc, sharply edged; they are winged with the gay feathers of the birds of the country. Their clubs are of mesquite wood (a species of Acacia) three or four feet long. On one occasion as Major Fitzgerald was escorting a train up the river, he found them moving their families; pressing them too hard they turned upon his command and in defiance of powder and ball *attacked his party with clubs at the very bayonet's point, and forced his soldiers to retire.*" Michler here relates the treachery and cunning of the wars between the Yumas and their kindred the Cuchanos in 1851, when they mutually betrayed each other within short periods by invitations to feasts, etc, and then falling on each others rancheries by night or when absent, and massacreing each others women and children and burning their rancheries. Macedon, the principal chief of the Cuchanos, who was much beloved among his tribe and said to be an intelligent and high-minded Indian, was killed in one of these 1851 raids.

"The Indians being naturally suspicious of each other, their treaties of peace do not continue long. We were a witness of one of these treaties. The Cuchanos had often sent their women down the river to propose one; owing to the frequent intermarriages among the tribes, this is the usual mode of proceeding. Through the influence of Major Thomas, a day was appointed for both parties, Cuchanos and Cocopas, to meet at the post. Jose, Jepita, Coyote, and Colorado, represented the Cocopas; and Pasqual (an immense man of near six feet four inches in hight) an Caballo en pello and Vicente, figured on the part of the Cuchanos. Francisco, brother of the deceased Macedon, an intelligent, splendid looking young Indian, brought up the Cocopas chiefs in the steamer. In the Council all made speeches, and when assenting to any particular view advanced on either side, they commenced with the principal chief and passing round the whole circle from one to another in the order of rank each one expressed his approval by the monosyllable 'good.' After the words of the treaty the Major asked each one to make a sign or mark opposite his name. Before having time to explain its purport Jepita jumped up, and with very energetic language and appropriate, stated that their word was as good as their mark; but that they would make any of their signs such as 'kneeling upon one knee,' 'raising the hand to heaven,' or 'embracing.' Immediately putting his words into effect, he walked up to Pasqual, and taking his large frame in his arms, gave him a long and tight embrace. After the ceremony was over, rations were issued to them, which they had devoured with right good will. They then went about begging for old clothes, and in the evening celebrated one of their games."

Physique, Etc.

The usual decline of the California Indians from the vicinity of the whites is noted by Michler, as well as from their tribal wars. "These Indians are of a dark brown color (fresh mahogany?); *during the cold weather of dull and dirty appearance*, but in summer bright and glossy from bathing in the river. They are most expert swimmers. They are of the medium hight, well formed and slender; not muscular; the deltoid muscle alone being largely developed, arising from the peculiar mode of throwing the arms while swimming; active and clean-limbed; their features not disagreeable, although they have large noses, thick lips, and high cheek-bones; their chests are well developed and figures manly, indicating symmetry but not strength. The women are under the medium hight: their figures are fine and plump; the bust is well developed, the mamma firm, the arms finely molded, the hands small and pretty, the legs beautifully formed and well molded and nicely turned ankles; the feet are naturally small, but become much enlarged by not being protected. Their deportment is modest, and their carriage and bearing erect and graceful. They all travel on foot, and when going long distances at a slow trot." Such is Michler's gallant description of the Colorado dames and belles.

Dress.

"An *essential* article of dress worn by the men is a piece of *coarse cotton cloth three or four feet long*, passed between the legs, the ends drawn over a cord tied round the waist and then allowed to fall loosely down. The women wear a very becoming and pretty dress. They take the inner bark of willows, cut into strips about an inch wide and sufficiently long to extend from the waist to the knee. A number of these pieces are woven together at one end and selvedged, the edge long enough to go half way round the body from the hip to the knees. The front portion is woven plain, but the back into an angular shape, with a lump at each side, answering the same purpose and appearing like a *bustle*. On this protuberance the women carry their children of two or three years of age, a rope passing round the groins of the child and the ends tied together in front of the mother; as she approaches you nothing is seen but a little foot dangling down on each side. The belles of the tribe, however, when they can obtain the material, make the front of white woolen cord; they take a white blanket, pick the wool loose, and twist into cords of some thickness, and use this in place of the willow bark; they tip the ends of the cords with bits of red flannel; the girdle is then made of cords of the same kind, only variegated with different colors, red, white, and blue. When they lie down to sleep they strip and cover themselves with their clothes, having nothing between them; in winter they keep warm by lying near a fire. The hair of both males and females is cut square across the forehead above the eyes, the sides and back left long: the men wear it very long, as it is considered a great ornament, and braid it into rolls (braided bands); the latter are used for securing their bows, arrows, and clothes, above water when swimming a river. The women do not wear it as long as the men. They speak of one of their celebrities now dead, with great respect, as the warrior with the very long hair. Both sexes paint; the usual colors are vermilion, black and blue. A very few are tattooed, which is performed by a sharp flint and sprinkling in the wound the dust of charcoal.." [The mode of cutting the hair short before or over the forehead as related by Michler, prevails also among the tribes of the Mohave, Gila, and Colorado, the head of the Gulf of California, in many tribes of Lower California, and also many of the Alta California tribes of the Coast, and the Tulare and Sacramento Valleys. It is not *certainly known* whether the wheat, barley, melons, frijoles, maize and pumpkins, are *indigenous species* of useful plants, or from Spanish civilized agriculture; but we surmise they may be indigenous.—A. S. T.]

Burials.

Among these Indians of the Colorado, says Michler, "they burn their dead;" and it seems with precisely the same ceremonies as those of the tribes of the Californias. All their other ceremonies, customs, and habits, conform to the California standard with scarcely any difference, except that the Colorado tribes are more lively, astute and warlike. Doubtless these Colorado and Mohave tribes often made incursions among the nations of the Coast rancheries before the arrival of the Spanish Friars. Michler says the Yumas, etc, make earthern pots and porringers for cooking in, etc, an intimation of which we have from Kino, Consag, and other Spanish writers prior to 1750.

Agricultural Tribes.

Almost all the tribes of the Mohave, Colorado, and Gila, are agricultural Indians more or less; and except the Apaches Broncos, Navajos, and a few others, this rule will hold good of the Southern Payutes, Cosninas, Moquis, and those of New Mexico from the Parallel of 36° 30′ to the Gila, and from the Colorado to the line of the Rio Grande to where it strikes (in Chihuahua) the Guzman Lake line.

THE INDIANS OF 36° PARALLEL, ETC—AUTHORITIES—CONNECTION WITH MEXICO.

The Fourth Volume of the Railroad Reports, contains the accounts of the Indians on the 36th parallel, and so on to the Mohave and Pacific, written by Whipple, Ewbank, and Prof. W. W. Turner. This occupies 118 pages of the Report, and is filled with most valuable papers on the Indians within the parallels, etc, immediately foregoing, and copiously illustrated, and which of course is too lengthy for these pages. It contains very little however relating to the "State of California," Indians, and refers almost entirely to those of New Mexico and Arizona. It contains at conclusion extensive extracts from the early accounts of De Niza, 1539; Coronado, 1540; Alacon, up the Colorado, 1540; Friar Ruitz and Esprjo, 1583; Venegas, 1758, and Capt. Jose Cortez (Spanish army), 1799; all of deep interest to the Indianologist, and relating to the Colorado, Gila, and New Mexican Nations. In the Sixth Volume of the Railroad Reports, Lieut. Abbott gives some notes on the Klamath Lake (a vocabulary, etc.) and Pit River Indians, which is the first concerning these tribes falling under our observation. Alarcon and Coranado, as early as 1540, make some observations on the Indians of the Colorado, in cultivation, products, customs, etc, which agree with the notes and histories of the Jesuits, 1690 to 1758, and all other accounts to 1860; showing that in the course of 320 years these Indians (as high up as the Big Cañon) have scarcely changed at all, if any, in their condition and habits. The like may be said of the other Spanish authorities and dates mentioned foregoing from 1539 to 1799, of the Gila river and contiguous tribes. Capts. Sitgreaves and Simpson of the U. S. Army, also published accounts with illustrations (in their journals of military expeditions published by order of Congress between 1849 and 1854) of the Tunis, Cosinas, Yampais, and Mohave Indians, which are highly interesting and valuable to the Indianologist.

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................FEB. 14, 1862.

DELAYED PAPERS.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the FARMER, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

☞ THOSE who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address,
PUBLISHER CALIFORNIA FARMER, San Francisco.

NEW PRODUCTIONS.

WITH a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public interest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Look at this—High-landers, Pay Up.

OUR subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

The Lama and Alpaca Goats.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

TO CORRESPONDENTS AND READERS.

OUR readers will find another valuable letter from our regular correspondent at Paris. Vine-growers and wine-makers will find these letters of great service to them, giving them information which is not usually attainable. We hope they will appreciate the good service rendered our State by Mr. Haraszthy, in these letters.

The Report of Col. Haraszthy (the father of our correspondent), to the Legislature, which we publish in another column, will also be found of much interest.

We have a communication from our correspondent Lillie de Montana, "Human Bondage," which will appear in our next issue.

The "Boquet of Flowers," by "Caro," will appear in our next; also, "The Last Scene in the Life of a Misanthrope." Who knows the writer?

FOURTEENTH OF FEBRUARY.—This is a memorable day in the records of time. Noted and looked for by thousands of people, old and young, as associated with past memories, some pleasant and some sad. To us it brings many pleasant associations, but as we look back we see in the past two decades a dark shadow that fell upon our heart upon the eve of this day. It came with crushing power, for death came in its most terrific form and rent from life and home a much loved child, our first born. Beneath the icy stream he sank, on earth to smile no more. With clearness of vision we can see those features even now, as cold and stiff they were, when recovered from watery grave. Over every feature of that still pale face had sorrow fixed what time can near efface. So comes the memory to us of this sad day. "What deep wound ever healed without a scar."

COMPLIMENTARY.—We acknowledge the reception of tickets to the concert of Miss Lizzie Parker, which takes place to-morrow evening at Tucker's Hall, which we trust will be well attended. Let our *American* artists be generously supported. Also, invitations to attend the lecture of Doctor Phelps at Doctor Scott's church this evening at which there will also be a valuable addition of music.

Marin County No. 2.

THIS county, of which we spoke in our last, is destined soon to be better known than merely as the place of the State Prison and Lime Point, for as a dairy county she is not excelled by any in our State—in fact, we think she is No. 1 in quantity and quality.

In our trip thither we landed at the San Quentin wharf, and took stage for San Rafael in a carriage of the Stage Company, and had only a passing view of the public buildings at that point. One thing we did notice, the miserable and almost impassable roads around the Point to the hills beyond the Prison, and which could easily be repaired by the prisoners; as there is plenty of rotten rock and gravel alongside the road, handy, we should suppose that this work could and would be done, particularly for the public good, as this is a point where there is a large travel. As we passed the Prison, we noticed the large new buildings of Mr. T. Ogg Shaw, now nearly completed, and where are to be worked a large body of the prisoners, in the making of agricultural implements and other goods. Also the building now used by the Mission Woolen Mills, in which some sixty of Wheeler & Wilson's sewing machines are at work making army clothing.

The road from thence to San Rafael winds along around the foot-hills, and in view of the bay, presenting very pleasant scenery, which ere long will be improved by cultivation, if these large estates should be cut up into farming land. The road, however, now is "a hard road to travel," the result of the rains and repeated land slides. In one place, where a slide of some forty feet occurred, the entire bank above the road came down for about one hundred feet in length; and, what was very singular, a tree some forty feet high and about eighteen inches in diameter came down with the mass of earth, and rested directly in the middle of the road, the tree still standing as uprightly in the middle of the highway as if it was its original location. We regret this tree was not permitted to hold its own *pre-emption claim!* A little work and the road could be made around it, leaving it as a living monument commemorative of the doings of the winter of 1861–62. Along the entire route of four and a half miles to San Rafael, we saw a number of land slides. Near and upon the flats opposite San Rafael, a grand good work has been performed by nature, in depositing a coating of four to eight inches of sand and gravel upon the low, marshy land (a tract of some one hundred acres), belonging to Mr. Mahon, of San Rafael, for which Mr. M. should be particularly grateful, as it greatly improves and enhances the value of his entire tract. This is a case where it can be said that "good comes out of evil." Here the floods have proved a benefit.

San Rafael, as we said in our last number, presents to the eye a picture of natural beauty. The town situated between two ranges of very beautiful rolling hills, or low mountains, now putting on their bright green robes of spring, with the lofty peak Tamalpais covered with the snow, presents to the eye a genuine picture of rural beauty; and if the inhabitants of San Rafael had only done but a small portion of their duty in years past, in beautifying or helping nature to beautify, it would now have been a perfect little Eden; but this is the first place we have ever found where nearly a whole town really believed that "nature unadorned is adorned the most," and therefore left nature to do all.

Here at San Rafael we learned from the vegetable market-man that ever since he had been there, some eighteen months, every vegetable he had sold he had purchased in San Francisco. This ought not to be, for the soil is good, and capable of producing all that is needed for the table.

The town of San Rafael contains about 200 inhabitants. It has two churches, that of Rev. Mr. Gilbert, and the Catholic church; a large hotel (brick) kept by Mons. Angelotti, who owns two hotels, one of which is closed. The Marin Hotel can well accommodate sixty visitors or boarders, and Mons. A. is ever ready to see that his patrons are well cared for. Rev. Mr. Gilbert has a Female Academy in the church building, under his own charge, with the assistance of his lady and his daughters. This is a good school, and should be remembered by our citizens.

The San Rafael Stage Company have large stables, where can always be had good horses and carriages, to visit the surrounding places of Olema, Tomales, Punta Arenas, Bolinas and Preston's Point and the Novata Ranch—all these places being also beauty spots in nature's handiwork at this section of country.

The Marin County Journal, of which we spoke last week, is published here, and is doing much to awaken a spirit of improvement; yet, after all, the Supervisors of this county have a great responsibility upon their hands. They should arouse the people to a sense of their true wants—good roads, bridges (free roads and bridges in all cases), public buildings, and school-houses in every district. These are items that should be kept before the people until they accomplish the work. We were surprised to learn that until very recently there was neither a church nor a school-house in the county, and even now we think two of each is the whole number. (We will correct if in error.)

We found, however, a few bright spots to visit, for we always scent them out. We visited the residence of Oliver Irwin, Esq., who has planted a fine young orchard, which is doing well. J. Sims, Esq., has also a young orchard planted, which we visited. Dr. Deberry has a pretty garden spot around his cottage; Mr. Mahon the beginning of an orchard upon the old Mission garden. These are the beginnings, we hope, of a system of better things. Mons. Angelotti, however, has quite a garden laid out, which was destroyed by the grasshoppers last year, and which the coming year he intends shall be rejuvenated and greatly improved. We know, however, that a true spirit of improvement is abroad, which we shall fathom and report by our next sketch, No. 3, which will embrace our ride around Point San Pedro and to Novato, to the noble ranch of Messrs. Sweetser & De Long, Our House, and other spots, which we enjoyed very much.

The Spading Machine.

WE received an invitation from the Proprietors of the New Spading Machine, as it is called, to witness it in operation at the grounds of the Race-Course, near the Mission, on Wednesday last. It was the day of the great trotting match between *Shot & Rainbow* and *Barton & Glencoe.* Some three thousand persons were p esent (at the race, we mean); while we found quite a small interest on behalf of Agriculture. In *this* race for supremacy the odds were greatly in favor of the trotters; the Plow, or digger, was distanced. Only three or four persons were purposely out to see the digger. We regret this for the cause's sake.

We saw this machine go round its course, drawn by Morton's four excellent team horses. (We wish our farmers would all have such horses to do their plowing; their work would be better done, and their crops larger.) But to the machine; This Digger (for this is the true name) is a series of blades about two inches wide, nine inches long, and three-fourths of an inch thick, and by means of a chain on wheels, the teeth or blades being attached to one side of these wheels, the machinery is moved on the principle of the endless-chain horse-power. This whole machinery is hung by heavy iron frame-work on a stout wooden frame, upon four broad wheels, the driver being seated in front. In the moving of this machinery, the blades enter the earth at right angles, and as the chain and wheels advance, they tear the earth up, thoroughly and finely, from about eight to ten inches deep.

This machine, could it be so constructed as to require but one-fourth of the power to work it, a grand point would be won. Besides, every farmer, in breaking up his land or preparing it for grain, would desire that all stubble and grass and weeds should be buried; this the Digger cannot do; it only breaks up the soil; it does not turn it over. For land that has been cultivated with corn, potatoes, or root crops, the land being clean, it would be excellent, provided it can be constructed to require a much less draught, for our farmers do not have a team of horses like the famous Morton's double span, that can draw a load of *eight tuns*, easily. When the farmers will raise the stock suitable for the farm like the Messenger stock, or the English Clyde stock, then all shall have easy work of it.

To the Proprietor, Walter B. Minturn, Esq., we return thanks for his politeness in showing us this machine, and hope it may be brought into successful operation; yet we fear that the weight of the machine and its cost, $600 to $800, will preclude its use, although at the trials made it has cut up its one acre an hour. We have more to say hereafter.

Haraszthy's Report on the Vine.

We lay before our readers this week the able Report of Col. Haraszthy upon the Culture of the Grape and Wine making, with his account of a visit to Europe. These views, if carried out by our Legislature in their spirit, can be made of incalculable benefit to our State, to the whole Pacific coast, and in fact to all the States of our Union.

If the whole labors of Col. Haraszthy, and the collections of vines and trees, as well as the important information, shall revert to the State, as is intimated in that Report, then we trust a truly liberal compensation may be made the Commissioner for what he has done for California; for it is so very seldom we can record such public spirit or enterprise made *pro bono publico*, that when they do appear they look like the rainbow in the clouds bright and beautiful, wonderfully contrasting with the general darkness that surrounds the selfish treasure grabbing of our office-holders generally.

If our State authorities would but awaken to the all important interests of our rich country, and make provision of a liberal kind for developing the resources of California it would startle the world with its wealth. No state in our Union could equal it. We trust this Report will awaken public attentions to such matters.

The Russian River Railroad.

THE great and truly valuable Russian river tract of country has never yet been duly appreciated, neither has its resources ever been rightly conceived of, so that justice could be done to it.

There is no better land in the State, none more productive than the great Russian River tract. All that is now needed to give prosperity to that whole section, is an opening to a market for her productions.

A Railroad from that section into Marin county would be found to pay well. The point for a terminus could be fixed near San Rafael, at Point San Pedro, or near there, where a landing for steamers could be had, whence produce might be conveyed direct to San Francisco. This Railroad could be built for $20,000 per mile, and would never be affected by storms nor be interrupted by floods. While it would immediately increase the value of all real property on the line, it would also increase the value of all the varied productions of that great section of country, and pay the richest dividends of any Railroad in the State. The citizens of Marin, Sonoma and Russian river sections should not let this matter go by next spring without action.

POST OFFICE YARD.—We have ever been an earnest advocate of public and universal improvements, in all our public grounds and around our private dwellings, and we feel confident it would enhance the value of all property. The improvements around the Post Office building has added much to the good looks of the building itself, and when Uncle Sam shall get possession of all his land around it and lay out such a park as should be made, of tall stately trees, then it will be indeed a building and ground worthy to have inscribed upon its front, U. S. A. The trees (the evergreens) now in the yard, should be immediately pruned closely, cutting away all the dead and diseased tops and sides. Unless this is done, and done soon, disease will fasten upon them like gangreen, and death be the result.

Our County Newspapers.

WE wish the citizens of every county, especially the working men—the real industrials of our towns—would feel a proper interest in their local papers and give them a just and liberal support. There are many ways in which the citizens of all classes can aid their own county journals, and do a great good to the public as well as advance their own interests. There are three ways which occur to our mind in which citizens can aid the newspapers of their own counties, and which they should be sure and carry out. 1st. They should subscribe and *pay* for the paper voluntarily and cheerfully as a means to advance the interests of that community. 2d. They should communicate often with the Editor, and be ready to make known to him all important facts, the publication of which will advance the true good of that county. Giving him information of the success of every production of the earth, and especially new products, and of all inventions or discoveries, the knowledge of which will do good to somebody; all information about schools, roads, bridges, markets, &c. By a manifestation of such an interest for their own paper, men advance their own cause and take the very means for prosperity to themselves. 3d. They should not only inform the Editor what has been done, but show him what can be done by the exhibition of the product thus grown or manufactured. The office of a county newspaper should be the *bulletin-board* and the *barometer* that shows the prosperity of the county. By such a course there never would be a complaint that the newspaper is not worth taking, for it would be a paper made by the people themselves, and full of interest to them. We have always found the *best* and *truest* patrons of *our* paper among those men who were the subscribers of our county papers, and when they have thus become interested in their local paper, they are ready to receive one of a wider or more extended circulation, and embracing interests identified with their own.

The World's Fair, London.

WE confess a real and true satisfaction at the wise action of the Legislative Committee in indefinitely postponing the matter of the London Fair. Much as we should rejoice to see California truly represented at the World's Fair in all her varied interests, we have from the beginning of the present plan been opposed to the enterprise, for we felt convinced that the State would not gain any credit by it, and so the Committee have reported; and while our State is embarrassed, and the people struggling against an unparalleled series of misfortunes, it is time our Representatives should be wise in the disposals of the money in the treasury. While we regret that our State could not be truly and faithfuly represented by specimens of her skill and industry, and her mechanical genius, we shall hope that the present error may be amended, and be prepared for the Fair of Paris in 1863.

LAW OF THE ROAD.—"Keep to the right as the law directs." This is the law in most of the old States, it is written in the "Statute Books," and practiced generally. And yet we are surprised that the wisdom of the law has never been questioned, and a better one made. Our plan would be to "Keep to the left as the law directs," and our reasons are these, and we believe they are correct. The driver of every vehicle sits at the right side of his carriage, and consequently, when meeting another carriage he passes on the right. Drivers are thus the widest distance apart and of course they query how near they can drive without coming in contact. Were the law made as it should be "keep to the left as the law directs," both drivers would be brought side by side, and consequently could see and always avoid the possibility of collision. We have been very much surprised that in the United States the law of "keep to the right" has so long prevailed, when it is so essentially an erroneous one. We hope the present Legislature will set the example. Make "a law of the road" wisely, and make it left, and then it would be right. This, we believe, is the law in England, and in this we can pattern from them.

GUIDE-POSTS IN EVERY COUNTY.—We would suggest to our honorable Legislators the great importance of passing a law that shall compel the supervisors of every county to cause guide-posts and mile-stones to be placed at all the cross roads, giving the needed information of distance and place. This is considered one of the most important of all public duties performed in the old States by county authorities, and we hope to see it done here.

VALUABLE KEEPSAKES.—A large amount of money will undoubtedly be spent for valentines, two-thirds of which will have been paid for those of a ridiculous character. Often, messages of insult or such as are intended to mortify or wound the pride or sensitive feelings of the innocent or simple hearted. While a few, here and there, "like angels visits," are the "true valentines" of true hearts—and as such always accomplish good. The amount, however, which is spent for the *trash* would be much better if it were well spent at TUCKER & Co's for a gold or silver thimble, a watch-chain, a ring, plain and rich, or costly, a set of spoons, a napkin ring, a fruit knife, or even a gold watch. These are the best kind of valentines. They keep in time and tune.

DEBUT OF MISS LIZZIE PARKER.—We acknowledge the reception of a card of invitation to a private concert of Miss Lizzie Parker, which was held in the spacious music room of Messrs. Badger & Lindenberger, on Tuesday morning last. This preparatory concert was attended by a select and appreciable party of friends, for whom the debutante discoursed sweet music sufficiently and in variety enough to convince all that the lady is an artist of high order, and one who will be justly appreciated in this country. Her style of singing places her in the role of operatic singers, which, at the present time of a dearth of amusements or enjoyments of a meritorious character, will give us a feast. Her first concert takes place on Saturday evening next.

Mechanical Dentistry.

IT is our province as a Journalist to chronicle whatever is new and useful in science and art, and to keep our readers advised of all improvements that concern their individual weal. It is therefore with peculiar pleasure that we call attention to the fact that Dr. E. C. ANGELL, one of our prominent Dentists, has provided himself with the requisite machinery and apparatus for the manufacture of *superior mineral teeth* in his own laboratory. Hitherto the artificial teeth used upon this coast, have been imported from the eastern cities. These teeth admit of comparatively few varieties, being the simple repetition of a few stereotyped editions. As a consequence, cases have been constantly occurring for which they were poorly adapted. It is by reason of this fact that we meet with so many unfortunate sufferers whose faces are unnaturally full, and others whose faces are unnaturally sunken, while there are very many whose teeth and features present the most striking antagonism—the former having all the freshness of youth, while the latter are rendered unnaturally old by contrast.

The teeth manufactured by DR. ANGELL overcome all of these difficulties. *First*, They are so modeled to each individual case as to secure the complete restoration of the features. *Second*, They can always have the requisite length. *Third*, They can always have the shape best calculated to give proper expression. *Fourth*, The color can always be adapted to the complexion. These are a part of the advantages secured to the wearer of the mineral teeth. We have seen specimens of these teeth, and can assure our readers that they only need to be seen to be appreciated. Another important fact connected with the work which we desire to mention is, the proprietor has such facilities for its manufacture that its price is within the reach of all.

Another important fact: *The Tooth Soap* of DR. ANGELL stands unrivaled in excellence to any tooth wash known.

POST OFFICES IN MARIN COUNTY.—"GOOD NEWS FOR MARIN."—We are glad to inform our readers in Marin county that in a pleasant call we made at the office of the mail agent of our post office, and after urging the claims of this county for better postal arrangements, we had the pleasure to see a letter made ready for sending to Washington, urging in an earnest manner the wants of Marin in this respect, which, with the good intentions of the mail agent here, we think will give Marin what they really need deserve, a post office in several places where none now exists.

TO SELLERS OF WOOL AND HIDES.—To those who visit our city with these articles of produce for sale, we can cordially commend them to Messrs. Feuerstein & Company, who are always ready to pay the very highest market prices for them, cash on delivery. We are glad to know that this kind of produce is paying much better than formerly, for every dollar now realized to the farmer and stock raisers, will help remove the burden of loss by the late calamities.

CURE FOR THE RHEUMATISM.—We call attention to the card of Mr. DeFries in our advertising columns. This is no *quack nostrum*, but an absolute and valuable medicine. Mr. DeFries has as his motto "no cure no pay." We have conversed with men who have experienced immediate relief, and have never afterward been subject to this terrible affliction. We can commend Mr. DeFries to those who are afflicted.

THE HAY AND WOOL PRESS.—Many valuable hay presses having been lost by the late floods, we can call the attention of all who desire, to one of the most excellent kind, one that will also answer the double purpose of a *hay-press* and *wool-press.* They can call at the warehouse of Messrs. Macondray & Company, and see the very best now offered. These will make bales of about 250 pounds, and do the work rapidly and well. (See advertisement).

A HUMAN SCABBARD.—On Montgomery street, there is an Exhibition of an "Odd Fish," of the genus "Sword," in the shape of a young man of rather comely appearance, who, sporting a blunt saber nearly twenty ches long, calls into service, at intervals of 20 minutes, his own individual throat for the sheathing of the instrument; and which, save only the hilt, is actually gulped with such a supreme *sang froid* as is only equaled by the mingled disgust and trepidation of the spectators—with less hesitancy than one who is about to swallow a doctor's *bolus*. Were we called upon to reward the performer of this unwary stroke in sword-exercise, we would send him a bundle of rejected bean-poles or rather *fence*-rails, with which he may prosecute the science of "thrusting" at the contents of his "bread-basket."

FRESH GARDEN SEEDS.

☞ **The undersigned are the Sole Agents of DANIEL L. PERKINS,** the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

MR. PERKINS will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,
11tf Pacific Fruit Market San Francisco.

MAGNETIC PHYSICIAN.

CITIZENS—FRIENDS:

M. MINER, from Washington, D. C., comes to you endowed with that remarkable power of **Sympathetic Clairvoyance,** which enables her to discover the Causes of Disease, and apply the Remedy.

Diseases which evade all other modes of Examination, and yield to no other System of Treatment, are clearly revealed to the Sympathetic Clairvoyant and easily brought under control; while Diseases, in all their forms, physical and mental, chronic and acute, are alike subject to its power, relying as it does, on Nature's great remedial agents: Water, Air, and Magnetism.

Mothers and CHILDREN treated with great success.

Room No. 10, Union Block, cor Market and Kearny streets. 11tf

Office Hours—From 12 M. to 3 P.M.

STATE SUMMARY.

The Bee says that two wagon lodas of newspapers recently arrived in Sacramento by the Overland Mail.

It is stated that General Vallejo gathered the past season *two thousand one hundred pounds* of apples from a tree in his orchard.

The Petaluma Argus has commenced its second volume, and now reckons itself among the permanent institutions of Sonoma county.

The steamer Sonora, which sailed Tuesday morning for Panama, took $827,760 in treasure, and about 100 passengers.

The citizens of Bloomfield, Sonoma county, have contributed $166 50 to the sufferers by flood in Sacramento Valley. The amount was raised in three days.

Though we have had no rain this week, quite a flood has occurred in St. Anne's Valley, submerging the lower stories of houses, caused by graded streets having dammed up the water draining from the hills.

Since the heavy rain of Sunday, farmers have been enabled to recommence plowing. They wisely exert themselves to the utmost to put in as large crops as they possibly can. Roads are improving every day.

The Grass Valley National says: "Out of seventy-five consecutive days, up to the 23d of January, only eleven were without rain or snow—and during that time some six feet of water fell from the clouds."

On Friday of last week a race came off at the Willows Course, between "California Damsel," "Glencoe Chief" and "Jim Barton," which resulted in the "Damsel" gaining the victory in three straight heats. Time, 2:38½, 2:41, 2:40½.

The plains up North, on the Feather river, which some time ago resembled the sea, assumed another form under the excessive cold, and presented a glittering sheet of ice. In many places the current piled up these sheets of ice, one upon an other, ten feet high, forming stationary icebergs.

The weather has been fair for the past week, no rain having fallen; and the water is gradually receding from the overflowed districts. The land is probably dry enough to work in many places, and thousands of plows are doubtless in operation over the State. The prospect is good for abundant crops.

The quantity of rain that has fallen in San Francisco, this season, as reported by Thomas Tennent, is as follows:

Rain up to January 31st	38.02
Rain up to February 2d	79
Total	38.81

This does not include the slight shower on the 4th.

The steamer Nevada, on her down trip from Sacramento, last Friday, struck a snag while passing through the slough, and was obliged to be run on the beach near Rio Vista, where she sunk by the stern to the hurricane deck. The passengers were taken off safely. Efforts are now being made to raise her, which, it is thought, can be easily accomplished.

The flood has had the effect to make a thorough cleansing of the country, says the San Joaquin Republican. Bugs which had troubled the farmers are swept from the ranches; worms will be heard of no more, and they have made sad havoc; squirrels and gophers have been drowned by myriads; the whole country has been cleaned out of insects and vermin, as effectually as St. Patrick is reported to have run everything of the kind out of Ireland years ago.

The Relief Committee, on leaving Platt's Hall, and transferring its funds, etc., to Mayor Teschemacher, reports as follows: Total of applicants registered, 1584. Men, 461, women, 437, children, 685. Total number of families in the above, 307. Total number of persons in these families, 1210. Of these families, only 150 applied for partial relief—wood, blankets, etc. The remainder, 157, have been wholly provided with homes, in rented houses, with stoves, bedding, and provisions for two or three weeks. Of these 157 families, there have been sent, free of expense, to other places, to resume business, 21. There have been finally supplied and discharged, 34. Total, 55. Leaving dependent for continued supplies, for at least one month, in whole or in part, of families, 102. To which we must add, of applicants from the class of families first named, 25, making a total of families 127, or of persons, 500, who require organized charitable aid to keep them from actual want.

BY OVERLAND TELEGRAPH.

GREAT VICTORIES FOR THE UNION CAUSE.

The Overland Telegraph has been reporting great news for the Union cause during the past week, which is published at length by the daily press. The Federal troops have been dealing heavy blows on Secessiondom. First among the most important, is the capture of Fort Henry on the Tennessee river. The Rebel force at the Fort was 15,000. The Federals attacking, with gunboats and land force, were 22,000. The attack was made on Friday, the 8th, and the Federal victory was complete. The fight lasted for one hour and a quarter, and was conducted entirely by the gunboats. The infantry force on land did not arrive till after the surrender. The boiler of one of the boats was struck by a shot, causing an explosion, and the killing of about 25 persons, which was the principal loss. The prisoners taken were two rebel Generals, one Colonel, two Captains, and one hundred soldiers, the other rebel troops having fled previous to the surrender. By this victory the Federals have obtained control of the Memphis and Ohio Railroad. The Fort mounted 17 guns, mostly 32 and 22-pounders, all of which, with a large amount of muskets, ammunition, tents and camp equipage, fell into the hands of the Union troops. The value of the property taken is estimated at over $1,000,000.

On Tuesday the important news reached here of the capture of Roanoke Island, N. C., by the Federal troops in the Burnside expedition, after a hard fight. The dispatch announcing this event left Chicago at 10½ a. m. and reached here at 9 a. m. of the same day! The victory was complete. The rebel fleet were all captured except one gunboat, and 2500 rebel troops are prisoners. Richmond papers report the rebel loss at 300 to 1000 killed and wounded.

Dispatches of yesterday, 13th, published in the Alta of this morning, give the following:

The latest advices from Cumberland, Maryland, state Lander was twenty miles on the other side of Romney. Gen. Banks had moved his column, so as so cut off the retreat of the Rebels. General Lander is said to have 25,000 men, and Banks 11,000; while the inclosed rebeb forces amount to 22,000. Gen. Lander believes that the whole rebel column will be taken or scattered.

The steamship Baltic, from Port Royal, brings 700 bales of cotton. The weather was getting disagreeably warm.

The gunboats had shelled out a fort on Pine Island, and made an advance towards Bluffton, where there is a large force. Another account says that an expedition left on Monday, including all the gunboats and transports, sufficient for the shipment of twelve thousand troops, which will go through Collbogue Sound into Savannah river, without coming in range of the guns at Fort Pulaski. The rebels have withdrawn a large number of troops from Charleston and Port Royal to Savannah.

A Fort Henry correspondent of the Republican says the late gunboat expedition on the Tennessee river was greeted everywhere with the wildest enthusiasm. Prominent men came to the boats and said should the Union army enter Tennessee 50,000 men were ready and would cluster around it. Officers of the gunboats say it is impossible to doubt the genuineness of such greetings.

Fort Pulaski is now said to be in as bad a condition as Sumter was. Our forces are advancing daily.

In Missouri a messenger from Lebanon reports that Sigel's division had arrived at Marshfield, four miles from Springfield, on Tuesday. Price is said to have left Springfield, and is now encamped near the battle ground at Wilson's Creek.

The Treasury Note bill, with the legal tender clause, and provision for the payment of interest of the public debt in coin, passed the Senate to-day, with amendment for depositing with the Treasury $25,000,000 at 5 per cent. This clause is entirely acceptable to the House Ways and Means Committee.

The Secretary of War will order heavy cannon cast in California, if any of the foundries have the material and facilities.

News from Mexico states that the Allied Commissioners had returned to Vera Cruz from the city of Mexico. The Mexican Government had insisted upon the withdrawal of the Spanish forces, but would accept the intervention of France and England.

New York, Feb. 10th.—Money was dull and lower—five to six on call; Sterling exchange firm, with a moderate business, at 115½; Gold was 4¼ to 4½ premium; Gold Bars, 3½; Treasury 7 3-10 notes, 98⅝ to 98¾; Pacific Mail, 99½: California large bonds, 81; California 7's, 82, and Panama, 104.

The great Sawyer gun at Newport News burst lately, killing two persons and wounding five.

The Navy Department received a despatch from Commodore Dupont, stating that the second stone fleet was sunk on the 26th January, effectually blockading Rattlesnake Shoal, [Charleston Harbor.] The oply remaining channels are Swash and Moffit's.

General Stone has been arrested and sent to Fort Lafyette, serious charges have been made against him in connection with the Ball's Bluff engagement, and he is strongly suspected of disroyalty.

Read! Read!
WHY WILL YE SUFFER?
Read the following Certificates and be convinced:

Gallinas, Sept. 15, 1861.

To John DeFries, Esq., San Rafael.
I hereby certify that I have been afflicted with the most severe case of Rheumatism of a most unusual character, for several years, and during that period I have been advised and under the treatment of some of the most eminent Physicians without the least benefit, and have been pronounced incurable by several of them. I was advised by a friend to try your treatment. I did so, as a last resort, as I was lame and helpless as an infant; and to my surprise and gratification found myself cured and able to go to work in the short space of five weeks, and have been cured and well now for about one year, and find your medicine most excellent and without any bad effect—the same as mercury or other medicine often has—and I can recommend your treatment to all those affected.
RICHARD DOWDELL.

Sworn and subscribed before me this 16th day of September, 1861. J. T. STOKER, Justice of the Peace, San Rafael Township, Marin county.

San Rafael, Marin county, Jan. 17th, 1862.
This is to certify, that I was afflicted in January, February, and March, 1858, with the Rheumatism, by which I was unable to move hand or foot the most of the time during said months. To my great relief I obtained two bottles of Rheumatic Medicine, prepared by John DeFries, which entirely cured me, and I have never since felt any rheumatic pains.
R. W. FRINK, County Judge of Marin county.

This is to certify that I have used the Medicine prepared by John DeFries, in my family, and am prepared to testify as to its efficacy in all cases, and have never known it to have a bad effect.
J. O. B. SHORT.
Subscribed and sworn to before me, this 8th day of October, 1861. DANIEL T. TAYLOR, County Clerk.

☞ **Mercury Never Used. Chills and Fever Cured in two days,** without Drugs and Medicine inwardly.

☞ Persons whose systems have been injured by Mercury, can have the poison eradicated entirely.
Address JOHN DeFRIES.
San Rafael.

For Elegance and Usefulness Combined in a Present
For the Holidays,
BUY A
WHEELER & WILSON SEWING MACHINE

The Wheeler and Wilson Family Sewing Machines are acknowledged to be far superior to all others in use.

They are adapted to every variety of Family Sewing, they are not liable to get out of order, and a child can learn to use them.

Do not buy a chain-stitch Machine, the seam has a cord on one side very unseemly and liable to wear off and rip.

The Wheeler and Wilson Machines make a stitch alike upon both sides of the fabric, and it will not rip or ravel out.

H. C. HAYDEN, Agent,
11tf Corner Montgomery and Sacramento streets.

The Question Solved.

COOK'S
Improved Portable
SUGAR EVAPORATOR
FOR MAKING
SORGHUM AND MAPLE SUGAR.

ALL DOUBTS ARE DISPELLED! THAT CHINESE SUGAR-CANE YIELDS
TRUE CANE-SUGAR
Is a Settled Question.

The difficulties in securing its Granulation have been entirely overcome by the invention of
Cook's Evaporator.

By its peculiar arrangement it throws off all scum and feculencies, and secures a deposit of a kind of wax, which would otherwise prevent granulation, and WHICH HAS YET BEEN REMOVED BY NO OTHER PROCESS. Thus in this machine are combined all the requisites for Defecating without Chemicals, and evaporating with an unparalleled rapidity.

Attention is called to the following Claims of this Valuable Invention:

1st. It so liberates the sirup from its gummy and glucose matters that crystallization may readily be secured.
2d. It will make more and better sirup in a day than any other evaporator.
3d. Being made of sheet metal it is more sensitive to heat than cast iron, and can suddenly be brought to a very high heat without cracking, a danger to which cast iron Evaporators are greatly subject.
4th. It consumes less fuel by one-half than any other Evaporator.
5th. It is the only one in which great heat can be applied to shallow bodies of juice without danger of scorching; hence its greater rapidity of evaporation and more certainty of success.
6th. It is more convenient for use than any other style; is always ready for work without calling upon all the neighborhood mechanics, and causing great delays when you are in the greatest haste.
7th. It thus combines in an eminent degree all those essential requisites of sugar machinery, viz: speed, superiority of work, convenience, and economy.

The Undersigned hold the PATENT RIGHT for the entire Pacific Coast and are now ready to take orders for this justly celebrated EVAPORATOR. Its merits are so well established that it need only be seen to be appreciated.

We will furnish Evaporators adapted to brick arches at the following prices, Liberally Reduced to meet the state of the times and to promote the successful manufacture of Home Products:

No. 3—Copper Pan, 45 by 90 inches	$100
No. 4— do do 45 by 100 do	125
No. 5— do do 45 by 144 do	150

Two Skimmers, one Door, and one Grates accompany each Pan.

Copper Pans are used for this Evaporator, on account of their great durability and cleanliness.

☞ For any further information and for Pamphlets containing full directions for the Culture and the Manufacture of Sorghum; also for testimonials of its successful Manufacture by this Evaporator in the hands of Farmers of the different States; and for Orders for the Machines, address the undersigned.

CAROTHERS & BATES,
Box 306 P. O. San Francisco.

N. B.—A MODEL of this Evaporator, and Samples of Sirup and Sugar made with it, can be seen, and important information had, at California Farmer Office, where Orders can also be left.
17

Dr. E. C. Angell,
DENTIST,

IS PREPARED to supply Whole or Half Sets of Superior MINERAL TEETH manufactured in his own Laboratory, being modeled and carved for each individual case in such a manner as to secure the most perfect adaptation, and the complete restoration of the features. By the aid of machinery he is enabled to furnish SUPERIOR WORKMANSHIP at prices scarcely, if at all, higher than is charged for Artificial Teeth of the most ordinary and commonplace character. Samples be may seen at his office, and reference is permitted to numerous cases in which the work is doing excellent service.

His DENTIFRICE, known as—
ANGELL'S
Orris and Charcoal Tooth Soap,
Is not only grateful to the mouth, but is widely admitted to have no equal for cleansing the Teeth and promoting their soundness. A package that costs one dollar lasts twelve months if used daily. For sale by the principal Druggists.

DR. ANGELL Practices Dentistry in all its various branches, giving especial attention to the TEETH OF CHILDREN, preventing and correcting irregularities. For **Straightening Irregular Teeth,** he has invented apparatus that renders the treatment of cases which have hitherto been considered beyond the reach of remedy, comparatively easy and rapid.

Difficult Cases in any department of Dental Surgery or Mechanical Dentistry, respectfully solicited.

THE TWO RIVERS.

AN ALLEGORY.

By the side of a peaceful river,
  Watching its gentle flow,
As it rippled and danced o'er the rocks and sands,
  To a music soft and low,
I joyed to think of the verdure and bloom,
  By its genial influence spread—
Of the bounteous plenty which marked its course,
  By its sparkling waters fed.

That peaceful stream seemed an emblem sweet
  Of a quiet human life,
As, gliding down the current of Time,
  Remote from the world's dark strife;
It seeks to give of the good it hath,
  To cheer by a kindly smile,
To lift the burden from weary hearts,
  And grief of its sting beguile.

Again I stood by that river,
  When the floods were out in their wrath,
And beheld the waters, rushing by,
  Strewn with ruin, and wreck, and scath.
Then I shuddered to think, of its power to harm,
  Of the horror which marked its way;
For I knew that its wild destructive force
  No human arm might stay.

But, Oh! my heart was sad to feel,
  That its whispering, eddying tide
Was still an emblem of human life,
  When swayed by passion and pride.
Then its fierce mad waves the lesson taught,
  How strife can all beauty mar;
And the wreck on its surface seemed a type
  Of the devastation of war.

Then I prayed that my life, as the gentle stream,
  Might silently glide away,
Till the night of time set peacefully,
  To dawn on eternal day.   AGNES.

Home Valley Ranch, Feb. 23, 1862.

◆

Old Letters.

We have received some interesting letters, written a few years ago. The letters contain some pleasing legends and other matters, that will be read with interest. The following shows that the writer felt, what is too often the case, that friendship is based upon the amount of gold in pocket. The writer had then seen, and has often since seen, the changes of Life in California. He is now doing well in one of the beautiful spots of our State:

CAMPO SECO, April 20th, 1855.

DEAR FRIEND: You will not, I trust, chide your *compagnon de voyage* if, at length, I break in upon your retirement, to inquire after your health and well being; to remind you of days "Lang Syne," and to redeem my promise. For weeks previous to my return from the "Valley of Angels," I had thought to have written you a long letter—a letter that, while it aimed to impart good advice, and relate the legend of "*El Monte Angeles*," should at the same time, in its imperfections, furnish you abundant merriment.

This "pious intention" I have not had leisure to execute, as I had hoped to at the time of its conception. A multitude of cares, such as "*God's Poor*" only know, have thus far prevented me from making the attempt; and even now I doubt my ability to write anything that will interest you. Still, if I *survive* long enough, I shall write you a long letter; so pray for the end!

FORTUNE'S REVERSES.

Since we exchanged *adios* in Sacramento no startling adventures have befallen your humble servant, and nothing has occurred to render life desirable save the gold that lies in its hills—a lure to the mercenary *Ortugals* of the nineteenth century.

The only new acquaintance I have made is *Señor Poverty*, an ill-clad and unpleasant companion, in whose society man cannot hope to find enjoyment, and with whom, if we consult our own happiness and popularity, we will not associate on terms of intimacy. In truth, my associations with *Mr. Poverty* have only tended to make me unhappy and unhappy continually—not unhappy that I had lost my money merely, but because it led to many perplexities—such as want of comfort, an uneasy mind, the contracting of low associations, and, worse than all, the estrangement of those once loud in their professions of regard. Do not think that I care if these *false* friends all desert me. No, indeed! their god is "*popular opinion*;" their standard of respectability is *Gold*, and "appearances of wealth" constitute their weigher of excellence. I have no sympathy with them; they are "joined to their idols." I only ask that they let me alone. Still, I can but regret any influence that shall lead me to doubt the existence of Friendship—of a deathless principle that shall exist through all time, sending hope to the unfortunate, prompting us to sorrow with those that mourn, and to rejoice with our friends in all their glad conquests. Indeed, it needed not the conflagration that attended my introduction to *Señor Poverty*, to convince me that my new acquaintance is a lineal descendant of the prince whose realm is that Lake that burneth with fire and brimstone."

But enough of this; you call me egotist, and well you may, since I prate continually of self.

LEGEND OF CAMPO DE LOS ANGELES.

A few days since I paid a visit to the *Monte Angeles*, or, as our English authors would have it, the "Angels' Meadows." It is impossible for me to you of half of its beauties. The Meadow is situated midway between the plain of the Merced River and the snow-capped summit of the Sierra Nevada. That particular point known as *El Monte* is a somewhat extensive piece of smooth meadow or table-land, lying upon the side of the most romantic mountain on the *Rio Merced*. In the center of the plain is a small lake, around which grows the fragrant magnolia, the flowering aloe—a species of cacti—and other beautiful plants, whose names I cannot give. In the lake are several islands, called by the natives, *Los Casas del Santos* (the Homes of the Angels); and, indeed, so singularly beautiful are these islets that we may readily believe them to have been the abode of fairies. On one of the Islands is a cave of considerable extent, the sides and roof of which are made brilliant by crystalline incrustations formed by the dripping water. In the cave are springs of delicious coolness and exceeding purity. The cave is called the "Chapel"—and a glorious place it is to remind one of Deity! But I must return to the Legend of the Angels' Camp, which I will give you as I received it from a native Californian:

Long ere Young America had crossed the Rocky Mountains in search of a Western Boundary, the natives of this portion of California looked upon this mountain as the abode of Angels. Sweet voices had been heard in the *Campo de Los Angeles*. Spirit songsters sang in praise of virtue—promised rewards to the faithful, and stimulated all to the accomplishment of good deeds. Nor was this all: the infirm were healed through the efficacy of the *agua dolce*—sweet water—and cheered by the sweet spirits of the glen, returned to their friends, wonderful evidences that "Angels ministered unto them." All wondered; and many yearly sought the teachings of the spirits that haunted this paradise. Little cared they to commune through tables and chairs—by the aid of a half-crazed "Medium," with spirits that often lied—while here, sweet voices held out to them hopes of a happy future. Every year, from all parts of California, were gathered together the brave sons and fair daughters of California. The honored father, the loved mother, and little children, all were here—the old to prepare for that dreamless sleep that knows no waking; the young, to learn to "act well their part on earth," that, if called, they might join the angel choir in heaven. The young mother, as she bathed her young in the pools of *agua frio*, that gem-like skirted the mountain, invoked the protection and blessings of the sweet singing spirits of the lake. All, all were happy, until the demon "Avarice" scattered gold throughout the length and breadth of the land, to tempt the cupidity of man; to lead them from their pleasant homes to become wanderers upon the auriferous mountains and plains of the "Eureka State." Then, as impelled by their desire to become suddenly rich, the votaries of this "glittering deity" scrambled in mad haste through valleys and over hills—even making hideous the "Home of the Angels," with their profane, maudlin shouts; and, at last, desecrating the holy ground with human blood. At this is said: "The Angel Spirits, with one sad wail for their gold-accurst and sighing listeners, left earth to take their abode in Paradise, leaving the *Monte de Angeles* and its frequenters to mourn the delusion that has driven from earth the Spirit Choir." But these people do not mourn as those without hope. They confidently look forward to "a good time coming," and declare that when men shall forget gold in the love for humanity; shall look to the advancement of their pecuniary condition as secondary to the perfect development of the moral and mental faculties—in short, when they shall cease to do evil, and learn to do well, then, once again, will the song of Angels be heard throughout our entire land, and the day-spring of our new found joy make glad amends for the long night of our moral debasement. Heaven grant it may be so! that the rude legend of the natives may find accomplishment in an entire, full appreciation of the beautiful and good in this fair world of ours, until men shall no longer toil with no aspiration higher than the accumulation of wealth; shall no longer indulge in intemperance, gambling, licentiousness, and murder, to find excitement for their toilsome search for gold. "Let the love of the spirits and the hope of their return, prompt us to earnest days and earnest dreams." Such is the prayer of the matron, as recollection recalls the days of childhood, and the young maidens put up votive offerings to the Virgin, that the prayers of the mother may be realized.

Such, my dear friend, is a very imperfect rendering of the Legend of the Angels' Meadows. Really! were it possible, I could hope that the native's legend might be true; and that, ere long, the Angels Camp might be enlived by a spirit band.

◆

WATCH, MOTHER.

The following is beautiful—one of those little gems that touch the heart:

MOTHER! Watch the little feet
  Climbing o'er the garden wall,
Bounding through the busy street,
  Ranging cellar, shed and hall.
Never count the moments lost;
Never mind the time it costs;
Little feet will go astray—
Guide them, mother, while you may.

Mother! Watch the little hand
  Picking berries by the way,
Making houses in the sand,
  Tossing up the fragrant hay.
Never dare the question ask:
"Why to me the weary task?"
These same little hands may prove
Messengers of light and love.

Mother! Watch the little tongue
  Prattling eloquent and wild;
What is said and what is sung,
  By the joyous, happy child,
Catch the word while yet unspoken;
Stop the vow before 'tis broken;
This same tongue may yet proclaim
Blessings in the Savior's name.

Mother! Watch the little heart,
  Beating soft and warm for you;
Wholesome lessons now impart;
  Keep, O keep that young heart true,
Extricating every weed,
Sowing good and precious seed:
Harvest rich you then may see
Ripen for eternity.

◆

HEALTHY BODIES.—Chess playing may be a safe and intellectual amusement; but when we see a young man, who has been all day bending over the desk, sit down to "the relaxation" of contemplating a chess-board for hours, we feel like entering our earnest protest and pointing him to the cricket-ground, or any other active sport, which his stoop-shoulders and contracted chest cry out for. Notwithstanding the reform which has been effected in the ideas of the generality of people on these and similar subjects, there is room for more and greater. A healthy body should be the first care of every man, woman and child in our midst. The impiety of neglecting it, is palpable. With our present knowledge of the needs of the body, and the disastrous consequences of neglect, no one can plead ignorance as an excuse. Let our readers examine well their habits in this regard; examine them as a man may examine into his faithful stewardship of a great trust committed to his charge by the Master.—[Fanny Fern.

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the CALIFORNIA FARMER in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad.

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the FARMER.

Wishing to place the FARMER at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies $25
" ten " 30
(Each Copy to be mailed separately, if so desired).
For three Copies.......................................10
" six " 20
" single Copy...4

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

FRUITS, GRAIN, AND PRODUCE.

CALIFORNIA WINE!

CARD.

Several Mares and Colts of high grades.
All the above will be sold at a bargain. Inquire of Editor of Farmer. 1

Literary Shrubbery.

THE VELVET HORN.*

I HAD a pet, a lovely deer,
With velvet horns and eyes so clear
That I could see my image lie
Deep shaded in her hazel eye.

She came to me at my command,
She ate the food from out my hand,
She followed me where'er I went,
Nor ever questioned my intent.

Up rocky steeps where mosses grow,
And with bright crimson tint the snow,
Or down the glen and woodland vale,
Where silver brooklets slowly trail,

Where cowslips and the iris fling
Their gaudy colors to the spring,
She followed me, and it was queer
How little then she knew of fear.

But when the forest leaves were red,
And hung like banners overhead,
And autumn winds with hollow sound
The dry leaves whirled along the ground,

Each rustling noise that passed her by,
Awoke the fire-ball in her eye;
She pawed the earth, she snuffed the air,
And scented danger everywhere.

And I, so much her faithful friend,
No longer could her steps attend;
For e'en my pocket seemed to fill
Her with some strange and nameless ill.

She fed no more from out my hand,
She came no more at my command;
Her gentleness, and all that's dear,
Had given place to foolish fear.

I caught her, and beneath my arm
I tried to quiet her alarm;
But all in vain, my flesh was torn—
No longer hers the *velvet horn*.

[N. E. Farmer.

---

* The first growth of the horns upon the deer are always covered with a soft down, resembling velvet.

IN A PRINTING OFFICE.

The composing room of a printing office is about as productive of various questions, and elicits as much curiosity from visitors, as any place of business we know of. The first thing a visitor does is to step up to a case where fingers are at work, and watch every motion, with perfect steadfastness, looks into the compositors face to see where his eyes are; the process looks mysterious, and questions follow about like this:

"How do you know where to find the letters? Are they arranged in order? How do you know when they are right side up? What's the reason there's more type in some boxes than the others? I should think you would make mistakes; and ought to have the boxes marked? Don't you get the wrong letters sometimes?"

Looking around he spies in one corner, a lot of "something" that calls forth, "What are these?"

Compositor—"Quads."

Visitor—"What's Quads?"

Compositor explains. Next finds the form from which another is distributing.

Visitor—"Distributing them, are you?"

Compositor—"Yes."

"Can you do that faster than you can set it? What makes you wet the type? (looking at the form) why its all up side down. Is that the way it always is? You can't read it can you?"

Next goes round the press and finds the roller, puts his fingers on it, and gets them dyed a shade or two blacker than their usual hue.

Visitor—"What's this roller made of—India rubber?"

Compositor—"No, of glue and molasses."

Visitor—"Of molasses! I should think it would melt!"

Compositor—"'Twill if it gets warm enough."

His eyes next fall upon the paper, "laid down" ready for press.

Visitor—"Why, this paper is all wet. Do you have to do that?"

Compositor—"Yes."

Visitor—"What for?"

Compositor explains, and wishes he would clear out of the office.

He looks around and finds a form of advertisements laid aside—he runs his fingers over the column, and knocks a square of it into confusion. Compositor looks cross, and says, "you've knocked that into pi."

Visitor looks round, whistles, and with a bow, goes out without any invitation to call again.

THE DUTY AND RIGHT OF GOVERNMENT.—In a recent charge to the Grand Jury, Chief Justice Hall of Colorado Territory, used the following language which, in our opinion, expresses a correct and sound doctrine:

It appears to be the duty of this Court to remind you that, whilst it has been the admitted policy of the Federal Government, since the Presidency of Mr. Jefferson, to allow impunity to errors of opinion so long as reason was left free to combat them, it related only to the condition of domestic peace when reason has empire, and is suffered to reign. As our Government has never before been required to grapple with a ferocious domestic war aimed at its life, it has never before been moved by any public necessity to define its policy, in this respect, during the existence of such a war. But it must be obvious to all reasonable men that the proper policy for such condition of society, must be that which, in that condition, may be pursued with safety to the government—that whilst the Government may tolerate any form of erroneous opinions, without detriment or danger in times of domestic peace, it may not be able to tolerate such opinions as instigate, or simulate, or encourage, or even comfort traitors in times of domestic war—and that Courts and Juries, therefore, must determine the criminality of errors of opinion by the necessities of the condition of society in which they are expressed, and the magnitude and nature of the mischiefs they are calculated to produce. Coupled with the duty of the Government to protect itself, must be its right to suppress all injurious practices aimed at its dissolution.

GRASS VALLEY WEATHER.—A writer from this section during the late cold snap, says: Winter, old fashioned, icy-fed, frost-biting winter, is upon us, freezing almost everything it touches—pumps in the kitchen, water in the kettle on the stove, beef in the larder, cream in the pitcher, etc. The mercury stands ten degrees above zero; may be it will freeze next. The snow is fourteen inches deep, grand for sleighing, and old and young are improving it. As we write, the cheerful sound of merry bells is heard mingling with the crack of whips, and the cheers of the well robed travelers. We almost fancy ourselves back again, where winter is winter; where our frost-bitten fingers and ears have cried out in vain against the cruelty of frost, ice, and snow.

THE Richmond Examiner says the Southern people can raise any article of Yankee industry. Some witty wag coolly remarks, Why don't they raise the blockade?

WHY is a blush like a little girl? Because it becomes a woman.

East India Tea Store.

ESTABLISHED IN 1857.

631 Washington street,

Nearly opposite Maguire's Opera House.

GEO. M. SMITH & CO.

DEALERS EXCLUSIVELY IN

Choice Green and Black TEAS

Of Chinese and Japanese production;

COFFEE, SUGAR, AND CHOCOLATE.

Our TEAS are acknowledged to be the Best ever offered in this Market.

☞ Observe, this is the ONLY BONA FIDE TEA STORE in this State. 1

MANUFACTURES BEST OF FAMILY SOAPS.

Near corner of Mason and Pacific streets.

PATENT
HYDRAULIC HOSE
MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N SWEZY, President, and CHAS. M. GORHAM, Secretary. The Committee was composed of H. HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
119 First street.

33m

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc., valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms—say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861. 8

MASONIC REGALIA.

Electricity as a Remedial Agent.

DISEASES CURED
Without the Use of Medicines,
AT THE
Electropathic Institute,
625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong; while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument is engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unreasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	123
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument.

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.

Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT
SEED-SOWER AND REVOLVING HARROW!
FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the implement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast For sale by

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universall commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Muskoto Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

9 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

Patented April 5th, 1859;

and March 27th, 1860.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wrist-bands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco,
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. Todd & Co., No. 42 Clay Street.] Feb. 13.

But little of interest has transpired in our Grain market during the past week. Trade generally has been dull. Our receipts have been on a liberal scale. Millers now find no difficulty in getting all the wheat they want; and we know of considerable parcels going into store, not finding purchasers at satisfactory prices. It is a general opinion that as soon as the traveling improves, we shall have a lively trade from the interior. We gave our views last week relative to the demand that was looked for from the Cariboo Northern mines; by the steamer Cortes a large number of passengers and 150 mules started for Cariboo; and we learn the next steamer is already full. The rush for the North has already begun. These new mines will present us another market for our Flour and Grain. Late advices from Oregon are to the effect that they have a surplus of both Wheat and Flour, notwithstanding the loss they have suffered by the floods, and that instead of our being compelled to ship there, they themselves will send considerable quantities of Wheat and Flour, if the prices will warrant, to this market, as well as to the British Possessions. Barley and Oats remain at last quotations. Hay is arriving more freely, and prices again favor the buyer. Potatoes are forced to maintain their price from a combination among the holders; they store all that do not find a ready market. The present figures will soon decline. Potatoes being a perishable article, and subject to sprouting and decay, cannot long remain in store, and so soon as forced sales are effected it will be at low prices. Sellers of Wheat find it difficult to sustain prices: we quote our market from 2¼ to 2⅜ cents for milling; these are the extremes. Corn has arrived more freely, and our market is now well supplied.

Our receipts for the past week, from around the Bay, have been as follows, in addition to liberal Coast receipts: Wheat, 10,404 sks; Barley, 10,067 sks; Oats, 2023 sks; Hay, 518 tuns; Buckwheat, 10 sks; Middlings, 34 sks; Flour, 3876 qr sks; Bran, 626 sks; Cornmeal, 42 sks, Beans, 52 sks; Potatoes, 478 sks; Corn, 100 sks.

A coal mine has been discovered in Sonoma county. The late rains caused numerous slides, and one of these revealed a coal vein on the side of Sonoma Mountain.

Youth's Budget.

A CHILD'S WISH.

Be my fairy, mother—
Give me a wish to-day;
Something as well in sunshine,
As when the rain-drops play.

And if I were a fairy,
With but one wish to spare,
What should I give thee, darling,
To quiet thy earnest prayer?

I'd like a little brook, mother,
All for my very own,
To laugh all day among the trees,
And shine on the mossy stone.

To run right under the window,
And sing me fast asleep;
With soft steps and a tender sound,
Over the grass to creep.

Make it run down the hill, mother,
With a sound like a tinkling bell,
So fast I never could catch the leaf
That into its fountain fell.

Make it as wild as a frightened bird,
As crazy as a bee,
With a noise like a baby's funny laugh:
That's the brook for me!

THE TULIPS.

"Get away with you, you dirty old beggar boy! I'd like to know what right you have to look over the fence at our flowers?" The speaker was a boy not more than eleven years old, whose face looked very harsh and disagreeable just then, though people sometimes called it handsome. He stood in a beautiful garden, just in the suburbs of the city. It was early Summer time, and the tulips were opening their petals to the sunshine. It was a great joy to look at them as they bowed gracefully to the light with their necks of crimson, yellow and carnation. The beds flanked either side of the path that curved around a small arbor, where the young grape clusters that lay hidden among the large leaves wrote a beautiful prophecy for the autumn.

A white paling ran in front of the garden, and over this the little beggar boy, so rudely addressed, was leaning. He was very lean, very dirty, very ragged. I am afraid you would have turned away in disgust from so repulsive a spectacle; and yet God and the angels loved him. He was looking with all his soul in his eyes on the beautiful blossoms, as they swayed to and fro in the summer wind, and his heart softened as he leaned his arm on the fence, and forgot the hard lines in which his everyday life was cast, in a long absorbing gaze. It was a pity his dreamy reverie should have such a rude awakening.

The blood rushed to his face, and a glance full of evil and defiance flashed into his eyes. But before he could retort, a little girl sprang out from the arbor from one boy to the other. She was very fair, with soft hazel eyes, over which drooped long shining lashes. Rich curls hung over her shoulders, and her lips vied in tint with the crimson of the tulip blossoms.

"How could you speak so cross to the boy, Hinton?" she asked with a tone of sad reproach quivering through the sweetness of her voice. "I'm sure it doesn't do us any harm to have him look at the flowers, if he likes."

"Well, Helen," urged her brother, slightly mollified and ashamed, "I don't like to have beggars gaping over the fence. It looks so low."

"Now that's a notion of yours, Hinton. I am sure, if the flowers can do anybody any good we ought to be very glad. Little boy" (and the child turned to the beggar boy, and addressing him as courteously as though he had been a prince), "I'll pick you some of the tulips, if you'll wait a moment."

"Helen, I do believe you're the funniest girl that ever lived!" exclaimed the brother, as he turned away, and with a low whistle sauntered down the path, feeling very uncomfortable; for his gentle sister's conduct was a stronger reproof to him than any words could have been.

Helen plucked one of each specimen of the tulips, and there was a great variety of these, and gave them to the ragged boy. His face brightened as he received them and thanked her. That sweet girl had dropped a "pearl of great price" into the black, turbid billows of the boy's life, and the after years would bring it up, beautiful and fair again.

* * * * * *

Twelve years passed away. The little blue-eyed girl had grown into a tall, graceful woman. One bright June afternoon she walked with her husband through the garden, for she was on a visit to her parents. The place was little changed, and the tulips had opened their lips of crimson and gold to the sunshine, just as they had twelve years before. They observed a young man in a workman's blue overalls leaning over the fence, his eyes turning eagerly from the tulips to the young woman, herself the fairest flower there. The stranger had a frank, pleasant countenance, and there was something in his manner that interested the gentleman and lady.

"Look here, Edward," said she, "I'll pluck some of the flowers. It always does me good to see people admiring them;" and then releasing her husband's arm, she approached the paling (and the smile around her lips was very like the child-smile of the old time!) saying: "Are you fond of flowers, sir? It will give me great pleasure to gather you some."

The young workman looked a moment very earnestly into the fair, sweet face, and then answered, in a voice tremulous with feeling:

"Lady, twelve years ago this very month, I stood here, leaning on this railing, a dirty, ragged little boy; and you asked me this very same question. Twelve years ago you placed the bright flowers in my hands, and they made me a new boy; ay, and they made a man of me, too. Your kind face, ma'am, has been a light all along the dark hours of my life, and this day that little ragged boy can stand on the old place and say to you, though he's a humble and hard-working man, yet, thank God, he is an honest one."

Tear-drops were trembling like morning dew on the shining lashes of the lady, as she turned to her husband, who had joined her, and listened in absorbed astonishment to the workman's words.

"God," said she "put it into my child-heart to do that little deed of kindness, and see now how very great is the reward he has given me."

The setting sun poured a flood of rich purple light over the group that stood there—over the workman in his blue overalls, the lady with her golden hair and long silken lashes, and the proud-looking gentleman at her side. It was a picture for a painter.

ANSWER TO ENIGMA NO. 5.

Worcester's English Dictionary.

In a cemetery at Dunkirk, N. Y., a stone is erected over the remains of a deceased lady, on which her survivors intended to write the stock epitaph, "Let her rest in peace." The space gave out, however, so that only the initial letters of the last three words could be inserted. Thus the old lady rested under the somewhat slangy inscription, "Let her r. i. p."

The pleasantest things in the world are pleasant thoughts; and the greatest art in life is to have as many of them as possible.

The quickest way to make eye-water is to run your nose against a lamp-post.

BUSINESS NOTICES.

☞ DON'T READ THIS. ☜

The Pulu.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new Dry Pulu is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

Agricultural Warehouse in Stockton.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

A Farmer's Mill in High Water.—While the roads are impassable and where the flouring mills are swept away, Farmers should immediately procure the Union Farm and Plantation Mill, now offered by Greene, Heath & Allen. This will answer all the purposes of a Flouring Mill for a whole neighborhood. These are the Mills for the times. See advertisement.

An Experienced Man, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the Farmer Office.

20,000 Hop Roots.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the Farmer. A lot of 20,000 roots to be sold at once.

To Agents of the Farmer.

We would ask our Agents to whom payments are made for the Farmer to notify us, that we may give credit for them, as it frequently happens that our subscribers call and inform us that they *have paid such Agents*, although we have no notice of such facts.

Rebuild Your Fences.

The universal loss of Fences in our State will fall as a heavy blow upon our Farmers, and every opportunity and means for their being replaced at as little cost as possible, should be availed of at an early day.

We call the attention of all who desire to build Fences at a little cost to HYDE'S PATENT POST-DRIVER, for sale at this Office.

RIGHTS for Counties and for large Farms, can be purchased at the *Farmer Office*, on the most favorable terms. A liberal allowance to all who have suffered by the flood. Any information can be had by addressing Editor California Farmer. 16

To Vineyard Planters.

If our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.
The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.
The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.
He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.

JOAN'S FATHER.

From an Unpublished Poem.

BY FANNY GREEN.

Jagues: "Isabean,*
Spin yarn; and let gossip spin itself,
Or rot for want of spinning."
There he was,
Full six feet, standing in his plowman shoes,
Which were born into life along with him,
A strong, broad-shouldered and hard-visaged man,
Severe, and cold, and bitter. But sometimes
A truer current welled up from beneath;
And then a precious secret came to him,
Of a true heart that slept so far below
The iron-bound bosom, that he hardly knew
Whether it lived. And still, in disrepute
He held the wisdom of its counsels, since
He nursed a beggar with a broken arm,
Until the hand was strong enough to stab him.

In every action, and in every look,
The angularities stood out abrupt—
Strong prejudice, exclusive Love, or Hate—
An aptitude for governing, and a gauge
For woman's wisdom, meted by her strength,
With a great Will that turned what'er it touched
Into severer power and stronger tension.
Coarse, grizzled hair, a long and shaggy beard,
Thick, heavy eyebrows, shading heavier eyes,
A massive forehead, with a Celtic nose
Near arching to the Roman, and a form
Compact with bone and muscle, strongly knit,
Well suited his whole character.
But still
There was at times a curving of the mouth—
A kindling of the hard and heavy eye—
That shone out like the momentary sun,
From deep and sullen clound rifts; then, shut in,
Leaving the gloom more frowning than before.
But yet it told one secret of the man,
Which he, himself, knew not—that there was hid
Under the hardness a true human feeling,
As strong and daring, as the soul that fed it,
So bravely and unconsciously.

---

* Joan of Arc's Mother.

The Fencing Law—Reform It Altogether.

Views of a Practical Cultivator.

[The following letter on the fence question should have been published last week, but was accidentally mislaid; we hope, however, is not too late to be of service, and that it will receive the careful attention of our Legislators]:

San Jose, February 4th, 1862.

Editor Farmer: I see by your last number that you have received my letter about the flood in our valley. Now I have to speak of another subject, of the greatest importance at the present moment, and, if we succeed, it will be worth millions and millions to our present devastated State; and this is, to have the law on fencing against cattle changed to the contrary of what it is at present.

I am not a writer, but hope, as I think you have the interest of Agriculture at heart, you will treat this subject and show the bad effects of the present monstrous law. For my part, I will simply tell you what I think about it. The Echo du Pacifique having spoken about it, I wrote to its editor yesterday; and in the present letter I will have to repeat some of my remarks to that paper.

I am well aware that there will be some men who will try to maintain the law as it is; but I hope that there will be very few of such men, and those can only be considered as the direct enemies of the progress of California. It is easy to answer their arguments. They will begin to say, to show they are great philanthropists, "*This law has been made to protect the poor.*" If it is so, the law has missed its object, for it bears heavily on them. We know that, generally speaking, nearly every one who has a cow, or more, has a piece of ground, and under the present law, must fence it; but how can it be done, if he is poor? When, on the contrary, if a poor man knows that he is protected against other cattle, it will be easy for him to fence a small corner in which to keep his cow, and cultivate enough to feed her; and, in addition to that, cultivate potatoes and other vegetables to feed himself and his family. Any poor man, if industrious, can always find a piece of land to cultivate, and live independent, himself and family; but under the present law the poor man is deprived of these advantages, because he must fence it if he wants to do anything with it, while he has not the means to do this—then you see that this law is more directly against the poor than the other class; because it is well known that the fencing costs more than the property itself, and in some cases two or three times. But, Mr. Editor, please tell me what is the use of so heavy expenses, when they can be avoided? and for that our legislators have only to say a word, to save the State of these enormous expenses. Till now our Legislators have done very little for the direct interest of California; but we have every reason to believe that those we have to-day, will do right and relieve the country of that burden that has been so much in opposition to the progress and advancement of California; it has been heavier on her than even that question of *unsettled titles*, and to remove that other difficulty, our Legislators have only also to say a word.

But our fences, and nothing else, at present Only consider a moment, Mr. Editor, the results if that abominable law on fencing had not been in existence; but, on the contrary, the owners of cattle made responsible for the damage done by their stock. Our beloved country is so favored by nature that we would now astonish the world by our productions, and we would now export grain, etc., in every direction. We would be, in a word, the best country on the globe, because we are on the best spot. Now, in consideration of all the fences destroyed by the flood, will our Legislators refuse their aid to the poor farmers, who have been so badly treated; will they refuse their aid to the interest of the State at large? No!

The present law is authorizing robbery, because any thinking and reasoning man will understand very well that the owner of cattle, who is the only one that is benefited by it, is also the only one that ought to take care of them and feed them, and not allow them to destroy his neighbor's. For instance, if I have grain, trees, or vegetables, my neighbor's cows can come and destroy the whole, but my grain, trees and vegetables will not go and eat his cows. It is plain enough that if the cattle are fenced in, it is *all right.*

Now, a point that we must consider, is, that there is only a small number of cattle erring and causing all the damage, compared to the whole number raised in the State; because, on most of the ranches, they keep them fenced in, and often have men to watch them; they know that it is to their interest to do so. And that small number that remains erring, prevents a large portion of our poor working classes from cultivating the soil, as they have not the means of fencing it. Is that protecting them? No!

In Europe, where the interests of the cultivator are better understood, a simple stone is the limit and boundary of property; because they understand that it is unnecessary to go to the ruinous expense of fencing. They have pasturing places fenced in, for cattle.

On my arrival in California, thirteen years ago, I was surprised to find the existence of such a law in an agricultural country like this; and every time I had occasion to express my opinion about it, I have done it, because I have always been devoted to the progress and interest of our country.

I will close my remarks by an illustration that shows the *good* effects of the present law—a scene that occurred some years ago in our valley between two neighbors. I will designate the parties by the letters, C and D:

Mr. C, a farmer, arrived with his family, and succeeded in getting a property adjoining Mr. D, who was a rich man, and had his property well fenced in. Mr. C, with work and great exertions, accomplished the work of fencing his place in; but as there was a fence on Mr. D's side, this saved him from making one there, very fortunately for him; because his means were exhausted in fencing the other part. After his grain was in fine condition, then came Mr. D, who said: "Now, neighbor, you know the law on fencing, that each one is to make the half. As I have made the whole between you and me, I wish you to pay me for one-half of it."

Mr. C said: "I know the law, Mr. D, but it is impossible for me to pay you anything now. Make me the bill of what it cost, and we will have some settlement about it, and I will pay you when the crop comes in."

Mr. D made his bill, and presented it to Mr. C. But Mr. C, finding, according to that bill, it would cost him more for his half than a whole one, wished Mr. D to reduce the bill to reasonable figures. But Mr. D refused to do it, and said to Mr. C that "he would give him ten or twelve days to think of it."

But, after the time was past, and seeing that Mr. C was not going to accept such a bill, what does Mr. D? What, yes, what? He had a part of his fence torn down, so that his own cattle went into Mr. C's grain and destroyed his crops. This was done because Mr. D knew that he was protected by the law, for causing the ruin of his neighbor.

I leave this to your consideration without comment.

Now, Mr. Editor, as you have always defended the interest of the cultivators and producers, I feel glad to give you an opportunity to show your zeal for the good cause. You can write better than myself on such an important subject. At the present moment, your aid is needed, and I trust that we shall have it; and as success is certain, you will have the satisfaction of having contributed to the greatest reform that has ever been made in California in favor of the progress of Agriculture, and for the benefit of all.

I say that *success is certain*, because I have the greatest confidence in our present Legislators, who are desirous this time to do their best for the interests of the country. In presence of the losses sustained by so many, they will save them from complete ruin; they will save the State from many millions of unnecessary expense. In this hope

I remain, yours, respectfully, L. Prevost.

We can scarcely add anything to what our correspondent has so ably presented. His are the views of a practical cultivator, and entitled to much weight.

[For the California Farmer.]

Cultivation of the Blackberry.

BY AN EXPERIENCED GROWER.

Fruit-Vale (Brooklyn), Alameda co., Feb. 17th, 1862

Editor Farmer: As per request, I pen for your readers my experience in the cultivation of that most valuable fruit, the Lawton Blackberry, and I hesitate not in doing so, because now any one who is acquainted with its qualities and productiveness would consider no fruit-garden complete without it; for it takes the same place among the the small fruits, that the Apple does among the large fruits, in the length of the bearing season, as well as its enormous crops and suitability as an article of food in almost every conceivable way, and for the ease with which it can be kept during the winter season.

When it first came under my notice, the reports from the East, concerning it, were most too much for me to fully believe, though coming from reliable persons. I then thought they must be laboring under the influence of a Blackberry fever, but still, knowing something of the quality of the fruit in its wild state, as it grew in Delaware and New Jersey, from the experience of my boyhood, and having some faith in the changes that might be made by good cultivation, pruning, etc., I concluded to procure some of the plants, paying from fifty cents to one dollar each for them. From those I have propagated from year to year, until in the spring of 1860, having procured a few acres of land in this rich and beautiful valley, I planted about four thousand vines on four acres, by throwing out furrows eight feet apart, laying the vines in, one every five feet, (their tops having been cut off to within six inches of the roots); then, throwing a furrow on them, they soon threw up canes from two to four feet long, with branches, some of them producing a little fruit quite late in the season, that is, during October and November. One vine, an exception to the rule, produced one hundred and fifty berries, but such bearing before the plant was well rooted almost ruined it, teaching a lesson that all should remember, which is, never let vines or trees produce fruit the first year. It will not pay. If they are well pruned back, not more than one in a thousand will produce enough to injure it. Well, the next spring, as soon as Jack Frost would permit, they commenced forming fruit, and in two months, or thereabouts, from the opening of the blossom, the fruit was ripe. I gathered a few ripe berries on the 29th of May, and on the 14th of June, began shipping them to the city. From the four acres I gathered thirteen thousand pounds. The most grew on my hardest and lowest soil, where water stood after heavy rains; there some of the vines produced as much as twelve pounds each; whilst where the soil was light and mellow the yield was much less. I cannot say there was a great difference in the berries on the different soil, but they all were—well, Mr. Editor, you and the citizens of San Francisco know what they were! But now for their keeping: Well, there were enough on the bushes for family use, ripening along, until in November, when those put up in bottles, with a very little sugar, and made air-tight, by being covered with a waxed cloth, came in use, and we have a few on hand, as fine as ever. They make very good jelly, but we did not try turning any of them into wine, for we bear testimony against changing a choice gift, intended to bring the blessing of health, into fermented drink, at least, until some one can give us a satisfactory answer to our queries, published in your paper last year, or show us that we can do more good by doing so. I might remark here that, having fruited three other kinds, I consider none of them of any account except the Dorchester or High-bush, and *it* is not worth having when the Lawton can be obtained. I cannot recommend them at all, though I always keep both kinds on hand for sale, so that purchasers can try for themselves. Of the Lawtons, my men picked from seventy-five to one hundred and twenty-five pounds per day, each. I guessed so near right last spring of the yield of my patch that I will again venture to guess: for this year there will be forty thousand pounds on the four acres, and some of the hills will produce thirty pounds. You can tell almost to a certainty the amount a bush will produce, the fall before, by counting the number of eyes, or buds, on the stalk and limbs; then multiply this by eight, the number of berries averaged to each bud; then divide by one hundred and fifty, the average number to the pound—though sometimes a bud will produce more, and good cultivation will greatly lessen the number to the pound. Well, I guess this is about as much of a letter as you will care about publishing at one time, so adieu for the present.

Your friend, Isaac B. Rumford.

Plant! Plant! Plant!

Farmers and Gardeners should not forget that, by reason of the cold and wet season which has been upon us, all Vegetation is about two months later than usual, and all the various seeds that are usually planted in December and January will now require to be planted, even up to March and April, and, in fact, the very condition of the earth would preclude the growth of seeds until it has become of that degree of heat as not to blight those that vegetate, by cold nights. It will be observed by all who watch the operation of Nature that even Oats and Barley, and in some cases, Wheat, have turned yellow, by reason of the coldness of the nights and the chilled and wet earth.

Seeds planted in cold and wet soils, in January, will not be of as strong and vigorous growth as those sown in February or March, after the earth has had its depths warmed into a vitalizing power for the Seed.

The loss of a large portion of low lands for early planting should awaken the attention of upland cultivators, and induce them to learn the wants of our market, and plant accordingly. To all in want of good reliable Garden Seeds, Farmers' Grain, Grass, and Field Seeds, we refer them to our columns, as those who advertise with us are of that reliable character that we can, with confidence, recommend.

Those products that are now commanding a higher price than ever before are, nearly all the Root Crops—Beets, Carrots, Turnips, and Potatoes; also, Cabbages, Cauliflowers, Lettuce, etc. To these, particular attention should be called, not that we advise everybody to run into that trade, but to produce enough to balance the market by a fair rate in price.

Late Nursery Business.

Tree planting and vine planting, and all garden operations, are very much later this year than we have known them for many years past; we should think fully eight weeks later than in ordinary years. By reference to dates, we have the blossoming of peach trees as early as the 15th of February, while this year the trees are still at rest, entirely dormant. Trees, vines, and shrubs, are also at rest, and with the present cool weather, tree and vine planting and all garden operations can be successfully continued to a later day. Purchasers of trees and vines can lay out their work safely for weeks to come, yet the earlier now the better, as it is excellent weather for planting. It is to be hoped that an increased attention will be given to planting trees and vines at the foot-hills and mountain sides, for from all past experience they have done well, and with the better experience of the best varieties for every location and better understanding of the modes of cultivation, a great success will surely be attained.

We call attention of all planters to the advertisement in our columns, for we advertise only well known and reliable nurserymen, and such as we can earnestly recommend to the confidence of our readers. Every owner of a homestead should at once plant trees, both for fruit and for shade. Every good tree and vine planted around the house, and in the orchard and garden, increases the value of that property *twice* the cost of investment.

To Shippers of Produce.

We feel that we are doing our State good service always when we make known the best facilities to the producer for realizing, from the products of his labor, orchard, and vineyard, or the stock-raiser, the best means for him to realize, and for both these producers to obtain, the highest prices for all they bring to market.

To our large producers of Grain, Wool, Wine, Hides, Horns, Tallow, and other products that will pay to ship, we advise them at all times to call on Messrs W. T. Coleman & Co., Commission Merchants, and owners of a Regular Line of fine Clipper Ships, and advise with them relative to the shipment of Produce.

Messrs. Coleman & Co. have warehouses for the storage of all kinds of Produce, and are always ready to make advances of the most liberal character, either on storage or for shipment. Being always advised of the markets in New York, from their house in that city, they can be of great service to all who desire reliable counsel relative to such a shipment.

Messrs. Coleman & Co. have done much to advance the best interests of our State, especially in advancing the interests of the Producer, by the shipment of such articles abroad.

Mend your Ways.

Now is the time for every man who travels the public highways as a teamster, stageman, or with farm-team, to show his public spirit. Although the floods are abating still the public roads are in very bad condition, and all can do a little. We therefore suggest that every teamster, stageman, farm-wagoner, or public carrier, shall carry a shovel and hoe on their teams, and as they find the water making gullies and channels upon the highways, they each shall give a few minutes attention and work while their team rests. It will often be found that in passing on our high-ways, especially our hill-sides, the water breaks across the road in small gullies, which if taken at first break and checked, the roads can be saved from becoming impassable, so that if every teamster would go prepared for such emergencies, and be willing to work at such a time, great good would result to all. We know that people would generally say that it is not *their business* to mend the ways, but this *we do know*, that such a disposition and such a spirit, would always pay, for those who travel most would find that the labor would be for their own benefit, and often five or ten minutes thus spent might save their own team *half a day's lost labor*, and perhaps a wheel or an axle and $20 cost. We hope, therefore, our suggestion, made with the kindest interest, will not be wholly lost, but that we shall have the pleasure and satisfaction of *knowing* that it has done good, and find that good has come of it.

Robin Red-Breast.

We were most happily reminded of our dear New England last week while riding over a part of Marin county, in finding hundreds and thousands of the beautiful "Robin Red-Breasts." These birds of spring were gathering the red berries of evergreen trees, and catching worms that are so thick now in the meadows. If we remember rightly, the Robin Red-Breast comes from their hiding places only till after the winter storms have passed, so that these birds are now the harbingers of returning spring and pleasant weather. (We may take this occasion, also, to mention, as a significant fact, that on the morning of the breaking up of the great rain-storm, 23d Jan., we saw a large flock of robins in this city. We hoped, then, that their advent was prophetic, and so it has proved; the storm was then ended, and we have had no rain since, with the exception of an occasional shower.) We gladly welcome them, not only as familiar friends of our early home, but welcome them as precursers of sunny days, and we would pray that the hearts of all sportsmen may spare the Robin Red-Breast. They come to choose their mates, build their nests, lay their eggs, and hatch their young. They gather up the worms that destroy your crops, therefore spare these birds.

Let them chirp along the meadows,
Let them sing in happy glee,
Let them choose their "mates" and safely
"Build their nests in every tree."

Spare, oh, spare these birds of promise,
Heralds of past winter's storm;
Shield them from the cruel sportsman,
Say to Robin: Fear no harm!

GREAT PEDESTRIAN FEAT.

We learn from the Leicestershire Mercury (England) that Alfred Hellson recently undertook to walk on six successive days the distance of seventy miles a day. He commenced his performance on Monday, July 20th, and completed it with ease on Saturday, the 26th, doing it within the specified time. The seventy miles were usually walked in about fourteen hours, but on one of the days they were completed in twelve. A great variety of opinion was entertained as to the possibility of his succeeding in his attempt. While on travel he took very little food except beef-tea, or a small bit of mutton half cooked, and a little stimulant occasionally. In stature he is about the middle hight, thin, extremely muscular, and having a somewhat intellectual countenance. Taking into consideration the rough country roads which he had to traverse, the distance which he walked, and the apparent ease with which it was accomplished, his feat was certainly very extraordinary, and we should greatly question whether many horses could be found equal to the performance of it.

When on travel, Hellson had a slight swing with his arms, and appeared to be going at a steady rate of three miles an hour, and it was only when any one attempted to keep up with him that his real pace was perceptible. His usual pace was probably from four to six miles an hour. He has now undertaken to run a friendly match of ten miles against ten of the best runners in Melbourne, he to start and continue running the whole distance, whilst the Melbourne men are to be placed at intervals of a mile apart, the first of whom is to start and run until he comes to the second, who then takes up the running until he reaces the third, and so on to the end of the distance.

"Hallo!" ejaculated an anxious guardian, as he entered the parlor and saw his lovely niece blushing in the arms of a swain who had just popped the question, and sealed it with a smack, "what's the time of day now?"

"I should think it was about half-past twelve," was the complacent reply, "for you see we are almost one!"

"Ma," said a little girl to her mother, "do the men want to get married as much as the women do?"

"Pshaw! what are you talking about"

"Why, Ma, the women who come here are always talking about getting married; the men do not talk so."

Grapes and Wines.

[We continue below from our last number, and conclude, the remarks of Dr. Grant before the Brooklyn Horticultural Society.]

Question 6th.—Is not some good system of training indispensable to the continued productiveness and longevity of the vine?

This question suggests a very wide field of speculation, upon which we will not step this evening. A very few remarks will be sufficient to set forth clearly our affirmative position, and by the kindness of Mr. Bridgeman we have at hand just the vine which is desirable to illustrate this part of our subject. This vine, although now in a pot, is in all respects as a vine should be in garden or vineyard, when well grown preparatory to training according to any judicious plan. I am not about to advocate any particular plan, for there are many whose merits are well known and universally recognized for accomplishing both the general and special ends of training. The general object aimed at in training is the production of good wood, which shall produce large crops with certainty, and continue the vine in perpetual health. Without the aid of man it wastes its strength in apparently sportive efforts, and not only fails to produce good fruit within prescribed limits, but also fails to maintain its own health. The vine before us consists of one shoot, which is the present season's growth. It is about six feet high, of strong, well-ripened wood. Its leaves are large, thick, and fleshy, with a firm leathery feel which denotes the healthy development, which is the result of good management and care. At the junction of each leaf with the main shoot is a bud lying in the embrace of the foot-stalk of the leaf, and what appears to be the short stump of a shoot, on which may be seen a few leaves. These leaves, as we shall soon see, are not unimportant. These stumps would have been each shoots of considerable length if they had not been "stopped;" that is, had their ends pinched off in their early growth. They are called laterals, and this pinching is one of the operations called summer pruning.

If these had been suffered to grow, instead of one tall, stout shoot, beautifully furnished with its strong healthy leaves, we should have had many slender shoots and a multitude of small, thin, unhealthy leaves, whose strength would not have been sufficient to enable them to resist uninjured the trials to which they are always subjected by atmospheric changes during the period of growth. Instead of one strong youth, now ready to take a short winter sleep, and wake in spring to perform joyfully the labors of early manhood, we should have a great number of feeble infants, that might have the misfortune to survive the winter, but only to linger through a short and profitless existence. These little stumps of the laterals are now joined to the main shoot by a strong woody union, but only by inosculation, little more firmly than the leaves, and will fall off in spring if not removed. If suffered to acquire strength, they form a strong woody union, and become branches, and damage or destroy the bud at their base. At the base of every well-developed leaf at its first formation are two buds, one of which very soon shoots forth, and becomes the lateral of which we have spoken. These are called the anticipative buds. By the side of these are now to be seen the other buds, which are called the dormant buds, and which will make the shoots of next season. When well developed, as on the specimen before us, they are often called fruit-buds, because the shoots which spring from them will put forth flowers, and, under proper circumstances, produce fruit. Of these strong buds you will see there are some 25 or 30, each of which will produce a shoot, and each shoot will attemt to produce three bunches of grapes—that is, from 60 to 90 bunches. If we attempt to keep all, we shall probably fail of getting one good bunch. We shall get a great number of shoots in the form of side branches, which will vary in length from three to twice three feet, all of which will be covered with innumerable small leaves, none of which will be strong and healthy, and, consequently, none prepared to give any good fruit the next season. Here, then, we shall have a worthless vine which will require as much room as an orchard tree, and occupying as much space as four productive vines.

Now let us subject our vine to training, and behold the result. We will cut it off at the fifth bud from the bottom, and in the spring, when these five buds shoot forth, we will rub off the two lower ones, and for a time suffer the other three to grow. Flowers for three bunches of grapes will appear on each. Just before these open, stop each of the lower shoots at the second leaf above the upper bunch, and tie the third one to the stake to grow to a tall shoot, as was done the season before. Take off the upper bunch from each shoot, and six will be left, which will give six bunches of mature fruit. Laterals are to be stopped as before. We have followed the vine only through two seasons of its early age, but I think all who have favored us with their attention must have seen clearly that the vine can not give good results without systematic training, which supposes a course of pruning also. By this we aim to produce just so much good wood as we have learned, by experience and careful observation, will best occupy a given space, in which we propose to train each vine, and to effect its equal distribution over the allotted area, so that not only each branch or shoot shall occupy uncrowded its proper space, but each bunch and leaf also. As the vine advances in age the indispensable need of these operations becomes clearly obvious.

By any good system which is founded upon accurate knowledge of the vine, its management is easily accomplished, and without it no vines, in garden, house, or vineyard, have ever produced good results for any length of time. If any lady wishes to be her own superintendent, she may be assured, that by taking the vines from the first planting, she will find the matter so simple and pleasant that the charge of vines enough to produce one ton of grapes yearly will be found to be a most interesting diversion rather than a burdensome care.

And we may safely say to all who desire to grow good grapes, that after proper entertainment is furnished to the roots of our best hardy kinds, the only specific required to enable them to meet uninjured all the ills to which vines are supposed to be incident is the good system of training faithfully carried out.

Foreign Vines and Fruit Trees.

From the following official communication it will be seen that the vines and fruit trees purchased by Commissioner Haraszthy, in Europe, have arrived in prime condition:

To His Excellency, the Governor—Sir: In accordance with your directions, I have taken charge of the grape-vines and fruit trees, arrived from Europe, and purchased for the use of the State; the same came in the very best condition, and promise a successful propagation. I am at present occupied in making hot-beds, and planting the more exquisite varieties in pots buried in said hot beds. We have a large number of cuttings, which I am planting in open air for rooting, confident that, if no extraordinary event happens, there will be 300,000 rooted vines ready for distribution next Fall.

It would be well if the present Legislature would direct how the distribution should be made, as the propagated vines ought to be taken out of the ground, and distributed before the next Legislature will assemble, and would have time to determine the mode of disposing of the named vines.

The Patent Office in Washington distributes part of its plants through the Representatives in Congress. This mode would be practicable here also; in fact more so, as there is no county in this State which has no lands well adapted for the vine culture.

Permit me to draw here your attention to the necessity of having as soon as possible an appropriation passed, to defray the expenses already incurred for the purchase of vines and trees, the traveling expenses for procuring the same and collecting all the information necessary to make our State also a prosperous vine growing district. The above named expenditures, including freight on railroads and steamers in Europe, on the vines and trees, etc., I have paid out of my own means, expecting the same to be refunded to me by an appropriation to be passed by the present Legislature. I ask no remuneration for my personal services as Commissioner; on the contrary, I feel proud of the honor, and I will be richly remunerated if I have done any service to my country.

The exact amount of the costs and freight I am not prepared at this moment to state, for the reason that some of the United States Consuls have not yet accounted to me for the money left by me in their hands, and paid out by them for vines and trees, nor could I get the exact amount of my banker in Paris what he had paid for freight, etc., but I may safely say that an appropriation of $12,000 will cover the expenses, including the steamer freight from New York to San Francisco, which was paid by Wells,Fargo & Company, and will not fall far short, on all the vines and trees, of $2000 to $2500.

The above named estimate of $12,000 will cover also the planting and taking care of said trees and vines, the purchase of about 40,000 earthern pots for the more rare plants, and the building of a cheap and temporary hot-house, where a part of them are already planted. The sum thus expended will be a trifle to the real value of said vines, when, if we put the valuation of rooted vines at ten cents, which is less than the nursery men sell fine varieties, it would amount to about $30,000, but to the people of this State it will in time be worth as many millions.

With distinguished consideration, very respectfully, your Excellency's most abedient servant.

A. Haraszthy.

Suggestions as to Grape Culture.

Mr. Joel Clayton writes to the Alta from Contra Costa County, as follows: "Seeing that the subject is before the Legislature, it may not be amiss to suggest that it is better to divide all the vines that the State pays for, throughout the whole State, giving each locality a chance to try for itself. There is not much science needed in planting grapes, and I doubt the assertion that the grape is a criterion in making good wine, having traveled through our State and seen that locality always tells in its own favor. In Los Angeles there are but four places famed for wine, and they are situated at the foot of the mountain, with a strata of lime lying above them in the mountain. The famous Champagne District in France, owes its superiority to the same cause, and not to the kind of grape used. The carbon absorbed from the soil, combined with the sweetness of all things grown in such locality, makes it sparkling. It is well known in Los Angeles, that Cocomungo, Azusi, Wilson's, and San Fernando, excel all other locations, and their grapes are the same as those in use all over the State. The next favorable locality for culture, is Mount Diablo, an upheaval of a carboniferous formation, and its excellent wine is proof that the soil and subsoil are all that is necessary to produce fine wines. The rich bottom-land in California has too much chlorine and alkali in its subsoil to give that aroma and richness found in fine wines, but will produce more grapes and of larger size than the gravelly lands. I would recommend that previous to engaging in wine culture, to study locality first and vines second. That the old California grape is the best I do not assert, but think it safer to plant a few foreign grapes, as, to produce fine healthy fruit, all will need acclimating; even then, may we not introduce some of the diseases from Europe which desolate their vineyards? The making of wines needs skill and time to get a reputation, but all will fail if the soil is not favorable."

To the above another writer "L. D." replies: Noticing a statement of Mr. Joel Clayton, headed "Suggestions as to the Culture of Grapes," allow me to make a few remarks; having a thorough theoretical and practical knowledge of grape culture in European countries, and not being devoid of observation made here, I thought the same might interest you.

Mr. Clayton doubts the assertion that the grape is a criterion in making good wine, and further states that the famous Champagne District in France owes its superiority to the locality, and not to the kind of grape used. Of this, I must say that the gentleman is in great error, and but little informed of the peculiarities and qualities of the grape-vine. It is an understood fact, that in all vine-growing districts the reputation of the same has been established, through the planting of the choicest varieties of vines, taking in consideration the soil, locality and climate. This is the case in the Champagne District, and Burgundy in general; for it is the Pineau grape only which has established the reputation of the Burgundy and Sparkling wines. The Sauterne wines only gained their reputation through the improved culture and selection of choice varieties of grape-vines. Of Medoc may be said the same; the different Chateaux which produce the superb clarets, have planted the choicest varieties. Not wishing to occupy more space than possible in your paper, I will only mention, about this point, that I have found it indispensable, and regard it as an established rule, that a choice variety is required to make a superb wine. My idea is, that the knowledge of the soil, chiefly the subsoil, will help amazingly to promote success; that a first-class locality and soil should go hand in hand with a choice selection of grape vines; at the same time the climate must not be forgotten. As regards the climate, I will mention that the Riessling will not produce that aromatic wine in Los Angeles as on the Rhine, nor the Pineau that superb wine there, as in Burgundy; this assertion is backed by many experiments made in different parts of Europe.

My humble suggestion in regard to distributing grape-vines, introduced from Europe, over the State, is, to consider the climate in which they are to be planted, and not to deviate more than possible from the natural tendency of the plant, upon which, I feel confident, the final success of these vines will depend.

Pruning Roses.

A writer in the Horticulturist gives some practical directions on this subject, which will be useful to many of our readers. He says this operation will require to be performed during March, April, and the first two weeks of May (but not later). [For our season we would place the time at two to three months earlier; say, in ordinary seasons, December, January, and February; but this season a little later]. Commence with the more hardy varieties, such as French, Moss, Provence, etc.; these, for the most part, have dormant-looking buds, and being less active than others, take a longer time for their development. Next begin with the hybrids, hybrid perpetual, hybrid Bourbon, and hybrid China; but as these are more excitable than the above, they should be pruned the latter end of March and beginning of April, [December and January, here]. The tender Noisettes, China, and tea-scented kinds should not be pruned till a month latter.

Before commencing to prune, it is necessary to observe the habit of the plant, whether it be a vigorous, or a dwarf variety; also, to determine, with those kinds suitable for exhibiting, whether they are required for that purpose, or merely for effect; if for the former, large blooms will be required, and less of them, and these can be obtained by close pruning; in the latter instance, longer pruning must be adopted, when a greater quantity of blooms will be obtained, but they will be inferior in quality, and less in size. Carefully thin out the heads of the plants, and take away the small crowded branches, and all gross, unripe shoots, leaving such only as are composed of firm and well-ripened wood, and leave these at regular and equal distances. Prune down according to the strength of the shoot and habit of the variety; in some cases, to two or three inches; in others, where the habit is vigorous, one foot, or even eighteen inches, will not be too long for a shoot to be left; but as this depends upon the habit of the variety and shoot to be pruned, no absolute general rule can be given in shortening the shoots. Cut close to an eye, observing, when practicable, to leave well-swollen, plump buds, which will always produce the finest blooms; likewise secure those having an outward tendency, and pointing in a direction proper for the handsome formation of the plant. The French, Alba, and nearly all the Moss Roses, require rather close pruning; and if large blooms are required for exhibition, this particular must be strictly attended to. The hybrid Chinas and hybrid Bourbons are, with very few exceptions, very vigorous growers, and require more care in pruning than most other sorts. An acquaintance with the varieties is necessary to enable the operator to prune successfully; for instance, we have Fulgens and Brennus, two vigorous growing varieties, which frequently produce shoots five or six feet long in a season, either of which, if pruned as recommended for the French, or some other of like habits, would not produce a flower; whereas, with judicious pruning, every shoot would be made to give large trusses of blooms. The varieties in these two classes must therefore be carefully studied, as there are some among them which require close pruning, and these may be known by their moderate style of growth, when compared with the majority of the same classes. Young plants, just received from the nursery, will require to be pruned down to two or three eyes, a little more or less, according to the habit of the variety. Unless this is attended to, large and handsome heads are rarely obtained.

Sorghum Sirup in Illinois.

The Kendall Clarion, of October 26th, published at Yorkville, Kendall county, Illinois, estimates that La Salle county will make, this season, 2250 barrels of Sorghum Sirup, which will afford about two gallons to each man, woman and child in the county, which will render them independent of New Orleans molasses. In Kendall county, the cane mills are at work crushing cane and rebellion at the same operation. It is estimated that the Sorghum crop in Illinois, this year, without doubt, is worth a million of dollars, and will have a tendency to keep down the price of both sugar and sirup, notwithstanding the extra duty. It is proportionably large in Iowa.

Old Letters.

May 21st, 1857.

* * * * * It does seem strange to me that the people of this State will "sit calmly by" and see base officials squandering the money of those who, blind to their faults, have elevated them to power—nor in their majesty put down those who make the pursuit of office a business, rather than a public obligation, imposed by duty and patriotism. Our Constitution and Laws seem, while they provide punishments for lesser crimes, committed by the humbler citizen, to throw the mantle of protection over the man, who, in his official capacity, degrades and pollutes the altars of the Government he has *sworn* to sustain, by ungodly extortions, by astounding schemes of plunder, or by open robbing of the funds intrusted to his care. While this state of things exists, while gamblers, thieves, and professional rowdies, control our elections, our courts, and even the Legislature itself, it will not be wonderful if, at times, we see whole sections of our State, acting in open defiance of our *impotent* laws, and by the power of strong arms executing, summarily, upon the disturbers of the public peace, the dreadful vengeance of outraged communities.

Despite our health-giving climate, our beautiful and spacious harbors, our great agricultural and commercial resources, and the abundance of our mineral stores—and although California is settled by the most talented, as well as the most enterprising, of the *People of the United States*, still we may not hope to see our state assume its true positon, until our Constitution is thoroughly and radically reformed, and the *people* pay more attention to the selection of their rulers. This work, my dear sir, must be done in the mountains, away from the tainted atmospheres of the cities. In your mining localities are thousands of men who, in point of intellect, rank far above those who direct and command them. These men hold no office, seek none, but whose ability and greatness of soul entitle them to a voice in the councils of the people, and whose advice we need. All through the State people are heard to inquire, as did one of old, "*What shall we do to be saved?*"

* * * * I hope the next election will prove that they have discovered some way to rid themselves from the horde of corrupt officials who claim to control the destinies of our young State.

But enough! I am moralizing to too great an extent, and will weary your patience with my political lectures. * * * E. H. F.

The Sorgho for Forage Crop.

In regard to the merits of the sorgho as a forage crop, M. Ch. d'Ivernois says, in a letter addressed to the President of the Imperial Zoological Acclimation Society, that the result of his extended experiments satisfies him that the sorgho is a plant of immense value. He has taken at Hyeres, during one season, five abundant cuttings on a soil light and fertile, but not capable of being irrigated, and upon which he claims that scarce any other forage crop would have given a result at all analogous. The fodder was greedily eaten by all his cattle. He thinks that the sorgho will be an acquisition of surprising value as a fodder crop for the district of Provence, where so very few fodder plants can withstand the four and a half months of absolute drought. He believes that, as to the crop of seed, the more northern districts of France cannot hope to compete with the southern, but that it would be profitable if cut for fodder before the ripening of the grain, as a cheap and abundant supply of seed could always be obtained from more southern latitudes.

The gentleman above referred to is a leading member of the Imperial Society, and his opinions seem to bear much weight with the members.

Hedge Fences.

In view of the fact that the overflows sweep away all board and ditch fences from the valleys, it is suggested that hedge fences of willow, osage orange, hawthorn, privet, or other material be cultivated. The suggestion is a good one, and it is what we have urged for years; and the Sacramento Bee remarks, "It is one that many have long contemplated carrying out in practice, but found it impossible so to do in consequence of the numerous loose stock in the country, which would tramp upon, eat and destroy all such fencing when young. Heretofore no man could cultivrte such a fence save inside a board or ditch fence; hence none were cultivated. And to enable farmers to make such fences now, they must be protected from stock. Without that protection they can never rear a hedge fence."

To Relieve Choked Cattle.

The instant a creature becomes choked, no matter what with, the throat becomes dry, and the longer the substance remains, the dryer the throat. The following is a sure remedy: Take some oil, no matter what kind, and hold the creature's head and turn down about one gill of oil, and then let go of the head, and the creature will heave it out in two seconds! I have tried it for years, and never knew it to fail.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

No. 73 of whole Series; continued from Farmer of Feb. 14, 1862.

XIII.—M.

The Indians of the Colorado and Gila Rivers and those of the Gulf Shores.

THE INDIANS TOWARDS SAN DIEGO.

THE Cahuillas and Geniguiebs, may be called the generic names of the tribes of Indians inhabiting the valleys and mountains which lie between the Colorado and Mobave deserts, and whose clans and rancheries became civilized in the Missions of San Fernando, San Luis Rey, and San Diego. (*Diegnan* or *Diegenos* are Spanish generalities for the clans of San Diego; as Gabrielenos, Barbaranians, Carmellenos, etc, etc, was of San Gabriel and other Mission Indians.) The Colorado-river Indians proper were never conquered, civilized, or reduced, by the Spaniards, as they invariably burnt all the Missions and posts established by them—as the Missions of Concepcion, San Pedro y San Pablo of 1781, Santa Catalina and San Pedro Martyr 1816 to 1825, all by the Yumas or their affilees. They have repeatedly massacred parties of American and Mexican hunters and emigrants.

Prof. W. W. Turner, obit. 1858 (who was among the first of American philologists), places the Chembuevis and Cahuillas' languages as belonging to the stock of the Shoshones (Bannacks, Blackfeet, etc, of the Great-Basin languages, and which Gallatin 1845–48, and Turner after him in 1856) places the San Juan Capistrano Indians as being a branch of the same Shoshones and Cahuillas, Mohaves, etc. So these clans of a Great Nation, had strayed, either from east to west, or from west to east, some 2000 miles from their natal domains. And herein we may add the notation by Gallatin, in the first vol. of the Ethnological Transactions (who was an intimate of the lamented Turner), in his classification of the Mexican picture chronology, from A. D. 1399 to A. D. 1518: relates for the year 1484, "that all the old people say that in this year was the first human sacrifices in the land (the proper empire of the Aztecs), as previously the sacrifices had only been of animals and birds;" and for the year 1513, "There was *such an earthquake this year*, that as the old people say, so numerous were the birds flying from east to west that they obscured the sun and those they took had no entrails, but were filled with skins and excrements." This *by chance* may be true, and relate to tremendous convulsions in the earth's surface extending over the Gulf-of-Colorado and California countries.

Gallatin also notes in the second volume of the Ethnological Transactions, that Melchor Dias, under Coronada's expedition, first Governor of Sonora or then Upper part of the present Cinaloa, started (from probably Culiacan) off for the Colorado with 25 men to open a communication with Alarcon's vessels; he found marks of Alarcon's party on the trees of the river, which he called the Rio de Tejon, or *River of Fire-brands;* Alarcon had called it the River of Buen Guid (River of Good Guide, signs or highway); the name of Colorado we believe was given by the Jesuits. Dias ascended the river five days, and crossed it on rafts, and continued his march along the coast towards the southeast, and accidentally dying, his party arrived back to Sonora in safety.

Lopez de Cardenas was also sent by Coronado in the same year of 1540, from his camps in Eastern New Mexico, with twelve men, to verify the stories of the Indians, of *a great river towards the northwest.* After twenty days' march *across a desert*, they arrived at the river (which is the Colorado of our days), but far above its mouth.

The Big Cañon in 1540.

"The river was there buried apparently more than one thousand feet below the feet of the land on which the Spaniards stood, and which was so precipitous that they found it impossible to descend to the bed of the river." The country being altogether uninviting, waterless, and the weather very cold, Cardenas returned to Coronada's Camp at Civola.

So that Cardenas was the first European discoverer of that wonderful geological and geographical feature of our Pacific domain, to wit: the Big Cañon of the Colorado River, where its waters are said to pass for some three hundred miles in a bed, box, or trough, of volcanic rocks; between the junction of the Virgin and northeasterly up the Colorado, the country seems to have undergone little alteration between 1540 and 1860, or a period of 320 years.

These facts are all from Castenada's account of Coronada's celebrated New Mex. and Alta Cal. Expedition of 1540, to discover the unknown cities of gold and silver, etc, of the Cabeza de Vaca and Friar de Niza. Castenada's account laid buried in the libraries of Spain, until it was resurrected by Monsieur Fernaux Compans, and published in French, in his collection of scarce works of voyages and travels relating to the early discoveries of the Americas; the work was issued in some twenty octavo folio volumes, between 1835 and 1843. Castenada was an officer with Coronado.

The Old Digger Pioneer.

Speaking of old people, and touching the old Placerville Indian woman of 200 years, Gallatin mentions from the Mexican chronologies, that the Aztec Mexicans notice the fact of old people of two and three hundred years. And 200 years is not out of the range of possibilities. Indians in the Mexican dry uplands and Sonora, have been several times noted in the Spanish-Friar Chronicles of Mexico, as living to very old ages, as from 112 to 150 years.

PICKERING'S RACES OF MAN—HIS NOTES ON THE CALIFORNIA INDIADA.

Dr. C. Pickering of Boston, who was a member of the Expedition of Commodore Wilkes, 1839–42, in his *Races of Man*, the observations of which were made during the voyage and indicate great acuteness, classes the California tribes as "Malay Americans"; it seems to us quite erroneously. His remarks, observations, and notations, are confirmatory of the Indian tribes, their habits, customs, etc, such as they are related more at large in our Indianology Notes on those of the Bay of San Francisco and the Sacramento Valley, up to the Oregon line, where the field of his observations chiefly lay. He classes the Polynesian islanders also as Malay descendants, but remarks that the hair of the Californian is invariably straight, while that of the Polynesian is waving and inclined to curl. The tattooing on the breasts like a necklace is also noticed among the Sacramento Indians. The great epidemic among the Columbia-River Indians occurred in 1823; a fiery fever-and-ague, which it seems extended to those of the Sacramento and San Joaquin shortly afterwards, and destroyed thousands of Indians. They were also thinned by the small-pox and the measles. The notes of Pickering cover some fourteen pages on the California Indians, and he says little but what has been said of the Indians of all other parts of Upper and Lower California mentioned in our pages.

THE YUMA MAIDENS.

Michler mentions of the Yumas, that on the arrival of their young girls at the age of puberty, a great feast is made to celebrate the event with dances, speeches, games, etc, after the usual manner of the Indians, as in preparing for the chase, war, and other such affairs. It would be a curious and highly interesting study to collect accounts of the Indian games, dances, and feasts. In both the Californias these diversions prevailed; in Upper California the Indians of the Missions had some thirty different kinds, and all of them accompanied with chants and wild music, and all of them with established forms, regulations and ceremonies. In Arroyo's Vocabulary of the Mutsunes of San Juan Bautista, some of the notes of their music are inserted.

BARTLETT'S NOTES ON THE CALIFORNIA INDIADA.

The following are notations from Bartlett's account of the United-States-and-Mexican Boundary Survey of 1850–53, published in New York in 1856, a work of great value and careful observation. Speaking of the *Indians of Napa Valley*, he remarks that young oaks are rarely or never seen, probably from the annual fires and cattle. This is doubtless the case with many species of *Quercus;* but in the mountain districts, the Robles oak of the Spaniards, a magnificent tall umbrageous tree, is commonly met growing up from the acorns, and of all sizes. The Oaks of the lower valleys furnish food for the ranch cattle, when the pastures are exhausted, and many rancheros cut down the oak branches in the fall to sustain the horn stock until the new grass comes up. In seasons of scarcity a rancho with encinals or oak groves becomes of great value to the proprietor, as the animals sustain themselves well on the *green* leaves.

These Napa Indians make use of nets and decoy-ducks and geese to catch birds and fishes, in a very cunning manner. Their huts seem to be more comfortable than many of the other tribes, but they are after the ordinary style of the California Redman.

Of the Gila, New Mexican, and Chihuahua half-civilized Indiada, Bartlett makes some very valuable additions and suggestions to our former knowledge of these mysterious people; these are accompanied by excellent drawings of the Casas Grandes Ruins of the Gila and in the State of Chihuahua, and many other matters relating to them.

The Mexican Mesas, for Railroads, etc.

The Casas Grandes of Chihuahua are about 300 miles southeast of the Gila ruins, but are situated on the dry elevated *Mesas Alturas* of Mexico, and about the same hight above the sea as the Indian Pueblos of New Mexico. These Mesas can be easily traveled, as Humboldt says, in a carriage from Santa Fe to Mexico city; that is, a plain on the tops of the mountains, with its own systems of ranges, extends throughout the Rocky mountain country, and of great value in a social, political, and commercial point of view, as already prepared by nature for the laying down of railroads in longitudinal lines on the tops of the Sierras and Cordilleras, for over 2000 miles, and the line of country extremely healthy.

Indigenous Cotton,

Bartlett says, was found by Alarcon in 1542, on the Colorado, of which the Indians made garments. This native cotton is still grown on the Gila, in Chihuahua, Sonora, on the Texas Rio Grande bottoms, and in many warm river bottoms of the uplands of the northern States of Mexico, and during the Ante-Columbian times, doubtess, was cultivated in many parts of Mexico, as it was found in common use by the early Spanish Conquistadores and in many parts of Central America.

The Ancient Civilization

of the Alta-California Indians seems to have extended down and along the course of the fertile valleys, which are every now and then found on the *Mesas Alturas* of Mexico, and doubtless, further exploration by intelligent travelers, would develop a regular series of Indian *Casas Grandes* or ancient settlements from the lands of the Moquis and Tunis in the north, throughout Chihuahua, Durango, Jalisco, etc., until they merged into the Aztecan or the Toltecan domains, when the northern or Southern systems clashed or became intermingled. So far as known they all understood agriculture by irrigation. These dry upland valleys of Mexico and Central America are still very little explored by scientific men. They are exceedingly salubrious, and where water is found, very fertile.

SAN FRANCISCO:
FRIDAY..............................FEB. 21, 1862.

DELAYED PAPERS.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the FARMER, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

☞ THOSE who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, PUBLISHER CALIFORNIA FARMER, San Francisco.

NEW PRODUCTIONS.

WITH a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public interest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

◆

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

◆

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

◆

Look at this—High-landers, Pay Up.

OUR subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

The Lama and Alpaca Goats.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

SMITH'S GARDEN—BRAVELY AT WORK AGAIN.—We are most happy to call the attention of the Public to the card of our Sacramento Pioneer Nurseryman and Gardener, which appears this week.

Just as we predicted a few weeks since, that the Proprietor of these splendid Gardens would remove all the destructive marks of the flood, and be ready for the business of life again, so it now appears; and as he has thus bravely met the crisis, and put on the harness of Industrious Work again, we hope and trust his friends and customers will come thickly and make his business lively again; and thus, soon by a prosperous renewal of trade, make the earth and its whole surroundings blossom with a cheerful trade as well as with buds and blossoms.

A RAY OF SUNSHINE.—We extract from the letter of a subscriber on the Mokleumne River, dated Feb. 15, the following: "Inclosed you will find four dollars, being payment for the FARMER for one year; when time expires, if we can afford to take the paper longer will let you know. The flood has damaged us five hundred dollars, in hay, grain, and fences, besides putting us back with our work two months; but all our neighbors have suffered a great deal worse than we have, though I cannot as yet make an estimate of the amount." Well, we hope our friends will recover their losses in bountiful, though late, crops.

RECEIVED.—The Insurance Almanac issued from the Agency of the Royal Fire & Life Insurance Company, Messrs. Alsop & Company acting as agents for the Pacific coast. This almanac is the most complete statistical almanac we have ever seen, being, however, of English statistics, relating to insurance, statistics of life-leases, and risks of mortality, the great fire in London, chronicles of the Garabaldi expedition, British tariff, Her Majesty, Ministers, Members of the Cabinet, House of Commons, &c., with other valuable items. It is an admirable issuance of an Insurance Company, worthy a *royal* one.

Washington's Birth-Day.

IF there ever was a time when the memory of Washington should be awakened, and his name hallowed by a grateful people with more than ordinary feeling and interest, that time is now. The liberties he achieved for our country have been in fearful jeopardy, as his great mind pointed out they would be unless well guarded with eternal vigilance. And now, upon the return of that memorable day, it is proper and right that the whole nation, those that value our institutions, should review the past, should reflect upon the causes that have placed our nation in this peril; and on the return of this day no duty could be more appropriate for this people, than to assemble together and listen earnestly and prayerfully to the last words of the "Father of his Country." Yes, we rejoice and feel it a very wise and auspicious movement that has emanated from the head of this nation, to desire that the people should assemble and read Washington's Farewell Address. No other human teaching is so appropriate now as that sacred document. Every sentence, every line, every word, is full of meaning; it will now appear to our people like an inspired address then shadowing forth what is now before us.

"Never take up the sword but in the defense of liberty, and never lay it down till that liberty is freed from danger." Such were the words of the IMMORTAL WASHINGTON, and the sword that has now been raised was taken up in the defense of the very liberties achieved for us by Washington, and it will not be laid down until those liberties are free from all the perils that environ them; and this memorable day, the birth-day of Washington, will be more truly observed than ever before.

Let the loud cannon roar, let bonfires light every hill-top, let the bells send forth their chime, and let a grateful people come together and receive the last word of the GREAT PATER PATRIÆ; and let the due observance of this day act like the electric fire, penetrating every patriotic heart, till it shall be felt east, west, north and south, thrilling the souls of all who love our country, its constitution, and its flag, and causing all who have sinned against Heaven and the best Government ever vouschafed to mortal, to feel that the doom of traitors is near at hand; that it is already recorded above that our cause is right and will prevail, that very soon the tide of human blood shall be stayed, the wrong-doers humbled in the dust, and the white flag of peace wave triumphantly over all the land.

This is the day of all others to be commemorated now. Washington's spirit is over our land. His memory inspires the hearts of our good men, it nerves the arm of the brave—and thus will we keep sacredly this day; and when the Fourth of July shall return to us, we will then celebrate anew the *Independence* of our country, its full *Freedom* from foes without and foes within, giving glory and honor to the God of Battles, while we proclaim peace on earth and good will to all men.

◆

MESSRS. BAILEY & HARRISON.—"OUR OLD ADVERTISERS."—In looking over the files of the FARMER of more than eight years since, we find the name and firm of Messrs. Bailey & Company, as importers and manufactures of oils, camphene, &c. In our columns at the present date, we also find the same advertisers as with a new firm, however still battling on in the business world amid all the trials and changes incident to a California life. In duty to our old subscriber and patron, we take pleasure to recall pleasant reminiscences. In our files of 1854, we find the following notice of Messrs. Bailey & Company, we copy only a part of a long notice of his manufactory at time. We said then:

"Last week we had a very pleasant visit at the extensive works of Wm. Bailey, Esq., oil manufacturer on Battery street. We spent some time in the various departments. In the bleaching-rooms, one vat contains 1800 gallons, another 900 gallons. 100 gallons are bleached, strained, and pressed, per day."

"One department is appropriated to the manufacture of lard oil," "another presents the whale oil from the Arctic." "Still another presents the true sperm."

In the article from which these extracts are made, the full account was given of the whole establishment. This was in 1854. We further stated:

"The Spermaceti is sent to the States to be made into *sperm candles*. (Query. Why not manufacture them here?) Connected with this establishment is a *fine whale ship*, making its regular trips along the coast and returning laden to supply the proprietors, thus making the system complete. Thus commencing by *harpooning the whale* on the ocean and continuing the process until the oil, in its refined process, is presented to the customers from the warehouse. From 2000 to 3000 gallons per day is the average sales. This is the largest and most complete concern of the kind on the Pacific coast."

The same Mr. Bailey is now of the firm alluded to, and amid all the trials and losses incident to a California life and its calamities, and added to this the severe loss of his eyesight by a long illness, yet, with that brave fortitude, known only to Californians, Mr. B. has still stood up and continued his business with a brave heart and a perseverance that deserves success. And to his firm we now allude, hoping his friends, and an appreciating public will not forget amid the numerous claimants of public favor, to give a just share to Messrs. BAILEY & HARRISON, whose place of business is named in our advertising columns.

◆

SPICES TO YOUR TASTE.—In all the Home departments, in the culinary especially, there is an appropriate place for spices, and in all the famous recipes it is said "spices to your taste." Now we have a new, and we believe a true idea; and, as it is all important that we should have *good spices* to suit the taste, we suggest to all our readers the importance of visiting that excellent place called "Marden & Folger's" Spice Factory, where the article can be had fresh and pure, and at such prices that the Pies, Puddings and all the nice things can in reality be made "to suit the taste."

The Anaconda Fulfilling its Mission.

"Hang out our banners on the outward walls!"

SCARCELY a day passes now that does not bring us tidings of glorious victories achieved by the federal forces, over the banded rebellion that has for months past run riot in the southern portion of the Republic, carrying persecution and desolation in its train, and paralyzing to a fearful extent the international traffic of the commercial world. One cheering triumph after another is heralded thrillingly along the wires that span our continent, in such quick succession that each new wonder—instead of enjoying its nine days of proverbially allotted life—is overlaid and smothered by a swiftly succeeding wonder, which in its turn meets with a similar fate ere the earth has made a single diurnal revolution.

Even the most obtuse among us begin to realize the folly of that impatient cry that went up all over the land some months since—"On to Richmond!" However justly the philosopher of the New York Tribune may have been censured, we must in candor confess that he merely gave utterance to the desire that filled and agitated the general heart. But the Great Anaconda of our noble old Commander-in-Chief, which the fussy quill-drivers were wont to poke straws at because of its torpidity, is seen now to have been merely strengthening itself for the work assigned to it, that of squeezing the vitality out of the hideous monster Secession.

Honor to whom honor is due. We feel in this day of startling triumphs that to the fidelity, patriotism, and sound judgment of General Scott the Union cause is greatly indebted. It is unquestionably the carrying out of his comprehensive plans that is now overwhelming the rebellion. Those plans were decided upon and their development commenced at an early day, and were steadily and surely progressing when that popular clamor arose which diverted our operations to the blundering attack upon Manassas, resulting in the disgraceful rout at Bull Run. For that disgrace General Scott cannot be held accountable. That enterprise was no part of his plan. He said so himself; and we can now see that it was only a melancholy episode, attributable to the short-sighted impatience of the people.

The object of the concentration of the army of rebellion at Manassas was the capture of Washington City and Maryland, with the purpose of making that position the basis of further aggressive movements against the Government; and our army around Washington was simply a defensive measure—and was never intended to act in an offensive capacity, except in the event of the retreat of the rebel hosts (which now seems impending), when it will fall with resistless and annihilating effect upon their flying columns.

The plan of operations is already so far developed that it needs no word of explanation from us. The work is going bravely forward. One important event treads upon the heels of another. If our brave cannoneers at Alcatraz should have a "target exercise" after every victory, they would soon require a fresh supply of ammunition! And were we all to spread our glorious bunting to the breeze at each Union success that the Telegraph wafts to our ears, our cities and towns would every day be attired in the starry blazonry of the Fourth of July!

◆

ORRICK JOHNSON'S RIDING SCHOOL.—Now is the season to enjoy the healthful exercise of the saddle. Fathers and husbands that wish enjoyment for those they love, the wife, mother, and daughter, now is the time, as the spring opens to enjoy the exercise of the saddle. Women are too much confined to the close air of the warm room, and health is in peril. There can be no greater wrong upheld than to be kept in the house day after day without a breath of pure air inhaled by a walk or a ride in the open air, and of all exercise for woman, none can equal that of the saddle.

Orrick Johnson's Riding School is one of the finest *health improvers* in our city, and it is to be regretted that so few enjoy this valuable accomplishment. Mr. Johnson has an admirable riding circle, the very best trained horses, easy saddles, and all the needed riding dresses for the school. To these can be added the very gratifying fact that the charges are unexceptionably low. We hope all who desire health and pleasant recreation, at a very little cost will go to Orrick Johnson's Riding School.

Mr. Johnson is particularly deserving of patronage for his public spirit in getting up so fine a riding school, he is also deserving of the public patronage for his known liberality to those of moderate means, and when in poor health without means, offering the use of school-horses and attention free. In this way he has done much good. Persons in the first stages of consumption can be cured often by early trial of the saddle, and there are numerous cases of much good having been accomplished at this riding-school.

◆

MILITARY GOODS—MASONIC REGALIA.—D. Norcross stands unrivaled as the "Grand Master" of ceremonies in preparing all the needed accouterments of the commissioned officer in these times that try men's patriotism, from the tiny vest-button with the eagle upon its bright face to the gold-mounted sword, the gleaming epaulette and the crimson sash. All these, and all else needed, are supplied on demand just as fast as brave men invade the warerooms of Mr. Norcross. The "Worthy Brethren," too, of all orders, signs and crosses, have only to make the sign, and "Brother Norcross" will supply all demands in the quickest time and agreeable to orders. See advertisement in our columns.

PLANT TREES.—Citizens of all the great Santa Clara Valley should improve the present excellent weather, and plant the fine trees, roses and garden shrubs offered by Mons. Provost, who is one of the pioneer gardeners and florists of San Jose, and has done much to awaken public attention to those improvements and adornments which add to the value of property, as well as to the beauty of every Home.

Col. Haraszthy's Report.

WE spoke of this report in our last issue. Since then another Report, which we publish, has been made of the arrival of the vines and trees, and of their being planted by Col. H.; also asking the Legislature for an appropriation to defray expense of purchase, freight and care, as seen in that Report. All this is right, and we hope measures may be taken by the Legislature to carry out that plan, and the Governor authorized to appoint a suitable committee, whose duty it shall be to travel over the State, and cause a just distribution of these vines and trees in the several counties. The plan is a good one, and should be carried out to the letter and spirit.

The views presented by Col. Haraszthy are of the right stamp. They are the same views entertained by us formerly, and often expressed by us during the past ten years. In 1853 we were so fully impressed with their importance that we prepared a memorial to Congress upon the same and kindred subjects, urging a claim upon Congress for an Agricultural College for this State, and a grant for it. That memorial was presented in the Senate of the United States by Hon. John B. Weller, and the following is from the Senate Record, as transmitted to us by him:

"U. S. Senate, Dec. 13, 1853. Senator Weller—I beg leave to present the memorial of Warren & Co., praying for the endowment by the General Government of an Agricultural College in the State of California, upon a permanent basis, with ample means to sustain the necessary Professors of the several branches of science. I move the memorial be referred to the Committee on Agriculture. Referred unanimously."

And then, under the cognizance of Wm. M. Gwin, it was consigned to the "tomb of the Capulets," as was the Pacific Railroad and other projects for the good of our State.

In that memorial it will be seen that we urged similar views, *eight years since*, as are now urged by Col. H. to awaken public attention; and were it not for the condition of our common country, we would hope that the same memorial could be awaked to life again, and an appropriation made from the National Treasury, and a grant of lands for an Agricultural College and ground to carry out the original plan, as now urged in the Report of Col. Haraszthy. These are extracts from the memorial referred to:

"California, by the discoveries of mineral wealth, has created an enterprise, and exerted an influence upon the nations of the earth, unequaled in the history of the world.......The flags of every nation wave in our harbor, a harbor that has no superior in the world, either for extent or for the tunnage, speed and beauty of its shipping......The agriculture of California is now attracting a portion of that interest which when duly understood, appreciated and improved, will place the State before the world as possessing advantages of soil and climate in all their variety to a degree never vouchsafed to any people, and this agriculture needs the fostering care of the Government."

Thus we labored in early years, planting seed for the future, and we rejoice in our heart that even after nearly ten years, we can see the seed beginning to vegetate; and if our people, if our Legislators, are wise, we may yet obtain from the General Government grants of land and money for a College and garden worthy our noble State.

◆

MISS LIZZIE PARKER'S CONCERT.—The first concert of this distinguished artiste, from Boston, was given last Saturday evening, at Platt's Hall, to a very fashionable audience.

This concert was a success. The first song made a favorable and happy impression. That impression will receive continued and unceasing favor from the public.

The audience were fully prepared for an agreeable concert, and one of high order, from the reputation of the lady artiste that had preceded her arrival, but all present were agreeably disappointed, as it exceeded their expectations.

We do not enter into a criticism of the various parts performed. Suffice it to say that from what was offered that evening, our citizens may feel assured we have a rich repast of Music in store for us soon, as we learn that arrangements are now being made to bring out a series of operas at Maguires, in which Miss Parker will act as "Prima Donna."

The Second Concert took place last evening, at Platt's Hall, and resulted, as anticipated, in a complete success, a fine audience being present.

A GRAND CHANCE FOR LADIES.—Make room for the ladies! Mrs. Norcross', on Sacramento street, is *the* place for the ladies to visit. Everything in the shape of ladies' real needed comforts, in the way of small articles of dress and trimmings, can always be found at the establishment of Mrs. Norcross. This is emphatically the place to do shopping, as all the attendants are ladies, and they understand the wants of their own sex, and no artiste can excel Mrs. Norcross in supplying most admirably the wants and suiting the taste of her patrons, in all the fancy laces and trimmings so necessary for the comfort taste and appearance of the Queen of the Household.

CRACKED WHEAT FOR FOOD.—One of the most palatable as well as one of the most healthful articles of daily food, is *Cracked Wheat*. The Alta Mills have won a good name for this article of food, having it prepared in a very superior manner. Crushed wheat should be boiled three hours, and served up with sugar and cream. It is far superior to many kinds of puddings, and as a desert it cannot be surpassed. There is no one article of food that can be used so long without satiety.

THAT BELL RINGS.—There are numerous kinds of bells. Pretty belles, that are seen upon our promenade on pleasant days; church bells, that call the wise and good to duty and devotion; and noisy bells, that gather politicians together, or ring out on all occasions. Various bells that tell of Victory, or proclaim good news of Peace. But the particular kind of bells we now wish to call attention to, are the $1000 Bells that are telling all about *Cheap Carpets*, on Clay street.

WASHINGTON'S BIRTHDAY promises to be celebrated to-morrow, the 22d, with much spirit in this city, more especially in view of the recent Union victories. Business will be generally suspended, and the military will be out in full force. The following circular has been issued by the Commander of the Department of the Pacific:

Headquarters Department of the Pacific,
San Francisco, Feb. 20, 1862.

General Orders No. 6.—Amidst the universal rejoicing of the patriotic and Union loving people on the Pacific coast, incident to the brilliant victories achieved by the Army and Navy of the United States, let us pause a moment to do honor to the memory of the Chief of that illustrious band of patriots who established the liberties for the preservation of which we are now battling.

The 22d of the present month being the 130th Anniversary of the birth of Washington, it will be duly celebrated by the Army of the Pacific. All labor will cease during the day, and at meridian a salute of one hundred and thirty guns will be fired from Alcatraz Island. By order of

BRIGADIER GENERAL WRIGHT.
R. C. DRUM, Assistant Adjutant General.

TUCKER'S ACADEMY.—This institution is now one of the permanent, good interest paying stock institutions of our State. We see that Tucker's Musical Academy is again announced as ready for another monthly payment of one per cent. This is the fourth payment, we believe, thus showing that here is a stock that gives *twelve per cent.* per annum, and while we reflect that in such times as these if the rental of a public building can do this *now*, it must do much more by and bye, so that those who want *good paying stock* this is of a class that is A No. 1.

SELL YOUR GRAIN.—We urge our grain growers and all producers to look to our *grain market report*; it is important they should know the true state of the market, both here and at Oregon. Farmers should always see where a good opportunity occurs. We fear many have reason to regret lost opportunities.

THE weather has been mostly pleasant the past week. We were visited with a light rain Tuesday night and part of Wednesday, then with fair weather again. On the whole the weather has been favorable, business is reviving, and farming operations are getting started. The season will be late, of course, but doubtless a good one.

JUDGE Hoffman has given his decision rejecting finally the DeHaro claim to the lands known as the Potrero, containing about 2,200 acres, immediately south of and bordering upon Mission creek. The only genuine claim recognized by the Judge was a concession for a provisional occupation, and subsequent papers in the nature of grants were shown to be forgeries.

THE Red Bluff papers say that cattle skinners are doing a great business in that vicinity, some making as high as $20 a day. They follow after the herds of half-perished cattle and skin them as they drop. It is suggested that some of them would have lived longer had not the "skinners" been on their track.

IN Tulare county, where the flood was represented to have been more severe than elsewhere, late advices state that the loss was much exaggerated. The water was not so deep as reported, and in Visalia no brick buildings were destroyed, though all the adobe's "melted" down.

AT Los Angeles, the News of the 12th says: "The weather is now most delightful, the long and gloomy period of rain and ruin has at last passed away, and once again the bright sunshine and balmy zephyrs make all hearts glad. We may now calculate that the rainy season is over."

THE Gila and Colorado rivers are reported to have been more swollen during the late storm than for thirty years previous. The banks were overflowed, Fort Yuma was surrounded with water, and the wide bottom lands for leagues in extent were covered, as by the swelling ocean.

◆

OBITUARY NOTICE.

Little Henry has wings, now, Mother!

The numerous and fatal maladies that carry so many children to an early grave and cause so many hearts to mourn, is a subject worthy the contemplation of the highest mind, and we wish that some stay could be made to the havoc that death is making among the little ones of our day. With the deepest sorrow for the loss of one whose sweet smile and gentle voice was familiar to us, we are called upon by our deepest sympathies for the bereaved parents, and our deep affection for the sweet child to let our heart speak its feelings.

Little children are Heaven's messengers to communicate innocence untainted, smiles unrepressed, words unsullied, love and affection unselfish and uncontrolled. They are the morning light and golden rays of evening to the heart, the morning and evening star, the rainbow arching the sky of life amid its storms. They are the Eolian harp to the soul's ear, the very melody that touches the heart when all other instruments fail. They sweep down into the heart's depths by whole octaves, and there exclaiming father and mother, they hold the whole harmony of the household loves, and it is when these chords are broken, when these lights go out, we *feel* a silence, a void that no voice, no other harmony can complete.

With a moisture that dimmed the sight, we read the following in the records of the 8th of this month: Died in this city, Feb. 7th, Henry DeWitt, second son of Mark and Charlotte E. Brummagim, aged 4 years, 7 months, and 1 day.

Weep not dear mother, weep not for me,
For I am free from suffering now.
Oh, how I wish you could but see
Your Henry's wings begin to grow.
And soon I'll spread each little wing
And come awhile to earth again,
And to my mother's heart will sing
A song to still its sharpest pain.
For it shall tell of Henry's joy;
The same shall unto thee be given—
A Spirit's love without alloy
Which we shall all enjoy in Heaven.

NEW SEEDS FOR THE SEASON.

NOW IS THE TIME FOR FARMERS TO SUPPLY themselves with Seeds of New Products that will give variety to their crops and put money in their pockets A superior quality of

FLAX-SEED,
FRENCH SUGAR-BEET, and
CHINESE SUGAR-CANE,

Can be obtained at very low rates, at the Farmer Office. All who possibly can, should at least give some of the new products a trial. 13

BY OVERLAND TELEGRAPH.

The Telegraph has again had a busy week recording Union triumphs. Fort Donelson, situated on the Cumberland River, about half-way from the mouth of the river to Nashville, has been taken, after a desperate fight; and there appears to be no doubt that Savannah, Ga., is now in possession of Union troops. The rebels evacuated Bowling Green, Ky., which was immediately occupied by Federal forces. Price has been driven out of Springfield, Mo., and the Union Flag floats over the whole of Missouri, and is advancing into Arkansas in pursuit of Price. Indeed, the old Stars and Stripes are now reported to be waving in every State of our glorious Union.

On Thursday, 13th, Fort Donelson situated in Tennessee, was invested and attacked by the Federal army, of about 50,000 troops, and several gunboats. Owing to the nature of the ground, however, but a small portion of the Federal force was able to take an active part in the conflict. The rebels had within the breastworks about 20,000 men, commanded by their great Generals, Johnson, Floyd, Pillow, and Buckner. The fort is surrounded by high, steep hills, heavily wooded, and protected by redoubts, trenches and rifle pits. Considerable skirmishing occurred during Thursday night, both forces endeavoring in the darkness to crowd upon each other. A sortie was made against Taylor's battery of light artillery by the Rebels, but they were driven back beyond their intrenchments. On Friday morning it was discovered that the enemy had placed logs on the top of their breastworks, leaving a little space for them to shoot through, much diminishing their risks from our sharpshooters. The firing began again at daybreak on the 14th, and continued almost unceasingly up to four o'clock. The fight on Saturday was bloody and desperate. The right wing of our forces, composed of the first and second brigades of General Mc Clernand's division, bore the brunt of the fight. Our forces were ready all night. The enemy made a sortie at ten o'clock on Saturday morning from the fort; they drove our forces back three-quarters of a mile, and captured Schwartz's battery. At one o'clock our troops rallied, recovered the battery, drove the rebels before them, and planted our flag on the outer fortifications. Our forces were ready all night to recommence the attack on Sunday morning, when they were met by a whit flag, Buckner having sent a dispatch early in the morning surrendering the fort. The works extended some five miles on the outside. The rebels lost 58 field pieces, 17 heavy guns, and 20,000 stand of arms, besides a large quantity of commissary stores. They are completely demoralized and have no confidence in their leaders. They charge Pillow and Floyd with deserting them. Our forces from the moment of the investment of the Fort, on Wednesday, lay on their arms night and day, half of the time without tents, and a portion of the time in heavy rain and snow. The loss on our side is heavy, and will probably reach 400 killed and 800 wounded. We lose a large percentage of officers, three lieutenant-colonels being killed. Three colonels were wounded. Major Post of the 8th Illinois Regiment, with 200 privates, were taken prisoners on the night before the surrender, and have been sent to Nashville. The enemy's loss was 800 killed and 1500 wounded, though the principal part of their fighting was behind their intrenchments. The Fort was surrendered unconditionally, with the entire garrison, consisting of 15,000 men. Generals Floyd and Pillow, of the rebels, with 5000 men, stole off during the night previous to the surrender, and made their escape. Floyd's Brigade, when taking their departure, fearing pursuit and capture, threw their arms, which were Minié rifles of the best kind, into the river. The crews of the gunboats are now engaged in fishing them out.

In Missouri, on the 15th, south of Springfield, Price's army was attacked in the rear, and his force completely routed. The Federal forces captured a very large amount of his stores and baggage; also a large number of prisoners. General Halleck telegraphed to General McClellan that the Union flag floats in Arkansas. General Curtis has driven Price and his army out of the State of Missouri, and several miles across the Arkansas line. The Federal forces are hourly capturing rebel prisoners and stores along the route of retreat. Brig.-General Edward Price, son of Gen. Sterling Price, Col. Dorsey, Col. Cross, and Capt. Page, all of Prices staff, were captured near Warsaw on Sunday night, the 16th.

A correspondent writing on Friday says: The more I see at the fort, the more I am convinced that it cannot be reduced without a terrible battle. Its rear seems almost impregnable. The outer works and bastions of the fort are located on ridges 150 and 250 feet high, covered with dense timber. On similar gorges and hills outside of these our army is drawn up in line of battle, completely inclosing the enemy, from Cumberland south of the fort, to the back-water of the stream which flanks the fort on the north.

A dispatch from Fortress Monroe announces the surrender of Savannah to Commodore Dupont.

The movements against Savannah are so formidable that there is no reason to disbelieve the news of our success. Our force consisted of 12 gunboats and a powerful armament of nearly 10,000 This would be weakly resisted.

The Fort Jackson expedition is supposed to look towards Charleston. It consisted of 10,000 infantry and three regiments of cavalry, which would proceed by one route, while a heavy column would go by another.

The President has issued a proclamation, recommending the people of the United States that they assemble in their accustomed places of public worship, and with due solemnities, on the 22d of February, instant, celebrate the anniversary of the birthday of the Father of his Country, by causing to be read to them his Farewell Address.

The storeship Supply boarded, off Cuba, the British schooner Stephen Hart, loaded with rifled cannon, powder, and Enfield rifles. The cargo was insured for $125,000. The prize was brought to New York for adjudication. The Lizzie Wharton has also been captured, two days out from Apalachicola, with a cargo of cotton, valued at $65,000.

Dispatches from all the Northern cities express the wildest delight of the people at the news from Fort Donelson.

It is believed by military men at Washington that Manassus will be evacuated by the rebels, as Bowling Green has been.

It is currently reported that Governor Harris of Tennessee has ordered all Tennesseeans to lay down their arms.

The official report of the battle of Somerset is published, and shows that the enemy's loss was 192 officers and men killed, and 82 wounded. Our loss was but 30 killed and 206 wounded.

Senator Harris introduced a Bill in the United States Senate, making the rebels out outlaws so far as civil rights are concerned—the fact of the plaintiff's treason to be a complete defense in bar of any actions.

Gen. Lander made a forced march on Thursday night, 13th, breaking up the Rebel camp at Bloomberry Gap, killing thirteen and capturing 17. This opens the Baltimore and Ohio Railroad to Hancock.

* * *

Editor Farmer: I notice in your paper the kind offer to publish the amount of Grape-vines and the kind that farmers have for sale. I have 10,000 of the best quality of one year old Native Vines for sale, and 20,000 Native Cuttings, all of which I offer as cheap as any in the valley. Yours, S. B. Bright, Sonoma.

PUBLIC LECTURE.

☞ MRS. FANNY GREEN, will give by request and aid of Col. E. D. Baker, an Oration at Platt's Hall, On **Wednesday Evening, Feb. 26th;** Subject: "The Power and Permanency of American Institutions." A Quartette from the Metropolitan Brass Band, is engaged, and three Original Patriotic Odes, with Music composed for the occasion, will be sung. 20

MAGNETIC PHYSICIAN.

Citizens—Friends:

M. MINER, from Washington, D. C., comes to you endowed with that remarkable power of **Sympathetic Clairvoyance,** which enables her to discover the Causes of Disease, and apply the Remedy.

Diseases which evade all other modes of Examination, and yield to no other System of Treatment, are clearly revealed to the Sympathetic Clairvoyant and easily brought under control; while Diseases, in all their forms, physical and mental, chronic and acute, are alike subject to its power, relying, as it does, on Nature's great remedial agents: Water, Air, and Magnetism

Mothers and CHILDREN treated with great success.

Room No. 10, Union Block. cor Market and Kearny streets *Office Hours*—From 12 M. to 3 P.M. 17-6t

Married.

In this city, Feb. 20th, by Rev. T. Starr King, Collins Wadhams and Charlotte A. Davis.

Jamestown, Feb. 3, by Judge Preston, Elton Barker, Esq., and Miss Sallie Wilson.

On the ranch of Captain Ketchum, Feb. 6, by the Rev. W. C. Curry, B. H. Bonham and Miss Sarah E. Heard, both of San Joaquin county.

Sonora, Jan. 3, Mr. Charles Carroll Brown and Miss Arabella Easton.

Yolo county, Feb. 12th, John J. Berry and Miss Mary M. Miller.

Stockton, February 15th, Christopher Murray and Miss Mary Breen.

Died.

In this city, Feb. 19th, Captain Phœnix Rodgers, a native of Baltimore, Md., aged 52 years. Mary Frances, daughter of James C. and Catherine McLaughlin, of Sacramento, aged 5 years, 6 months, and 12 days.

In this city, Feb. 19th, of consumption, Francis, wife of J. H. Dalton, aged 19 years. Feb. 17th, Margaret Corran, wife of Patrick Corran, aged 50 years. Feb. 20th, Margaretta R. wife of O. A. Reynolds, aged 35 years.

Sacramento, Feb. 14th, Scholastique Laurin, wife of Alexander Lynch, aged 22 years and 2 months, a native of Leprairie, Canada East.

La Porte, February 12th, M. M. Allen.

Port Wine, Feb. 9th, Van Buren Wilson, aged 29 years. Feb. 12th, Mrs. F. Culver, aged 32 years.

French Camp, of consumption, 30th ult., Frederick William Franskee, aged 26 years.

Washington Flat, Calaveras county, on the 7th inst., Nathan W. Greene, a native of Vermont, aged 46 years. [He leaves a wife and two children. Vermont papers please copy.]

In San Joaquin County Hospital, Feb. 11th, of congestion of the lungs, C. Bell, a native of Connecticut, aged 46 years.

FRESH GARDEN SEEDS.

☞ **The undersigned are the Sole Agents of** DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

Mr. Perkins will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

The Question Solved.

COOK'S
Improved Portable
SUGAR EVAPORATOR
FOR MAKING
SORGHUM AND MAPLE SUGAR.
ALL DOUBTS ARE DISPELLED! THAT CHINESE SUGAR-CANE YIELDS
TRUE CANE-SUCAR
Is a Settled Question.
The difficulties in securing its Granulation have been entirely overcome by the invention of
Cook's Evaporator.
By its peculiar arrangement it throws off all scum and feculencies, and secures a deposit of a kind of wax, which would otherwise prevent granulation, and WHICH HAS YET BEEN REMOVED BY NO OTHER PROCESS. Thus in this machine are combined all the requisites for Defecating without Chemicals, and evaporating with an unparalleled rapidity.
Attention is called to the following Claims of this Valuable Invention:
1st. It so liberates the sirup from its gummy and glucose matters that crystallization may readily be secured
2d. It will make more and better sirup in a day than any other evaporator.
3d. Being made of sheet metal it is more sensitive to heat than cast iron, and can suddenly be brought to a very high heat without cracking, a danger to which cast iron Evaporators are greatly subject.
4th. It consumes less fuel by one-half than any other Evaporator.
5th. It is the only one in which great heat can be applied to shallow bodies of juice without danger of scorching; hence its greater rapidity of evaporation and more certainty of success.
6th. It is more convenient for use than any other style; is always ready for work without calling upon all the neighborhood mechanics, and causing great delays when you are in the greatest haste.
7th. It thus combines in an eminent degree all those essential requisites of sugar machinery, viz: speed, superiority of work, convenience, and economy.
The Undersigned hold the PATENT RIGHT for the entire Pacific Coast and are now ready to take orders for this justly celebrated EVAPORATOR. Its merits are so well established that it need only be seen to be appreciated.
We will furnish Evaporators adapted to brick arches at the following prices, Liberally Reduced to meet the state of the times and to promote the successful manufacture of Home Products:
No. 3—Copper Pan, 45 by 90 inches......$100
No. 4— do do 45 by 100 do 125
No. 5— do do 45 by 144 do 150
Two Skimmers, one Door, and one Grates accompany each Pan.
Copper Pans are used for this Evaporator, on account of their great durability and cleanliness.
☞ For any further information and for Pamphlets containing full directions for the Culture and the Manufacture of Sorghum; also for testimonials of its successful Manufacture by this Evaporator in the hands of Farmers of the different States; and for Orders for the Machines, address the undersigned.
CAROTHERS & BATES,
Box 306 P. O. San Francisco.
N. B.—A MODEL of this Evaporator, and Samples of Sirup and Sugar made with it, can be seen, and important information had, at California Farmer Office, where Orders can also be left. 17

Trees packed in good order and shipped as directed.
J. LEWELLING,
19 San Lorenzo, Alameda County.

Ladies' Department.

THE BOUQUET OF FLOWERS.

BY CARO.

[The following beautiful lines were sent us by a lady, many years since, in return for a Bouquet of Flowers, which we had prepared as a special gift, and sent as the token of returning Spring. They are so full of true poetry we give them for the first time to the types.]

The snows make pale the earth around,
But snows I heed no more—
For Fancy leaps, with one wild bound
The wintry tablet o'er.

Oh! Spring comes to my heart again,
With these bright smiling flowers,
And Summer follows in its train
With welcome dews and showers.

My young feet dance o'er sunny hills,
And flowers talk with my heart,
While I am singing to the rills,
Beside where lilies start.

The zephyrs woo each wayward curl,
Until my brow lies bare,
While showers of apple blossoms hurl
Their wealth upon the air.

The lambs feed on the mountain side
And talk with trembling tongue,
While birds amid the green woods hide,
And chatter to their young.

The isinglass on our old rock
Is flashing in the sun;
And glossy herds below it flock
From morn till day is done.

The blue sky flings its azure down
Upon the laughing rills,
Or stoops with its proud dome, to crown
The everlasting hills.

And at their base the green-robed trees
Stand up like men in pride;
Or bend to whisper to the breeze
That lingers at their side.

Oh! Fancy leaps with wild delight
The wintry tablet o'er;
The snows are melted from my sight—
The Spring is here once more!

The spirit-tides of sadness ebb,
And wild Grief hears her knoll—
For Fancy weaves her magic web,
Bright flowers, beneath your spell.

[For the California Farmer.]

Human Bondage.

"The truth shall make you free."—[Jesus.

How many are ready to exclaim, with the Pharisee of old, "I was born free! neither was I ever in bondage to any man!" But this assertion is most false, both then and now. Behold the soon-to-be mother, as if ashamed of the immortal jewel committed to her charge, cruelly compressing her expanding form, and in many other ways violating the laws of unfolding life, rendering herself irritable and unhappy, and stamping the same disposition upon her offspring. Could we but see the amount of wrong predisposition woven into the very fiber and tissue of our being, ere we were born, few would feel to say that they were even born free!

Behold! again, the new-born infant. See the tyrant, Custom, binding it in bandages so tight that it can only bend its neck and heels; and the cries and struggles of instinct against such treatment is sure to be followed by a dose of medicine which only makes the matter worse; and from this time forward, the female portion of the world, at least, are made slaves to dress and the caprice of fashion.

How often have I seen the tender throbbing brain bathed in burning liquors, while, to still its cries, some of the same was poured down its throat, to mingle unhallowed fires with the pure life-current, and, perhaps, to lay the foundation of that insatiable thirst—Intemperance.

Many well-meaning mothers injure their children's health, dispositions and constitutions, by feeding them too much, and too often. I mean, particularly such as are fed when very young and are often taken care of by a nurse. I have heard such a one call out every time she heard her child cry, "Why don't you go, Bridget, and feed that child? I think surely you will let it starve!" when it was only crying on account of the distress of being overfed.

It is wrong to think that a child, however small, cares for nothing but its food; it loves, and is pleased with, light, the open air, the smell of flowers, soft dry clothing, and easy motion and position. When a child is cross, there is a cause; its outward or inward harmony is disturbed; and it is oftener the former than many suppose, as the newly-born spirit is very susceptible of earth's discordant sounds, and thus the mother instinctively sings her babe to sleep with the softest lullaby.

But physical bondage sinks into insignifiance when compared with mental slavery, which carries into captivity the young mind before it knows it has an eternal birth-right of freedom. As soon as the tender germs of intellect begin to unfold, asking for truth—the bread of life—how often is it compelled to accept a stone or scorpion, affording, not food, but poison to the opening buds of the human soul.

The child that is made to stay in the house on Sundays, and to study an abstruse catechism instead of visiting pleasant scenes and drinking in of Nature's harmonies, will become morose and unloving; his conscience will be inflamed and perverted by these false views of God and his works; and, from being taught that evil is co-eternal with good, he will feel little inclination to overcome or remove the obstructions to his onward progress, since the events and conditions of of life here, and hereafter, were ordained and predetermined from the foundation of the world In what a moral dungeon is that soul confined that has been brought up in the dogmas of such intolerant theology!

There is a chain of social bondage running through all society that fetters the finer feelings of the heart and the highest aspirations of the mind; and, so long as the rules of etiquette shall determine our associates instead of the law of affinity, just so long will there be felt a restraint upon our actions and sentiments that renders us false, both to ourselves and others. Disguise it as we may, our social intercourse is mostly like a masquerade, where the exterior is only seen, clothed with blandishments to please, while the inner life is hidden beneath, and is longing, like your own, to throw off the mask it is compelled to wear, and to stand forth in the native dignity of truth willing to be read and known of all men that have true charity, and whose hearts thrill responsive to the magnetic chord of sympathy which fills the soul with angel harmony.

He who goes in debt beyond what he is able to pay, is no longer free, but is in bondage, and he feels the weight of its heavy chains whenever he sees or hears from his creditors; and how often is a whole life embittered by bonds he can neither break or cancel.

But of all the bonds that bind and fetter the progressive spirit, there are none so formidable as those of prejudice; for, Proteus-like, they assume every shape, and when you think them vanquished, they only change their forms, and, like as Apollyon opposed Pilgrim, they stride quite over the whole breadth of the way, and declare you shall go no further.

But the Sword of Truth can cut its way through all opposition; and even now, while swords of steel are clashing, and the loud thunders of war are heard in our land, may Truth and Right prevail; and while physical bondage may be benefited, may we also see the liberation of the minds of the masses from the fetters of barbaric ages, and a new and more perfect era of civil, religious, and social freedom dawn upon our world,

Aurora, January, 1862. LILIA DE MONTANA.

Want of Cheery Kitchens.

A farmer's wife writes as follows on this subject in the N. E. Farmer. She utters some truths that may be applicable to more than one housekeeper who reads them:

Very much is written and said about pleasant and tastefully-furnished parlors, but the kitchen is left in the background, except as it is described in stories of the olden time, "with ponderous beams overhead, from which hang festoons of dried pumpkin, apple, etc." It is too important a part of home to be neglected, yet it surely is neglected. The parlor must be cool and airy and sunshiny; but the kitchen may be wherever there is room for it, with a view from curtainless windows of barnyard or wood-pile—no paint or carpet on the floor, no paper on the walls, furnished with chairs and tables, and also with clothes-frame and wash-tubs, a line of dish-towels over the stove, and a row of old hats, coats, and frocks for ornaments. This is a picture of too many of our farmers' kitchens; of the place where we housekeepers expect to spend a considerable portion of our time. No wonder that mothers look careworn, and that farmers' wives and daughters complain of their field of labor. No wonder that soiled morning dresses are seen; for clean calico, white collars and smooth hair, could never feel at home in a dingy, cheerless kitchen, and a man who will not provide a pleasant one deserves to take his breakfast every morning opposite a slovenly-looking wife.

I think, now, of one cheerful kitchen, a simple one to be sure—but the morning sun looks in through woodbine and roses, and never goes behind the western hills, without giving us a good-night glance—and morning glories love to peep in and throw their dancing shadows upon the shining floor. The distant view of hills and woodlands makes many a weary burden light by its silent teachings. We sing in such a kitchen just because we cannot help singing, and a sad heart has no place there.

And now as we, shivering, wrap our shawls about us, vainly endeavoring to convince ourselves that winter is not almost here, yet gladly bring our books and knitting work around the big cook-stove for the evening, do, husbands and fathers, hear my humble plea in behalf of the "suffering sisterhood," and give us a *cheery kitchen*.

LAST SCENE IN THE LIFE OF A MISANTHROPE.

The following is believed never to have been in print, and it is desired to learn the writer:

The sun hath kissed the foam that rides upon the laughing billow,
And bright, through forests green, his beams are tumbling on my pillow;
Farewell, sweet sun! like other joys thou fast from me art flying;
My heart is heavy in my breast—I feel that I am dying.

The evening wind is on my brow—I feel it press my cheek—
Bright spirits flit before my eyes, and smile, but do not speak;
A voice, that whispers things of death, around my couch is sighing,
My heart is heavy in my breast—I feel that I am dying.

To-morrow, and these shaded scenes, that sweetly lie before me,
Shall be forgotten, and the shroud of death shall hover o'er me.
No friendly step approaches where my wearied form is lying,
I have no friend to speak to me, or press my hand while dying.

But I will die as I have lived, a lone one on the earth,
A stranger to the face of man, a stranger to his mirth;
And while the chilling pulse of death is through my bosom flying,
I'll pray that bright ones of the sky may calm my fears of dying.

I ask not for the tears that from the eyes of beauty fall—
I ask not for the robes of death, or for a funeral pall;
The forest trees shall shade the bed of flowers where I am lying,
And streams of waters bright shall sing my requiem while dying.

And birds with wings that flash the sun's bright beams upon the eye
Shall pluck a green pall from the trees to shroud me where I lie;
And winds that, like the voice of death, around my couch are sighing,
Shall gently press my pallid brow, and fan my cheek while dying.

But I will think of these no more!—a strange and mystic vision
Of glorious scenes comes o'er my soul, and images elysian;
Ere long my trembling spirit shall, on wings of light be flying—
My heart is heavy in my breast—I feel that I am dying

We cut the following advertisement from a paper published in the far West: "To Rent—a house on Melville avenue, located immediately alongside of a fine plum orchard, from which an abundant supply of the most delicious fruit may be stolen during the season. Rent low, and the greater part taken in plums."

CIRCULATION OF THE FARMER ABROAD.

We have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

With a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the California Farmer in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad,

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the Farmer.

Wishing to place the Farmer at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies	$25
" ten "	30
(Each Copy to be mailed separately, if so desired).	
For three Copies	10
" six "	20
" single Copy	4

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Pianos and All Other Instruments TUNED AND REPAIRED.

Music copied and arranged for all Instruments; New Music published; Music arranged and bound; Genuine Silver Strings manufactured to order. 1-1y

Pulu! The Wonderful!

Another cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the Pulu crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So easy to the body, so cooling to the head;
Another charm, too, in the PULU found—
Where PULU is, no Insects come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want good Beds should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have*.

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

FRUITS, GRAIN, AND PRODUCE

PACIFIC FRUIT MARKET.

OUR ARRANGEMENTS ARE NOW COMPLETED to supply our customers with the choicest Fruit of California production. We receive consignments daily from

OAK KNOLL, NAPA.

Several extra fine Dairy Cows; very superior.

A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.

Several Mares and Colts of high grades.

All the above will be sold at a bargain. Inquire of Editor of Farmer. 1

Literary Shrubbery.

THE POOR MAN'S REST.

Let me rest—but lay me low,
Where the hedgeside roses blow;
Where the little daises grow,
When the winds a maying go;
Where the footpath rustics plod;
Where the breeze-bowed poplars nod;
Where the old woods worship God;
Where His pencil paints the sod;
Where the wedded throstle sings;
Where the young bird tries his wings;
Where the wailing plover swings
Near the runlet's rushy springs!
Where, at times, the tempest's roar,
Shaking distant sea and shore,
Still will rave old Barnesdale o'er,
To be heard by me no more!
There, beneath the breezy west,
Tired and thankful, let me rest,
Like a child, that sleepeth best
On its gentle mother's breast.

Fascination of the Snake.

The following rather incredible story is authenticated by Samuel Beach, a naturalist, of two boys in New Jersey, who, being in the woods looking for cattle, lighted by chance on a large black snake; upon which one of them, an inquisitive imp, immediately resolved to ascertain, by experiment, whether the snake, so celebrated for its powers, would charm or fascinate him. He requested his companion to take up a stick and keep a good eye on the snake, to prevent evil consequences, while he made a trial of its powers.

This, says Mr. Beach, the other agreed to, when the the first advanced a few steps nearer the snake, and made a stand, looking steadily on him. When the snake observed him in that situation, he raised his head with a quick motion, and the lad says at that instant there appeared something to flash in his eyes, which he could compare to nothing more similar than the rays of light thrown from a glass or mirror, when turned in the sunshine. He says it dazzled his eyes; at the same time the colors appeared very beautiful, and were in large rings, circles, or rolls, and it seemed to be dark to him everywhere else, and his head began to be dizzy, much like being over swift-running water. He then says he thought he would go from the snake; and as it was dark everywhere but in the circles, he was fearful of treading anywhere else; and as they still grew less in circumference, he could not see where to step; but as the dizziness in his head still increased, he tried to call his comrade for help, but could not speak; it then appeared to him as though he was in a vortex or whirlpool, and that every turn brought him nearer the center.

His comrade, who had impatiently waited, observing him move forward to the right and left, and at every turn approach nearer the snake, making a strange groaning noise, not unlike a person in a fit of the nightmare, could stand it no longer, but immediately ran and killed the snake, which was of the largest size. He that had been charmed was much terrified, and in a tremor; his shirt was in a few minutes wet with sweat; he complained much of dizziness in the head, attended with pain, and appeared in a melancholy stupid situation for some days.

* * *

Married Life.—Do not run much from home. One's own hearth is of much more worth than gold. Many a marriage begins like a rosy morning, and then falls away like a snow-wreath. And why? Because the married pair neglect to be as pleasing to each other after marriage as before. Endeavor always to please one another, but at the same time keep God in your thoughts. Lavish not all your love on to-day, for remember that marriage has its to-morrow, too. Consider, ye daughters, what that word wife expresses. The married woman is the husband's domestic faith; in her heart he must be able to intrust the key to his heart as well as the key of his pantry. His honor and his home are under her keeping—his well-being in her hand. Think of this? And you, ye sons, be faithful husbands, and good fathers of families.

Read! Read!

WHY WILL YE SUFFER?

Read the following Certificates and be convinced:

Gallinas, Sept. 15, 1861.

To John DeFries, Esq., San Rafael.

I hereby certify that I have been afflicted with the most severe case of Rheumatism of a most unusual character, for several years, and during that period I have been advised and under the treatment of some of the most eminent Physicians without the least benefit, and have been pronounced incurable by several of them. I was advised by a friend to try your treatment. I did so, as a last resort, as I was lame and helpless as an infant; and to my surprise and gratification found myself cured and able to go to work in the short space of five weeks, and have been cured and well now for about one year, and find your medicine most excellent and without any bad effect—the same as mercury or other medicine often has—and I can recommend your treatment to all those affected.

RICHARD DOWDELL.

Sworn and subscribed before me this 16th day of September, 1861. J. T. STOKER, Justice of the Peace, San Rafael Township, Marin county.

San Rafael, Marin county, Jan. 17th, 1862.

This is to certify, that I was afflicted in January, February, and March, 1858, with the Rheumatism, by which I was unable to move hand or foot the most of the time during said months. To my great relief I obtained two bottles of Rheumatic Medicine, prepared by John DeFries, which entirely cured me, and I have never since felt any rheumatic pains.

R. W. FRINK, County Judge of Marin county.

This is to certify that I have used the Medicine prepared by John DeFries, in my family, and am prepared to testify as to its efficacy in all cases, and have never known it to have a bad effect.

J. O. B. SHORT.

Subscribed and sworn to before me, this 8th day of October, 1861. DANIEL T. TAYLOR, County Clerk.

☞ **Mercury Never Used. Chills and Fever Cured in two days, without Drugs and Medicine inwardly.**

☞ Persons whose systems have been injured by Mercury, can have the poison eradicated entirely.

Address JOHN DeFRIES.

Near corner of Mason and Pacific streets.

PATENT

HYDRAULIC HOSE

MANUFACTORY.

119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, Grain and Feed Bags, Garden Hose, &c;

And I have the Society's DIPLOMA, signed by G N Swezy, President, and Chas M Gorham, Secretary.

The Committee was composed of H. Harris, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work Better, Cheaper, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,

For Hose with Four Seams, that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

One-half of my interest in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,

Electricity as a Remedial Agent.

DISEASES CURED

Without the Use of Medicines,

AT THE

Electropathic Institute,

625 Washington street,
Between Montgomery and Kearny streets,
SAN FRANCISCO.

When it was promulgated that disease could be entirely eradicated from the system without the use of poisonous drugs, the unthinking, or those who do not look deeply into cause and effect, scouted the assertion as chimerical, and adduced strong evidence of its utter impossibility. Long articles, replete with arguments, seemingly unanswerable, of the position that only through the digestive system could the blood be purged of the accumulation of the poisons which constitute the disease. A great cry went up from those interested in the continued supremacy of the old system of one poison to cure another; that electricity, as a curative agent, had been tried and proved to be of but little if any value—thinking, poor souls, that the world of science stood at the same point it occupied one hundred years ago. They were wrong, while those old fogies were content if they cured one in every five patients, there were those who were diving deep into the science of electricity, and finally it was discovered that the trouble was in the instruments used. From that time to the present, improvements have rapidly advanced, until every disease in the catalogue of human ills has been either cured altogether, or checked so as to enable the sufferer to seek those changes of climate which ultimately perform a perfect cure. Diseases hitherto considered incurable, have been cured, and those diseases which took months, and even years, to cure by medical process, are now cured in a few weeks; and all by the improved instruments of DR. J. H. JOSSELYN, Resident Physician at the Electropathic Institute, New No. 645 Washington street, between Kearny and Montgomery streets, San Francisco. It is astonishing to see the number of patients and diversity of diseases that have been relieved by the Electropathic system. From early morn till late at night his instrument in engaged, imparting health and strength to all who have the good fortune to obtain his services. The charges, too, are not as heavy as by the old system, besides there is no medicine to pay for, let alone the unpleasantness of swallowing the nauseous stuff. During the time that the Institute has been in operation, there has been more benefit to the human family derived from the system than from all other systems combined during the same period. Among the most troublesome diseases to which Californians have been exposed, is Rheumatism; none have given the honorable practitioner more trouble to relieve, and none have pretended to cure (if we except known empirics) permanently. But this subtle disease gives way before the Electropathic system in a very short time, enabling the sufferer to go about his business without pain or the fear and dread of relapse. And so with most other diseases, considered incurable. We mention Rheumatism because of its abundance, but we could enumerate many other diseases full as troublesome, and some far more fatal in their results.

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	491
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a luxury, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES;

San Francisco, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

Hornitos, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

19 J. H. JOSSELYN, M. D.

THE VERMONT

SEED-SOWER AND REVOLVING HARROW!

FARMERS, ATTENTION!

With this machine, any person that can manage a pair of horses, can perform the operation of

Seeding and Harrowing at the same Time.

It is adapted to the sowing of ALL KINDS OF GRAIN, and is regulated by the guage to DISTRIBUTE EVENLY OVER THE SURFACE, any desired number of pounds of Grain per acre, covering the Seed immediately, so that NONE OF IT IS LEFT IN SIGHT FOR THE BIRDS TO DESTROY.

IT IS SIMPLE IN CONSTRUCTION, STRONG, AND DURABLE,

Just the mplement the Farmer needs at the present time, to enable him to raise Grain profitably at the prevailing low prices.

It now makes its first appearance on the Pacific Coast. For sale by

KNAPP, BURRELL & CO.,
310 Washington street.
San Francisco, Sept. 10, 1861. 2

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

Dr. E. C. Angell,

DENTIST,

IS PREPARED to supply Whole or Half Sets of Superior MINERAL TEETH manufactured in his own Laboratory, being modeled and carved for each individual case in such a manner as to secure the most perfect adaptation, and the complete restoration of the features. By the aid of machinery he is enabled to furnish SUPERIOR WORKMANSHIP at prices scarcely, if at all, higher than is charged for Artificial Teeth of the most ordinary and commonplace character. Samples he may seen at his office, and reference is permitted to numerous cases in which the work is doing excellent service.

His DENTIFRICE, known as—

ANGELL'S
Orris and Charcoal Tooth Soap,

Is not only grateful to the mouth, but is widely admitted to have no equal for cleansing the Teeth and promoting their soundness. A package that costs one dollar lasts twelve months if used daily. For sale by the principal Druggists.

DR. ANGELL Practices Dentistry in all its various branches, giving especial attention to the TEETH OF CHILDREN, preventing and correcting irregularities. For **Straightening Irregular Teeth,** he has invented apparatus that renders the treatment of cases which have hitherto been considered beyond the reach of remedy, comparatively easy and rapid.

Difficult Cases in any department of Dental Surgery or Mechanical Dentistry, respectfully solicited.

OFFICE..........650 Clay street,
16 lower corner of Kearny.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING
MACHINE.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHINE IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.

It washes Flannels without shrinking them.

It does not wear the Clothes and never breaks a button.

It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash Faster and Better than Four Washer-women can by hand.

Wringing is Done Five Times as Fast as Clothes can be wrung by hand, and removes the water so thoroughly that the Clothes Dry In Half the Time.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
176 (old number) Washington street,
16 Next Maguire's Opera House. *SAN FRANCISCO.*

FOR SALE.

A VALUABLE HOMESTEAD, WITH excellent Out-buildings, a fine Garden, Vineyard of four acres, with a field of sixty acres more, for pasturage or cultivation. The whole will be sold a great bargain if applied for immediately.

For particulars apply at California Farmer Office. 10

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer.

[Corrected weekly, by A. H. TODD & Co., No. 42 Clay Street.] Feb. 20.

There is little that is encouraging that can be offered, under the existing state of our market. The roads are yet almost impassable in the country, and transportation expensive. Our Flour and Wheat markets are extremely dull, and show a marked decline from last week's prices. We are advised of the sale of one parcel Coast Wheat, 1500 sacks, to complete the loading of the bark Retriever, at 2¼ cents. This would have been a low figure for Choice Wheat a few weeks since, but now it is fair quotation, or a high figure for export; and had not the shipper been anxious to have completed the loading of the vessel, would not have paid that price. Our millers are buying Wheat at prices from 2 to 2¾ cents, and nothing except some very Choice Extra Wheat is saleable at over these figures. The demand for Seed Wheat is very active; and, judging from the care farmers are taking, we have reason to think our crops for 1862 will be very clean and free from foul matter. Farmers have learnt by experience that good seed is the cheapest, and fully repays them for the extra care and expense. Barley and Oats still remain much in favor, and are firm at quotation prices. The quantity of Hay coming to market, or offering, has caused a decline in price. We know of one party who has bought a large parcel, and is storing the same on speculation. His ideas are, that an advance is probable. We look upon these speculations as dangerous, knowing that when the price of any article of consumption, or feed, gets extravagantly high, the economy that is practiced lessens the amount used. Our views often differ from others in regard to our markets; but we speak as we believe, and have opportunities of judging unsurpassed, if equaled. Our circle of correspondence among the farmers, and throughout the State, is very large, and by which we often gain information that is reliable, enabling us to speak, and in our market reports present matters of interest. Our Potato market, by a concert of action among the holders, has maintained itself, and prices continue to rule high. Corn, Rye and Buckwheat arrive sparingly, and find ready buyers. From this time we shall give a statement of the Coast receipts, which form a large portion at this season of the year, and act, like Oregon, to keep our market from advancing to a very high figure. The discoloration of our Coast Grain, occasioned by fogs, always renders it less saleable than that raised in the interior or about our Bay, and makes a difference with the buyers of from ⅛ to ¼ of a cent ⅌ pound in price; and one still further and greater drawback is, to the Coast farmers is the high rates of freight, and the difficulty in shipping, although we are credibly informed the yield to the acre is larger than in the interior, which may, in a manner, repay the difference.

Our receipts from around the Bay and Coastwise, for the past week, have been as follows: Wheat, 12,178 sks; Barley, 10,665 sks; Oats, 6188 sks; Cornmeal, 93 sks; Flour, 5986 qr sks; Bran, 804 sks; Hay, 304 tuns; Shorts, 30 sks; Onions, 177 sks; Salt, 1200 sks; Corn, 297 sks; Potatoes, 1391 sks; Beans, 848 sks.

San Francisco Cattle Market.

Feb. 20.

Reported for the CALIFORNIA FARMER, by W. J. WHITING, corner of Sutter and Sansome streets (Stock Corral).

We have to note a material advance in all kinds of Stock since our last issue; but whether it will long continue, it is hard to tell. There seems to have been considerable fluctuations in the Stock market of late, owing, principally, to the supply in market; but it does not seem as though there was much scarcity in the country, for no sooner does an advance take place than in comes a large amount, and down go the prices to the old figure, or nearly so, with the exception of first quality of American Beef, which has been steadily on the advance, and of which there appears to be more prospect of maintaining the present prices. But whether good roads and good weather will have any effect upon this kind of Stock, depends somewhat on the amount destroyed by the recent floods.

AVERAGE SLAUGHTERERS' PRICES.

BEEF—American, first quality 6c to 12c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ⅌ ℔.

Youth's Budget.

FAMILY VISIT TO THE CIRCUS.

SNIFFLES, took his wife and children to the circus, yesterday. By some mistake, he got into the twenty-five cent department, and in a moment he was borne away from his wife and children by the crowd. After a few moments, he regained his wife, who had just had her pocket picked of the bureau drawer keys and her port-monnaie, and had just dropped the youngest Sniffles between the seats. Sniffles took the rest of the family into the fifty cent department at once, and then returned after the missing Sniffle. After an arduous search, he found the missing Sniffle, lying on its back, half suffocated with tan-bark, under the seat, with a large dog turning it over with his nose, to see if the young Sniffle was good to eat. After driving off the canine animal, he seized the prize and bore it triumphantly to Mrs. Sniffles, who sat sniffling in very agony for her lost darling.

He found seats for the family, but he was obliged to stand up and take a promenade seat, in consequence of the crowd. The children got acquainted with Mr. Rice very quick, and wanted their Ma to buy him and take him home for them to play with, he was "so funny, and had such pretty trousers!" This Mrs. Sniffles promised to do, when Paragon (the youngest Sniffle) wanted to know if his Ma wouldn't buy the rhinoceros too. To this Mrs. S. blandly consented, and told the children to be quiet, and when they were not looking at the interesting things, to watch their Pa, to see that no young woman inveigled him, Mr. S. being very susceptible.

When the beautiful little girl rode so elegantly on horseback, the children were in a perfect frenzy of delight, and Paragon—in endeavoring to make a jump at her to kiss her, as she floated past with but one toe touching the horse—spilt down between the seats, when a dirty little boy, who had clandestinely got in under the canvas, stole away his orange, and pulled his hair for tumbling on him. Mrs. Sniffles extricated Paragon from his predicament with a piece of old hoop. When Paragon got out, he was very dirty, and the little girl had got through her performance. Then Paragon cried, and would not be comforted, until one of the performers, who economised his time by peddling lemonade between the acts, passed by with the beverage, and a glass of it was obtained. This having been poured into Paragon's system, his cheerfulness was restored, and he commenced watching his Pa again.

The elder Sniffle, who had been standing beside a little brunette of a thing, supposing himself out of sight of his flock, had purchased some oranges and confectionary for the dark-eyed damsel; and at the time Paragon looked that way was busy chucking her under the chin. Paragon immediately sung out:

"Pa is kissing her!"

At this Mrs. S. looked, beheld, fainted, doubled up, and disappeared between the seats, whence she had to be rescued by means of a long pole with a hook at the end of it, and was finally dragged out in a limp, dishclothy condition. She was conveyed to the door, the children insisting upon being permitted to remain to see the "muels," which their Pa sternly refused to consent to. The family left in a wretched state of mind—Mrs. S. in a state of syncope resulting from the infidelity of her children's Pa; Mr. S. in a state of tremulous fear for the consequences of this affair; and the children glowing with indignation that they were not permitted to remain until it was over. Altogether, the afternoon terminated miserably; and Sniffles has forsworn circuses, except when he can attend alone.

DOGS AND OTHER ANIMALS.

It is hard to believe, says Willis, that two races so spliced together as the canine and human do not lap over; hard to feel that some dogs are not better worth saving than some men, some men more fit to rot in unhallowed ground and be forgotten than some dogs. Creatures so intelligent, and yet so patient of our neglect; so sensitive, and yet so forgiving of our roughness and ingratitude! So gentle when we do not seem to love them, so overjoyed when we do! So uncomplaining, even of hunger, if we are not ready to feed them—even of storm and cold, when turned out from the bright fire on the winter's night, to watch for us while we sleep warm in our beds! So ready to fight and die for us and our poorest belongings! Surely for qualities like these, though they go upon four legs, qualities that would grace a Christian or a hero, there should be some other vestibule in religion. We might even let a child pray, it seems to me, that, through the open door of Heaven for the humble, where he is taught that the beggar that takes alms from his hand may sit above him, his faithful dog may be permitted to look in.

Animals of different species, says Dr. Burnap, are capable of forming attachments to each other. He relates an affecting anecdote of this kind. When the American army in the Revelation lay at Valley Forge during the inclement winter of 1779–80, the stable of the Governor, then a Colonel in the army, was tenanted by three animals of most diverse species, but of affections the most cordial and united—a horse, a dog and a drake. No sooner did the horse lie down at night, than the dog came and lay close at his side, then the drake as invariably crept into the little oval nest created by the dog's head and body. In this position they passed the cold winter night, and were invariably found by the servant the next morning. The dog and the drake became devoted friends. At the close of every meal they resorted to the Colonel's quarters to be fed, and the shaking of the table-cloth was a signal for a race between the dog and drake, which would arrive first and get the nicest bits of their common repast. Usually the race was a pretty even one, the drake making up for the shortness of his legs by the strength and activity of his wings. At length, however, there came a deep, light snow. At noon the table-cloth was shaken as usual, and the dog commenced the race of bounding through the snow, and was soon near his dinner. Not so with the drake. He began his usual career with great impetuosity, but soon began to tumble from one hole into another, until he became exhausted. But what did the dog do? Did he rush on and devour his meal alone? By no means. He missed his companion, looked behind, and saw him struggling in the snow; he galloped back, took the drake gently in his mouth, and bore him off to share the meal with his noble-minded companion.

"So here I am between two tailors!" said a fellow at a public table where two young tailors were seated, who had just commenced business for themselves.

"True," was the reply, "we are new beginners, and can only afford to keep one goose between us."

To cure hams, first ascertain what is the matter with them, then apply the proper remedies; and if you do not succeed in curing them, it isn't your fault.

A country dentist advertises that he will spare no *pains* to render his operations satisfactory.

SPARE MOMENTS are the gold dust of time. Of all the portions of our life, they are the most fruitful in good or evil. They are the gaps through which the serpents of temptation find the easiest access to the garden of the soul.

BUSINESS NOTICES.

☞ DON'T READ THIS. ☜

THE PULU.—As we have said much in favor of this material for Bedding, and advocated the famous Pulu mattress, we have been surprised to learn that some folks are using various substances intermixed with Pulu, such as very coarse wool, hair, moss, and old substances, and by such means bringing disrepute upon the "Real Pulu." Facts have come to our notice of such things, and we can suggest *one way* by which all purchasers can be sure of getting the "Real Simon Pure Pulu:" Go to Schreiber, the Original Importer—it is for his interest to sell only the Pure Article.

By accumulated evidence that has been received by Mr. Schrieber from old sea-captains and many other persons afflicted with *Rheumatism*, the new DRY PULU is a true remedy for this terrible suffering. Rheumatism can now be cured all over the State, as Mr. S. has just received at his establishment 1500 bales, the purest, dryest and best ever imported by him.

AGRICULTURAL WAREHOUSE IN STOCKTON.—The farmers, mechanics and ranchmen must always remember that one of the largest supplies of implements, tools, and goods for the ranches can always be found at the warehouses of Messrs. Jones & Hewlett's of Stockton. This firm have the very best facilities in the Old States for purchasing, and they can always do well by their patrons. There is no establishment in San Joaquin county that can equal them for supplies, and for a liberal spirit and kind endeavors to give satisfaction to all.

A FARMER'S MILL IN HIGH WATER.—While the roads are impassable and where the flouring mills are swept away, Farmers should immediately procure the UNION FARM AND PLANTATION MILL, now offered by Greene, Heath & Allen. This will answer all the purposes of a Flouring Mill for a whole neighborhood. These are the Mills for the times. See advertisement.

AN EXPERIENCED MAN, who understands the best mode of manufacturing Linseed Oil—a man who is familiar with the various processes of converting flax-seed into oil—can hear of an excellent opportunity and a permanent engagement in the business. Apply at the FARMER Office.

20,000 HOP ROOTS.—Those who want to plant a hop yard can be supplied with fine roots at a bargain if application is soon made to the Editor of the FARMER. A lot of 20,000 roots to be sold at once.

To Agents of the Farmer.

WE would ask our Agents to whom payments are made for the FARMER to notify us, that we may give credit for them, as it frequently happens that our subscribers call and inform us that they *have paid such Agents*, although we have no notice of such facts.

Rebuild Your Fences.

THE universal loss of Fences in our State will fall as a heavy blow upon our Farmers, and every opportunity and means for their being replaced at as little cost as possible, should be availed of at an early day.

We call the attention of all who desire to build Fences at a little cost to HYDE'S PATENT POST-DRIVER, for sale at this Office.

RIGHTS for Counties and for large Farms, can be purchased at the *Farmer Office*, on the most favorable terms. A liberal allowance to all who have suffered by the flood. Any information can be had by addressing Editor California Farmer. 16

To Vineyard Planters.

IF our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

Valuable Blood-Stock For Sale.

We would invite all who desire Dairy-Stock of the very highest character, to call on us, or write to us, as we have for sale about twenty-five head of as choice Durham Stock as there is for sale in the State, as follows:

One Full-Blood Durham Bull, 2 years old, of the highest pedigree, and as handsome an animal as has ever been offered in this or any other country.

One young Full-Blood Calf, 8 months, a perfect picture.

Several younger Blood Calves.

About twenty Cows and Calves, Durham, Devon, and Ayrshire, with Calves by their sides.

Among the Cows are some of the very best milkers in the State. Inquire at the Farmer Office. 18

HUNTER'S
GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.
The undersigned would offer them his
NEW GRAIN SEPARATOR,
Patented April 9th, 1861,
As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.
The importance of this Implement can be seen at once, as the
INCREASED VALUE
OF
Well-Cleaned Wheat
Will be more than sufficient to every Grain-Grower of any amount
TO PAY FOR A MACHINE.
The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines
He feels confident that every Grain-Grower
WILL BE CONVINCED OF THEIR VALUE
The moment an opportunity is presented to see them work.
A. HUNTER,
Inventor and Patentee.
AGENTS—J. D. ARTHUR & SON, San Francisco.
J. BONNER & CO., San Jose Foundry, San Jose.
HENRY PAGE, Napa.

☞ All letters on business connected with the office should be addressed to PUBLISHER CALIFORNIA FARMER, San Francisco, Cal.

SEWING MACHINES.

$5,000,000 Saved.

ECONOMY is the watchword now. Over our whole State there has fallen a severe calamity which touches every branch of industry, pervades all kinds of business, and reaches every family, carrying a pecuniary loss greater or less to all. The recent floods and the losses arising therefrom, the lateness of the season, retarding all kinds of business, has awakened throughout all the State a determination to economise in all the departments of life.

One of the heaviest items of expense in the family circles is the cost of Sewing. New garments, repairing garments, and all the numerous items of sewing are so great that in order that this may be done in the family and under the eye of the head of the family, an *extra servant* must be employed to labor, so that the mistress of the family may have time to attend to the Family Sewing, and this involves a cost of $30 to $40 per month; for now since the *Bulletin* has tried to reform female wages, the "Biddies," the "Bridgets," the "Kates," and the "Norahs," have made more trouble than ever, and it is found that families must do without help unless they can have it at $15 or $20 per month. But since the IMPROVED SEWING MACHINES have been introduced by H. C. Hayden, Esq., agent of the Wheeler & Wilson, so great has been the saving of time in the family that hundreds of housewives find they can *do without* help, as the sewing can be done by the Wheeler & Wilson's Machines in *one-tenth the time* usually required, besides having the work done in so much better and handsomer style.

Careful estimates have been made of the saving of labor by their introduction into the United States, and it has been found that the enormous sum of SEVENTY-FIVE MILLIONS OF DOLLARS has been saved the *last year* alone, by Sewing-Machines.

We have taken some pains to learn the number of Sewing-Machines sold in California in 1861, and find it about TWO THOUSAND FIVE HUNDRED. The probable number of heads of families (the female head) is fifty thousand; allowing that only *one dollar* per week is saved by each family in the expense of making garments and family sewing, and TWO AND A HALF MILLION OF DOLLARS is saved: add to this the saving to the male portion of the family, and to this the saving to all the various articles sold, formerly made by hand, now made on the Sewing Machines, and the amount named would be more than doubled. Again, the grain bags made in California the last year were equal to *five million bags*. The saving in the cost caused by machine sewing is equal to four cents on every bag; this would be a saving alone of *two hundred thousand dollars* per annum. We believe that it would be easy to prove that more than $5,000,000 per annum is saved by the Sewing Machine in this State alone.

We have visited the Machines now at work for the Mission Woolen Mills at San Quentin, and used by the prisoners, and was surprised at the quickness and readiness with which fresh hands do the very best work. Were it not for the Sewing Machines it would have been impossible to supply our soldiers with garments here; they would have had to import them at a cost of more than 40 per cent additional to their present cost, and this would have been a heavy loss to our State, as well as a great delay in the supply.

By the enterprise of D. McLennan (now Leonard & McLennan, proprietors of the Mission Woolen Mills), a great facility has been given to clothing of our troops, with a great saving to the government, as well as comfort and health to the soldiers during the past unusual stormy weather.

Our visit to the tailoring establishment at the Prison furnished us with the following facts: The Hall is a large, airy, and spacious room, 40 by 100 feet, in which are now one hundred persons at work, in all the various branches of cutting out, making up, and finishing the army clothing, as contracted for by Messrs. Leonard & McLennan. This establishment is under the superintendence of E. E. Jennings, Esq., assisted by a clerk, Mr. Ives. We shall hereafter speak of the Prison in all its departments, its management, and its results. Our present object is to show the direct good resulting to our State by the use of the Sewing Machine; its power for great emergencies; its capabilities for helping the laborer when emergencies arise. In this hall we saw 100 men at work, 14 Chinamen, and 86 others, mostly foreigners,—Mexicans, Chilenos, Spaniards, etc. Not one of these 100 men ever previously worked on a Machine, yet the work now finished is pronounced better than the work imported from abroad, in every feature. The Superintendent assures us that the Chinese learn quick, do their work in a most surprising manner well, and that they being *once learned right*, they never unlearn, but are reliable; they are quick and great imitators; they are also easier to manage. We learn these all-important facts as now connected with the Sewing Machines: There are now SIXTY of WHEELER & WILSON'S *Sewing Machines* employed here, and they work to perfect satisfaction, are easily managed by these new workmen, and Mr. Jennings informed us that he was surprised to find that Wheeler & Wilson's Machines would sew with perfect ease the thick and heavy clothing for the cavalry garments. On the thickest cloth they operate perfectly, and were it not for these Machines this work and these contracts could not have been so readily filled. The cloth is taken from the Mission Mills at San Francisco, and in forty-eight hours the clothing is returned ready-made and finished in perfect order. This we call California enterprise; (this we prophesied three years since.)

We have many important facts touching the State Prison labor, its influence and its effect upon the community, of which we shall speak hereafter in a series, from notes taken of our examination made in the different departments.

The *facts* are now established beyond dispute, that for regularity, completeness of work, capacity to work on all the various kinds of material from delicate muslin up to leather, and the heavy cloths now used for the army, the Wheeler & Wilson Machine stands unrivaled; as the work done by it can be seen at the office of the Mission Woolen Mills, over Parrott's Bank, and better work on clothing of this kind has never been shown, not even that made to order and imported here from the old States.

We can, with the facts before us now and constantly accumulating, urge upon our Farmers, our Grain-growers and Wool-raisers, the importance of procuring these machines and preparing their own grain-bags and wool-sacks in their families; as by these means they can make a saving of a handsome sum annually, besides the saving of time, strength and health of the wife and daughters, thus accomplishing a vast amount of good.

We present this week on our first page a series of illustrations of these Sewing Machines, showing to the eye each of the various patterns now in use, and which are offered at greatly reduced prices, and with these most important considerations: Every Machine now offered and sent out from Wheeler & Wilson's agency is GUARANTEED *in its practical working power*; each Machine being accompanied by a *complete set of tools*—all that is necessary for the adjustment and working of the Machine. To these is added complete *printed directions* in English, French, Spanish, and German, so that all purchasers have the Machines before them in teachings so plain that "they that run may read."

With this array of facts we leave our readers to make use of the information we have collected for their benefit, simply adding that what we have asserted above is derived from undeniable proof.

A new and important improvement has just been added to the Wheeler & Wilson Machines, which we see illustrated in a late number of the Scientific American, called the "*corder*" for laying cord on shirt bosoms, collars, or gentlemen's vests and coats, and on ladies clothing. It is laid and stitched without previous basting. This is a new and valuable addition.

◆

The Grain Market.

WE ask the readers of the FARMER who are Grain-growers, now that the grain market is being fully tested, to please review all the statements which have been made in this Journal since Harvest commenced, and then compare them with other reports, and see who has been right.

We believe we can with much pleasure claim to have been at all times correct in our estimates, and sound in our counsel. Every opinion advanced has been found to stand; the amount we stated months since has now been established correct. The effort to *raise* the market we classed as a heartless and base speculation, that has been proved by a loss to those who engaged in it. Months since we urged again and again for all to ship the grain abroad as soon as possible, fully believing that with all the efforts that would be made it would not all leave the State. We then believed that the new crop would come in with 500,000 bushels of old wheat on hand. What is the prospect now? 1,000,000 bushels we presume is the smallest quantity now on hand. Allowing 30,000 barrels per month as the consumption, equal to 150,000 bushels, and give four months more before the new crop, it leaves us 400,000 to spare or ship abroad. But in the present condition of foreign demand we fear our farmers have let slip the "golden chance." When will they all learn to be wise and sell when the right time comes. We have some interesting facts to give ere long on this question. The present signs are not favorable to high prices.

Another Charge on the Old Fence Law

ATTENTION LEGISLATORS!

STONY-BROOK, February 20th, 1862.

MESSRS. EDITORS: The best thing I see in the Governor's Message [Downey's retiring Message], is a strong recommendation to the legislature to make a law to compel stock-owners to keep their stock within the bounds of their own land. In looking over the doings of the legislature, so far, and as far as I have had oppertunity, I don't find anything done about it yet; but I sincerely hope they will not let that recommendation of the Governor pass without giving us the law he recommends. It is a fact, as the Governor says, that fencing costs more than the land is worth, especially in the hills. In Alameda county, there is an immense amount of land in these hills that can and will be cultivated to wheat and barley, when we have a law to protect the crops from cattle running at large. The San Francisco papers, generally, and the CALIFORNIA FARMER in particular, have, and are now urging us to plow and plant the hills on account of so much valley-land being overflowed and made unfit for grain crops this season. But gentlemen, you are too fast; give us the protection the Governor recommends, first, and then, in due time, you will see many a waving field of wheat and barley growing on hundreds of beauty-spots all over the hills. There are many men in this country with families, and more are coming, that are not able to buy a farm ever so small, in the cultivated valleys, on account of the high price of land, that would be glad to "pitch into" the hills just outside of Spanish lines on U. S. land, and make themselves a home, if they could be protected from the horns and hoofs of such stock as are permitted to roam over the hills and where they please, the owners once or twice a year hunting them up to brand them.

How much better it would be for the stock-owners themselves, in the not very long run either; they would soon get rid of the rest of the big horns that are too tough for the present hard winter, and get in such stock as would be to their interest, as well as pride, to look after every day. I have but a small stock, say twenty head, common American stock; they come up every night in their corral of themselves; they always get a kind word and a bite of something to eat when necessary. I have no trouble with them; all the trouble I have is with what we call the wild cattle, when my crops are growing. My boys have to run them back evenings far enough so they won't get back again before morning. It is quite a chore for boys and horses every day (and the boys say there is not much fun about it). My fence is good for the kind, but not what would be called a lawful fence in Michigan, consequently, I can't go to bed nights with a crop on one side of the fence and a herd of wild cattle on the other.

Now, Mr. Editor, my object in writing this letter is to have you jog the memory of our legislative body, on the importance of such a law, if it should appear to you necessary to remind them. All my neighbors that I have talked with on the subject are in favor of such a law; and I believe, Colonel, you are. Such a law must come, sooner or later, why not this session? It ought to have been made when the law for herding sheep was made, some five or six years ago. If it had, we would not now see so many dead cattle lying round as we do.

Respectfully yours, ABRAHAM CLARK.

FINDING WATER WITH A PEACH-CROTCH.

P. S.—Speaking of making homes in the hills, there are many claims vacant for want of springs of water. I believe water can be found in the hills by digging, as well as in the valleys, but I would look for the veins scientifically, that is, with a crotched peach limb, thus ⋀, taken in both hands firmly, palms upward, and the but-end of the crotch pointing up, then walk on slowly, and if you approach a vein the but-end will begin to turn down; pass over back and forth and you will find the identical spot to dig. The crotch won't work in every one's hands, and some don't believe in it; but I know it to be a fact. Try it where you *know* there is a vein, or pipe of water running under ground, and if it don't work in your hands let others try it. It did not use to work in my hands, but does now; I tried it crossing my own underground water-pipe (of wood), and it worked like a charm. I found other veins by the same process in different places on my land where I little expected water, which leads me to conclude that there are numerous veins of water in the hills running in every direction, that don't always break out in springs. A. CLARK.

◆

Plow! Plow! Plow!

THE week of pleasant weather recently enjoyed by our Farmers was used to good advantage, and thousands of acres were turned up to the sun. This week's rain has been a great disappointment and a severe loss to the Farmers, many of whom had land and grain ready soaked for sowing, which now will be lost. We know of several instances where the land was ready and the grain soaked with bluestone ready for the ground, the rain prevented its being sown, and the grain may be lost. To all such we would say, be not discouraged, but *try again, try again*. If only a proper amount of bluestone is used, it is thought grain may be kept a long time after soaking without injury.

Beet-Root Sugar—Sorgho Sirup Crop.

A correspondent of the Ohio Farmer, writing from Columbus, O, Dec. 12, 161, says: A few days since, Prof. M. A. Mot (a very intelligent and scientific Frenchman), invited me to call at his rooms in the "States" hotel, in this city, where he showed me a splendid specimen of sugar he had just manufactured from the beet-root.

As far back as 1832 and 1833, my father attempted to manufacture sugar from the beet-root, but did not succeed in obtaining any, although he succeeded in making a very excellent sirup. About the same time, or perhaps a little later, Mr. Joseph Sullivant, of this city, incurred some heavy expenditures in endeavoring to manufacture sugar from the beet-root, but did not succeed, since which time it has been entirely abandoned so far as my knowledge of Ohio extends.

In 1859, I procured some White Sugar-Beet seeds from France, which I gave to Professor Mot. A portion of these seeds were planted in gardens in this city, and others in or near Newark. From these seeds, Professor Mot procured beets averaging six pounds, several of them weighing over nine pounds. Being an adept in chemical manipulation, with the commonest kind of implements—for they scarcely can be called *apparatus*—he went to work to rasp, press, boil and clarify the juice of the beet, and his labors were crowned by the production of a splendid article of sugar.

From a computation based on this experiment, the following may be regarded as the amount which may be produced per acre, if skillfully and properly managed. By planting the beets one foot apart, in rows two feet apart, twenty-two thousand beets can be grown to the acre; now if these will average six pounds apiece, the aggregate product will be sixty-five tons of beet-roots. In France, it is said that the sugar produced is equivalent to fifteen per cent of the raw material. But suppose we say that ten per cent only is manufacturable into sugar; the result will be six and-a-half tons of sugar; or suppose we modify even this statement, and put it down at six thousand pounds of sugar, and six thousand pounds of sirup, equal to six hundred gallons of sirup per acre—the sugar will be worth say six cents per pound, making $360; the sirup will be worth say forty cents per gallon, making $240; the product per acre, $600.

This is no fancy sketch nor idle speculation. Prof. Mot has ordered from France sufficient sugar-beet-root seed to plant ten acres next spring, and is preparing machinery and apparatus on a scale sufficiently large to manufacture the product.

All soils will not produce the beet-root equally well, nor can sugar be made from the roots grown in some soils. Then again, it requires considerable chemical knowledge to succeed in manufacturing the root. Certain chemicals, or rather chemical preparations, are indispensible to the successful manufacture of the sugar.

After Prof. Mot has his beet-sugar establishment in successful operation, it would be well for young men to serve an apprenticeship of three or four months with him in order to learn how to manufacture, and thus prevent much valuable time and raw material from being sacrificed or wasted for a want of proper knowledge to turn it to the best account, as has been done with the sorgho.

Three years ago, many persons were disposed to regard the sorgho a failure, but in the hands of competent men, it has proved a triumphant success. Mr. C. Jacobs, of this city, has presented me with several gallons, which is fully equal to any "Golden," "Boston," "Sugar-House," "Belcher," or other sirup I ever tasted—it is entirely free from that peculiar taste or flavor generally a concomitant of sorgho sirup. From the best authorities I can obtain on the subject, I am disposed to put down the Sorgho sirup crop of Ohio for 1861, at not less than two and a half million gallons, whilst other parties place it as high as six millions. It would not be surprising if in five or six years "Ohio Sorgho Sirup" would be as abundant in the best markets, as the St. Louis, or Boston sirup has been heretofore.

◆

New Productions in Illinois.

The Chicago Journal gives the following account of the success of new products in Illinois, which we copy, to show what might be done in California, with even greater success:

"Not only are we producing our own sirup and sugar, and are likely to produce our own cotton, but it has been demonstrated to a certainty that coffee can be grown in Illinois.

"George R. Hoffman, of Effingham county, last year, raised two bushels of coffee, nearly identical with the Rio coffee. His seed was sent to him three years ago from Australia. It is unproductive the first year, and is most productive the third season. At his estimate, thirty bushels can be grown per acre. The plant has every appearance of hardiness and adaptability to Illinois soil. Many farmers in Hoffman's vicinity will plant it the coming season.

"The Southern rebellion may be the means of proving to the world that the West is capable of supplying the country with all it needs in the way of the substantials, as well as the condiments and luxuries of life.

"At the last meeting of the Illinois State Agricultural Society at Springfield, J. H. Smith, of Quincy, exhibited one ton of sugar made by himself from Northern cane. He states that about seven-tenths of the sirup runs to sugar, and that he can make the sugar at five cents per pound and molasses at twenty-five cents per gallon, and realize more profit from an acre of cane than he can from an acre of corn.

"The Galena Advertiser says all the lower half of Illinois is a cotton-growing region. A gentleman who left Louisiana on account of the political troubles, and settled at Decatur, this year raised a bale of cotton and sent it to market. Next year he is prepared to raise a thousand acres, satisfied as he is by his experiment that it will be a profitable crop. Twenty and thirty years ago the article was cultivated sufficient for domestic use in most of the families in the lower part of the State. Cultivated by free labor, it may no doubt be made a profitable crop."

Growth and Management of Sorgho.

We give below made up from the experience of those who have cultivated it in the North and West, the most definite and reliable information upon this subject.

SEED.

Plant no seed obtained at random; get it of some one who has had a good crop of *rich* cane. It should be saved by selecting from the best canes in the field, and hanging it in bunches in an airy, shady place.

Sprouting the seed is of the greatest importance; one to three weeks gained in that way in the length of the season, may be the means of insuring success to that which would otherwise prove a failure. Soak the seed in warm water, by pouring on the water and letting it stand over night, or as some recommend, in a solution of equal parts of chloride of lime and copperas. As soon as the germ appears, drain and dry the seed, and roll it in plaster.

THE SOIL.

This should be good wheat land, or a sandy loam, with a sunny exposure, plowed deeply, and made perfectly mellow. Mark it out in rows running north and south, and about three and-a-half to four feet apart, with a plow having a shoe upon its point to prevent furrowing deeply. Plant so as to secure a good stand every two feet in each row. It is important to give the cane full benefit of the warm sun around the roots.

Some have recommended transplanting cane from hot-beds. In the report of the Sugar-Cane Growers' Convention, held in Princeton, Ill., on February 29, 1861, we find the following:

"L. C. Field gave an instance where cane had been started in hot-bed and transplanted with good success.

"Others corroborated the fact of its easy and sure transplanting; also, that the young cane when planted in the field would endure quite hard frosts."

Transplanting may be of advantage in northern latitudes.

TILLING.

Stir deeply until the cane joints, and *keep clean* always. Every rod will show its own culture, and the least neglect is manifested in the backwardness of the cane. Keep the weeds out by all means, especially when the cane is just struggling into the world above ground.

HARVESTING.

The cane should be cut no faster than it is manufactured, the freshly cut making the best sirup. Begin as soon as the seed has partially passed into the dough state, or, if the crop is large, as soon as it begins to brown. Blade the stalks and cut off about three feet of the top for fodder.

Should frost threaten, cut up the crop and put it into shelter, covering it with straw or hay. Ripe cane can be kept some time in this way, but green cane will mould; it should be put under cover, but have plenty of air.

MANUFACTURING.

Everything required for manufacturing should be in perfect readiness. A single day's delay may cost you more than the value of all your machinery. The lesson on every hand is "DISPATCH." Let nothing interfere day or night. Southern machinery never stops during the two and a half months grinding season. One farmer lost 75 acres of cane last fall, worth over $7,000, by a little delay in his engine.

The requisites are:

1st. A good iron mill of *more* than ample capacity for the work expected of it. This is necessary to make up for any unexpected delays.

2d. The most rapid Evaporator you can secure. There is nothing approaching Cook's in this respect.

3d. Some shallow wooden coolers, about 3 by 6 feet, and 10 inches in depth.

4th. Clean new barrels. Many a lot of sirup is spoiled by barreling in old filthy barrels.

5th. Good dry wood, such as is calculated to make a light, quick blaze.

6th. Draining vessels for the reception of the cool sirup. We suggest that they be made with inclined sides, thus:

One side projects below the other from two to three inches, having an opening between them of three-quarters of an inch, closed by a cloth-covered slide. The vessel may be of any desired length. Pour in the sirup, and when crystalized, raise the slide just enough to let the molasses drain into the gutter. The vessel should be kept in a room where there is a regular temperature of 90 deg.

◆

Absorptive Power of the Soil.

No contribution of science to the practice of agriculture is more calculated to arrest the attention of the farmer than the various observations which have been made within the last few years regarding the remarkable power the soil possesses of absorbing and retaining some of the indispensible elements of the plant. They are the more worthy of attention, inasmuch as the facts which have been determined are, to a certain extent, opposed to some of the more commonly prevalent opinions. They lend but little countenance to the idea that the manure, when committed to the soil, lies there in a precarious condition, liable at any moment to be deprived of its soluble constituents by the rain, and of its volatile matter by the heat of the sun's rays; but, on the contrary, they tend to show that there is a conservative influence at work in the soil which imprisons these substances within it, and stores and preserves them for the future uses of the plant; and, what is more, it exercises this influence most powerfully on those substances which are most sparingly distributed through the soil, holding with the firm grasp of a miser the potash and ammonia, but leaving the soda and lime, which are less important to the plant, at the mercy of the rain.

The discovery of these facts has thrown an entire new light on the chemistry of the soil, for they have shown that it must be studied not merely by itself, but in relation to the various substances with which it comes in contact in the course of cultivation, so as to trace the influences which they mutually exert, and thus a subject already sufficiently complex has become more difficult and laborious than it was before.—[Scottish Farmer.

Princeton and its Farms.

The Colusa Sun, published in Colusa county, says in its issue of February 15: On a late visit to Princeton we found that many of the farmers in that neighborhood had been plowing during the whole of the late storm and flood, and that their crops of grain are already looking green under the warm Spring sun. The late pleasant weather has dried the ground sufficiently to enable most of the farmers in that vicinity to resume work, and many anticipate more and richer crops than that portion of the county has ever seen.

Probably there are few that have ever traveled through the county who have any idea of the amount of the richest kind of land that lies in Colusa county. The whole country between Colusa and Princeton may be safely classed as one of the highest favored spots agriculturally that "ever turned its broad back upon the gaudy sun." The extensive belt of timber that lines the river offers facilities for fencing that no other portion of California possesses, and it has been used liberally. The long lines of strong and high fences remind one of the older States.

Conspicuous among the fine farms that line the river is that of John Boggs, Esq. Standing in a locality that cannot be surpassed for beauty and convenience by any site we have ever seen, it has been improved, fenced, and stocked with care and much cost, and may be regarded as one of the model farms of the State.

Comparatively few stock died in that vicinity, though on the other side of the river the loss has been great among both sheep and cattle. The country surrounding the village shows but little of the disastrous effects of overflows. The storm will prove advantageous to most of the farmers in the neighborhood, as it has soaked the ground so effectually that no drought can affect it disastrously very soon.

The same paper also gives the following well-timed hints: These warm days of early Spring should not pass neglected. A few hours devoted each day to planting seeds, trimming fruit trees, and arranging grounds, will be repaid to the fullest measure. Nature has done much for Colusa county—a little industry and taste can do much more. Five dollars invested in seeds and roots, and a little labor, will do more to ornament these gardens, yards, and houses, than ten times that amount expended in any other way, and the same tree that will bloom with flowers in the Spring, will be laden with fruit in the Autumn. These labors, too, are always compensating; they react upon the laborer. And she who with knife and spade will plant a lily now to perfume and adorn her garden, will be planting and nourishing the roses and lilies upon her cheeks. The exercise will give vigor to the nerveless, and muscle to the weak.

◆

Loose Stock and Fences.

A committee of the New York Farmer's Club, lately estimated that the fences in that State cost $92,000,000 every ten years, or $9,200,000 annually—the most of which, the club contend, might be and ought to be saved to the farmers of that State, by making the stock owners take care of their own property. A resident of Sacramento county has been making a calculation relative to stock and fences in that valley, which the Bee gives in his own words: "According to the State Register, the counties of Tehama, Colusa, Yolo, Solano, Butte, Yuba, Sutter, Sacramento, San Joaquin, Stanislaus and Merced had in 1859, 230,000 acres in cultivation. The loose stock in those counties then numbered 228,000. The acres cultivated since that time, have, by the best information, more than doubled, say they now number 700,000 acres, with a mile of fence to every 100 acres or 7000 miles in all. To this may be added one-third for fences inclosing pasture, and we have 9,333 miles of fences at a cost of $600 per mile, or a total in dollars of $5,599,800. About half of this fencing has been carried away, torn up, or destroyed by the floods and could not be replaced for $600 per mile. The cattle in these counties now do not, reckoning the loss by flood and inclement weather, outnumber the stock of 1859, and 228,000 at $10 per head would be worth only $2,280,000, but they could not be sold for near that price—not for more than $6 per head, which would bring $1,368,000—and yet the fencing necessary to keep out this stock so as to permit farming to go as before will cost over $3,000,000, or more than twice what the cattle are worth! If a law for the protection of crops from stock be not passed, the number of acres cultivated this year in the counties named will not exceed 300,000, and the total value of the product at $20 per acre will be $6,000,000: but if a law to protect farmers be passed, 700,000 acres will be put in cultivation, whose crops at the same rate would be worth $14,000,000, but as the acres would be increased we place the product of each at $15, and have the sum of $10,500,000 or a gain of four and a half million dollars, or three times the value of all the loose stock, by the passage of this law. It would be better then to drive all the loose stock into the sea than to oblige farmers to fence against them at any time; but in a time like this it is simply impossible for men whose lands have been overflowed to replace their fences."

◆

Fruit Trees from Cuttings.

Having been successful in making cuttings from the pear root, I give the process: Take a common, soft, burnt draining tile, two or three inches in diameter, and two soft burnt bricks; soak them in water. Have in readiness a bed of wet, bank sand; then fill the tile with cuttings, and lay it on the bed of sand, closing both ends with the bricks; then cover the whole three or four inches in depth with wet sand; let it remain in that condition for six or eight days, occasionally watering it to keep it moist; at the end of the time stated take the cuttings out and they will be found with a callus formed upon each. Then plant them out in sand or in earth, in the shade, and water occasionally; in a few days they will throw out roots and grow handsomely. Any kind of cuttings can be rooted in this way.

Wine Product of Los Angeles Last Year.

The following, says the Southern News, is the estimated number of gallons of wine manufactured in Los Angeles county, last year. It is supposed to be as near as possible correct:

Kohler & Frohling	50,000
Matthew Keller	35,000
Sansevain Bro	20,000
B. Ballerino	10,000
Dr. White	8,000
Fulda	7,000
V. Hoover	7,000
B. D. Wilson	15,000
William Workman	6,000
Messer	6,000
Vignes	8,000
Boyle	3,500
Huber	2,500
Clemente	7,000
Dalton	4,000
Anaheim	50,000
Cocomungo	8,000
Total	247,000

It is estimated that 400,000 pounds of grapes were shipped from this county to San Francisco during the past year.

The News adds: Again we would call the attention of the Legislature to the importance of fostering this great industrial branch of our State. Burdens which will retard its advancement should not heedlessly be imposed upon it. Already the tax imposed upon wine is found to be onerous on account of its not being fit for sale at the time of its manufacture, nor until at least two or three years have elapsed. We hope the Legislature will consider the matter and remedy the evil complained of, thereby advancing the interests and stimulating the energies of our wine manufacturers.

◆

In Tehama county, the Beacon states that but little loss has been sustained by the floods, and adds "in fact the heavy rains and high water will prove a blessing rather than a curse to the farming community, and we may not only expect large crops the coming season, but high prices for everything the farmer produces. To be sure, thousands of cattle have died—but the cause is not traceable to either rain or floods, but to an excess of stock, more than the land was capable of furnishing subsistence for—negligence in taking care of stock—in fact, starvation has done the work, a result which any man of ordinary foresight might have foreseen. A sufficient number of cattle are still left, and are worth to-day more money than the whole stock would have been, had none died.

◆

The Wheeling (Va.) Intelligencer of the 17th says: The new tea plants are now in bloom in the National Conservatory at Washington. They bear a white flower, and fill the air with a delightful perfume.

Eight Children at a Birth.—On the 2d August, Mrs. Timothy Bradlee, of Trumbull county, Ohio, gave birth to eight children—three boys and five girls. They are all living, and are healthy, but quite small. Mr. Bradlee's family is increasing fast. He was married six years ago to Eunice Mowery, who weighed two hundred and seventy-three pounds on the day of her marriage. She has given birth to two pairs of twins, and eight more making twelve children in six years. It seems strange, but nevertheless is true. Mrs. Bradlee was one of triplets, her mother and father both being twins, and her grandmother the mother of five pairs of twins. Mrs. Bradlee has named her boys after noted and distinguished men; one after the Hon. J. R. Giddings, who has given her a splendid gold medal; one after the Rev. Elijah Champlain, who gave her a deed of fifty acres of land; and the other after James Johnson, who gave her a cow.—[Letter to N. Y. Tribune.

Earl Russell, in a dispatch dated 23d of January, to Lord Lyons, says that the English Government differs entirely from Secretary Seward's conclusions on the question whether the persons taken from the Trent and their supposed dispatches were contraband.

Napoleon opened the French Chambers on the 25th. He said that the civil war which desolates America has greatly compromised our commercial interests. So long, however, as the rights of neutrals are respected, we must confine ourselves to expressing wishes for an early termination of those dissensions.

A dreadful fire broke out lately at the Napoleon Docks, Antwerp. The Belgian sugar refinery and the St. Felix bonding warehouses were burned down. The estimated loss is 5,000,000 francs.

The late flood in the Allegheny river, P., cleaned out the oil region of its barreled product, and it was estimated that as many as one thousand barrels were on the river at one time.

WHY WILL YE SUFFER?
Read the following Certificates and be convinced:

GALLINAS, Sept. 15, 1861.
To John DeFries, Esq., San Rafael.
I hereby certify that I have been afflicted with the most severe case of Rheumatism of a most unusual character, for several years, and during that period I have been advised and under the treatment of some of the most eminent Physicians without the least benefit, and have been pronounced incurable by several of them. I was advised by a friend to try your treatment. I did so, as a last resort, as I was lame and helpless as an infant; and to my surprise and gratification found myself cured and able to go to work in the short space of five weeks, and have been cured and well now for about one year, and find your medicine most excellent and without any bad effect—the same as mercury or other medicine often has—and I can recommend your treatment to all those affected.
RICHARD DOWDELL.
Sworn and subscribed before me this 16th day of September, 1861. J. T. STOKER, Justice of the Peace, San Rafael Township, Marin county.

SAN RAFAEL Marin county, Jan. 17th, 1862.
This is to certify, that I was afflicted in January, February, and March, 1858, with the Rheumatism, by which I was unable to move hand or foot the most of the time during said months. To my great relief I obtained two bottles of Rheumatic Medicine, prepared by John DeFries, which entirely cured me, and I have never since felt any rheumatic pains.
R. W. FRINK, County Judge of Marin county.

This is to certify that I have used the Medicine prepared by John DeFries, in my family, and am prepared to testify as to its efficacy in all cases, and have never known it to have a bad effect.
J. O. B. SHORT.
Subscribed and sworn to before me, this 8th day of October, 1861. DANIEL T. TAYLOR, County Clerk.

☞ Mercury Never Used. Chills and Fever Cured in two days, without Drugs and Medicine inwardly.

☞ Persons whose systems have been injured by Mercury, can have the poison eradicated entirely.
Address JOHN DEFRIES, San Rafael.

California Notes.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
THIRD SERIES.

of whole Series; continued from Farmer of Feb. 21, 1862.

XIII.—M.

Indians of the Colorado and Gila Rivers and those of the Gulf Shores.

Indigenous Products of the Indian Cultivators.

The Jesuits found fields of *wheat* (no doubt an indigenous species), frijoles, maize, cotton, pumpkins, etc, in the different Gila expeditions of Kino and others between 1698 and 1764, cultivated by the Pimos, Maricopahs, and others. The population of the basins of the Salinas or Assumption, San Francisco (the old Verde or Azule of the Gila), must have been very dense, together with the immediate plain or valley of the Gila bottoms, of which the fore-mentioned rivers are tributaries from the north. Ruins of houses and remains of broken pottery strew, as is said by others, the upper waters of all these streams, and irrigating canals still remain to testify of many successive generations of men once occupied these portions of the southern frontiers.

The Ruins of the Gila.

Bartlett's company mention finding near the ruins and *acequias* of the Salinas, where it comes into the Gila opposite the Pimo villages, numbers of small green stones (blue stones or amethysts of de Niza, Alarcon, and others, probably) which are much prized by the Indians of the Gila and Colorado to place in their strings of wampum (or shell money); these blue stones were noted by Alarcon as early as 1540, who also notes that he went up the Colorado as much as eighty-five leagues (255 miles) and found that he there was stopped by high rocks through which the river passed (the Big Cañon), and that on his way up and down he met with no less than *twenty-three* different Indian languages among the tribes on the river.

Overflows of the Colorado—Tide Bores.

Alarcon, Kino, Consag, the Jesuits after Consag in 1747, some of the Franciscan Friars, and the Spanish military officers up to 1800, James Patie, and since then the wandering California hunters to 1860, as well as the military officers of the United States, have all made notation of the sudden overflows of the Colorado river-bottoms, at the Gulf openings, caused by a sudden rise of the tides from pressure of winds or seas, and meeting the current of the river, causing the phenomenon of *the Bore*, such as is seen at the mouth of the Ganges, Amazon, and other great rivers of the earth. Patie's account of this sudden rise of the waters is very interesting, and corresponds to observations made in 1852. The water in the river being backed, or filling up its banks to overflowing, causes it to find outlet in every direction by its sloughs to the westward, particularly where there is a great depression in the earth's surface below the level of the sea, as is assumed by Blake and others. These *bores* cause great changes in the loamy sandy river-bottoms, and often sweep away immense tracts of land. The river is also greatly affected by the melting snows in the snowy ranges of California, Utah, and New Mexico, and every year brings immense currents of fresh water to the ocean, which overflows for miles in width. After the waters dry off, the Indians commence their cultivation of maize and pumpkins; before clearing the land, however, they run a stick in the ground, and if the water coming in is too brackish, they remove to other places.

Quenchless Water.

Bartlett mentions a curious fact of a spring of sweet water, near Carisso Creek, without possessing the faculty or power of quenching the thirst. This is in San Diego county, not far from the desert, and is also mentioned by Lt. Whipple, in his memoir of 1849-50, published in Schoolcraft's Indian Volumes.

Prairie Dogs in California.

He also mentions the existence of the Prairie dog as having been seen *by him* in California. We often questioned Colorado travelers about this curious fact, but as far as we know, they say it must be some mistake of Bartlett's.

Sculptured Rocks.

Bartlett also gives many engravings of sculptured rocks on the Gila and in Chihuahua, and on the Rio Grande, not far from El Paso; these are stated by him to exist in many localities of the Alturas, as related by Indians and hunters. They are found also in Upper and Lower California (generally on sandstone rocks and cliffs), and in New Mexico and Utah. Some of them evidently relate to matters since the Spanish conquest; others may contain records of the ante-Columbians, worth research. They are also found in caves with the addition of mineral paints in those parts of these countries where limestone and sandstone formations prevail.

The Pueblo Indians of New Mexico.

The Pueblo Indians of New Mexico, from their ability and industry, and their peculiar architecture and mode of living, seem to me to have once been the occupants of all those dry healthy mountain regions of the great Cordillera of North America, extended or deflected constantly to the western shores, more than to the Atlantic. The habits of many of the Indians (the existing semi-civilized under Spanish influences) of Mexico and Central America, on the dry Pacific Slopes and plateaus, assimilated very considerably to those of New Mexico, and the query in my mind is if they did not keep *always* within the boundaries of their own native climatological elevations, as near as was consistent with the preservation of health and vigor, and kept from the unhealthy tropical coasts. Probably the Toltecans or Aztecs were their enemies, and when the clash of strength came, these last deflected permanently to the Atlantic slopes.

Montezuma's Name.

Bartlett says the Gila Indians know nothing of themselves of the story of Montezuma, except what they have been told by Mexicans or Mexican Indians. However, it is a certain thing that those of Sonora and New Mexico, as well as other parts, have from all consonants knowledge of some Montezuma or other. All travelers mention the fact, and there must be something in it of value.

Bartlett's party saw in several instances quite large numbers of pure white antelopes on the plains of Texas and Chihuahua, which animals are an object of great veneration and value by many tribes of the Alta California Indians. In very many respects his account confirms the extended journeys of Cabeza de Vaca of the same lands in 1530–40.

Scarce Books.

Bartlett mentions two scarce works published on Chihuahua since 1845, viz: Escudero's Estadisticos de Chihuahua of some 200 pages, and Garcia Condes Ensaya Estadistico sobre el Estado de Chihuahua, folios, probably printed in the city of Mexico. Another work was printed in the same city in 1850, on the Geography and statistics of the State of Sonora, by Jose Francisco Velasco, of over 200 pages, which we have seen; these three valuable works are however not to be had in California.

Precious Metals.

Bartlett says the regions traversed by his party are mostly very healthy, and are immensely rich in the precious metals—probably much more so than California, and in the future must astonish the world. He also mentions his intention of one day publishing a separate work on the Ethnography, Ethnology, Philology, and Homology, of these regions, in which the Casas Grandes and remains of the Ancients will be thoroughly canvassed. He collected twenty Indian Vocabularies of Indian tribes, of 200 words each, which will throw great light on the connecting tribes of the Indianology. No one is more competent than Bartlett to handle such subjects, as his published work shows, and also his valuable contributions to Homology and kindred sciences in the two volumes of the Transactions of the New York Ethnological Society, before spoken of in connection with Gallatin's name. The new work of Bartlett will be an invaluable addition to the California Bibliography and Indianology.

Fresh-Water Crocodile.

Accounts have been published in the California papers of 1860, of the discovery of a species of fresh-water crocodile or alligator. These accounts appear to be from truthful sources, but no confirmation has as yet been given to the only one seen up to 1 Feb. 1860. There is a Lake Cayman of Chihuahua of the maps, but which Bartlett says is known there (it was near his route) as Lake Tlagualila in the Bolson de Mapimi; this Bolson is an immense valley basin of Chihuahua and Coahuilla, with no river affluents connecting with the sea. Cayman is the Spanish for alligator, and doubtless the name was given according to old Spanish custom, from the appearance of some species of alligator in the first settlement of the country.

Utah Indians.

The California papers of the Fall of 1860 contained a strange account of a Utah Indian proceeding near one of the Mormon settlements of Utah Territory. Two Mormons were out in the fields at work when they were surprised by some Indian horsemen and a woman riding up, who ordered them to dig a grave in a certain place. When the hole was finished they were told to stand off, and the Indians deliberately proceeded to place the woman in the hole and bury her up alive. After which the Indians rode off, taking with them the Indian woman's horse. The wondering Mormons had hid themselves, but kept a watch on the proceedings of the Indians, and on their departure went down to the grave, and found on opening it, that the woman of course was dead. This most likely was the work of some Indian witch, doctor, or sorceror, and the burial his mode of punishing some expiatory lives or of blood offering.

San Diego Indians.

Speaking of the Comeya tribe formerly christianized in the Mission of San Diego, and referring to those of the old Jesuit Missions of Sonora, Sinaloa, Alta and Lower California, Bartlett remarks that it ought to be borne in mind, that many of the Indian tribes *ante tempo Jesuita* have since become entirely extinct. He also mentions what all old Californians know: *the extra fine quality* and abundant yield of the *Sonora Wheat*. We strongly incline to the opinion that the Gili-Indian Wheat, as well as much of that of Sonora, is, like the California Wild Oat, an *indigenous species*, equally with that of their cotton.

Curious Crinoline Adventure.—A correspondent vouches for the truth of the following story: "A young lady expensively dressed, was in a garden within one hundred miles of the town of Bradford. She stooped to gather something, when her crinoline coquetted with a beehive that stood close by. On attempting to walk forward the mischievous article, unwilling to surrender its hold, pulled over the hive, and an angry troop of bees came buzzing about the alarmed and unhappy fair one. Clearly no time was to be lost; so, mustering up all her courage, she rushed to a pond in the inclosure, and plunged overhead, to shield herself from her exasperated foes. As it was, however, the poor girl was very badly stung, and had to be removed to bed.

NURSERY BUSINESS, &c.

FRUIT TREES!
THE SUBSCRIBER OFfers the present season, an extensive assortment of
Fruit and Ornamental
Shade Trees,
SHRUBS, EVERGREENS,
Greenhouse Plants, &c.
....ALSO....
200,000
FOREIGN GRAPE-VINES,
THE LARGEST AND FINEST SELECTED STOCK
FOR WINE AND TABLE USE,
IN THE STATE.
We are prepared to sell the above in large or small quantities, at
GREATLY REDUCED PRICES
from previous years, and lower than the same kinds are sold, as per Eastern catalogues. Also,
The California Grape-vine,
OF TWO YEARS' GROWTH.

Nursery Stock,
CONSISTING OF
Shade and Ornamental Trees,
Locust, Maple, American Elm, Linden,
Linden, Mulberry, Osage Orange,
Poplar, Weeping Willow, Catalpa,
Laburnum or Golden-Chain,
&c. &c. &c.

EVERGREEN TREES,
California Arbor Vitæ or Cedar, Sugar-Pine,
Spruce, Firs, Deodar Cedar, Cypress,
&c. &c. &c.

Persons ordering particular varieties of Fruit Trees will please mention whether they will allow us to SUBSTITUTE, in case we have not the particular varieties named; we will, however, in all cases, adhere to the orders, as far as possible; and when allowed to substitute varieties, will give kinds of the same Class ordered, as Early, Autumn, Late or winter Fruit.

PURE CALIFORNIA
White and Red Wines
For Sale, by the Gallon or Case,
Containing nothing but the pure juice of the grape.

Garden Seeds.
A large and varied stock of Home Grown
GARDEN AND FIELD SEEDS,
All of which are guaranteed to be of OUR OWN GROWING, and being the present season's crop, all are warranted to be Fresh and Genuine.

CATALOGUES of the above are now ready for mailing to all applicants, free of charge.

All orders must be accompanied with the cash, to receive attention.

The California Farmer.

SAN FRANCISCO:
FRIDAY..............................FEB 28, 1862.

Delayed Papers.—As the transport of the mails has been obstructed in most every direction, for several weeks past, and many of our subscribers may have failed to receive the Farmer, we have to inform them that they have been regularly sent from this office, each week, but were doubtless unavoidably delayed in reaching their destination.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination, hoping it will meet their approval and induce them to subscribe, and ask their neighbors to do so.

Postmasters and others, who may receive the paper, will oblige us by soliciting subscriptions, or putting it in the hands of those that will. Subscriptions may commence at any time.

Send for Sample Papers and get up a club. Address, Publisher California Farmer, San Francisco.

NEW PRODUCTIONS.

With a hope to ascertain to what extent many of the new productions that have been tried have been grown successfully in California, we desire to hear from the growers of the following products, and shall be grateful if they will furnish us with all the information in their power relative to their success with the several products named.

We wish to hear from the growers of the following: Hemp, Canary Seed, Hops, Flax, Chinese Sugar-cane and West India Sugar-cane, Dioscorea Battatas, True Carolina Potato, the Cork-bark Oak, Tea and Coffee. We should also be glad to have statistics of the Tobacco and Cotton that have been grown, confident that they would be of great value. We would like the number of acres grown of each article, and the quantity of each in weight. All the important facts: the quantity sown (and when sown), the time of planting and manner of cultivation, with the time of harvest and the results.

As these are important facts, and for the public nterest, those who aid us in this matter will thus be, in truth, public benefactors, as we wish to publish such reports.

Sales of Grain and Wool.

Those who desire to realize the very highest price for their Grain and Wool, can be informed of the best chances in our city, where, on all special occasions, they can realize high prices without delay. Samples sent to us from the country, with particulars, will be responded to.

Durham and Devon Cattle, Blood Horses, Leicester and Cotswold Sheep, American Ewes and Lambs, and other Stock, for sale. See advertisements in the Special column.

Look at this—High-landers, Pay Up.

Our subscribers, who have not been swept by the flood, should bear in mind that while we are called upon to sympathize with the sufferers and relieve those who are flooded, we need the prompt response of the "able" ones that we may do the more, and therefore hope every subscriber will feel bound to remit to us promptly.

Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from five to fifteen per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and, where they desire our judgment, we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery.

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial "hobby," and we know we can satisfy all that send us their business to attend to.

The Lama and Alpaca Goats.

Measures are in progress to secure these animals for this State, and it is now proposed to import them through Gov. Bigler, who has left at our office important documents which we shall be happy to show to those who desire to enter into an arrangement for their introduction to this country, and which can now be done with great success and profit.

Look to Our Special Advertisements.

Our readers will always find important advertisements in our Special Advertising columns. We have at this time Stock-Farms, Orchards, Saw-Mills, and Property to Exchange or for Sale, all worthy Special notice.

Miscarried or Lost Letters.

As there have been many letters lost or miscarried during the late unprecedented flood, and the delays resulting therefrom, we hope all our correspondents who may have written to us and who may not have received prompt replies, or due attention from this office, will notify us of the fact, and we will endeavor to make amends, as we feel confident that many letters have been miscarried and lost. Those of our subscribers who have failed to receive their papers, can have the missing numbers made up for their files, if they so desire it.

A Way to find Springs of Water.—We call the attention of the curious to the letter of our correspondent from Stony-Brook. A new way is here proposed to show where springs may be found in the hills and mountains of California. The plan of our friend is something after the manner of the Divining Rod, by which means treasures are discovered, so with the plan of our correspondent. Should others have faith to try it we hope they will give us the result.

The following facts came to our knowledge this week: Henry Churchill of Sutter County, near the Buttes, saved his barley and wheat straw and fed it out to his cattle during the flood and cold weather. His loss in stock numbers *one heifer*. His neighbors who burnt their straw were in want of same kind of food, and suffered a loss of one-quarter, one-half, and some three-quarters of their whole stock.

The Hubbard Squash.—This squash is the very best known; delicate, yet pure and sweet, and is always good and reliable. The best way to cook this variety is to saw the squash in half, and place in oven and bake it. This squash for pies is equal to the sweet potato, and of the same flavor; it should be extensively cultivated.

Our Present Number.—We ask the especial attention of our patrons to this number of the Farmer. We feel confident all our readers will see that in despite of the severe calamities that has fallen upon the interest we advocate, our Journal looses none of its interest, but rather improves. May we not therefore secure your coöperation.

Growing Flax and Hemp.

The numerous inquiries that are constantly made of us relative to the value of Hemp and Flax in this State, when grown, and the assurance that a large number of acres will be grown the present year, has induced us to make the needed inquiries abroad, and of those parties here who are interested in the cultivation of both these staples, and who will in all probability be the purchasers of the raw material when grown.

Having called on Messrs. Tubbs & Co., proprietors of the Rope-works, we learn that the principal amount of Hemp now in use here, is imported from Manilla, and costs about $100 per tun landed here. The tarred rigging used for shipping is principally imported. Twine and small rope has not yet been made, but that kind of manufacture will in all probability be commenced this Autumn, when all the Flax that shall be grown will find a ready market here, or it can be shipped East with a certain profit.

The last reports of the New York and Boston markets quote American Hemp as follows: Dew rotted, $1 35 to $1 45 per tun; Dressed, $2 to $2 15 per tun.

The condition of the market and the probable increased demand for navy and general use will increase the value 10 to 20 per cent. The market price for Flax was not reported for some time past.

The article of *Flax-seed* will always command a ready sale at a good price; and we learn that arrangements are in progress by a prominent house in this city to purchase all the seed and manufacture oil from it.

With these facts established, we hope those who have lands suitable for the growth of Hemp and Flax will try them the present spring. The season for planting is from the 1st of March to the 1st of April, upon good rich, light, sandy soil. Both Hemp and Flax should be sown quite thick in this country, so that it shall grow with fine slender stalks, and thus would rot easy. When sown thin it grows so stout that the fiber is coarse when rotted, and neither glossy or fine, and much less in value.

We shall be very much obliged to those who are growing either Hemp or Flax if they will communicate with us on the subject, as we may be enabled to communicate important facts and be of service to them.

Russian Hemp is now sold in New York at $2 40 per tun, and our opinion is that California Hemp when properly grown and properly dressed will equal any ever imported from any part of the world.

Since writing the above we find later reports in the New York papers as follows: Jute, $1 25 to $1 30 per tun; Russia, $2 50 to $2 60 clean dressed; American, undressed, $1 45 to $1 60; American, clean dressed, $2 10 to $2 20.

Fences! Fences! Fences!

In our Journal we have presented the subject of fencing against stock and the utter impossibility of the farmers being able the present season to protect their crops unless the Legislature should pass a law *compelling stock-owners to herd their cattle*, and to make the stock that is left without herdsmen responsible for all the damage done.

We believe such a law would be just and right, for nearly all the large stock-raisers are able to employ herdsmen. Many of them are also contiguous to one another, and apart from the mass of cultivators, owning large tracts of land; such stock-raisers can arrange among themselves when they meet at their "rodeos" relative to the employment of herdsmen, and thus the law will not conflict with their plans or their interests. We really believe such stock-raisers will cheerfully obey such a law when they see the necessities which demand it. And again, it is not the large and regular established stock-men that commit these depredations, but a class of cattle-roamers, speculators, etc., that go from district to district, and turn their stock loose wherever there may be found feed to suit them.

We call the attention of all who feel interested in this subject to the letter of Mr. Prevost in our last issue, and to the letter of Mr. Clark in our present number, and also to the bill now before the Legislature as presented by Mr. Saul, from the Committee on Agriculture. This we trust will awaken immediate attention and action, for it is important that the question should be immediately settled so that the Farmers may plow and plant in security.

We desire most fully to express our conviction of the necessity of a wise and judicious law restraining all stock from roaming at large, for as our farming interests are now in peril from this source, immediate action by the Legislature will result in great good to the whole State.

It should be remembered that good legal fencing will cost as estimated by intelligent farmers three times the cost of the land itself in all ordinary cases. Another reason why relief should be given to Farmers will be seen in the fact that at this time thousands of acres of the vine would be planted if they could be protected by law against the depredation of stock running at large.

Loss of Sheep.

Much controversy seems to be going on about the loss of Sheep and Lambs resulting from the late floods, and the cold storms and severe weather following. We presume our information is about as good as any one upon this subject, and we do not estimate the loss so high as many persons; yet it is high enough, sad enough, and bad enough, and costs enough. When all the reports shall have been made of all the stock, of all kinds, it will be found that the real loss of stock to our State will not be far from 600,000 head, comprised as follows: 150,000 Horned Cattle, 100,000 grown Sheep, 300,000 Lambs, 25,000 Horses and Mules, 25,000 Hogs and Goats; total, 600,000.

When the reports shall come in, this we think will be the very outside of the loss. We hope it will fall short of this, although the severe cold since the floods have been very fatal, adding one-third to the above estimate.

San Jose Mercury out of Order.—We notice that the Mercury in its issue of February 20th, copied nearly a column from the Farmer without credit. Is this "on the square" Mr. Mercury?

Marin County.—No. 3.

Marin county is famous in the history of California, and yet how few persons neither know where it is located, or of its pleasant and beautiful situation, or of the yet undeveloped resources that lie hidden for want of due care and consideration. We presume the location of the State Prison and its associations has been of great injury to this county, arising from the many prejudices connected therewith, those who have managed this institution being residents of the county, and the escaped convicts and those pardoned out being employed often in the vicinity, has worked against the county in the public mind. This is unjust, as this county, save the immediate vicinity, is as free from its influence as any other county.

When at San Rafael, we made a circuit for the investigation of the different ranches. From the center of the town we went seaward, intending to round "Point San Pedro;" we called at the residence of Wm. Sims, Esq., of whom we spoke last week. Mr. S. is an early settler in this place, located here in 1857, when only two building were in San Refael, save the old Mission. Now 200 inhabitants and beautiful in location and climate, only needing a spirit of the right kind to stimulate the cultivation of the earth and make the place appear in good taste. Mr. Sims has done much to set others at work, having a good young orchard in fine growing condition. Our next call was at the residence of Oliver Irwin, Esq., whose ranch comprises 1200 acres, mostly low land unimproved, 10 acres only cultivated. Mr. I. has 1000 trees planted, 200 grape-vines, 150 head horn cattle, a good dairy now under lease to Mr. Ogletree, consisting of 125 dairy cows, making about 75 pounds of butter a day in the season. To Mr. Sims and to Mr. Irwin, we were indebted for many courtesies. On our route round the point, we called at "Towne's" ranch, a good location opening to the bay, and capable of making a good ranch if only properly cultivated. At the bay-opening to this ranch a large amount of lumber was washed ashore from the flood. Mr. Towne saved about 2000 feet of lumber all along this point. We found much "tide wreck," dead cattle, horses, hogs, &c.

Next, Captain Simpton's ranch. A stock ranch of only about seventy head of cattle and horses. Requires a good cultivation only to make a good and profitable ranch. J. D. Bullus, Esq., has a very excellent ranch, and is about building a new house and making substantial improvements. Mr. B. raised an extraordinary crop of potatoes last season, planted in May. Mr. B. has 350 acres of land, 50 head dairy stock, makes 100 pounds of butter a week, in the season. Near this and on this ranch is a fine quarry of stone, which should be opened for building purposes. And at this point is also a good steamer landing, and also a point of excellence to connect with the railroad from Russian river. This would bring produce to market and benefit all along this route. One mile from this, on the shore at a very pleasant bend of the bay is the ranch of J. J. Bullus, Esq. (the Father of Mr. J. D. B.) Here is to be another dairy ranch. Mr. B. was hard at work (though a man of years), erecting a new house, a dairy-room, &c. All along shore in front of his place was evidences of the floods: fence staff, new lumber, remnants of furniture, dead stock etc. Mr. B. has about 800 acres, 300 head stock, milks 120 cows in full season, and makes 200 pounds of butter a week. From this point we rode over the hills and along shore witnessing the evidences of the late storm, often seeing chairs, tables, bedsteads, portions of buildings, dead stock, &c., all from the valleys, above and from Sacramento, which had swept across the bay.

G. King, Esq., has a very valuable ranch at a very pleasant point and susceptible of great improvement. A portion of his ranch runs into the lowland, that having been covered with debris by the storm will give him good land soon. Mr. King is a genuine working farmer, and will have a very fine place ere long. Samuel A. Nay, Esq., has a good stock and farming ranch, and capable of great improvement, has 40 head of dairy stock. Dairying is his forte, and soon an orchard and garden will give comforts to the homestead. He has 500 acres of upland, 100 acres marsh, has 150 fowls and collects from 20 to 25 eggs a day.

The McAllister ranch is now improved by Mr. Kilbraoith, who will soon make it appear in an improved form. All along these shores and hills, and running back into the high ranges, are seen numerous land slides of an interesting character; large slides from the mountains, sometimes acres jumping out, as it were, and leaping down the sides of the hills, without any apparent cause. We presume, however, that squirrel and gopher-holes, or fissures, admit the waters, and they finding the bed-rock, or hard surface underneath, lift the upper surface and move it forward and down to the valley below. Very curious scenes are witnessed by these numerous marks of a severe winter's storm, of which many records will be made hereafter.

Novato.

Another trip from San Rafael gave us an opportunity to view this fine county that, as yet, is almost wholly unimproved, save as grazing for stock. Novato Ranch, or Novato Center, lies about 17 miles from San Rafael. Novato ranch, owned by Messrs. DeLong & Sweetzer, of which a full description was given in our Number of Jan. 17th, is the only highly and truly cultivated spot. This ranch claims nearly 12,000 acres. The map says 8800 acres. Surveys are now in progress, and soon to be decided. The route from San Rafael to Novato is along a fertile tract of country which, when titles shall be settled, will be one of the richest in our State. We called at the ranch of Mr. DeFries, a dairy ranch (DeFries cures rheumatism, see card in our columns), pleasantly located, needs cultivation. The ranches of Mr. I. Lucus and Mr. James Miller are both pleasantly located near the orphan assylum (which we had not time to visit). Both these ranches could be made very pleasant and profitable, with a judicious system of cultivation. Here is very fine land for hemp, flax, sugar-cane, broom-corn, beet-root, &c. Our next call at "Our House"—this is a very pleasant spot, and we wonder our correspondent Rockwell did not give some notice of it in his sketch of Novato ranch, and also the pigeon shooting, of which he was an observer.

"Our House" is the traveler's home on this route kept by Messrs. Smith & Jones; it is a very pleasant spot. Mr. Smith has a neat cottage and a pretty garden commenced. We found here a well stocked store; doors open; store left alone tending itself—just like 1849-50; all safe. Mr. Smith says he is in a good neighborhood, and never fears anything being lost. Here is a pleasant place to spend a few days fishing and shooting; plenty of sport in the streams and the hills from this to the "Novato Ranch."

This splendid ranch is all that our correspondent described. The location is very beautiful, situated upon a rising mound, at the headland of a long and broad valley; the scenery is truly grand. On the right and left from the sides of the valley rise a series of hills that extending back present a grand and magnificent view. We suggest to the proprietors that they employ Chas. Nahl, Esq., of this city, the truly meritorious artist, to sketch and paint this splendid view.

We spent an afternoon, evening and morning at this spot; we roamed over the grounds, and through the large orchard of 19,000 trees. Here we found an example of care and culture of an orchard worthy of all praise. This orchard shows the true system of the *pruning down short* and thorough cultivation which we have always recommended. The entire orchard was in harmony, in the design and in the care bestowed. Its present condition is the result of the right kind of care; the careful, deep, and constant cultivation of the past year had secured a healthy, uniform growth of the trees, and the looseness of the soil had permitted the excess of water of this winter to settle down below the roots, thus relieving the trees and saving them. This orchard and its culture gave us great pleasure. The stock here is well cared for; a noble large barn well filled with hay and grain and plenty of sugar-beet, ruta-baga and turnips was evidence of a judicious care and management; for there were plenty of sugar-beet for sale, which were now being sold at $30 per tun. This pays farmers, especially when 40 and 50 tuns per acre can be raised.

While visiting this ranch we called on L. A. Parker, Esq., a young man who has charge of the dairy, and found him busy rolling up the yellow lumps of butter, and placing his hundred and fifty pans of milk,—this with only twenty milkers now; but with seventy-five milkers he intends to turn out a goodly account of June Butter that shall command a big price. We were pleased to know that here were to be erected sheds for the dairy stock in Summer and in Winter, and that with proper food the good milkers will be well provided for and sheltered from "Summer's heat and Winter's cold."

We enjoyed our visit very much. We return our thanks to Mr. and Mrs. Sweetser for their kind hospitalities. From this place we rode up the valley and called at the ranches of Capt. Bowman, Mr. Hubbard, Mr. Lett, and Mr. Brackett; these are principally stock and dairy ranches. At the last place we found the proprietor busy preparing for spring work, an active and nice young bachelor, and with the means around him we wonder he don't remember that his dairy rooms would do so much better if he had some good spirit to be a *help make butter* (we mean a "help meet" also.) Now friend Thomas don't you think so too?

On our return we passed the place called "Black Point"; not having time to visit it we regretted it, as there are a number of active and energetic farmers and ranchers at that point, which hereafter will prove a very important business point, and where our government should again establish a Postoffice, now very much needed.

State-Prison Labor.

The question of State-prison labor and the influence of it upon free labor is now agitating the public mind. This, and the Chinese question—Cooley labor—is exciting an array of facts, all of which will undoubtedly result in final good. Our Legislature being now in session, will, by their committees, most assuredly do nothing hastily, but weigh well all the evidence before them and do all in their power to encourage, foster, and protect all the individual interests of our State.

Feeling a deep interest in these questions, we have made a visit to San Quentin, and have visited the tailoring establishment where there are 100 convicts at work on clothes. These are employed by Messrs. Leonard & McLennan, proprietors of the Mission Woolen Mills, under the charge of E. E. Jennings, Esq. We visited the iron-works, foundry, machine-shop, brass-foundry, &c., belonging to T. Ogg Shaw & Company, who employ 100 prisoners. These are under the charge of Gov. Dorr. This will be, when finished, one of the most complete establishments on this coast. We visited the carpenter's, blacksmith's, and wagon-maker's works, under charge of Mr. Kelley. Here are 25 prisoners. We visited the cigar factory, where 35 prisoners are engaged in making cigars for Englander & Company, under the charge of Mr. Vogelsdorf. We visited the cooper-shops, where 35 prisoners are engaged in making casks, barrels, and kegs, for E. T. Pease & Company, and J. Dows & Company. These are under the charge of Mr. Marvin. And in every establishment we were surprised to notice the great order, the industry, and attention to labor which prevailed everywhere. From all that has been done heretofore, there is a most wonderful change for the better.

We saw the prisoners, 576 in number, go to their meals quietly and noiselessly, take their seats orderly and eat good and wholesome food, and in plenty, to the credit of the Commissary and to the State, and to the authorities that now rule. It is not our intention to give a complete sketch of what we saw in *one* notice only, but we have important facts and statistics which we have collected, of the *past* and *present*, which we shall give our readers in a series on "Convict Labor" and the management of the convicts and the prison.

We must, in justice to what we saw, assert that we were agreeably surprised at the excellent condition in which we found the prison system conducted. It is a credit now, where heretofore it was only a reproach. The prisoners show that, even if they are law-breakers and criminals, they are treated with kindness and humanity. The following are the officers of the prison: W. E. Robinson, Warden; W. P. Jones, Commisary; J. M. Blood, Captain of the Guard; J. Fitzbain, Lieutenant of the Guard; J. R. McGarvey, Clerk; Albert Shephard, Overseer; E. Baldwin, Turnkey. To the Warden and Commissary, and other Overseers and Superintendents we met, we are under obligations for kind attentions and a readiness to show us all the working of the State Prison labor, and we shall hereafter give, particularly, the facts as we gathered them.

The Golden-Gate Nursery.

Whoever wishes to fly away from the cares of business, its worryments, its trials and losses, and find relief and repose, we would recommend to them to go out to the Golden-Gate Nursery, and call upon the proprietor, W. C. Walker, Esq., and spend an hour or two, and stroll through his conservatories, and among the many beautiful walks, and examine the numerous kinds of Plants and Flowers, especially the immense number of new *evergreen trees* which Mr. Walker has introduced into his collection within the last two or three years.

We have often spent hours there, and every time with new pleasure and delight in seeing the success which attends the growth of this particular class of plants and trees. They seem peculiarly adapted to our climate, even in many cases surpassing in growth and beauty that of their own native soil.

Our first visit the last week we repeated in order to examine more fully the complete collection which now counts by thousands.

We most earnestly recommend our citizens to give a little time to a visit to these fine grounds. Col. Walker is ever at home and most happy to make a visit pleasant and instructive. Every owner of a homestead should visit this garden; there are so many trees and plants that would adorn the "homestead" that it is a sin against nature that they should not be universally enjoyed. Among the many very choice varieties now of full size and thrifty growth, we would name, especially worthy of notice, the Eucalyptus; there are four sorts. This class of trees are of the most graceful character; branches pendant like the willow, yet evergreen; bright slender shining leaves, a tree of very rapid growth; the wood fragrant, and some sorts fragrant leaves. This is one of the very best of shade trees.

The Acacia trees; of these there are many sorts. The Australian Acacias are usually known. Col. Walker has many new and valuable kinds, viz: Acacia Longiflora floribunda, a superb tree, always in bloom and very fragrant. Acacia Linearis, very beautiful; several new in foliage and flowers.

The Araucaria excelsa, Araucaria Bidwilli, Imbricata, Cookii, and Cunninghamii—these fine varieties of this noble and beautiful plant should be seen and appreciated. This species of our ornamental tree is unequaled for its perfect symmetry of growth.

Cupressus Macrocarpa—evergreen; beautiful in form and highly ornamental. Cupressus Italian compact in habit, spiral in form, beautiful; one of the finest evergreens.

To these we add as beautiful, double English Hawthorns, a superb flowering tree, one of the choicest of trees and rare; Arbor Vitæ's of many sorts, Nereum Splendens (Oleander), Pittosporum, Enonymus, Fabiana Imbricata, Laurus of many sorts, Metrosideros, Melanucas, Laurestinas, Veronicas, and the Pepper trees; this latter is of fine habit and very fragrant foliage.

We could add a thousand other trees and plants. We only name these few in the hope we may induce our citizens and all our friends in the country when they visit our city to go and see Col. Walker's garden; we are confident that if they will do so they will thank us for having called their attention to it.

In the Floral Department there are found here the gems of every season; the collection of Roses alone embraces over four hundred varieties, while the herbaceous flowering shrubs number as many more.

The Plants in the Conservatory count by thousands, and embrace the choicest of every clime, from the most delicate Fuchsia to the gorgeous Magnolia, whose flowers cast their fragrance for a mile, and which have bloomed finely in the gardens of Gen. Redington, Sacramento; Maj. Hensley, San Jose; and J. D. Farwell, Esq., Oakland. The glorious plant should be in every collection.

In addition to the value of these trees as an ornament around "Home," this collection is the only one in our State where all the needed plants can be found to decorate in a proper manner the Grave and the Tomb—*the last home of man upon earth.*

Washington's Birthday was properly honored last Saturday, despite the rain. Washington's Farewell Address was read in various churches and before the respective houses of the Legislature convened only for that purpose. Salutes were fired at the Government stations. The military of the city turned out for parade, and in mud and rain were reviewed by the Governor. Balls and festivities took place in the evening, and altogether the day was properly observed.

The Baker Oration.—The oration which was to have been delivered on Wednesday evening by was postponed on account of the weather, to Wednesday, March 5th, at which time an address will be delivered which will well repay every person who shall attend. Mrs. Green is a lady of eminent talents; her gifted pen has placed many a gem before the public, and her writings and addresses are full of great and beautiful truths.

Bulbous Roots.—We would urge those who love beautiful Flowers to be sure and secure some of the splendid bulbous roots recently imported from France, by S. W. Moore, Seedsman, on California street. Now is a good time to plant. See full directions in Number 16 of our paper. J. Wright & Co., of Marysville, have a splendid of bulbous roots also, for Yuba county.

STATE SUMMARY.

Storms in the Sierra Valley.

The following facts relative to the storms the present year in this great valley we take from a letter of one of our subscribers, of the date of Feb. 11:

"We have not been exempt from the general severity of the winter, for with the exception of about a week, it stormed for about ten or eleven weeks. It has been the severest winter on stock in this part of the country within my acquaintance with it, a period of over seven years; *still we were not forced to remove the Legislature.* Our principal loss has been confined to the injury sustained by stacks of hay, our general practice in this regard of topping them out having proved entirely inadequate. The roads have been entirely impassable, also a great disadvantage to us, as we have always depended upon a month of sleighing. But still, all things taken at their worst, how can we complain when viewing the utter destruction of property in the Sacramento and its tributaries.

"We have had communication with Downieville most of the winter by mule or horse, there having been several parties engaged in delivering beef cattle in Downieville and the adjacent towns.

Weather, Farming, etc., in Suisun Valley.

Suisun City, February 25, 1862.

Editor Farmer: It it raining here very hard and has been for several days. Suisun Creek is over its banks for the third time this winter, doing considerable damage to fences. But this place has escaped so far without any damage whatever, owing to the fact of its being situated on the water of Suisun Bay, and is drained at every low tide. Our farmers have got in about one-third of their wheat. There would have been a larger breadth of land sowed this year than usual had it not been for the late rains. Our people are getting in earnest about roads; there are sealed proposals to be submitted to the Board of Supervisors to build a macadamized road from this place to Fairfield; it will cost some five or six thousand dollars. An act has passed the Legislature authorising the Supervisors to levy an additional tax of fifty cents on the $100. I hope when you pay us another visit you will find us in communication with the outer world.

R.

Rains in Big Valley.

John Coleman, Esq., Big Valley, informs us as he has just come to our city, that these late rains caused a higher freshet in all the Big Valley region and all along down to Two-Rock Valley, than has been known the past winter. Last Saturday, 22d, the waters was the highest. This freshet washed away some fencing, but not a very serious damage, and made the road impassable for several days. The water in Petaluma was several inches higher than known before, this season. Much grain was ready for sowing before the rains, and much was sowed before this last rain. Considerable stock is perishing, even now, from the cold.

The weather for the past week has been anything but desirable, having been rainy most of the time, putting a check on farming operations and business. The Sacramento river, which had fallen to about fifteen feet above zero, rose a foot or two, and the American broke through the partially rebuilt levee at Rabel's Tannery, and again flooded a portion of Sacramento. By accounts we publish, it appears that a large quantity of water must have fallen lately, and much inconvenience will be the result in most sections. But we have now a prospect of fair weather again, and doubtless good times are coming. Up to Wednesday morning 40.75 inches of rain had fallen here this season.

A calf was born on the ranch of Mr. Nicholas Walsh, near the Calaveras lately, weighing 135 pounds. This calf was by R. S. Bates' "Fourth Duke of Northumberland."

BY OVERLAND TELEGRAPH.

The most important events in the progress of the war since our last, are the capture of Nashville by the federal troops, and another routing of Price, after he had been reinforce by McCullough in Arkansas. Dispatches were published yesterday from the East, up to Feb. 26. In Congress, Senate, the Pacific Railroad and Telegraph Bill has been reported. The Mexican treaty, proposing to guarantee the Mexican debt and appointing Gen. Scott as Minister to Mexico, was defeated. The Conference Committee on the Treasury Note Bill agreed upon a report, which passed both Houses. All Telegraph-lines have been taken possession of by the Government, and all reports of military operations, unless properly authorized, are forbidden. No papers are to be allowed to publish military news, however obtained, unless authorized, under penalty of exclusion from the mails. A very destructive fire occurred in Boston, on the 25th, on Sargent's Wharf and Eastern Avenue, loss estimated at $750,000; several firemen were killed. The army under General Curtis had lately routed Price, together with McCullough's reinforcements, at Cross Hollows, Ark. Price was forced to abandon all his military stores, to-gether with his sick and wounded. The federal army continues its advance into rebeldom in all directions.

Dispatches received yesterday, 27th, state that the President has approved the Treasury Note Bill. The gunboats from Fort Donelson had arrived at Nashville. A British steamer loaded with cotton was captured on the Rio Grade; she had previously landed a cargo of blankets and ordnance at Matamoras. Stark, of Oregon, was admitted in the U. S. Senate by a vote of 26 to 19, and took his seat, The bill to fix the number of members of the House (Congress) at 241 passed both branches. The number of prisoners taken at Roanoke was 2,488.

General Curtis has taken possession of Fayetteville, Ark., capturing a number of prisoners, stores, etc. The enemy burned part of the town and fled.

New York, February 27. Sterling Exchange, 113½@114½; Pacific Mail, 92; American Gold, 2¼@2½ premium; 7 3-10 Treasury Notes, 99½@¾; Demand Notes active, (¼@½ premium,) the banks holding back their notes and paying out their own currency. California Gold Bars 2@2½ premium.

Westphalia Hams.

How often these *famous Hams* are brought into notice as superior to all other Hams in the world. They may be so to the pampered "epicure."

"Old Cheshire Cheese,"—there's nothing like it in the *cheese line* says another.

Krout! krout! sour-krout—that's the dish for me says mine "vrow."

Of all your drinks, give me the "Old Bourbon," says the brave hunter from Old Kentuck; and so "every man to his taste"; but when such Hams can be had as are now cured in California by "Wilson & Stevens," made from our own home-fatted hogs, that eat the grain grown on our own fields, then away with your Westphalias and all other Hams, for there can be none better and sweeter. We can attest to this by our own palate and our own sense of smelling also; besides, it is home-made, and better by far on that account.

Commission Fruit Store.—Our producers in the country can always find a ready sale for all their Fruit and all other kinds of Produce, and at a fair and generous price, and be sure of a quick and prompt return. By a reference to the card of J. W. Gale, Esq., they will see that an opportunity is afforded them of making sales not only of Fruits and farm produce, but also of Live Stock. We take pleasure in recommending Mr. Gale to their special attention as worthy their highest confidence.

Messrs. Hawley & Co.—Farmers! see Messrs. Hawley & Co.'s new advertisement. This House is worthy your confidence; go and trade with them. We shall speak more fully next week.

Two hundred beaver and otter skins were brought to Stockton lately from Disappointment slough. These skins were taken during the high water by a party of hunters, and form but a small portion of the aggregate number taken in and near the locality above named, says the Independent.

A Lancaster (Pa.) paper says that the ex-President, Old Buck, saws his own wood. He must be an old saw-Buck.

THE BAKER ORATION

Which was postponed on account of the storm, will come off on WEDNESDAY EVENING, March 5th, at PLATT'S HALL. All the important points will be found in the Programme, which will be largely distributed. 21

J. W. GALE,
Fruit and General Commission
MERCHANTS,
409, 411, and 413, Davis street,
SAN FRANCISCO.

In calling the attention of FARMERS and FRUIT-GROWERS to the above Card, the advertiser would respectfully inform them that having been engaged in the above Business during the past Five Years, and received during that time Consignments from the principal Valleys and Fruit-growing portions of the State, his facilities for the disposal, to the best advantage, of any Consignments with which he may be favored, are surpassed by none.

CONSIGNMENTS OF
Fruit, Butter, Eggs, Poultry,
&c. &c. &c.
Will be thankfully received and returns promptly made.

☞ Reference can be made to some of the principal Farmers in various parts of the State, with whom I have transacted business during several years.

LIVE STOCK,
My arrangements are such that I am prepared to receive
CONSIGNMENTS OF LIVE STOCK,
and dispose of the same at the Highest Current Rates.
March 1st. 21-6

Splendid Flock Of 600 Sheep.

A VERY SUPERIOR FLOCK OF ABOUT 600 Australian MERINO EWES now having LAMBS by a PURE FRENCH MERINO BUCK.

This lot of Merino Speep can be had at a Bargain, if applied for soon, as the parties are desirous of closing up business. Any persons who may desire a superior Flock of Sheep to begin with, this is a rare opportunity.

15 San Francisco.

BUCKEYE MOWER

THE SUCCESS WHICH THE
BUCKEYE MOWER
has met with in California has led us to make large importations of them for the season of 1862. We feel confident that it is the
Best Machine in Use,
and will take the place of the old-style Mower.
Among its advantages over other machines are the following:

IT HAS TWO DRIVING-WHEELS,
which support the whole weight of the Frame, Gearing, and Driver, giving it nearly double the power of a machine which has but one Driving-wheel.

IT HAS A DOUBLE-HINGED FINGER-BAR,
(Belonging exclusively to the Buckeye Mower,)
which conforms to all varieties of surface, and can be easily raised to pass obstructions. The Bar can be folded over the top of the Frame with perfect ease, so that it can be moved from place to place without trouble.

It has no Cog-Gearing in the Driving-wheels; it is entirely free from side-draft, and has no weight on the tongue or horses' necks. The draft is lighter than ordinary plowing.

THE BUCKEYE AS A REAPER,
The Important Advantages which belong Exclusively to the Buckeye as a Mower, are Retained in the Reaper.

The Two Driving-wheels and Double-Jointed Cutter-Bar make it the ONLY REAPER perfectly adapted to uneven ground.

The REEL is attached with a FLEXIBLE JOINT, which allows it to follow all the movements of the Platform on uneven ground, and can be readily raised or lowered, according to the hight of the grain.

The grain is delivered at the back of the Machine, entirely out of the way of the Team on the next round, in good shaped gavels for binding.

The Platform is readily adjusted to any required hight of cut.

The lateral brace at the rear of the Machine is of great advantage in steadying and supporting the Platform, and can be obtained only in a Machine which has the Cutter-Bar in front of the Driving-Wheels.

The Raker's Seat is so placed as to secure the most comfortable position, and the easiest and most natural movement to the Raker.

The weight of the Raker is sustained directly on the axle of the Machine, instead of being carried on the Platform, where it adds greatly to the side-draft.

By a late improvement in the hanging of the Reel, the tallest or most tangled grain will not lodge in the outer reel-arm.

The outer wheel of the Reaper is nearly in a direct line with the Driving-wheels, thus avoiding all cramping and straining in turning.

—WE HAVE ALSO—
The Celebrated
ESTERLY MOWER AND REAPER.
THE KENTUCKY HARVESTER,
A Combined Reaper and Mower.

For Elegance and Usefulness Combined in a Present
BUY A
WHEELER & WILSON SEWING MACHINE

The Wheeler and Wilson Family Sewing Machines are acknowledged to be far superior to all others in use.

They are adapted to every variety of Family Sewing, they are not liable to get out of order, and a child can learn to use them.

Do not buy a chain-stitch Machine, the seam has a cord on one side very unseemly and liable to wear off and rip.

The Wheeler and Wilson Machines make a stitch alike upon both sides of the fabric, and it will not rip or ravel out.

The Question Solv

COOK'S
Improved Portable
SUGAR EVAPORATOR
FOR MAKING
SORGHUM AND MAPLE SUGAR.

ALL DOUBTS ARE DISPELLED! THAT CHINESE SUGAR-CANE YIELDS
TRUE CANE-SUGAR
Is a Settled Question.
The difficulties in securing its Granulation have been entirely overcome by the invention of
Cook's Evaporator.
By its peculiar arrangement it throws off all scum and feculencies, and secures a deposit of a kind of wax, which would otherwise prevent granulation, and WHICH HAS YET BEEN REMOVED BY NO OTHER PROCESS. Thus in this machine are combined all the requisites for Defecating without Chemicals, and evaporating with an unparalleled rapidity.

Attention is called to the following Claims of this Valuable Invention:

1st. It so liberates the sirup from its gummy and glucose matters that crystallization may readily be secured

2d. It will make more and better sirup in a day than any other evaporator.

3d. Being made of sheet metal it is more sensitive to heat than cast iron, and can suddenly be brought to a very high heat without cracking, a danger to which cast iron Evaporators are greatly subject.

4th. It consumes less fuel by one-half than any other Evaporator.

5th. It is the only one in which great heat can be applied to shallow bodies of juice without danger of scorching; hence its greater rapidity of evaporation and more certainty of success.

6th. It is more convenient for use than any other style; s always ready for work without calling upon all the neighborhood mechanics, and causing great delays when you are in the greatest haste.

7th. It thus combines in an eminent degree all those essential requisites of sugar machinery, viz: speed, superiority of work, convenience, and economy.

The Undersigned hold the PATENT RIGHT for the entire Pacific Coast and are now ready to take orders for this justly celebrated EVAPORATOR. Its merits are so well established that it need only be seen to be appreciated.

We will furnish Evaporators adapted to brick arches at the following prices, Liberally Reduced to meet the state of the times and to promote the successful manufacture of Home Products:
No. 3—Copper Pan, 45 by 90 inches......$100
No. 4— do do 45 by 100 do 125
No. 5— do do 45 by 144 do 150
Two Skimmers, one Door, and one Grates accompany each Pan.

Copper Pans are used for this Evaporator, on account of their great durability and cleanliness.

☞ For any further information and for Pamphlets containing full directions for the Culture and the Manufacture of Sorghum; also for testimonials of its successful Manufacture by this Evaporator in the hands of Farmers of the different States; and for Orders for the Machines, address the undersigned.

CAROTHERS & BATES,
Box 306 P. O. San Francisco.

N. B.—A MODEL of this Evaporator, and Samples of Sirup and Sugar made with it, can be seen, and important information had, at California Farmer Office, where Orders can also be left. 17

Home Miscellany.

THE EXEMPLARY WIFE.

O blest is he whose arms infold
A consort virtuous as fair:
Her price is far above the gold
That worldly spirits love to share.
On her, as on the bounteous isle
Amid life's dark and stormy sea,
In all his troubles, all his toil,
He rests with deep security.

Even in the night-watch, dark and lone,
The distaff fills her busy hand:
Her husband in the gates is known
Among the elders of the land;
Her household all delight to share
The food and raiment she bestows—
Even she with a parent's care
Regards their weakness and their woes.

Her pitying hand supplies the poor,
The widowed one, the orphan child,
Like birds assembled round her door,
When sweeps the winter tempest wild.
Her lips, with love and wisdom fraught,
Drop, like the honey-comb, their sweets;
The young are by her dictates taught,
The mourner her condolence meets.

Her lovely babes around her rise—
Fair cions of a holy stem!
And deeply shall her bosom prize
The blessings she receives from them.
Beauty is vain as summer bloom
To which a transient fate is given;
But hers awaits a lasting doom
In the eternal bowers of heaven.

Beds and Bedrooms.

BY LEIGH HUNT.

BED is the home of home; the innermost part of content. It is sweet within sweet; a nut in the nut; within the snuggest nest a snugger nest; my retreat from the publicity of my privacy; my room within my room, walled (if I please) with curtains, a box, a separation, a snug corner, such as children love when they play at "house;" the place where I draw a direct line between me and my cares; where I enter upon a new existence, free, yet well invested; reposing, but full of power; where the act of lying down and pulling the clothes over one's head, seems to exclude matters that have to do with us when dressed and on our legs; where, though in repose, one is never more conscious of one's activity, divested of those hampering weeds; where a leg is not a lump of boot and stocking, but a real leg, clear, natural, fleshy, delighting to thrust itself hither and thither; and lo! so recreating itself, it comes in contact with another; to-wit, one's own. One should hardly guess as much, did it remain eternally divorced from its companion,—alienated and altered into leather and prunella. Of more legs we speak not. The bed we are at this moment presenting to our imagination, is a bachelor's; for we must be cautious how we touch upon others. A married man may, to be sure, condescend, if he pleases, for the trifle's sake, to taste of the poor bachelor's satisfaction. He has only to go to bed an hour before his wife. Or the lady may do as much *vice versa.* And herein we can fancy one gratification, even of the bachelor or spinster order, beyond which a bachelor or spinster can often be presumed to realize; which is the pleasure of being in bed at your ease, united with the highest kind of advantage *over the person that is up.* Let us not be misunderstood. The sense of this advantage is not of the malignant kind. You do not enjoy yourself because others are in misery; but, because your pleasure at the moment being very much in your bed, and it not being the other's pleasure to come to bed so soon (which you rather wonder at), you are at liberty to make what conclusion you please as to the superior nature of your condition. And there is this consideration besides; namely, that you being in bed, and others up, all cares and attentions naturally fall to the portion of those individuals; so that you are at once the master of your own repose and of their activity. A bachelor, however, may enjoy a good deal of this. He may have kindred in the house, or servants, or the man and woman that keep the lodging; and from his reflections on all, or either of these persons, he may derive no little satisfaction. It is a lordly thing to consider that others are sitting up, and nobly doing some duty or other with sleepy eyes, while ourselves are exquisitely shutting ours; they being also ready to answer one's bell, bring us our white wine whey, or lamp, or what not, or even to go out in spite of the rain for some fruit, should we fancy it, or for a doctor in case we should be ill, or to ask some question for the mere pleasure of answering it.

"Who's there?"

"Me, sir; Mrs. Jones."

"Oh, I beg your pardon, Mrs. Jones; I merely rang to know if you were up."

"Dear me, yes, sir, and likely to be this hour." (*Aside and happy*)—"Poor soul!"

"It's Mr. Jones's club-night, sir."

(Poor woman! Capital pillow this!")

"And it's a full hour's walk from the Jolly Gardeners."

("Poor Jones! Very easy mattress.) *Aloud*—Bless me, that's a bad business; and it rains doesn't it, Mrs. Jones?"

"A vile rain, sir, with an east wind."

("Poor Jones! Delicious curtains these!) Couldn't the servant sit up, and let Mr. Jones in?"

"Lord, sir, we're both of us sitting up; for I'm frighted out of my wits, sitting alone; and Mr. Jones wouldn't be pleased if I didn't see him in myself."

"(Poor woman!) Good night Mrs. Jones: pray don't stand any longer in that cold door."

"Do you want anything, sir?"

"Nothing, I thank you. I am very comfortable. What o'clock is it?"

"Just going one, sir."

"(Poor creature!—Poor Susan!—Poor Jones!) *Whew* goes the wind; *patter* go the windows; *rumble* goes a coach; to sleep go I."

This is pretty;—but a wife, instead of the woman of the house,—a wife up, and going about like one's guardian angel; we also loving her well, and having entreated her not to sit up, only she is forced to do so for this half hour,—either we know nothing of bliss itself, or the variety—merely as a variety—the having a whole bed for half an hour, merely as a *change* from that other superhuman dream of her's—the seeing even a little pain borne so beautifully by the "partner of one's existence," whom of course we love the better for it, and cannot but rejoice in seeing gifted with such an opportunity of showing herself to advantage—all this, if we mistake not (owing to our present bachelor hallucination), must be a sublimation of satisfaction unknown to sojourners at large, who are but too often accused, with justice, of having more room than they know what to do with.

A bed, to be perfectly comfortable, should be warm, clean, well made, and of a reasonable softness. People differ as to the amount of the softness. The general opinion seems to be in favor of feather-beds. To ourselves, a feather-bed is a Slough of Despond. When we are in the depths of it, we long to be on the heights. When we get on the heights, down they go with us, and turn into depths. The feathers hamper us, obstruct, irritate, suffocate. We lose the sense of repose and independence, and feel ourselves in the hands of a soft lubberly giant. The pleasure of being "tucked up," we can better understand; but it likes us not. What we require is, that the limbs should be as free as possible from obstruction. We desire to go counter to all that we endure when up and about. We must have nothing constrained about us; must be able to thrust arms and legs whithersoever we please. That the bed should be well and delicately tucked up, pleaseth us; but only that we may have the greater satisfaction in disengaging the clothes on each side with a turn of the foot, and so giving freedom to our borders.

Upon my resting body,
Lie lightly, gentle *clothes.*

Warmth, cleanliness, and ease being secured, it is of minor importance what sort of bed we lie in, whether it has curtains, or a canopy, or even legs. We can lie on the floor for that matter, provided the palliasse be of decent thickness. The floor itself then becomes a part of the great field of rest in which we expatiate. There is nothing to bound our right of incumbency; we can gather our clothes about us, and roll on the floor if we please. Flowery curtains we like; but the Cupids and gilt torches are particular. We are not fonder of them for being the taste in France. Curtains, paperings, plates and dishes, everything in that country, babbles, not of green fields, as with us, which is pretty, but of gallantry and *la belle passion.*

Commend us (for a climate like ours) to a bedchamber of middle order, such as it was set out about a hundred years back, and may still be seen in the houses of some old families; the room of moderate size; the four-post bedstead neatly and plentifully, but not richly draperied; the chairs draperied also, down to the ground; a drapery over the toilet; the carpet, a good old Turkey or Brussels, not covering the floor, and easily to be taken up and shaken; the wardrobe and drawers of old shining oak, walnut, or mahogany; a few cabinet pictures, as exquisite as you please; the windows with seats, and looking upon some green place; two or three small shelves of books; and the drawers, when they are opened, redolent of lavender and clean linen. If our bed-room is to be perfect, it should face the east, to rouse us pleasantly with the morning sun; and in case we should be tempted to lie too long in so sweet a nest, there should be a happy family of birds at the windows, to salute our rise with songs.

It is a good thing, however, to reflect, that custom is half the secret of content. The reason why we like a hard bed is, that we were brought up at a public school, without any luxuries: and, to this day, we like just such a sort of bed as we had there. We could find a satisfaction in having the identical kind of rug over our sheets; and sheets, too, of no greater fineness. And the same reason makes us prefer a coarse towel to a fine one, and a gown, of some sort, to a coat; with a pocket in the same place as the one in which we used to put our marbles and tops, and our pocket editions of Gray and Collins. We have since slept in houses of all sorts—in rich houses and in poor, in cottages, in taverns, and inns, and public-houses, in palaces (what at least the Italians call such), and on board ship: yea, in *bivouacs*—just enough to taste the extreme hardness of the bed military; and for the only contrivance utterly to vitiate our night's rest, commend us to the bed of down. That, and the wooden bed of the guard-house, disputed the palm. Habit does the same with kings and popes. Frederick the Second preferred lying in a little tent-bed, such as Voltaire found him in at their first interview, shivering with an ague; and we learn from Horace Walpole's Letters, that the good Pope, Benedict the Fourteenth, lay upon one no better (the palliasse, most probably, of his convent) by the side of the gorgeous canopy prepared for his rank. In truth, luxuriate as we may, we should be heartily ashamed of ourselves at our present time of life, if we could not sleep happily in any bed (down and *mud* always excepted), provided only it had enough clothes to keep us warm, and were as clean and decent as honest poverty could make it. We talk of fine chambers, and luxurious contrasts of sitters up; but our secret passion is for a homely room in a cottage, with perfect quiet, a book or two, and a sprig of rosemary in the window; not the book or two for the purpose of reading in bed,—(having once received a startling lesson that way, and not choosing to burn down the village,)—but in order that we may see them in the window the first thing in the morning, together with the trees of which they discourse. Add to this a watch-dog at a distance, and a moaning wind, no matter how "melancholy," provided it does not blow a tempest (for though nature does nothing but for good, the particular suffering sometimes presses upon the imagination) and we drop to sleep in a transport of comfort. Compare such a bed as this with one that we have seen during a storm of fifty-six hour's duration at sea, the occupant (the mate of the vessel) with his hands wet, black, blistered and smarting with the cold, and the very bed (a hole in a corner) as wet as his hands! And the common sailors had worse! And yet the worst of all, shut out from wet and cold as they were, but not having work like the seamen to occupy the mind, were the cribs of a parcel of children tossing about in all this tempest, and the bed of their parents on the cabin-floor. With these recollections (as the whole vessel got safe), we sometimes think we could find it in our hearts to relish even a feather-bed.

[TO BE CONTINUED.]

CALIFORNIA LEGISLATURE, 1862.

THE SENATE.

SENATORS HOLD OVER.—Alameda and Santa Clara—A. L. Rhodes, R.
Butte and Plumas—Richard Irwin, U. D.
Calaveras—P. A. Gallagher, U. D.
El Dorado—A. St. Clair Denver, O. Harvey, U. D.

Joint Convention.—Republicans, 55; Union Democrats, 48; Secessionists, 17. Total, 120.

CIRCULATION OF THE FARMER ABROAD.

WE have often urged the friends of our State, to aid us in the Circulation of our Journal in the Old States, and Europe, so that we might be more instrumental of good, and help to increase the population of California, and thus make the State more prosperous.

We have often published strong Letters, from various States, proving the good our Journal is doing in making our State truly known in all her vast resources. We now ask of all who feel a desire to have our State double her population, to this work.

We append a Proposition, and hope the Friends of this Journal and the cause it pleads, and all who wish to carry out the desires expressed by our excellent Citizen, in Paris, will coöperate with us. We will make liberal terms to all Societies for Emigration, or Clubs, and Commercial Houses.

WITH a desire to make the Resources of California known abroad as widely as possible, we feel confident that if we could Circulate the CALIFORNIA FARMER in all the Older States, it would be the means of showing the great Masses of the People, that California is the place for them to settle in; and we believe we could greatly benefit all the interests of our State, by Circulating our Journal extensively abroad,

With such views, we ask the coöperation of our Merchants, and Business Men, and all who desire to make California truly and widely known, to aid us in the Circulation of the FARMER.

Wishing to place the FARMER at so low a price, as to enable all to send it to their friends, we offer the following Terms for all Clubs to send to the Old States, and in Europe:

For eight Copies $25
" ten " 30
(Each Copy to be mailed separately, if so desired).
For three Copies...10
" six " 20
" single Copy.. 4

A Grand Opportunity for a Home.

For sale in one of the interior Mountain Towns, a good House and Garden, with outbuildings, including a Smoke-House in successful use, being capable of realizing a good income.

The buildings are good. The Orchard is in full bearing, with Peaches, Plums, Apples, Grapes, etc., and small Fruits. There are also on the estate several small tenements, which bring in an income of about $50 a month. The Fruit sold from the Garden, together with the certain income, will pay in two years or less the price now required for the estate. It is offered low for an Immediate Cash sale, as the owner desires to locate in a different part of the State, where he has other property which requires his attention.

For particulars inquire of Editor of Farmer. 24

Full-Blood Durham Stock.

Purchasers of very choice Durham Stock will do well to call and see our Lists of Stock for sale. We have some for sale as fine as can be found in this country.

We have a number of Full-Blood Durham and also Devon Stock, of perfect pedigrees, worthy the attention of those who desire to find the very best blood. The pedigrees we can show, and give full particulars.

Also, about twenty fine Grade animals, of superior stock and parentage, to which we invite particular attention.

Who Grows Flax?

Growers of Flax can have the highest price paid for their crop by applying to this Office, or sending samples of their crop and the quantity for sale.

Four Hundred and Fifty Acres Rich Land.

A valuable tract of rich Land, of the extent named, in a beautiful location. Will be sold a bargain if applied for soon. Title perfect. Inquire of Editor of the Farmer. 14

Pulu! The Wonderful!

ANOTHER cargo still, is just received
At SCHREIBER'S Depot! 't is believed
There is a charm about the PULU crop,
It comes, and goes,—the sale will never stop;
For everybody wants a PULU BED,
So EASY to the body, so COOLING to the head;
Another charm, too, in the PULU found—
Where PULU is, no INSECTS come around.

PULU! the famous PULU, now is known
As *BEST FOR BEDS*, and it has grown
So much in favor that the People go
Always to SCHREIBER'S great PULU Depot;
'Twas Schreiber had the first 'twas ever sold,
And then it almost cost its weight in gold;
But now, his ships, they come so thick and fast,
It sells so quick, a cargo does not last
A month or more, and then, it is so low
That all who want GOOD BEDS should surely go
Direct to SCHREIBER'S STORE on Sansome street,
There they will find a stock complete,
ALL KINDS OF BEDDING, everything that's wanted,
There too, the best accommodation granted.

Now don't forget the Number, 'tis 406;
Another fact upon your memory fix—
That Schreiber's is THE DEPOT OF PULU,
And HE the PIONEER IMPORTER TOO;
The man who first this luxury gave,
Then surely he *the best of trade should have.*

Now go and make your purchases complete,
At SCHREIBER'S, 406, on Sansome street. 1

FRUITS, GRAIN, AND PRODUCE

A. H. TODD & CO.,
Produce Grain Brokers,

A Full-Blood Devon Bull; pedigree perfect.
Several Calves, Full-Blood, and cross of same.
Several extra fine Dairy Cows; very superior.
A noble Draft Stallion, sired by a high-blood English Draft Stallion, from a Vermont Morgan Mare.
Several Mares and Colts of high grades.
All the above will be sold at a bargain. Inquire of Editor of Farmer. 5

Literary Shrubbery.

THE ROSE-BUSH.

A child sleeps under a rose-bush fair,
The buds swell out in the soft May air;
Sweetly it rests, and on dream-wings flies
To play with the angels in Paradise.
And the years glide by.

A maiden stands by the rose-bush fair,
The dewy blossoms perfume the air;
She presses her hand to her throbbing breast,
With love's first wonderful rapture blest.
And the years glide by.

A mother kneels by the rose-bush fair,
Soft sigh the leaves in the evening air;
Sorrowing thoughts of the past arise,
And tears of anguish bedim her eyes.
And the years glide by.

Naked and lone stands the rose-bush fair,
Whirled are the leaves in the autumn air,
Withered and dead they fall to the ground,
And silently cover a new-made mound.
And the years glide by.

Philosophy in a Few Words.—The following extract we make from one of Dr. Holland's essays on Human Life. The philosophy it inculcates would save a vast deal of unhappiness:

It seems a very melancholy thing for a man to carry a mental ulcer with him through life—to feel its pricks and pangs in every effort—to be conscious of its presence every hour—to be engaged in covering it from sight, or in the attempt to deceive the world with regard to it. Life is altogether too good a thing to be spoiled by a little sore, or a large one, when there exists an obvious mode of cure. It is our immense and intense self-consciousness that stands in one way always in the matter. The truth is that the world does not think half as much about us as we imagine it does. A man may walk the city of New York with a face "as homely as a hedge fence," thinking about it all the time and wondering what people think of it, and not a man in all the throng will ever see it. It is so in all the world at large. Our personal peculiarities, our personal failures generally, possess very little interest for others. They have enough to do in taking care of themselves, and their weaknesses and failings and peculiarities enough of their own, and if the world should spurn our well-meant efforts in its behalf, why, let it go. It effects nothing to get sore and sensitive over it. When a man truly learns of how little importance he is in the world, he is generally beyond the danger of becoming galled by his harness, whatever it may be.

Newspaper Reporters, who are so fond of enlarging upon the peculiarities of others, sometimes get a "ugly dig" themselves. An exchange says: "Newspaper reporters should not drink. Here is a story handed in by one of the craft, which shows, in very strong colors, the manner in which things become distorted by viewing them through the bottom of a tumbler: 'Yesterday morning, at 4 o'clock, P. M. a small boy, named Jones, or Brown, or Smith, with a heel in the hole of his trowsers, committed arsenic by swallowing a dose of suicide. The verdict of the inquest returned a jury that the deceased came to the facts in accordance with his death. He leaves a child and six small wives to lament the end of his untimely loss. In death we are in the midst of life.'"

Gold and silver are, in these days, the most prized and effective of all *belle-metals*.

The following toast was recently given: "The ladies—May we kiss all the girls we please, and please all the girls we kiss."

Talleyrand, talking of a man who dealt in nothing but quotations, said: "That fellow has a mind of inverted commas."

Some libelous fellow says that a woman's heart is the sweetest thing in the world—in fact, a perfect honey-comb, full of *cells*.

There is a purple half to the grape, a mellow and crimson half to the peach, a sunny half to the globe, and a better-half to man.

"Waiter, I say, I suppose you don't know of nobody who don't want to hire nobody to do nothing, don't you?" The answer was, "Yes, I don't."

"I don't believe it's any use, this vaccination," said a Yankee. "I had a child vaccinated, and he fell out of the winder a week arter, and got killed."

TIME.

Time *was*, is past; thou canst not it recall:
Time *is*, thou hast; employ the portion small:
Time *future* is not, and may never be;
Time *present* is the only time for thee.

Why is a beauty like the engine on a railway? Because she draws a train after her, scatters the sparks, transports the mails (males), and makes us forget time and space.

"Do you know who I am?" said a police officer to a fellow whom he seized by the throat. "Not exactly, sir, but I reckon you are the *malignant choker*?"

A Jewel of a Girl.—One of our exchanges speaks of a beautiful girl who would prove a capital speculation for a fortune hunter of the right stamp. Her voice is of silver, her hair of gold, her teeth of pearl, her cheeks of rubies, and her eyes of diamonds.

When a Hindoo priest is about to baptise an infant, he says: "Little babe, thou enterest the world weeping, while all around thee smiled; contrive so to live, that thou mayest depart in smiles while all around thee weep."

MANUFACTURES BEST OF FAMILY SOAPS.
Near corner of Mason and Pacific streets.

PATENT
HYDRAULIC HOSE
MANUFACTORY.
119 First street. - - Marysville.

First Premium.

THE COMMITTEE ON MINING IMPLEMENTS, at the last Annual Fair of the Agricultural, Horticultural, and Mechanics' Society, of the Northern District of California, awarded me the

First Premium for my Patent Machine

FOR SEWING HYDRAULIC HOSE, WAGON COVERS, GRAIN AND FEED BAGS, GARDEN HOSE, &c;

And I have the Society's DIPLOMA, signed by G N SWEZY, President, and CHAS. M GORHAM, Secretary. The Committee was composed of H. HARRIS, of the Pioneer Assay Office, and other prominent citizens.

My facilities are such that I can safely promise to do my work BETTER, CHEAPER, and in a shorter time, than any hose-maker in the State.

Hose-making is my profession, and I have the best working Machines, and the Best Workmen, that can be produced.

Notwithstanding all this, I charge

Only 15 Cents per Yard,
For Hose with Four Seams. that will stand the Pressure of 100 feet fall of water.

I can sew as cheaply as anybody, and people will have no occasion to go away from Marysville for Hose.

ONE-HALF OF MY INTEREST in these Machines for the State of California is for sale, or all of the Northern counties, from Yuba up.

S. HOWARD,
33m 119 First street.

1000 Acres of Land,
120 COWS,
AND
A Good Milk and Dairy Business,
For Sale at a Great Bargain.

A SPLENDID OPPORTUNITY IS NOW OFFERED to a man or men with a moderate amount of cash to secure one of the greatest chances in the Dairy Business ever offered in our State. The location is near Suisun City, within five miles. There is 960 acres good Land, well fenced, which can be had at $10 per acre, and 120 select COWS for $20 each, together with Engine and Boiler for feeding Stock, Cheese-Presses, Butter-Churns, Cans, Pans, Tools, etc, valued at $1000. All these implements will go to the purchaser without cost.

The Title to the Land and Property is undoubted. There are also 1000 acres of good Land adjoining leased for two years at $1 per acre; this goes also, and the lease can be renewed.

To a good and responsible party this property will be sold on the most liberal terms—say ONE-THIRD CASH, balance on such time as will be satisfactory. Persons wishing to buy will please call on or address COL WARREN, Editor California Farmer, who will furnish all needed information.

Nov. 1, 1861. 8

rable. We
ce, but we
oublesome,

To the nervous, the Directors would say, that you can be entirely relieved from those dreadful feelings of evil-foreboding, and your system strengthened so that nothing can disturb the current of your life. Several cases of insanity, arising from a disarrangement of the nervous system, have been permanently cured by this system. The Directors, in stating these things, do so in the hope that it may be the means of awakening the public who have not studied into such things, to a sense of their duties, and if possible, prevent those who have the care of the rising generation from poisoning their young charges with vile drugs, thereby entailing upon them troubles which in after life may cause them to curse their origin.

It is unnecessary to enumerate all the diseases in the catalogue, for that would be occupying space to no purpose. Every disease has been under treatment by this system, and there are none but have received benefit either in this State or at the East.

There are at present but few instruments in the world that can be depended upon. A good instrument costs very heavy, and must be manufactured to order, and there are very few who are able to manufacture them, for want of knowledge of the healing principle. The only instrument to be depended upon in this State is at the Electropathic Institute.

Connected with this system are the renowned Electro-Magnetic Baths. Here let us caution the public against the numerous impostors in the bathing line. The pure magnetic baths is one of the most effective aids in the removal of disease from the system, but if given at the wrong time, are likely to aggravate trouble, and cases have been known where the patient has been injured so badly as to require months to remove the injury. Persons in quest of this bath should be careful and not apply to a place where there is no physician to judge of the necessity of the remedy. In fact, the only place where they can be obtained in all their purity is at the Institute, where the Resident Physician will always be happy to examine and see that they are not unseasonably administered, and if not necessary, advise the requisite remedy.

Below will be found a list of the cases which have been successfully treated by the Electropathic system, at the Institute, during the first year of its establishment. The record is good, and challenges the admiration of the world:

Name of Disease.	*No.*
Rheumatism	421
Neuralgia	368
Dyspepsia	297
General and Sexual Debility	240
Asthma	220
Bronchial Affections	187
Fever and Ague	183
Female Irregularities	161
Mercurial Affections	130
Diseases of the Eye	85
Paralysis	78
Scrofula (long standing)	30
Catarrh of the Lungs	27
Catarrh of the Head	21
Liver Complaints	20
Deafness	18
Panama Fever	10
Consumption	7
All others, among which is almost every nameable disease	128
Total	2626

The above shows what can be accomplished by combined energy when it has truth and science upon its side. The Electropathic Institute was started amid the cry of interested charlatans, who used all the power their riches and the prejudices of the public gave them, to prevent its success. It has risen to a position that is beyond their baffled malice, and will be honored in the scientific world when they are forgotten, or only remembered for their crimes and impositions. A thinking public are fast consigning them to that oblivion their works merit.

Persons seeking remedial assistance may wish to know something of the system by which diseases are so rapidly removed from the body. Electricity is a fluid of so subtle a nature that it can only be studied by its results. We know by its action it forces everything of a foreign nature in the body from the center to the surface by its energy; while the vitality which it imparts fills up the vacuum, preventing thereby the subtle poisons from returning to the hitherto diseased parts; and here let it be understood that the Bath should never be administered until the disease has been forced to the surface, except, perhaps, in cases of cold where fever has not set in. Its action upon Mercurial Diseases is peculiar. The best authorities are of the opinion that it liquifies the mercury, which, when in a liquid state, by its own specific gravity, forces itself out of the body. This result has been arrived at by testing the water after an Electro-Magnetic Bath. After such tests have been found in the water, the patient is not troubled any more with those pains peculiar with the diseases. In all other cases it forces to the surface and is washed off by the Bath. The whole system, in its application, is a LUXURY, there being no pain or inconvenience attending upon it, but the reverse is the case, being one continued pleasure. Try it, you that are suffering either from disease or the injudicious use of poisonous drugs, and you will be made to rejoice that you have had the courage to strike out from the beaten path.

Below are a few certificates from patients that have been cured at the Institute:

CERTIFICATES OF CURES:

SAN FRANCISCO, April 18th, 1861.

This is to certify that I have been under the treatment of Dr. Josselyn, at the Electropathic Institute, and that he has cured me. My disease was mercurial, accompanied by chills. I applied to him on the 11th day of this month. I recommend all afflicted to employ him. He has cured me without medicine, by the use of his Electropathic Instrument

JOHN CALLAGHAN.

State of California, City and County of San Francisco, ss.
Subscribed and sworn to before me, this 18th day of April, A. D., 1860. P. BARRY, Notary Public.

HORNITOS, Nov. 1st, 1860.

Well, Doctor, I am at home, and have been to work in the water for several days, and there is no return of the Rheumatism, as I call it, and mercurial pains, as you stated them to be. I feel as gay as a lark, no pain or bad feelings, no stiffness, but perfectly well, and all done by you in three weeks, without one drop of medicine. You had hard work to make me believe before you commenced that you could cure me, but now I find it very easy to believe. Although my friends look rather incredulous, but they cannot doubt my sober earnestness. Doctor, you have my thanks, and I will benefit you all I can by spreading your fame up in these parts.

Respectfully yours, GEO. PERKINSON, Jr.

To J. H. Josselyn, M. D., Resident Physician at the Electropathic Institute.

CAUTION.

The public are informed that I cannot be seen at any other place in the State except at the Electropathic Institute (179, old No.) 645 new No., Washington street, south side, a few doors below Kearny. The reason of this caution is, certain Quacks have placed my name upon their doors, and have deceived strangers who wished my services.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value, are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

A Fortune for a Mechanic.

We have the PATENT RIGHT for the whole Pacific Coast for the best and most celebrated HORSE HAY-RAKE known.

ALSO—A CIDER-MILL and PRESS of the most approved construction.

A fortune can be made with either of these machines, by an energetic mechanic. The models may be seen at our office.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it. a very valuable implement, and one which will receive universall commendation.

No. 2. A Corn Cultivator.
Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.
Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundery, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamen al when no in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1859.

This implement will be of great value to Contractor and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Musketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver,

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns.

Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

2 COL. WARREN, Editor Farmer

A Chance for a Saw-Mill.

An experienced man at the Saw-milling business, one who has a cash capital of $5000, can hear of a chance by which he can secure a half-interest in a Saw-Mill, a Farm, and a Stock-Ranch, where his money can be doubled every year. The present advertiser wishes to go to the Atlantic States, to be absent some months on important business, and he desires to find a partner in whom he can confide. None need apply without they have the means, and can make the references all right. The Right Man can secure a grand chance.

Inquire of the Editor of the Farmer, who will give all particulars.

BAILEY'S PATENT
COMBINED
WASHING AND WRINGING MACHINE.

THIS MACHINE IS ADAPTED TO ALL KINDS OF Clothes, from a pocket handkerchief to a bed-quilt. You can wring your clothes in less than one quarter of the time, and so much dryer that they will dry in one half the time, and not injure your clothes one half as much as when twisted by hand. This Machine is formed with

TWO SPRING ROLLS COVERED WITH RUBBER,

And so constructed as to run together with great pressure, and turn fast and easy. The springs in the rolls are so constructed as to yield the most in the center, where the bulk of the clothes are conducted as they pass between them. By this means the springs with the rubber close so tight around the clothes that they come through

NEARLY DRY ENOUGH TO IRON.

However uneven the garment may be, it receives an equal amount of pressure. It is also sufficiently strong and so arranged that it can be run by power for LAUNDRIES, FACTORIES, LARGE HOTELS, &c. Although it is a small and simple Machine, it is able to do a large amount of work in a short time.

This Machine has been thoroughly tested for sixteen months past, and found to do everything that it was designed to do. And after any one buys one of them, and finds it will not do what I claim for it, they can return it and have their money, as all my agents are authorized to do this. So there is no chance for you to get humbugged by giving them a fair trial, and it may be just the thing you want.

To wash with this Machine, put your clothes to soak for about twenty minutes in strong soap-suds and warm water, then run them through the rolls five or six times back and forth into the suds, when they will require no rubbing excepting the very dirtiest parts, such as collars and wristbands, which will require but a slight rub with the hands. By this process you will be able to do your washing in less than half the time you can by hand, or any other Machine in use, and much easier, and no wear or tear to your clothes, like the rubbing-board and twisting to get the water from them—as you can see the principle of my Machine is to squeeze instead of rub and twist, which evades all friction.

CHAS. T. DARROW, San Francisco.
General Agent for California and Oregon.

A Machine will be on exhibition at F. D. Cottle's Carpenter Shop, Pine street, below Sansome.

Price—20 to 25 Dollars.

THE CATARACT
Washing Machine
AND WRINGER.
Rubbing and Wringing Done Away!

THIS MACHI IS REMARKABLE FOR THE FOLLOWING QUALITIES WHICH IT IS WARRANTED TO POSSESS:

It will wash and rinse the finest Lace Collar, or the largest Bed-Quilt.
It washes Flannels without shrinking them.
It does not wear the Clothes and never breaks a button.
It is perfectly simple, very strong and durable, and cannot get out of repair.

A common hand can with ease and perfect safety to the Clothing, wash FASTER and BETTER than FOUR Washer-women can by hand.

WRINGING IS DONE FIVE TIMES AS FAST as Clothes can be wrung by hand, and removes the water so thoroughly that the CLOTHES DRY IN HALF THE TIME.

☞ The Machines can be seen in operation at our store. Always for sale by

JOHN G. ILS,
175 (old number) Washington street,
16 Next Maguire's Opera House. SAN FRANCISCO.

FOR SALE.

A VALUABLE HOMESTEAD, WITH excellent Out-buildings, a fine Garden, Vineyard of four acres, with a field of sixty acres more, for pasturage or cultivation. The whole will be sold a great bargain if applied for immediately.

San Francisco Cattle Market.

Feb. 27.

Reported for the CALIFORNIA FARMER, by W. J. WHITING, corner of Sutter and Sansome streets (Stock Corral).

ALL the change that has taken place in the Cattle Market for the past week is a small advance in the price of Veal. First quality American Beef continues firm at our last quotations, with not a large supply in market; and the probabilities are that the rainy weather of the past few days will make the traveling so bad that an advance will take place. We begin to think that fat cattle are somewhat scarce, and that the present prices will be sustained for some time to come, with the probability of reaching a higher figure than for some years. We wish this to be distinctly understood as referring to first class American beef. Of all other kinds of stock the supply seems to equal the demand. There have been some fluctuations, but taking one time with another, we don't see anything that would lead us to suppose there is any scarcity in the country. We quote

AVERAGE SLAUGHTERERS' PRICES.

BEEF—American, first quality 6c to 12c; 2d quality 1c @3c; 3d quality none; Spanish, 1st quality 4c; 2d quality 1c ₱ lb.

VEAL—first quality, 6c@10c.

HOGS—Stock Hogs 1½ to 3c; fat Hogs on foot 4@6c; Dressed 7c@8c.

To Agents of the Farmer.

We would ask our Agents to whom payments are made for the FARMER to notify us, that we may give credit for them, as it frequently happens that our subscribers call and inform us that they *have paid such Agents*, although we have no notice of such facts.

FRESH GARDEN SEEDS.

☞ The undersigned are the Sole Agents of DANIEL L. PERKINS, the Pioneer Seed Grower, of Oakland, Alameda county, Cal., and they offer for sale this season the finest assortment of seeds ever produced in California, and at prices as low as the ruling rates in the Atlantic States. These seeds are warranted to be fresh and true to label, and in every particular equal to the best seeds produced in any part of the world. They have taken the first premium at each of the State Fairs, and many of our County Fairs, for several years past, which should be a sufficient guarantee of their genuineness and superior quality.

MR. PERKINS will be in attendance, to give instructions in regard to planting the same, at all times at the store.

Merchants in the city will confer a great favor when receiving orders from the interior, to call and have them filled.

Orders from the Interior will be filled promptly and forwarded by Wells, Fargo & Co's Express, or as directed.

Liberal discounts will be made to dealers, and any seeds remaining over at the end of the season may be exchanged for new ones the next.

GRAVES, WILLIAMS & BUCKLEY,
11tf Pacific Fruit Market San Francisco.

MAGNETIC PHYSICIAN.

CITIZENS—FRIENDS:

M. MINER, from Washington, D. C., comes to you endowed with that remarkable power of **Sympathetic Clairvoyance**, which enables her to discover the Causes of Disease, and apply the Remedy.

Diseases which evade all other modes of Examination, and yield to no other System of Treatment, are clearly revealed to the Sympathetic Clairvoyant and easily brought under control; while Diseases, in all their forms, physical and mental, chronic and acute, are alike subject to its power, relying, as it does, on Nature's great remedial agents: Water, Air, and Magnetism.

Mothers and CHILDREN treated with great success.

Room No. 10, Union Block, cor Market and Kearny streets
Office Hours—From 12 M. to 3 P.M. 17-6t

To Vineyard Planters.

IF our Vine Growers will furnish us with a list of the Vines they grow, and the quantities they have for sale, with the prices, we shall be happy to aid them in their sales. It is, however, of the utmost importance that there should be a sure guarantee that the varieties are beyond question reliable, as many and severe disappointments have occurred by reason of erroneously marking the varieties.

MARDEN & FOLGER,

Successors to Wm. H. Bovee & Co.,

HUNTER'S GRAIN SEPARATOR!

THE GRAIN-GROWERS OF THE PACIFIC COAST have now an opportunity never before offered them of cleaning their Wheat in the most perfect manner.

The undersigned would offer them his

NEW GRAIN SEPARATOR,
Patented April 9th, 1861,

As one of the best Implements ever invented. Mustard, Radish, Chess, Barley, and all other impurities, are separated entirely, leaving the Wheat in a pure and clean condition.

The importance of this Implement can be seen at once, as the

INCREASED VALUE
OF
Well-Cleaned Wheat

Will be more than sufficient to every Grain-Grower of any amount

TO PAY FOR A MACHINE.

The Patentee will visit all the principal cities and Farming districts to appoint agents at each place, and exhibit one of his Machines.

He feels confident that every Grain-Grower

WILL BE CONVINCED OF THEIR VALUE

The moment an opportunity is presented to see them work.

A. HUNTER,
Inventor and Patentee.
